National Capital Sesquicentennial Celebration

EXTENSION OF REMARKS
OF
HON. MARGARET CHASE SMITH
OF MAINE
IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to insert in the RECORD an address by the Honorable ALBEN W. BARKLEY, Vice President of the United States, at ceremonies marking the official opening of the sesquicentennial celebration on the Capitol Plaza on April 15, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Distinguished guests and fellow Americans, we are celebrating this year the Sesquicentennial of the city of Washington as the Capital of the Nation. In particular, we mark the anniversary today of the laying of the foundation stone of the Federal City which has in time become not only a noble Capital befitting the Government of a great and free people, but a symbol of the hope and strength of freedom to people everywhere in the world.

At about the time when the city of Washington was beginning to rise along the edges of the marshes which lined the Potomac River, Tom Paine was writing his famous book, "Rights of Man." Paine, who said of himself that, "My country is the world, and my religion is to do good," had come to America penniless and self-educated, as he was not the first and by no means the last to do, to one of the great glories of our Nation.

In the Rights of Man, Tom Paine was seeking parallels between the American Revolution and the French Revolution which our land had stimulated. In arguing that the American revolution had broken the ice, as far as revolutions were concerned, and that it was only natural that revolutions would follow in other places, Paine said this, "That the probability is always greater against a thing beginning than of proceeding after it had begun."

Tom Paine was one of the relatively few people anywhere in the world in his day who understood the full significance of the American revolution. He knew that this was no mere result of complaints against absentee government. He knew that it was not solely the consequence of taxation without representation, and that it was not alone the result of dissatisfaction with rule under the British crown. He recognized that the changes which would be wrought by the revolution in the American colonies would be vaster than a change in allegiance from a foreign to a local government. He understood that this was a fundamental reconstruction of the purposes of government and of the society on which that government was based. This was the revolution for the establishment of the rights of man.

Paine could not really have thought that there was much improbability in the staging of a revolution in America. That revolution grew straight out of the developing character of the American people. Different action on the part of the British parliament and leaders might possibly have changed the date of the American revolution; but at most it would have been postponed. The particular types of people who felt the call of America and came to her shores, the nature of the boundless country to which they emigrated, together demanded the right to independence for their colonies, and more particularly for themselves. They demanded the ultimate dignity of freedom.

"The revolutions which formerly took place in the world," Paine wrote, "had nothing in them that interested the bulk of mankind. They extended only to a change of persons and measures, not of principles, and rose or fell among the common transactions of the moment. What we now behold may not be improperly called a counterrevolution. Conquest and tyranny, at some earlier period, dispossessed man of his rights and he is now recovering them, and as the tide of human affairs has its ebb and flow in directions contrary to each other, so also is it in this. Government founded on a moral theory, on a system of universal peace, on the indefeasible, hereditary rights of man, is now revolving from west to east"—that is, from America to France—"by a stronger impulse than the government of the sword revolved from east to west. It interests not particular individuals but nations in its progress and promises a new era to the human race."

Paine thought that it was more difficult to win freedoms in the first place than to maintain them after they were won. I am not sure that this is the case. Party platforms are rarely known for their quality as abiding literature. But one sentence from the platform of a political party in 1924—it was the Progressive Party of Bob La Follette—has become a part of our heritage. "Every generation," it said, "must wage a new war for freedom against new forces which seek through new devices to enslave mankind."

That has been relentlessly true in our own country. It is true today as we face the most powerful and aggressive foe in our history as a nation. If the American and the French Revolutions were triumphs for the rights of man, what the world is offered today is the counterrevolution of tyranny, and let us make no mistake about it. What is hidden in the vestments of a utopian Marxist world of peace and plenty is a perverted and gnawing lust for imperial power which in its magnitude of scope would have made Caesar pale and Alexander tremble.

The propagandists for this foe call us warmongers. They claim to be the sole champions of peace, and they maintain the largest military machine in the world.

The propagandists for this foe claim to be apostles of freedom, yet in their so-called labor camps are more slaves than have been kept in bondage by any nation at any time in the history of the world.

No citizen is free from searches and seizures of the secret police. Trial by unimagined tortures take the place of trials by jury. There is no freedom of expression, no freedom of the press, no freedom to worship in one's own way, no freedom of enterprise, no freedom to enjoy the profits of one's labors.

This we know, and this as free citizens of a great nation, and as leaders among the forces of free men throughout the world, we can face, confident in our rightness and our strength. But there is another foe of our freedoms, no less insidious, no less dangerous. And this lies within ourselves.

The sharpest threats to the freedoms which we enjoy here in America have come, up to now, not from outside sources, but from within. And it is often precisely when we are threatened with a loss of our freedoms from the outside that we hear voices among us demanding that we cede away some of our freedom here at home in order to protect ourselves from this outside threat. And these same forces which would abridge our freedoms sow rumors and suspicion among us.

The plain truth is that our freedom is our sword. Ours is an imperfect freedom, but year by year, generation by generation we have tempered it and made it strong, polished the dark places to make them glisten like a beacon.

Being human, we make mistakes as people, as a government, as a nation. But if we now diminish, abridge, and reduce this precious heritage of rights and freedoms we shall have made a mistake fatal to the rest of our freedoms, and, in the end, to our existence as a nation.

On the contrary, we must extend our rights and freedoms, we must perfect our own democracy here at home, we must vigorously seek the means of equal freedom for all the world's peoples. We must see that our own Revolution fulfills the prophesy of Tom Paine, that it truly brings a "new era to the human race."

In times such as these there is usually a troubling and pernicious threat to freedom of thought and freedom to hold our own ideas, unpopular though they may be. Tom Paine was one of the real molders of the thought of our infant nation, although he was regarded by many then as peculiar and

unrespectable, perhaps even dangerous. Today he might be charged with being subversive. To those who might so regard him now it is well to recall that Paine wrote that in his day—and it should be pointed out that he was talking about European governments—"we still find the greedy hand of government thrusting itself into every corner and crevice of industry and grasping the spoil of the multitude." We can hear those sentiments still echoed frequently by highly respectable people.

There is a clear danger in attempting to halt the give and take of ideas, for it is here in the realm of reason, and by the test of morality that we shall truly and finally win or lose the battle which is before us.

Those who seek to restrict ideas are those who have no real confidence in America, its people, and its institutions.

"Those who deny freedom to others," said Abraham Lincoln, "deserve it not for themselves, and, under a just God, cannot long retain it."

In the 150 years since the establishment of the seat of the Federal Government in the city of Washington we have seen our Nation grow in size and in might until now it stands at the very forefront of all free and democratic nations. We have seen this city grow out of the marshes to become one of the most magnificent cities of the world. This has been accomplished in part because of a vigorous and growing population, partly because of a wealth of readily available resources. But just as responsible for the growth of this Nation and its power and position in the world has been the insistence on freedom which has welled up from the hearts of every generation of Americans. Our generation will meet all challenges to its freedom, as past generations have done. We shall work and pray to the end that we shall deliver to our children not only a free nation but a free world.

The Fair Deal in Virginia

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "The Fair Deal in Virginia," delivered at Richmond, Va., on April 18, 1950, by the distinguished junior Senator from Minnesota [Mr. HUMPHREY], one of the outstanding and most consistent liberals of the country.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I want to express to you my deep appreciation for the opportunity to visit your State—the birthplace of democracy—and to meet with you here in Richmond. I know that frequently it is difficult for those of you who live in Virginia to realize with how much awe and respect those of us from other sections of America look upon your native State. I well remember my school days as a youngster in a small town in South Dakota, reading about Monticello and Mt. Vernon, and studying the lives of Thomas Jefferson, James Madison, George Mason, Patrick Henry, and the many other illustrious figures in American history. I remember my sisters and my brother and myself talking about those early days and about the great State of Virginia with my father. Later, as a young man in Minnesota and as a student and a teacher of political science at the university there, the picture of Virginia as the birthplace of Presidents took shape more clearly. During my first visit to Washington not so many years ago, I remember that in my mind I looked forward as much to visiting Virginia—the cradle of great American tradition—as I did to visiting our Nation's capitol.

In many ways, therefore, it is with deep sincerity that I say how pleased I am to be with you tonight and to talk with you about affairs of state—problems of our democracy.

I was invited here tonight to participate in a debate with your senior Senator. I welcomed that opportunity and accepted that invitation, because I realized that whatever differences of political philosophy we may have, and whatever differences we may have about our interpretation of current trends, all of us share a common belief in the democratic process and in the importance of free discussion to our democratic way of life. One of the most essential parts of the American tradition is a respect for differences of opinion honestly held, and a recognition that a society without these differences of opinion is not a free society.

I also accepted the invitation to debate here in Richmond, Va., because I was conscious of the vital hictorical role which the public debate has had here in your own State and in the early development of our country. I need merely to mention the name of Henry Clay to illustrate that role.

I assume that the officers of the Virginia Commonwealth League and the representatives of the affiliated organizations sponsoring this meeting invited me here because I had the occasion in recent months to make clear and public my opposition to some of the activities of your senior Senator. Most particularly, I took issue with the activities of a committee of which he is chairman. It is the merits of my proposal to abolish that committee which was assigned as the topic of this evening's discussion.

I regret very much that the senior Senator from Virginia found it impossible to be here tonight, and to accept your invitation. I do feel that under the circumstances it would not be proper or courteous for me to debate that question in his absence. I do hope that we will have an opportunity to do so soon.

In the spirit of free discussion, however, I want to take this opportunity to discuss what I consider to be one of the most significant new developments in our American political scene. I refer to the growing participation of people in politics.

At the outset, before I begin to tell you what I have to say, let me make very clear what I do not intend to say. If your Virginia newspapers quote no other portion of my remarks tonight, I hope they will quote me to the following effect:

I am not going to discuss your State and local affairs. In spite of the fact that the State of Virginia and the State of Minnesota are both States with approximately 3,000,000 population, and with the same proportion of rural and urban population, and with many of the same problems, I fully appreciate that it is impossible for me, a citizen of Minnesota and a former mayor of Minneapolis, to attempt to tell you here in Virginia and in Richmond how you ought to run your government affairs. I shall not attempt to do so. I know that you, the people of Virginia, are fully able to make whatever changes may be necessary in your own way, in your own time, and in accordance with your own judgment.

We in America have passed through a very interesting period in our political history. There was a time not so long ago when it was possible for an American citizen to live his life, with but few exceptions, relatively free from direct contact and association with his Government. Ours was a simple society. Yes, we paid taxes, but not too much of that.

Affairs of government therefore were frequently and in many States a concern of the few. In the early days it was the concern of those who owned property. In the latter days it was the concern of those who had a business interest to advance through participation in government. Let us not forget that not too many years ago, only those who owned property and were considered men of means had the legal right to vote. There are only a few States in our Nation today who have any remnants of those undemocratic and aristocratic practices left. And even in those States, certainly in your own State, the poll-tax requirement is on the road to oblivion.

It was, therefore, quite understandable that with only the few participating in the political process, only the few were cared for through the political process.

Here is one of the greatest problems our democracy had to face. Democracy is based on the principle of majority rule. The great teachers of democracy have taught us that the judgment of the majority of the people is a far better judgment to follow than the judgment of any single minority, whether it be the few who own property or the few who control wealth. They had that faith because democracy to them meant participation by all the people in the political process. And the political process to them meant that the people would rule through their votes, after becoming informed and intelligent through debate and discussion and a free expression of their views.

The development of American history since that early day has been one of broadening and extending democracy. It has been a continuous striving to attain that goal so beautifully described by Abraham Lincoln when he said that ours was to be a "government of the people, by the people, and for the people." It was striving to make a political reality out of the immortal idea created and championed by that noble Virginian Thomas Jefferson, when he said "all men are created equal, and are endowed by their Creator with certain inalienable rights."

That tradition of human equality, of human brotherhood, and of increasing democracy has been championed in the twentieth century by Theodore Roosevelt, Woodrow Wilson, Franklin Roosevelt, and Harry Truman. It is receiving its greatest expression today in the program and political life of the New Deal and the Fair Deal.

This, my friends, explains the intensity of the opposition faced by the Fair Deal and the New Deal. The people are beginning to express themselves and as they express themselves the few and the privileged who have looked upon political activity and politics as their business and only their business are fighting to maintain their power and positions of privilege.

Make no mistake about it. The programs of the New Deal and the Fair Deal have helped business. Profits are at the highest level that they have ever been in the Nation's history. The New Deal and the Fair Deal have been good to them at the same time as those programs have provided for our welfare—yours and mine—and the millions of American farmers, workers, and small-business men.

There is only one logical reason for their opposition and their bitter hostility to the New Deal and to the Fair Deal. It is their realization that with the New Deal and the Fair Deal they no longer make the decisions; it is the people who make the decisions.

Nevertheless, it is good constantly to reevaluate the principles of the New Deal and the Fair Deal and subject that program to criticism and constant debate. I would personally far prefer to discuss the issues represented by the New Deal and the Fair Deal

rather than the slogans which the opposition has seen fit to repeat. But, I am prepared to discuss the slogans, too.

I was amused recently to read in the New York Herald Tribune that Governor Dewey delivered a lecture at Princeton University in which he said that it must have been some clumsy Republican who first used the slogan of the "welfare state" to label the Truman administration. You and I know, of course, that it is not only the Republicans who have used that label, but a great many who call themselves Democrats and who use that title behind which to hide their Dixiecrat and Republican ideologies.

In the election of 1948 the Fair Deal program of the Democratic Party faced the opposition not only of the Republican Party but also of the so-called Dixiecrat Party and its allies, many of whom did not have the courage to call themselves Dixiecrats. That Republican Dixiecrat coalition failed in 1948 to take away from the American people the benefits of the New Deal and the Fair Deal, and they will fail again.

You in Virginia know what I mean. All around you you see the signs of a well-laid plan to combine the Republican and Dixiecrat Parties into a seceret alliance to defeat the national Democratic administration and place in power a program and philosophy which would overthrow the principles of the Fair Deal and the New Deal, which we and the majority of the American people believe in and voted to support.

For many years now those of us who call ourselves liberals or New Dealers or Fair Dealers have been accused of trying to change our form of government and our form of society. Our critics say we are trying to create a welfare state or a Socialist state. In my opinion the use of these slogans is an attempt to confuse the issues and to escape facing the issues. It is an attempt to frighten the American people with words by repeating these words over and over again.

I would not deny that there is some merit to the Republican claim that the Fair Deal program seeks the welfare state as an objective. The welfare state is a legitimate objective—one that is perfectly consistent with our traditions and with the current wishes of the American people. A state which is devoted to the welfare of its members, a state which looks upon man and his welfare as an end in itself, is one I support and urge you to support.

The United States began as a welfare state when its Constitution charged the Government with the responsibility of the general welfare of its people. In a sense this was one of the great differences between this new country which was born and the tired nations of Europe in the eighteenth century.

From that day until this day the history of the American development has been a history of providing greater welfare for its people.

As early as 1806 Thomas Jefferson of Virginia, as President of the United States, asked Congress to approve a donation of lands for a National Establishment for Education. It is fair to characterize this step as one of the earliest forms of Government subsidy, since land was a financial asset. The use of land during that early period played an important role in developing the concept of Government subsidies. Our Government eventually granted 250,000,000 acres of land for various welfare purposes: for education; for wagon roads so that everyone, not only the rich, could travel easily; for canals and levees; for public buildings; for railroads.

Let us not forget too the significant role played by the Homestead Act of 1862 in developing our Nation and in bringing it to a position of power and responsibility in the world. For those who were not able to make an adequate living in the industrial areas of the East, Congress gave away vast areas of public lands to individual families. Today the Federal Government no longer gives land grants. The modern expression of that program, however, is legislation in behalf of unemployment insurance and social security. Today the method of payment is changed. But land or money, income-producing property, or income, there is no change in principle.

To provide financial assistance for welfare programs has always been a part of America's tradition. Furthermore, I issue the challenge tonight that it is an American tradition which even the opponents of the welfare state want to preserve. The only question which remains an issue is the question of "whose welfare."

As early as 1791 Secretary of the Treasury Alexander Hamilton—the symbol of conservatism—made a plea before the House of Representatives for Federal subsidies to manufacturers.

During the nineteenth century the United States Government gave to the railroads a total of 179,000,000 acres of land.

At this very moment the Reconstruction Finance Corporation and the Export-Import Bank assists private industry financially. I suggest that Mr. Guy Gabrielson, himself one of the leading exponents of reaction in America and spokesman for the Republican Party, is in favor of continuing that form of Government subsidy since the Carthage Hydrocol Corp., which he heads, has received the total of more than $18,000,000 in loans from the Reconstruction Finance Corporation.

In this connection I have one further observation to make. I am a member of the Senate Post Office and Civil Service Committee. In our committee is a bill to raise postal rates. The same magazine and newspaper publishers who daily attack the Fair Deal as a welfare state and oppose Government subsidies for the American people are daily in my office and before our committee, insisting the Government postal subsidy to their business be maintained. Last year the newspaper and magazine publishers of America received a subsidy upward of $200,000,000.

Many of these Government subsidies to business are desirable. But if they are desirable to help profits, they are desirable to help people.

Those of us who would advance proposals for welfare legislation do so because we are striving for a more perfect democracy in which the American people through their Government can build a constantly improving society.

Abraham Lincoln said in 1854, "The purpose of government is to do for the people what they cannot do for themselves or cannot do so well for themselves." That is philosophy which the New Deal and the Fair Deal represent and which I today represent.

What we strive for can best be put in the phrase "economic democracy." That phrase means "a system which preserves the political fabric of democracy and the freedoms traditionally associated with it at the same time as it searches for increased economic freedoms."

A wise man once said, "hungry stomachs do not make good political advisers." It is our objective to use the great wealth, the greater resources, and the great genius which is ours toward strengthening the establishment of a society free from economic insecurity.

We are moving into the second half of the twentieth century, a century which has seen America's productive strength grow beyond the dreams of even the most visionary of our national founders. Today we have the natural resources and the technical knowledge to open up a new vista. President Truman's recent messages to Congress have demontrated the possibilities that are open to us. Merely by continuing our past rate of growth we can within five years increase in production 20 percent, which would mean increasing the average family income by about $1,000 a year. Within our grasp in the next 50 years we can treble today's standard of living which would mean average family incomes of $12,000 a year.

We have an opportunity for the first time in the world's history to establish a society in which every family can have a decent standard of living and in which luxury living will be available to an increasing number of our citizens. It can be a society in which all have enough without unduly limiting the rewards available for the more industrious and the more able.

Yet as these possibilities come to mind, there also comes to mind the increasing complexity of our society.

In the not too distant past opportunity was open to all. If a man was willing to make the effort he could have the richest land and the richest resources for the asking. Today millions of families are dependent on jobs that may disappear tomorrow with no others available. Millions of families live on tiny worn-out farms eking out a bare subsistence. Many of them live right here in Virginia.

In this the land of plenty—in this the century of progress—we in America still have almost 10,000,000 families, or about one quarter of our population, trying to get along on less than $2,000 a year. Many of them live right here in Virginia.

Here is the crisis we face. Here is why we need a Fair Deal program working toward an increasing welfare program working toward greater economic democracy.

There are some who feel that the realization of the dream which is before our eyes cannot be achieved without sacrificing the free enterprise system—and they prefer the free enterprise system.

They are of little faith. I believe in the free-enterprise system—I am not a Socialist. No other system could have made the progress we have made in the past 150 years. But the free-enterprise system in America as we have seen it has always been one receiving encouragement, stimulation, and protection from Government activity—from Government welfare programs.

Let us not forget that the protective tariff, the darling of big business for so many years, was one of the most flagrant examples of governmental interference in behalf of business.

The greatest threat to the free enterprise system in America is not social security, minimum wage, aid to education, rural electrical programs, and the like. The greatest threat to free enterprise in America is growing monopoly in America.

There are those who would have us believe that an unbalanced budget spells the end of free enterprise in America. That is nonsense. I am more concerned about the fact that the Federal Trade Commission recently reported to Congress another half a dozen industries which are dominated by 4 to 6 companies making a total of 19 highly concentrated industries out of 26 studied. I am more concerned that 3 companies control 95.3 percent of the tin cans and other tinware industry; that three companies control 92.1 percent of the linoleum industry; that another three companies control 88.5 percent of the copper smelting and refining industry. In this connection Anaconda Copper alone controls almost half the capital assets of the whole industry and another quarter of the capital assets of the copper industry is controlled by Kennecott Copper Corporation.

I am concerned about the future of the free enterprise system when I learn from the Federal Trade Commission reports that 113 companies, all with assets of more than $100,000,000, own almost half of the manufacturing plan and equipment in the whole of our United States.

The free enterprise system is in danger but the danger does not arise from welfare programs. The danger arises from the fact that from 1940 through 1948, according to the Federal Trade Commission, more than 2,450 formerly independent firms in the manufacturing and mining industries alone disappeared as a result of merger and acquisitions. The asset value of these firms amounted to about $5,200,000,000 or nearly 5 percent of the total asset value of our manufacturing corporations in America. Moreover, nearly one-third of the companies merged were absorbed by the very largest corporations, those with assets exceeding $50,000,000,000.

It is monopoly which threatens a free America. I do not consider unbalanced budgets to be desirable objectives. Unbalanced national budgets, however, are not indications of the basic health of the American economy. The Republicans would balance the budget but they would do so I suggest at the expense of unbalancing the American economy. I remember well the days of the balanced budget under Ogden Mills, Andrew Mellon, and Herbert Hoover, and I remember that those balanced budgets spelled unbalanced family life for millions of Americans. I am more concerned with balancing the daily lives of Americans and their families so that they have full employment; so that they can enjoy the fruits of their labor; so that they can participate in the good life which is possible in our society.

You in Virginia have clear evidence of the effect which the New Deal and the Fair Deal have had on your State and the welfare of your citizens during the past 15 years. Let me address myself for a few moments to those of you who are farmers or who are interested in agricultural problems. I know what I am talking about. I grew up in a farming community in South Dakota. I was a young man in South Dakota when the depression and the drought combined to play havoc with the farm families. I learned a great deal about agricultural problems from first-hand experience—as much as some men learn in the ivory towers of State colleges. I know what it means to own a farm or try to live on a farm with declining farm prices, with mortgages past due, with poor soil conservation and soil erosion, and with big debts.

In 1932 the cash income of the farmers in Virginia was $70,000,000; in 1947, after 15 years of the New Deal, the cash income of the Virginia farmers was $413,000,000—an increase of five times. This is the welfare state of which you are to be frightened. In 1929 nearly $92,000,000 in mortgages was outstanding in Virginia; in 1947 these debts had been reduced to $72,000,000, in spite of the fact that the value of the dollar decreased; and this is the welfare state of which you are to be frightened.

Since 1933 the Farm Credit Administration has given assistance to nearly 12,000 Virginia residents to buy farms through loans of approximately $29,000,000. This has encouraged and made possible the ownership of family-size farms. This has strengthened the institution of private property and free enterprise in Virginia. This is the welfare state of which you are to be frightened.

Today more farmers are able to produce their own food by their own labor and on their own land than ever before. Here is the essence and the finest expression of free competitive enterprise that this or any country could offer. This was made possible through the program of the New Deal—through the welfare state, if you please.

Is it economical? I ask, could we afford to do anything else? The investment of approximately $29,000,000 to help Virginia farmers has done more to preserve free enterprise and the American way of life than any other single investment of like amount that I can think of. The alternative is a land system under which the banks, absentee landlords, and gentlemen farmers in the city own all the good farms.

But I must confess to you that in addition to promoting family farm ownership, the Roosevelt and Truman welfare programs are guilty of another grievous sin insofar as the farmer and his family are concerned. Do you know what they have done? They have very nearly destroyed the market for kerosene lamps on Virginia farms. Now, isn't that awful? Yes, through the REA Virginia farmers, acting together to form cooperatives, have strung in the first 12 years of the REA 14,555 miles of rural lines. They have brought service to 50,000 farms which never enjoyed the benefits of electricity before. When the REA was set up in 1935 less than 8 percent of the Virginia farmers had electric lights. I am told that today that percentage is in excess of 80 percent. I now fully understand why the Virginia citizens voted for Harry Truman and Alben Barkley in 1948, even though they did not receive encouragement from within their own State to do so.

More than two-thirds of Virginia's farmers are participating in the agricultural conservation program of the Production and Marketing Administration. Soil has been conserved and restored. Farms have been improved. Farmers have been enabled to obtain fair prices for their crops. Farm mortgages have been reduced. Tenants are now able to buy farms and make rented land their own. Farmers and farm people appreciate the benefits of electricity as much as you and I in the city. Today the farmers of Virginia are able to get telephone service through the use of REA funds by cooperatives. Incidentally, this market for telephones and electrical appliances will compensate the city folk many hundreds of times over the kerosene-lamp market.

Let me go on with a few additional direct examples of how the Fair Deal program affects the residents of Virginia. In 1947 nearly 115,000 Virginia residents received direct benefits from the Federal Security Agency in old-age pensions or unemployment insurance or child care. In 1947 alone more than $13,000,000 went to Virginia for these programs which benefited every resident of your State through improved health, education, vocational rehabilitation and social security. You should have received more, and more was available to you from the Federal Government. But more than 41,000 residents of Virginia received unemployment benefits in 1947.

I have already made it clear that the Fair Deal and the New Deal programs have helped all the people—and that includes the bankers—the bankers who forget the year 1932 when banks were closing and bankers were committing suicide. In 1933 nine Virginia banks with deposits of $879,000 failed and closed their doors. Today there are deposits of $1,800,000,000 in 314 banks in Virginia. None of these banks have closed and all of these deposits are insured by the Federal Deposit Insurance Corporation. We still have many problems to concern ourselves with, but the closing of savings banks is not one of them. I thought all of you bankers in the audience would like to know that.

Let me say a few words about the education of your young boys and girls. It might be that the State of Virginia doesn't need Federal funds for education—I don't know. It might be that Virginia has the finest set of schools anywhere in the country—I don't know. But you did receive $105,448,147 in Federal funds for education during the first 16 years of the New Deal beginning in 1932. Furthermore, in 1947 the Veterans' Administration spent $30,769,778 to educate the veterans of World War II in Virginia.

This is the welfare state of which you are to be frightened.

In the dark days of 1938 President Franklin Delano Roosevelt warned the American people. He said: "Democracy has disappeared in several other great nations, not because the people of those nations disliked democracy, but because they had grown tired of unemployment and insecurity. * * * In desperation they chose to sacrifice liberty in the hope of getting something to eat. We in America know that our democratic institutions can be preserved and made to work. But in order to preserve them we need * * * to prove that the practical operation of democratic government is equal to the task of protecting the security of the people."

Yes, this program and these principles which I state have international implications as well. America must prove to the peoples of the world that political democracy and political freedom is not synonymous, as the Communists would have them believe, with industrial anarchy, growing unemployment, and the monopoly state. American democracy must prove that political freedom and political democracy can bring about an economy which is a healthy economy—one which is concerned for the welfare of the people. In fact, political democracy and economic oligarchy are incompatible and there can be no lasting political freedoms so long as economic control is in the hands of the few and so long as economic security is missing in our society.

America has a responsibility in international affairs. It is a responsibility to preserve democracy in the world. It is a responsibility to preserve the peace of the world.

In a speech in the First Continental Congress in Philadelphia on October 14, 1774, the great Virginian, Patrick Henry said, "I am not only a Virginian; I am an American."

We today have a responsibility to say "We are not only Americans; we are citizens of the world." If we are indeed sincere about preserving democracy as a way of life for us and for our children, we must understand that democracy has to be protected all over the world. Those who would oppose assistance to the peoples of Europe—striving to keep their heads above water—are opposing efforts to preserve democracy. They are performing a great disservice; not only a humanitarian disservice, but a great disservice to our own interests and to the interests of our children.

In conclusion, my friends, I make a plea for a rational rather than an emotional approach to the problems of government. I make a plea that we respect the facts.

It is difficult for the American people to understand when Mr. Alfred P. Sloan, Jr., head of the board of General Motors, makes a statement on January 16, 1950: "In recent years economic incentive has been weakened by the ever-increasing take of Government. I fear the effect is beginning to be felt on the economy." And then for General Motors to announce that it had earned $600,000,000 profits in 1949—more than any other company has ever made in the history of American industry. I suggest this is not a rational approach to discussing political issues.

Since the war American big business according to the Federal Trade Commission has been making approximately 20 percent profit on its invested capital after taxes. This compares with about half that figure before the war.

If our political opponents wish to label the program we stand for as a welfare state—then let it be so. Call it what you will—one fact, however, stands out in bold relief. This program has raised the living standards of the American people. It has given a modicum of security to all areas of our population. It has provided a floor on living standards. It is furnishing relief from the apprehensions and anxieties which lead men to surrender their freedom. It is providing minimum protection against the hazard of old age and unemployment. It will provide

prevention from catastrophe of sickness and disease. It is giving decent shelter to more and more of our people. It is putting a floor under wages. It will provide Federal aid to education so as to give every boy and girl equal educational opportunities so that none will remain the slaves of ignorance.

These programs are strengthening the ring of freedom that centuries of struggle has drawn around western man.

These programs are providing the incentive and will set the example which will undermine totalitarianism wherever it may be.

Jefferson, Jackson, and Politics

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address I delivered in Denver last night to the annual Colorado Jackson-Jefferson Day banquet.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

After all these years of hope deferred, I cannot tell you how honored and pleased I am to be the speaker at the traditional Jefferson-Jackson Day dinner in Denver. Those who asked me must have been shocked by the immodest speed with which I accepted. Ordinarily I play hard-to-get, like a pretty girl who loves to shop around, but this time I spoke up fast. Frankly, I feared that it might turn out to be one of those pleasant dreams which fade with awakening, so I shouted "Yes" before the ink was dry.

Just 20 years ago when I was candidate for the office of lieutenant governor a very dear political friend, Max Schradsky, who, like all true friends, was brutally frank, said to me, "You will get along with the people all right but the party leaders will never like you." I have pondered that severe observation through the years. And then came this surprise invitation by the unanimous vote of the party leaders. So, at long last, here I am.

I am deeply indebted to the Democratic Party of Colorado. They have honored me with high offices and they have been very patient with me through the years. Our party won a sweeping victory in Colorado in 1948, but it was not an accident. It was according to plan, well thought out and well executed by our party leaders. State Chairman Joe Little and Vice Chairman Fern Miller did a superb job and George Rock, president of the Truman-Barkley Club made political history in Colorado. National Committeeman Barney Whetley and National Committeewoman Marguerite Thompson lent a thousand "assists" in a thousand different ways through the campaign. President Truman and Vice President Barkley gave us the kind of political leadership which counted most. All in all it was a magnificent job.

To a lawyer a place on the bench is a spot near heaven. Therefore, the rest of us are glad to see the man we love, Governor Knous, become Federal Judge Knous. If ever a person deserved the best of Democratic Party has to offer it is Governor Knous. His candidacy in 1946 marked the beginning of the come-back trial for the party in Colorado. Twenty years before, in 1926, the dean of Colorado politics—the beloved Billy Adams and Judge Knous' counterpart—the two men have a strong family resemblance—started the party back from an unemployed status without compensation to a place of trust and responsibility. In 1926 and 1946, a Democratic designation in Colorado was almost as hopeless as a Republican nomination in the solid South, but a miracle happened. The party owes much to both of these humble but stalwart men of noble character. Unpretentious but wise; warm-hearted but firm; self second but Colorado first, their careers stand out like the great mountain peaks which adorn this State. The rich qualities which made Jefferson and Jackson the patron saints of the Democratic Party whom we honor tonight predominate in Billy Adams and Lee Knous.

Like them both Jefferson and Jackson feared the public debt and all four of them have made the "pay-as-you-go" fiscal policy their passion. Jackson, as you will recall paid off the national debt while he was President, and is the only man in history to turn the Presidency over to his successor entirely free from debt. Some sort of a monument ought to be erected in his honor to commemorate that notable achievement. Governors Adams and Knous proved to be not only faithful guardians of the exchequer but they were faithful to every interest of the people. Governor Knous will go on to make the Nation a great—a really great trial judge. His own struggle in life has given him a clear understanding of the tribulations which worry mankind and his big heart, tempered by his firm adherence to simple justice, will make conspicuous his career on the Federal bench.

It gives me genuine joy to congratulate my old friend and member of the Johnson clan as "His Excellency the Governor of Colorado" and to greet his lovely better half, Mrs. Walter Johnson, as the "first lady" of this great State. In you, Walter, Colorado will have another careful, faithful and economy-minded chief executive. I wish both of you the success and happiness you so richly deserve. The Walter Johnson family and the Truman family have so much in common. Both of these first families are humble, sensible, God-fearing commoners whose public careers are dedicated to the promotion of mankind's highest and best aspirations. The solemn words "promote the general welfare and secure the blessings of liberty to ourselves and our posterity" so significant in the preamble of the Constitution, will guide and inspire Walter Johnson just as they have Harry Truman.

Last night in Washington the Colorado Society held a banquet in honor of Colorado's two Cabinet members, Oscar Chapman and Charles Brannan. Without precedent it is a mark of real distinction for one State to have two men sitting in the President's official family. Most States would feel honored to have one Cabinet member, but now the Centennial State has two. It makes us feel mighty important. Both are recognized as distinguished national figures. Both stand out as very able and greatly respected men and officers.

Just 5 years ago upon the sudden death of America's beloved President, Franklin Delano Roosevelt, in deep sorrow Harry Truman was called to the most difficult task on this earth. It is hard enough to follow in the footsteps of a man the whole world worshipped, but when Harry Truman succeeded to the Presidency the war still raged on two fronts. With the end of fighting came the transition to peace by a Nation geared to war as the economy and activity of a Nation were never geared to war so completely before. But Harry S. Truman, often with the misgivings of the people, took it in stride. After his surprise victory in 1948 we have quit worrying about Harry S. Truman.

Colorado has four Congressmen. Three of them are Democrats who deserve a big hand from the party. JOHN CARROLL proved to be the "freshman Congressman of the year" when he was first elected and he has continued to grow in stature and favor in Washington from that day to this. WAYNE ASPINALL and JOHN MARSALIS are top men among the newscomers in the Capital today. SAM RAYBURN, the beloved generalissimo of the House, a few days ago said to me, "Where do you Colorado miners dig up all the splendid men you send to the House?" Really, folks, I have never seen two rookie Congressmen take hold of things the way MARSALIS and ASPINALL have. It has been a joy to labor in the congressional vineyard with them.

We are gathered here on an important occasion. This is "kick-off" night. This is the time and place in which the Democrats open the 1950 political "hope chests" in Colorado. From now until the first Tuesday after the first Monday in November it will be buzz and buzz; and yakity-yak, yakity-yak, yakity-yak—for in the springtime of even-numbered years old men's fancy turns to politics. Seeking political office, however, is both honorable and vital in a democracy, so on with the array of political hopefuls. I hope, too, the Democrats may have many women candidates this year. Politics would be stupid indeed without the active participation of candidates and workers from the gentler sex. And especially workers!

Even though events justify it, tonight I shall not follow the time-honored and shopworn "point with pride" and "view with alarm" blood-and-thunder-roaring type of political speech. While this is a partisan group who might enjoy that kind of straight-faced kidding, I hope to be more philosophical in what I have to say, but doubtless less entertaining.

God and country both come before party; but since Government is our most vital and serious business, politics in election years is entitled to our undivided attention. Nevertheless, we must remember always that a political party is the servant of the people and not its master. A political party is not a religion, a social scheme, an economic philosophy, a system of government, or a way of life. A political party is not an end; it is a means to an end. A political party is merely a convenient and realistic instrument of the people through which, by collective action, they are able to participate effectively in the affairs of state. For more than 160 years we have maintained the world's oldest government and the world's foremost democracy through the political party technique.

In Europe many democracies have more than a hundred political parties. There every political faction and every political philosophy has its very own party. There, after the election the leaders of the splinter parties meet in a smoke-filled room and decide the fate of the country through coalition. Over here we have succeeded in holding the number of political parties to the barest minimum. Over here we have just as many shades of political thinking but we form the coalition before we vote instead of afterward, thus escaping from the uncertainties of loose political affiliations.

Nevertheless we have failed miserably and traditionally to get out the vote in the United States. In the democracies of Europe more than 90 percent of the eligible vote. Over here we do well in a red-hot Presidential campaign to get out 50 percent of the eligible voters. Equipped as America is with modern communication and transportation conveniences, coupled with our generous provisions for absentee balloting, there is no comforting explanation for this disquieting situation. Neither of our great parties can be very proud of the disturbing and unpleasant fact that 45,000,000 eligible voters failed to cast a ballot in 1948. Such indifference is dangerous to the Republic. It is a national disgrace

that our great political parties were so lacking in appeal that 45,000,000 electors said, in effect, "I want no part of either of you." Neither party can point with much pride to that bad record and, in truth, to the advantage of the Republic both might well view it with soul-searching alarm. Unless the two parties do a better job of appealing to the voters we may have to go to the splinter-party system here, too. As Democrats, then, it is our first duty to make our party so attractive and compelling that we will get out our share of those 45,000,000 nonvoters in 1950 and thereafter.

Since 1946 for the first time in many years only two political parties are represented in the United States Senate. That does not mean, however, that there is greater political unity in that great deliberative body or in this country for that matter; nor does it signify that the only division of political thinking is between the traditional Republican and Democratic Party philosophies. Far from it.

I have never seen sharper division in political thinking than exists today in the United States Senate. The Republicans have 42 Senators and 4 distinct factions. The Democrats boast 54 Senators and are burdened or blessed, however you view it, with at least 3 very well-defined schools of thought. That is not the whole story by any means. Almost every Senator, in some degree, follows his own ideas. Too, many Members of both parties talk one way in the cloakrooms and vote the other way on the floor. That does not necessarily convict them of being politically fickle or guilty of gross double talk. Senators never forget—nor should they—that in this Republic they represent the people of their States and are duty bound to cast their votes on the basis of what they think the people at home want.

I feel that it is to the credit of the Senate and to the country that we do have these 7 well-defined political schools of thought and probably as many as 50 lesser well-defined political philosophies in the Senate. It proves conclusively that there is no thought regimentation in America. It means that in the Senate we have that friction of minds which is so essential to political independence and freedom.

Should a bandit burst into this room and rob some of the wealthy Republicans who honor us by their presence tonight and who have become prosperous through these many years of Democratic rule from us Democrats, the police would get a wide range of descriptions of the robbers.

One would say the bandit was lean and hungry looking; while the ladies—bless their hearts—might describe him as tall, dark, and handsome. Some would swear he wore an overcoat, while others would insist it was a zoot suit.

Parade the social and economic facts of life before the 96 Members of the Senate and we come up with 7 different verdicts. That is an indication of the complexity of life in the midyear of the twentieth century. It takes all of those 96 concepts blended together to cover the whole field of our social and economic problems. Three blind men examined an elephant and then tried to describe its appearance to their wives. One tall fellow felt of its massive side and said an elephant is exactly like a great wall. A short chap wrapped his arms around the elephant's ponderous legs and decided that an elephant for all the world is like a tree stump. The third observer took hold of the elephant's trunk and concluded an elephant is very much like a rope. Taken separately these blind men badly missed the appearance of a pachyderm. But their collective conclusions properly put together make sense. It requires many minds to make a sound decision. That is why we put 12 men on a jury and 9 good and true men on our Supreme Court.

What a congestion there would be in the world if every human being wanted to live in Colorado, or California, or Canada, or New York City. How hungry would we get if everyone insisted upon spending his life fishing or painting or writing poetry or building highways? What a dreary world it would be if every male were a playboy and every female a glamour girl or, on the other hand, if every youth were austere and every damsel wore a veil. God was wise in making us different mentally and physically. It takes all kinds of people to make a world. No one is sufficient unto himself.

Why, then, should we expect uniformity in the interesting field of politics? Why not a little variety there, too? The Democratic Party is a big tent. It houses a wide range of political thinking. Across the tracks is another tent. It harbors many factions, too. Each of us has his own reasons for selecting either one tent or the other. That free choice is precious and must endure. But the choice within the tent is precious, too, and if the tent is not to be torn in shreds, the right of individual thinking within the party must be respected and accepted as proper and advantageous to the political party housed there.

No wise parent expects all of his children to be exactly alike in their appearance, aspirations, habits, tastes, and deportment. No wise party leader would insist upon his whole membership being peas-in-a-pod. If we want our individual political views respected as being honest and sincere when they are honest and sincere, we must respect the political views of others. The freedom to be wrong is just as vital as is the freedom to be right.

The saddest human performance reported by the press these days is a Sunday election in a totalitarian state. One ticket, one candidate, one bayonet in the buttocks, and 95 percent of the eligible electors voting like sheep, is the most depressing story of intellectual degradation which can be told. Rebellion rages within me when I hear my fellow Democrats advocate voting the party line, meaning their own narrow conception of the party line and in deadly earnest insisting that other members are dirty so-and-sos because they have minds of their own. I recognize such thought oppression for what it is—a Klu Klux Klan concept with disaster for the party lurking under its white robes of good intentions. It is the identical intolerance and bigotry which made Hitler infamous. For Democrats to despise other Democrats for their honest convictions and honest political conclusions is a concept of insane regimentation foreign to the Jeffersonian philosophy of freedom. The fiery independence and spontaneous abruptness of Jackson and the revolutionary nature of Jefferson have intrigued me always.

I am a Democrat because regimentation is repugnant and abhorrent to me. There is something way down deep in me which insists upon reaching my own conclusions in my own awkward way without the domination of anyone or interference of any kind. I feel strongly that God wants me to be that way. With rebellion in my heart I became a Democrat when I was 19 years of age. My whole family were stanch party-line Republicans who looked upon Democrats as evil-minded political heretics.

It has always seemed to me that, until Teddy Roosevelt, Republicans followed the party line religiously with conformity and regularity their great party objective. I couldn't and wouldn't take it. But Teddy planted some seeds of insurrection in the GOP which are bearing fruit today. I rejoice for them and I rejoice for America that they do have four factions in the Senate today. It makes their party bosses uneasy and uncomfortable but it is the most wholesome thing that has ever happened to them.

Perhaps it will make them angry for me to make an observation about their failure to win elections lately, but everyone else is doing it so I shall venture one anyway. Once the GOP learns that shades of opinion is not a crime; once it discovers that its party belongs to the people, too, and that special interests do not have the divine right to call the shots; once it welcomes heretics, free thinkers, and political sinners, to sit at the banquet table with full rights, it will be summoned to power again at least part of the time. The Republican Party tent does not need a purge; it needs to open the entrance flaps a little wider, which will permit some of those 45,000,000 nonvoters to enter and add their counsel and advice to the smug exclusiveness which too long have characterized it.

If the Democratic Party becomes the errand boy for self-serving pressure groups, if it becomes haughty, cocksure, domineering, bigoted, intolerant, and Hitler-like toward all who dare to do their own thinking; if, with purge in its heart and regimentation its goal, it casts a jaundiced eye with nasty suspicion toward other Democrats; and if on the other hand, the Republican Party opens up its tent and its heart to all who want better political service, you will see the minority and the majority parties change positions in America. That is not going to happen because the Democratic Party will not be that foolish nor the Republican Party that wise.

But where does such a philosophy leave party responsibility? After all, the only justification for a political party is to carry out the will of the people and give the individual voter a voice in government by associating him with others of like mind, thereby conferring upon him the advantage of collective action. The thing to remember is that "like minds" is a very general term and does not mean "identical minds."

This is how it works in the United States Senate: Each party elects its party leaders in the good old democratic way and these leaders do what they can in the party caucus and in personal contacts to obtain the collective action of their respective groups. Each party has a policy committee whose duty it is to determine what are and what are not party issues. Any Senator pushing specific legislation has an open invitation to appear before his respective policy committee and try to convince that group that his legislative proposal is sufficiently important to designate it a party issue. However, fortunately for the country, not 1 bill in 20 is made a party issue by either party.

In the Senate, party platforms are not taken seriously. They are written in such glittering generalities traditionally and are so manifestly election propaganda documents that they cannot be much of a guide. All party platforms are against sin, and all are "for the people." So most Senators reserve to their own judgment how best to combat sin and how best to serve the people. Too, most Senators resent and rebel against party pressure except in justifiable and infrequent instances. They like to think that they serve God first, country second, and their party third. Oh, to be sure it is nearly always possible for Democrats to serve all three simultaneously.

I want to confine my discourse tonight to political philosophy without getting into the field of specific political issues, but I am compelled to discuss one issue briefly which, however, does border on political philosophy.

Our foreign policy should not be determined on a partisan basis. Once we get beyond that 3-mile shore line, partisan politics should end. During the war, F. D. R. very wisely made the war's prosecution bipartisan. The Atlantic Pact, the Chapultepec Conference, and the United Nations San Francisco Conference, out of whose loins came the United Nations Charter, were set

up by him on a strictly bipartisan basis. President Truman followed that policy religiously for 4 years. However, since the election in 1948 our bipartisan foreign policy has been falling apart at the seams. Both parties equally are to blame for this unfortunate state of affairs.

The situation has been high-lighted in recent weeks by the McCarthy charges and countercharges. In an uneasy and distraught world, washing our dirty linen in public has been bad—very bad. The net result has been, temporarily at least, to embarrass and destroy our diplomatic service throughout the world. President Truman is trying hard now to restore the bipartisan status. His appointments to the State Department of former Senators Cooper and Dulles, who are partisan Republicans, are steps in the right direction. More, much more, needs to be done.

The United States must settle down to the facts which are embarrassing the world, with candor, sobriety, and full comprehension. While the tension in Europe and Asia is growing alarmingly, the dangers of a shooting war are remote, but our arch-enemy, Russia, may be expected to wage an unrelenting cold war against us during the whole foreseeable future. Russia is especially proficient in that kind of warfare. Her oriental concept of limitless time, and her known ability at international chess, make her a formidable foe. We dare not lose it for a cold war can be as dangerous as a hot war. The nation which does not win the aggravating cold war, in which we are presently engaged, faces frustration, economic instability, and political dissolution. May we ponder that shocking dilemma prayerfully.

We must start playing chess too. Russia has her Politburo of 14 master minds where every international issue is weighed and analyzed with meticulous care. To combat that excellent technical strategy for prosecuting a cold war we must organize at once a bipartisan council of 14 of our ablest men. Seven of them should be partisan Republicans, not so-called Truman Republicans but partisan Republicans chosen by the Republicans whose love of country rises above partisan considerations in foreign affairs, and seven of them should be the same kind of Democrats.

They should be given every shred of secret information on foreign developments and international maneuvers which we are able to gather. Given the facts, they could develop long-range strategy, make realistic plans and outline international policies. Regardless of what party was in power in Washington, they would remain on guard. Great Britain is the most successful world power in the field of diplomacy of history. Her foreign policy does not change with her elections. Under Tory, Liberal, or Labor Parties Great Britain's foreign policy remains the same yesterday, today, and tomorrow. Such stability in itself insures success.

Under our Constitution the President cannot be bound by the decisions of such a council as I have outlined. Under our system the President is supreme in international affairs, subject, of course, to certain limited congressional checks, but it is inconceivable that any President of any party would not make the proposed council his good right hand. As I see it, that is the first step in combating Russia's cold war which is forcing us so rapidly into uncontrolled inflation and bankruptcy. Personally, I would go so far as to amend our Constitution and provide by law for such a council, spelling out its duties and responsibilities and making its decisions binding upon all.

And now in conclusion:

While I enjoy having the Democratic Party the top dog I believe in the two-party system with all my heart.

The people of this State and this country need vigorous party competition. I can think of nothing more detrimental to the progress of Colorado than to have but one political party. Party rivalry along constructive lines is the people's best political insurance. Of course, no one can find fault with the Democratic Party if it plans to render such an excellent service that a majority of the voters will support it. That is what we are here for tonight. That will be the heart and soul of our 1950 political campaign but none of us want the opposing party to roll over and play dead. We want them and we expect them to fight to the last ditch for their policies and their principles. Out of such a contest will come better government.

I want the party of my choice to render the people a progressively better political service. I want to see it attract to its folds as many of the 45,000,000 nonvoters as it can—not by glittering promises of unearned gifts and special privileges, but by espousing the principles of our patron saints, Jefferson and Jackson, and on such a basis appealing for confidence and approval. I repeat that it is a reflection upon all political parties that 45,000,000 eligible electors in the United States see so little in any political party to inspire them today that they refuse to bother about voting. That great army of voluntarily disfranchised Americans is our party's greatest challenge, and our party's grandest opportunity.

Address of Hon. Thurmond Chatham, of North Carolina, Before the National Association of Wool Manufacturers

EXTENSION OF REMARKS

OF

HON. CLYDE R. HOEY

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a very splendid address delivered by Representative THURMOND CHATHAM, the able and distinguished Representative from the Fifth Congressional District of North Carolina. Representative CHATHAM has had broad experience in domestic and international affairs, and this address deals with most important and vital questions relative to our international problems. It will be found both interesting and informative.

The address was delivered before the National Association of Wool Manufacturers in New York on April 12, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THROUGH THE LOOKING GLASS

Of course I am happy to be here among my friends and associates of former times. I spent many pleasant years as an active member and director of this association, and, in my whole experiences, I have never encountered a group of men who were more forward-looking, patriotic and hard working than the members of this company. Through peace and war, you have tried to do your part for the building up of our country and our general welfare. I have not always agreed with the policies of the association, nor with the policies of my competitors, nor, in fact, with the policies of my own associates in the manufacturing and merchandising of Chatham blankets, but I have never felt that disagreement was unhealthy—at least in business. I may have to reserve my opinion of the political healthfulness of disagreeing—at times—with one's own administration.

If you disagree today with many of the things I am going to say, I will be more pleased than if you take it for granted that I am following some party line and that my observations and opinions are not worth the energy required for an argument.

I feel very fortunate to have had practically a front row seat in the world's theater during the past 11 years. I was in England when the war clouds were gathering in 1939, and I was there when the German-Russian agreement was announced, and I shared the apprehension and depression which that news created. I was there when the German legions marched into Poland, and I was within 4 hours steaming of the ill-fated *Athenia* when she became the first major casualty of the new war.

I came home fired with the determination that I would try to do something to help us avoid war. I had served in the United States Navy during the period 1917–19 and my experiences on various fighting craft were not pleasant. I, therefore, made several speeches in North Carolina in the fall of 1939 and my theme was "Get Prepared." I was severely criticized by a large segment of the press of my State and called a warmonger and perhaps a war profiteer. These articles and editorials are a matter of record.

When we were attacked at Pearl Harbor, I was called into the service of the Navy as a former Reserve and served 4½ years in various capacities. I was asked to organize the lend-lease section of naval ordnance. I dealt with our allies, including the Russians, for 15 months. I then went to sea as third in command of the U. S. S. *Phoenix*, one of our light cruisers and the flagship of Crudiv 15, *Phoenix*, *Boise*, and *Nashville*. I was at Casablanca for a brief time and then in the Southwest Pacific where I saw action against the Japanese for many months, and was recalled to Washington to serve with my good friend, James Forrestal. I had a front seat during the closing months of the war because I was with a man who will probably go down in history as one of our all-time all-Americans.

Came the final peace—VJ-day—and a few months later I returned to normal life—but not to normal conditons. The problems of peace can be just as great as the problems of war, and since I had been out of active service in business for some years, I entered the political field—arena might be a better word. I was persuaded—quite easily—to run for Congress in the spring of 1946, and, because I had given up the active direction of my business, I felt that I might be of further use to my country—the one that had done so much for me, and the one that I had done so little for between World Wars I and II.

I feel very embarrassed in giving you such a personal account of my own activities but I hope that you will appreciate the fact that I have had the fortunate experiences of taking an active part in world events that has been afforded to few people—certainly to few people of my age and training. What I say now will be on my own—my own summary of the present situation and my estimate of a view through "the looking glass."

I am not here to talk Democratic or Republican politics. I hope I am able and qualified to talk American politics.

I am convinced that our prewar world has gone forever. We, the United States of America, are the main cog in a big wheel—whether we like it or not. At the end of the war we thought we had agreements among our allies, and that we faced a long era of peace—an era to repair our wartime casualties and form a firm foundation for continued progress. No one of us ever thought we would at once enter into a new sphere of uneasy peace. It was inconceivable.

Let's bring it down to our own businesses. We have weathered a crisis, and we breathe a sigh of relief—smooth sailing should lie ahead. We wake up and find one of our main partners completely out of step. We wake up to find a trusted partner has turned out to be undependable, secretive, grasping, untruthful, and dishonest. How can you do business with a partner like that? In business, if he was a minority partner, you would throw him out. If he was a majority partner, he would throw you out. If he was an equal partner, you would have to fight it out with him.

We are today fighting it out with him—move and countermove. Our battle lines have formed, and the strategy of each side is becoming plainer every day. If you agree with me that weaklings seldom win, you will also agree with me that we must never again be classed as weaklings. I would like to quote something that I heard from my preacher many years ago. He is now a bishop, but then he was a young minister speaking to a small group on Navy Day 1927. I take it from my diary. After telling us that we should each do something for our country and of our obligations to our country, he said, "As a minister of the Gospel, I speak of peace, but also as a minister of the Gospel, I commend to you the words of the Apostle 'When a strong man, armed, keepeth his palace, his goods are in peace.'"

I commend this to you. To each of you.

As a sophomore in the Congress, and as a member of the Foreign Affairs Committee of the House of Representatives, I am still sitting in the front row. I am wholeheartedly in favor of our present foreign policy. It is a policy unique in American history, but I believe that to them that do good will come the rewards. The Marshall plan is unique but it is working and will continue to work if our own fifth column does not sabotage it.

When General Marshall set forth his plan at Harvard in 1947, western Europe was in turmoil. Here was a meeting of a man and a date with destiny and one of those opportunities so seldom afforded in the history of our civilization. It was a new concept of the Golden Rule for, without hope of reward, we, the American people, were advised to give of our sustenance to those in distress, friend and foe alike. I couldn't take it in—I was too dumb. And then I began to think. I was raised in the shadow of the Civil War—the War Between the States. On one of my grandfather's knees, I heard the stories of Bull Run, of Second Manassas, of Shiloh and Missionary Ridge. On my other grandfather's knees I heard the story of Bedford Forrest, of the hit-and-run principle of "getting thar f'ustes with the mostes'." But more than that, I heard of the plight of the South during reconstruction. I heard of the loss of the South's best friend, Abe Lincoln, of Andrew Johnson who was persuaded to punish the prostrate rebels—of Sumner and Stevens and the long bitter years of recrimination.

Suppose the North—many of our own blood kin, had offered the South a Marshall plan? Suppose the North had said, "We have won the war, we are now one people and we are going to give you money and technical skills—and sympathetic understanding. We are going to help build you up in a partnership, forgetting past differences, forgetting past bitterness and forgetting everything except that we are Americans." Supposing they had said that? Don't you think we would have been ahead 50 years and that we all would have profited enormously by the transaction?

That's my own argument for the Marshall plan. I have seen it in action—in western Europe during the last few months. Recovery beyond belief—recovery among friends and foes. The tide of communism, so rampant in 1947, pushed back within its own constricted borders. Recovery in Holland, Belgium, France, Italy, western Germany, and slowest, but not least, in Great Britain. Of course, it is not perfect. Is your own business? But recovery just the same. The forces of democracy have made so many touchdowns against the forces of communism, that the score is becoming one-sided.

As I see it, we have got to become international-minded. We have got to forget about what is happening in Fall River, New Bedford, Lawrence and Elkin, what is happening in Massachusetts, Maine, New Hampshire, and Vermont, Virginia, North Carolina and Georgia, and begin thinking what is happening in Belgium, France, Italy, Israel, Egypt, India, Pakistan, and China. We had better begin thinking about our selling agents in a world so tiny that we could go around it in less time than our grandfathers took to cross Rhode Island.

I'll get a little confidential. I have always been very pro-British, although they have out-traded me all my life. They have proved to be our most dependable allies when the chips were down. I have fought by their side and I know personally that when the going is tough, they will step in where angels fear to tread. But today, the project of western union—the almost necessary combination of western European nations, is in my mind, being held up by our British cousins. They can't see that their survival depends upon their giving up something they have not got—the glory and prestige of the nineteenth century British Empire.

I stand before you as an advocate of our present foreign policy—a strong foreign policy. To be strong we must be prosperous, and we cannot be prosperous nor strong alone. I stand before you and express my confidence in the direction of our State Department. I think Secretary Acheson is one of the greatest Secretaries of State in our history. I agree with Senator VANDENBERG that politics should be out, and I think that Dean Acheson is just as capable of directing our foreign policy as Albert Butler is capable of running Chatham Manufacturing Co., and that's saying a lot—verse, chapter, and book. I think that our President has lately made a series of outstanding appointments, even if he has turned down my own postmasters in North Carolina. Gordon Gray, Stuart Symington, Frank Pace, and Tom Finletter are ace high in any company. We are in a warm war and we desperately need good men. We have got a lot of them. If I could pick Franklin Hobbs, Lew Hird, Dean Walen, Harold Walter, Mose Pendleton, Everett Kent, Win Schuster, John Hutcheson, Chet Wiese, and some of the rest of you to run the United States of America, I would say that it would be in fairly good hands. We might even put our friends Bennett and Riemer in charge of propaganda, but the cotton fellows would say that we were playing politics. I would make Hugh Bolton my General Vaughan and Vern Fisher Director of the Budget. If I could appoint Tom Sheehe as Protestant Chaplain General, we would really have a team.

Forget foreign competition. You are never going back to the "good old days," because there never were any "good old days." If we have a prosperous, peaceful world, we will prosper. We are lucky to be alive and kicking and to be the wonder and envy of the rest of mankind. Forget politics as such and go out and do some work for your Government, and I don't mean contracts. Consider a foreign hook-up, as you used to consider a branch in the South. Why don't you think about helping build up the standard of living in other lands? Just as the United States of America is your best market, help make a market in countries friendly to us. American industry, and I speak especially of the woolen industry, has a once-in-a-lifetime opportunity. Think seriously of point 4, giving technical know-how to other countries. Forget tariffs and concessions. Think of your survival and preach the advantages of more things for everybody. We came up by our own bootstraps. How about helping some other nation do the same? We in the South came from nothing and the worst that could happen to us would be to go back to nothing. That would be just where we started, and I can't see anything frightening about that.

If I had you with me in government, and we could make Arthur Besse Secretary of State and Ed Wilkinson Secretary of the Interior, we wouldn't hear many squawks about Socialist trends. I wish I could put over the fact that we are in a new age—you know it as well as I—and that if we can have peace, we have not scratched the surface of prosperity. The world is our oyster, but you—you here before me—have got to take your responsibilities. Don't come moaning to me about what is going on. Do something about it in your own bailiwick. I'm sick and tired of my business friends coming to me and saying that the country has gone to hell and that they want me to do something. If you send a man to Washington to represent you, what he does there is your responsibility. You had better come down South and find out why we have so many important committee chairmanships. You had better look around and see wh' Emil Rieve controls so many votes in Congress. I admire Emil Rieve because he sticks to his knitting, and so many of our group constantly drop stitches.

If you can go to bed tonight and say that you have done something today that will forward the causes of democracy, I will take off my hat and make my best bow. But don't go to bed thinking that you have outtraded Davis and Furber or Crompton and Knowles when you had better be thinking about a good foreign policy and what you—you—could do for your country.

I leave you with a word of advice—how easy it is to give and how hard to take—and I say it seriously:

Send your business abroad.
Send your boys into Government.
It's your business and your Government.
It's my business and my Government.

Our Government has got its hands in your pocket, and my pocket, and as long as we fail to take an active part in the management, we should not have the right to say much about its policies.

Personally, I hold you responsible for the actions and decisions of my colleagues in Washington. I have seen very few of you there, although you are important stockholders in the United States of America. I am almost bitter in my feelings toward those who criticize so freely and dodge so adroitly. We talk of budgets and balances—we talk of farmers and unions. Why don't you jump in and see whether the swimming is fine?

We have been blessed beyond belief, and if everything doesn't go to suit you, don't blame it on Harry Truman or THURMOND CHATHAM, or your own Representative. Take a look in the glass and see if you can say to me—I've done the best I can.

Defense Department Press Releases Constitute Dishonest Hoax Upon Aircraft Workers

---

REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. HINSHAW. Mr. Speaker, certain press releases have been emanating from

the Office of the Secretary of Defense, such as one which I will include in the RECORD as part of my remarks. This article is as follows:

AIR FORCE AND NAVY TO BUY 2,048 PLANES FOR NEARLY $2,000,000,000

(By John A. Giles)

The Air Force and Navy are purchasing 2,048 new aircraft this fiscal year.

The Defense Department, announcing the award of plane contracts yesterday, said the Air Force would get 1,250 planes at an estimated cost of $1,297,500,000 and that the Navy would buy 798, costing an estimated $557,500,000.

The largest Air Force contract went to Boeing Airplane Co., for B-47 Stratojet bombers, costing an estimated $303,600,000. A Stratojet set an unofficial transcontinental record of 3 hours and 46 minutes, flying 2,289 miles from Moses Lake, Wash., to nearby Andrews Air Force Base last February.

The Air Force will spent $267,800,000 with Consolidated Vultee for the controversial B-36 bombardment planes.

HELICOPTERS ORDERED

The only new type of procurement by the Air Force is for helicopters. It will buy H-21 Arctic rescue helicopters, or Flying Bananas, from the Piasecki Helicopter Corp., for $9,300,000. The Navy will spend $4,156,064 with Piasecki for helicopters.

North American Aviation, Inc., received a $130,900,000 Air Force contract for building F-95 interceptor fighters, while the Lockheed Aircraft Corp. was awarded a $120,000,000 contract for F-94 two-place radar-equipped interceptors.

Fairchild Aviation will build more C-119 Packets, capable of hauling 18 tons of men and equipment, at a cost of $40,000,000 for the Air Force.

The Navy's largest award went to Grumman Aircraft Engineering Corp. for twin-jet F9F Panther fighters, costing $92,902,841. The same firm also received a contract for $41,308,714 for building AF Guardian single-engine attack bombers.

SIXTY-EIGHT MILLION DOLLARS FOR BANSHEES

McDonnel Aircraft Corp. received a $68,637,434 contract for building the F2H Banshees, which the Navy has said was capable of knocking down the B-36 at altitudes in excess of 40,000 feet.

The Navy will spend $36,700,941 with Lockheed to provide additional P2V Neptune jet bombers. A Neptune holds the world's long-distance record.

Other Air Force contracts:

C-97 transports, $32,800,000, Boeing; T-29 transport navigational trainers, $9,800,000, Consolidated Vultee; C-124 troop carriers, $84,500,000, Douglas Aircraft Co.; SA-16 amphibious air-sea rescue planes, $7,800,000, Grumman; T-33 trainers, $26,900,000, Lockheed; F-86 Sabre fighters, $34,400,000, North American; T-28 jet trainers, $15,600,000, North American; F-89 Scorpion all-weather fighters, $81,800,000, Northrup Aircraft, Inc.; F-84 Thunderjet fighters, $37,400,000, Republic Aviation Corp.

MORE NAVY JETS

Other Navy contracts:

F3D twin-jet fighters, $61,666,933, Douglas; AD single-engine attack planes, $12,121,360, Douglas; TO single-jet trainers, $1,265,000, Lockheed; P5M two-engine bombers, $31,700,941, Glenn L. Martin Co.; AJ twin-engine single-jet attack bombers, $16,583,982, North American; F4U single-engine fighters, $9,112,000, United Aircraft Corp., Chance Vought division.

The Air Force said additional aircraft procurement of about $94,300,000 is being obligated for related items of service, such as transportation, ground handling equipment and modification of existing types. It added that minor adjustments in costs and total number of aircraft might take place before June 30.

The Navy said that in addition to contracts already awarded for aircraft and aircraft equipment, $174,700,000 of procurement, primarily for Government furnished equipment, is being negotiated.

Mr. Speaker, the Defense Department, the Air Force and Navy, are not issuing new plane contracts and did not do so yesterday. These articles constitute a cruel hoax upon the aircraft workers and all persons connected with the aircraft industry, as it leads them to believe that new planes are being ordered. As a matter of fact, these planes were ordered last October and November pursuant to appropriations made last year for plane purchases. Nearly all of these contracts were announced in the press at the time so that this is only a rehash of what was published 5 months and more ago. In consequence of reading these articles today in the newspapers, unemployed aircraft workers are flocking into their union headquarters and into aircraft plants looking for their old jobs. Some of them have made contracts for the purchase of homes in the expectation of getting work or having assurances of continued work. Others have contracted for other types of purchases on the strength of these articles. This constitutes a dishonest hoax upon the aircraft workers of the United States, and news releases like this should not be permitted to emanate from the Office of the Secretary of Defense. Members of Congress are not fooled by these releases because they understand the terms used, but aircraft workers and the local merchants and others do not understand. They think that new orders are just now being placed.

Furthermore, Mr. Speaker, the numbers of planes stated in these releases fool the people because the ordinary citizen is lead to believe that all the planes listed are combat types, whereas many planes in the totals are trainers or transports.

Mr. Speaker, I append hereto the original news releases from the Department of Defense which served as the basic information upon which the many news articles were based.

The news releases referred to are as follows:

DEPARTMENT OF DEFENSE,
OFFICE OF PUBLIC INFORMATION,
Washington D. C. April 18, 1950.

AIR FORCE PURCHASING 1,250 AIRCRAFT FROM FISCAL YEAR 1950 FUNDS

The United States Air Force is purchasing 1,250 new aircraft from fiscal year 1950 aircraft procurement funds at a total estimated cost of $1,297,500,000

The estimated cost for complete aircraft and spares is $1,203,200,000. The airframe manufacturers listed below will receive approximately one-half of these funds for the manufacture of airframes only, and the remainder of the estimated cost will go to other manufacturers for engines, propellers, armament, communicat'ons equipment and other related items of procurement.

Additional aircraft procurement funds in the amount of $94,300,000 are being obligated for related items of equipment or service such as transportation, ground handling equipment, modification of existing types, and other costs to support the aircraft program which are not chargeable to the purchase of specific aircraft models.

Model	Estimated cost of complete aircraft (millions)	Air-frame manufacturer
B-47	$303.6	Boeing.
C-97	32.8	Do.
B-36	267.8	Consolidated Vultee.
T-29	9.8	Do.
C-124	84.5	Douglas.
C-119	40.6	Fairchild.
SA-16	7.8	Grumman.
F-94	120.0	Lockheed.
T-33	26.9	Do.
F-86	34.4	North American.
F-95	130.9	Do.
T-28	15.6	Do.
F-89	81.8	Northrop.
H-21	9.3	Piasecki.
F-84	37.4	Republic.
Subtotal	1,203.2	
Transportation, ground handling equipment, modifications of existing types, etc.	94.3	
Total	1,297.5	

The Air Force aircraft-procurement program for fiscal year 1950 is under continuing study and minor adjustments in estimated costs and total number of aircraft may take place before the end of the fiscal year.

DEPARTMENT OF DEFENSE,
OFFICE OF PUBLIC INFORMATION,
Washington, D. C., April 18, 1950.

NAVY PURCHASING 798 AIRCRAFT FROM FISCAL YEAR 1950 FUNDS

The United States Navy is purchasing 798 new aircraft with fiscal year 1950 aircraft-procurement funds at a total estimated cost of $557,500,000.

The estimated cost for complete aircraft and spares is $550,600,000 and the remaining $6,900,000 will cover related items such as ground handling equipment not chargeable to specific models. Airframe manufacturers will receive approximately one-half of these funds for the manufacture of airframes only, and the remainder of the estimated cost will go to other manufacturers for engines, propellers, communications equipment, and other related items of procurement.

The amounts indicated below represent contracts let to date for each model for both airframes and other aircraft equipment.

Model	Contracts awarded	Air-frame manufacturer
F3D	$61,666,933	Douglas Aircraft Co., Inc.
AD	12,121,360	Do.
F9F	92,902,841	Grumman Aircraft Engineering Corp.
AF	41,308,714	Do.
P2V	36,700,942	Lockheed Aircraft Corp.
TO	1,265,000	Do.
P5M	31,406,562	Glenn L. Martin Co.
F2H	68,637,434	McDonnel Aircraft Corp.
AJ	16,583,982	North American Aviation, Inc.
HUP	4,156,064	Piasecki Helicopter Corp.
F4U	9,112,000	United Aircraft Corp., Chance Vought division.
Total contracts awarded to date.	375,900,000	

In addition to the contracts already awarded for aircraft and aircraft equipment, $174,700,000 of procurement, primarily for Government-furnished equipment, is in the process of negotiation.

Address by Hon. James M. Mead Before the Baltimore Organization of the Better Business Bureau

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, a distinguished former Member of the United States Senate, the Honorable James M. Mead, now a member of the Federal Trade Commission, addressed the Baltimore organization of the Better Business Bureau recently regarding the role of the Federal Trade Commission in furthering and safeguarding the American system of free enterprise.

The facts and views presented by Mr. Mead will interest the great body of businessmen throughout the country, I am sure. For this reason I ask unanimous consent that Mr. Mead's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The president of your organization sent me a copy of the notice of your meeting today which stated that the subject of my remarks would be threefold: Why there is a Federal Trade Commission; How its operations affect your business; and The part the FTC plays in promoting and protecting the American free-enterprise system of business.

That is a large order for a few remarks after lunch, particularly from one who has only been recently appointed as a member of the Commission. However, during the period in which I was in the House of Representatives and the Senate, I had on occasion the opportunity to observe the work of the Commission and I was impressed not only by its past accomplishments but by the opportunity the Commission had to foster and promote fair practices in American business.

Our political and economic principles are based on the concept of free enterprise. For enterprise to be free, however, it must be fair. That concept is basic. You are not free to transact your business if you are stifled and suppressed by monopolies or beset by unfair competitors. The consumer does not buy on a free competitive market if the price which he pays has been fixed by conspiracy or monopoly or he has been induced to purchase commodities by deceit or fraud. Most of our people demand that our commerce be free, competitive, and fair. Because of that demand there is a Federal Trade Commission.

A little historical perspective may be informative and of interest. After the industrial revolution and the advent of the machine age in the latter part of the nineteenth century the problems presented by the concentration of productive wealth and the resulting monopolistic conditions were growing apace. In 1890 the Congress enacted the Sherman Act which made illegal conspiracies in restraint of trade. In the early part of the twentieth century, due to the constantly increasing problems of monopoly and other unfair trade practices, there was a strong demand for new legislation to supplement the Sherman Act. This demand culminated in President Woodrow Wilson sending a message to Congress in 1913 in which he recommended the creation of an Interstate Trade Commission. President Wilson said:

"The opinion of the country would instantly approve of such a Commission. It would not wish to see it empowered to make terms with monopoly or in any sort to assume control of business, as if the Government made itself responsible. It demands such a Commission only as an indispensable instrument of information and publicity, as a clearinghouse for the facts by which both the public mind and the managers of great business undertakings shall be guided, and as an instrumentality for doing justice to business where the processes of the courts or the natural forces of correction outside the courts are inadequate to adjust the remedy to the wrong in a way that will meet all the equities and circumstances of the case."

That is a very good general answer to the question of why there is a Federal Trade Commission and most of it is pertinent as of today.

For the purpose of brevity, the answers to the next two questions assigned to me for my remarks can be combined, that is, how the operations of the Commission affect your business and the part the Commission plays in promoting and protecting the free-enterprise system in American business.

The Commission was created by the Federal Trade Commission Act passed by the Congress in 1914. The act provides for the appointment by the President, by and with the advice and consent of the Senate of five Commissioners for terms of 7 years each. All policy and other important decisions of the Commission are made by a majority of the Commissioners. The work of the Commission may generally be divided into economic and legal or fact reporting and law enforcing. However, no clear distinction between the two can be made because economic studies and fact finding often present legal questions which must be solved, and the problems of law enforcement in our particular field are partly economic. In matters relating to monopoly and unfair competition, economics and law overlap, and the one is frequently a part of the other.

As one of its functions, the Commission makes general investigations and reports thereon to the Congress for the purpose of aiding the Congress in initiating and considering legislation. For illustration, the investigation by the Commission of the meatpacking industry was largely responsible for the enactment by the Congress of the Packers and Stockyards Act. The utility investigation by the Commission was greatly responsible for the creation of the Securities and Exchange Commission. As a result, you and others have more and better information available to you when you purchase shares of stock in corporations.

You are perhaps more interested in our law-enforcement activities. Section 5 of the Federal Trade Commission Act makes it illegal to engage in unfair methods of competition or unfair or deceptive acts or practices in interstate commerce. You may ask—how do these provisions affect you or your business? If you live in this country and do not live in a complete vacuum, these provisions affect you very strongly and very directly. For illustration, you are interested in building an addition to your store or factory and cement must be purchased for such construction. You believe of course that you are entitled to purchase cement at a competitive price. You will not be quoted a competitive price if the manufacturers of that cement agree on the price they will sell you that cement. It is our job to see that they do not agree on that price but sell at a competitive price so that you will enjoy the benefits not only of price competition but also of quality competition as well. As this is true of cement, it is also true of all other types of commodities sold in interstate commerce. Without the spur of competition quality stagnates and salesmanship becomes more of a question of who knows and likes whom rather than selling on the basis of price and quality.

All of us, even the large manufacturing corporations are consumers, as no person or corporation makes all of the things he or it uses. All of us, therefore, are interested in buying at a competitive price although there are some who are adverse to selling at a competitive price.

Another illustration of how the operations of the Commission affect you is that you may be a retailer and after an argument with your supplier about prices, about terms, or about anything else, you are cut off. Your supplier tells your other potential suppliers that you are a bad fellow and, in the bonds of comradeship, all of the suppliers agree not to sell you any more merchandise. You may know that you are not a bad fellow and that the supplier has wronged you but because you cannot get the proper merchandise you begin to lose business and are faced with bankruptcy. However, you can appeal to the Federal Trade Commission if your suppliers are engaged in commerce and agreed to boycott you. You may never need the help of the Commission in a matter of this kind but it is comforting to know it is there and it is available. The very fact that this help is available largely makes its use unnecessary.

Another illustration is that you may be in business selling a first-rate product. A competitor, however, disparages your product and injures the reputation and the business of your firm. You may appeal to the Commission as it is an unfair practice under our statutes to make false, disparaging statements in respect to a competitor's product, his business or his financial credit. Your competitor may also violate the Federal Trade Commission Act if he attempts to pass off his product as your product, if he engages in commercial bribery, if he induces the breach by your employees of their employment contracts, if he threatens you and others in bad faith with patent infringement suits or engages in other unfair competitive practices which may injure competition.

In our business we are constantly learning about the other fellow's business, and that is a liberal education. I did not know until recently that there is a substantial business in second-hand hats—men's hats, that is. Sometimes these hats are referred to in the trade as "ashcan" hats. This is probably due to the fact that when some men grow too tired of the old fedora they throw it into an ashcan. In any event, these old hats are cleaned and blocked, and new sweatbands inserted, and they are then offered for sale. The Commission does not object to this business, but we only ask these sellers to inform their customers that they are buying used hats. I submit that this is not an unreasonable request, but we have been called upon to make it.

Another tremendous field in which you are directly affected whether you are a consumer or a competitor is the field of advertising. Hundreds of millions of dollars are spent each year for advertising, and it is the duty of the Federal Trade Commission to see that these advertisements made in connection with goods sold in interstate commerce do not contain false or deceptive statements. It is an unfair trade practice to advertise falsely or deceptively in commerce. If your competitor advertises his merchandise falsely and the customers are thereby induced to believe they will get a better deal from him than from you, they will buy from him instead of from you. You are injured in your business, and trade is unfairly diverted. The customer or consumer is injured because he has been led to believe he will receive an article different from that he actually receives.

Both you as a competitor and the consumer may appeal for help to the Federal Trade Commission.

In connection with this question of advertising, a member of the staff recently invited my attention to a copy of a magazine published in the late nineties. There was an article in the magazine describing the acclaim given to Admiral Dewey when he returned from his great victory at Manila Bay, but what interested me in a professional way were the advertisements. There were a number of advertisements giving glowing accounts of cancer cures, sure remedies for baldness, and other answers to nearly all of man's problems. You may object to the advertising you now hear over the radio and read in publications. However, insofar as falsity and deception are concerned, the advertising of today is a great improvement over the advertising of other years. Some advertising of course is still objectionable. We have not reached the millennium. Human nature being what it is, some people will continue to misrepresent their wares in the market place. However, I am an optimist and I believe we are improving. Much of the credit for the improvement in this field is due to the excellent work of the better business bureaus in this and in other cities.

We have at times problems which have their lighter side in connection with the regulation of advertising. One enterprising chap advertised that he had a device which was guaranteed to kill roaches on the first application. He offered to sell his device by mail for $1 if the customer would send him a dollar. After sending the dollar, the customer received two blocks of wood with the direction that he place the roach between the blocks and press firmly. This was guaranteed to kill the roach on the first application. This is rather an extreme illustration of an advertisement which may, as far as it goes, be literally true, but it is also fraudulent because it only tells half of the truth.

The Clayton Act, which was passed in 1914, and was amended by the Robinson-Patman Act in 1936, authorizes the Commission to prohibit discriminations in price which substantially lessen competition or tend to create a monopoly.

For illustration, your place of business is located near a competitor and both you and your competitor purchase your merchandise from the same manufacturer in substantially similar quantities. However, the manufacturer may sell to your competitor at a cheaper price than he will sell to you. Because of this cheaper price, your competitor resells the merchandise at a price lower than you can afford and your customers begin trading with him. You lose business. This is apparently a case of an illegal price discrimination and you may appeal to the Commission for aid. In addition, if the seller offers your competitor advertising or other allowances, he must offer it to you on proportional equal terms if you continue to be a customer of that manufacturer. That sounds like common sense. It is common sense and, more than that, it is the law.

The Clayton Act also prohibits tying-in contracts. You may want to buy a keg of nails. Your supplier offers to sell you a keg of nails provided that you also purchase from him a case of left-handed catchers' mitts. You tell him you do not want the catchers' mitts and, besides, you are not left-handed. But your supplier is adamant and to get the nails, which you must have, you purchase the mitts. That is a tying-in sale which is prohibited by the Clayton Act and you may appeal to the Commission for aid. There are other provisions of the Clayton Act administered by the Commission which I shall not take time to describe.

The Webb-Pomerene Export Trade Act, another of the acts administered by the Commission, was passed in 1918. As I have stated, concerns engaged in domestic commerce may not agree on prices or engage in common selling arrangements. Many foreign countries do not have similar laws regulating the business of their nationals. American business must usually compete in foreign trade with cartels or Government trading agencies. Under the Export Trade Act American concerns engaged in the export business may organize an export trade association and file their papers with the Commission. They may sell in export trade through the association and agree on common selling terms provided they do not restrain our domestic commerce or the business of an American exporter who may not be a member of the association. By utilizing the terms of this act, American exporters may therefore compete on more equal terms with foreign cartels or state trading agencies. This act can well be utilized by groups of small business concerns in order to pool their resources and share expenses in selling in export trade.

The Wool Products Labeling Act which was approved in 1940 is administered by the Commission. As a consumer, when you and your family purchase clothing which purports to be wool, you are entitled to know that it is properly labeled and whether or not it is virgin wool or reprocessed or used wool.

The Commission also administers parts of the Lanham Trade-Mark Act approved in July of 1946. Under the terms of this act the Commission protects you as a competitor and as a consumer by applying for the cancellation of registered trade-marks which are deceptive, immoral or scandalous or which have been obtained fraudulently or which are being assigned for the purpose of misrepresenting the source of the goods.

You may be interested in the procedures of the Commission relative to alleged false and misleading advertising. A questionable advertisement may be brought to the attention of the Commission by either a complaint from a competitor, or from a member of the public or through the observation of advertising by a member of the staff of the Commission. The Division of Radio and Periodical Advertising of the Commission conducts a continuous survey of advertisements appearing in newspapers, magazines, radio broadcasts, etc. If a complaint is filed by a source outside the Commission, that is, by a competitor or a consumer, the identity of the complainant is kept confidential. Most of these matters relating to alleged false or deceptive advertisements are settled by the Commission in an informal manner. It may be that the practice has been discontinued and a statement to that effect from the advertiser may be taken and the matter closed without further action.

In false and misleading advertising matters as distinguished from antimonopoly cases and from cases involving fraud or dangerous drugs, the advertiser, within the discretion of the Commission, may be offered the privilege of stipulation. Pursuant to this procedure, the advertiser may voluntarily enter into an informal agreement to discontinue the false or deceptive advertisements in the future. If the particular practice complained of appears to be widespread or prevalent in the industry, the Commission, consistent with the objectives of the statutes which it administers, has initiated and developed the trade practice conference procedure. Under this procedure representatives of the members of an entire industry meet in conference under the supervision of the Commission. These conferences are for the purpose of enlisting the cooperation of the industry in considering, and when advisable, in drafting rules for the purpose of simultaneously correcting unfair or otherwise illegal trade practices which may be common in an industry. These are referred to as trade practice conference rules. The Commission has found this procedure has been very successful and has been informative to members of industry and has promoted fair competition and at the same time has protected the public interest.

If the various voluntary procedures used by the Commission are not effective in stopping the use of apparent false and misleading advertisements, the Commission may issue a formal complaint alleging that the respondent has engaged in unfair practices. This complaint is served on the respondent and thereafter a trial of the issues is held wherein the respondent has the right of presentation of evidence and the cross-examination of witnesses. If the record made in the course of trial sustains the allegations of the complaint, an order is issued requiring the respondent to cease and desist from the unfair practices. The respondent may, within 60 days after the issuance of the order to cease and desist issued pursuant to the Federal Trade Commission Act, appeal to the courts for the reversal of such order. We welcome the review of our proceedings by the courts. It is always helpful for a public official to have someone looking over his shoulder. When I was in Congress, it was my constituents. At the Commission, it is the courts.

My previous remarks have briefly outlined the affirmative procedures which may be used by the Commission in preventing illegal practices in interstate commerce. I have generally described how the work of the Commission affects you in your business and the part the Commission plays in protecting the American free-enterprise system of business. However, I believe, and I am sure that you will agree, that the most effective deterrent to unfair practices is the conscience of the individual businessman. I believe that the great majority of businessmen are honest and ethical and are interested in selling their merchandise on the merits of such merchandise without the use of any fraud or deception or other unfair trade practices. The Supreme Court of the United States in the case of *FTC* v. *The Standard Education Society* (302 U. S. 112) stated:

"The fact that a false statement may be obviously false to those who are trained and experienced does not change its character, nor take away its power to deceive others less experienced. There is no duty resting upon a citizen to suspect the honesty of those with whom he transacts business. Laws are made to protect the trusting as well as the suspicious. The best element of business has long since decided that honesty should govern competitive enterprises, and that the rule of caveat emptor (let the buyer beware) should not be relied upon to reward fraud and deception."

I am sure that the better business bureaus throughout the United States are in hearty accord with those statements made in an opinion of the Supreme Court of the United States. The Commission appreciates the great contribution that the better business bureaus are making in the field of fair competition. The Commission stands ready to cooperate with you in your endeavors and to help you in any way which we can under the statutes which we administer. I thank you for the privilege to be with you here today.

Washington's 150 Years

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD an editorial entitled "Washington's 150 Years," published in the New York Times of April 17, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WASHINGTON'S 150 YEARS

The National Capital's Sesquicentennial Celebration has been slow in getting started, despite a small congressional appropriation last fall and some talk since. On Saturday, however, it seemed to come to life with a 35-gun salute and some good words from Vice President Barkley. Mr. Barkley denounced a foreign slave power without actually mentioning it by name. Standing in the shadow of an 18-foot facsimile of the Capitol's Statue of Freedom, he also urged his hearers to take care that our own precious heritage of rights and freedoms be not abridged. He suggested that Tom Paine, whose pamphlets reinforced General Washington's tattered battalions, might be charged with being subversive if he were alive today. Perhaps Senator MCCARTHY will some day find time to look into this matter.

We hope that during the coming months Washington's anniversary will receive the attention it deserves. In the long parade of history it is just a little while since the Federal Government and its 126 employees moved down from Philadelphia; since Abigail Adams hung the wash to dry in what is now the East Room; and since President John Adams addressed the Sixth Congress at the first session ever held on Capitol Hill, the plaster, paint, and chips still smelling.

But Washington's short history has matched in meaning that of the older capitals; a handful of pioneers have become a great Nation; the democracy of Lincoln has succeeded that of Washington and still grows; we who wished only to be let alone in peace must now exert our influence all around the earth; decisions fateful for all mankind are made here, whether or not we asked for that responsibility. These events should be celebrated, this year and perhaps next, solemnly and with the participation of the whole country.

Educational Problems

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a very able address made by the Governor of South Carolina, the Honorable J. Strom Thurmond, at the annual convention of the South Carolina Education Association, on March 31, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One group of South Carolinians with whom I feel at home is our school teachers. All my life I have fought for the cause of education in South Carolina. I have always been keenly interested in our educational problems.

For 10 years I was directly associated with our educational system, 6 years of this time as a teacher in the public schools and 4 years as county superintendent of education in my home county of Edgefield. As a member of the State senate, I sponsored legislation for higher salaries for teachers and longer school terms, and I was chairman of the senate committee that wrote the present school-attendance law. As governor, I recommended, and the legislature passed, the best teacher-pay schedule in the history of the State, the State school survey, provision for the area trade schools, and many other progressive educational measures.

Today South Carolina is at the highest educational level in her history. Our State's educational effort has steadily advanced until we are now eleventh from the top in the percentage of income spent for education. A few years ago we were twenty-fifth.

Our progress, however, is far from enough to make our schools the vital instruments of public service they should and must be. This year I recommended to the general assembly a forward-looking school program, which included increasing teacher salaries, an expanded in-service teacher-training program, restoration of sick leave for teachers, loan scholarships for teacher education, State aid for school buildings, better organization of school districts, and an equitable formula for distribution of school-transportation funds. I reiterate my support of these objectives and will work shoulder to shoulder with you in seeking to bring them about.

Our educational problems have been more difficult to solve because we have not been a rich State. We have been near the bottom among States in per capita income and in income per pupil in average daily attendance. While our effort has been high our income has been low.

A number of those interested in education in our State have in the past sincerely believed that the speedy solution of our educational problems may lie in the passage of legislation granting Federal aid for our public school system. Their theory has been that Federal aid will come to the rescue of the so-called poorer States by providing greater assistance when the need is greater.

Today, I want to discuss this matter with you as honestly and frankly as I know how. Because of my interest in any proposal that will improve our educational system, the question of Federal aid has deeply interested me, and I have given it my most earnest consideration.

Several years ago I publicly advocated Federal aid for public education, provided that such aid be without Federal control and the State public school system remain entirely under local control where it belongs.

With the growing centralization of power in the Federal Government, and the flagrant violation and disregard of the rights of States and local authorities by the present national administration, I have been forced to the firm conviction that we cannot accept Federal aid for our public schools without ultimately losing control of them to the Federal Government.

I have also been forced to the conclusion that even if we should escape nationalization of our public school system in accepting Federal aid, restrictions will soon be imposed which will prevent the States with the greatest educational need from receiving Federal funds.

The vital issue confronting us is whether we can maintain a locally supported and locally controlled public school system. This Nation has grown great because of our free public schools. They are the bulwark of our liberty and the backbone of our democracy.

Less than 5 percent of the people who ever lived in this world have enjoyed freedom. Today less than 25 percent of the people of the world enjoy anything approaching the liberty which is our birthright under American citizenship.

No greater menace to that liberty and our democracy could arise than the transfer of the control of our public schools to the National Government in Washington.

Can we now doubt that if the Federal Government appropriates money for our public schools the Federal Government will control them?

In view of the record of the present administration in Washington, no one can feel confident that it will not use Federal subsidy of education as a political weapon. Can an administration which has already sought openly to bend and twist the Constitution to give the National Government control over ballot boxes, over police power, and over local business, be trusted to renounce control over the education of the youth of the Nation, once it has established the principle of contributing Federal money toward such education?

Within a generation, the principle of Federal control of education would be an accepted fact.

One deplorable result of Federal subsidy is the tendency to decrease the feeling of local pride and responsibility which has been the secret of our good schools. The local school inspires more pride and interest on the part of the average citizen than any other institution, except the home and the church.

The attitude and tendencies of the present administration in Washington give cogent evidence that restrictions could be, and would be, placed on Federal education funds—restrictions which South Carolina would be unable to accept or legally comply with under our State Constitution.

The primary policy of the administration demagogues has been to eliminate the South's historic custom of separating the races.

The most startling example of this policy was the recent refusal of the administration to extend housing funds to areas in which separation of the races is practiced. The application of Charlotte, N. C., for a housing development was refused on the ground that the housing would be restricted to Negroes, despite the admitted need for such housing.

This action was taken by the administration in spite of the fact that the Congress had declined to place any such restriction on the distribution of housing funds.

Another example is found in the recent action of the Department of Justice in the matter of the Henderson case to be taken up by the Supreme Court during April. The Henderson case involves separate seating in railroad dining cars, a practice approved by the Interstate Commerce Commission. This Commission asked the Department of Justice to intervene in an effort to have the case dismissed. Solicitor General Perlman not only refused to assist the Interstate Commerce Commission, but he actually filed a brief in favor of Elmer Henderson, the complainant, opposing separate seating in railroad dining cars.

It is perfectly clear that the Department of Justice would use the full weight of that Department to make certain that no Federal aid for education would be extended to schools which separate the races.

The so-called safeguards of the Federal-aid bill now under discussion do not and cannot guarantee local control. There are three ways in which these safeguards can be circumvented. Any one of these three would be enough to render the safeguards null and void.

The first of these is the familiar congressional device of amendment, commonly called rider. As you know, the Federal-aid bill pending in Congress, which we are now discussing, is merely an authorization bill. The money to finance the program must be provided for in a separate appropriation bill. When the appropriation bill is written, it will be possible to attach a rider thereto which can limit distribution of the appro-

priated funds. A rider providing that Federal funds shall not be allotted to any State practicing separation of the races is certain to be offered and unquestionably would be adopted.

The second way in which legislative guaranty of local control can be circumvented is by the action of another Congress. One Congress cannot bind another, and action by the next Congress or any future Congress would supersede the action of a previous Congress.

The present Federal subsidy bill is merely a foot-in-the-door technique. It is only temporary. Its proponents know very well that, once they have established Federal aid for education, the next Congress can come along and insert provisions giving Washington the right to regulate our schools or place conditions on the funds that will make it legally impossible for South Carolina to receive them.

The third way in which local control of schools may be nullified is by administrative fiat. The administration may arbitrarily refuse to give Federal funds to schools which separate the races, in defiance of the views of Congress. We have seen this happen in the distribution of housing funds.

The dangers of Federal aid for education are clearly expressed by those in a position in Washington to know. Eminent among these is Hon. SAM RAYBURN, of Texas, the Speaker of the National House of Representatives. Mr. RAYBURN opposes Federal aid for education. He opposes it on the ground that, under it, Federal control of the schools is inevitable.

I have a copy of a letter written by Mr. RAYBURN on this subject a few weeks ago. Let me read you what this distinguished Texan, who has been in the Congress for 37 years, has to say on the subject of Federal aid.

Mr. RAYBURN said: "I am now, and have been, opposed to Federal aid for education. * * * Once you start giving Federal funds you get Federal control too in the long run. * * * I know that the Federal Government contributes money to few things that it doesn't ultimately run, in its entirety, or is in a position to do so, when it so desires. I can imagine our voting money, in hundreds of millions, then somebody gets up and offer an amendment providing that no part of these funds be used in any State where there is segregation in the schools among the races. If a roll call was had on that, it would certainly carry—then we would be paying for something we weren't getting."

An argument made in favor of Federal aid for education is that under Federal court decisions we shall have to equalize school facilities, and that we cannot do this without accepting Federal funds for local school purposes.

Those making this argument evidently assume that we will get Federal money to help us continue racial separation in our schools. Everyone should know that this is directly contrary to present Federal policy. Everyone who looks at the matter realistically is fully aware that as soon as we become so dependent on Federal funds that we cannot do without them, the Federal administrators will deny such funds to States which have separate schools for the races. We in South Carolina will then be faced with the necessity either of throwing our school children together in the same schools, or doing the best we can without Federal aid after having become dependent on it. The ultimate result is that we would be paying taxes for something we are not getting. We will contribute our share, but our schools will not get the benefit of the Federal funds.

The other leading argument in favor of Federal aid for schools is that we are already accepting Federal aid for such programs as vocational education, agricultural education, and the like, without unreasonable Federal control.

This is false reasoning. The proposed Federal aid bill is something entirely new. For the first time in history, it is proposed to extend Federal subsidy down to the level of our elementary schools and the very roots of our educational system. This would affect our children from the very first day they enter school, in every classroom and in every book they study. There is a vast difference between Federal aid for certain specialized programs, and Federal aid throughout the entire public school system.

We have accepted Federal aid for vocational and agricultural education, and a certain amount of supervision, because to do so has not affected our basic educational program. The temptation to regiment a nation through its children is certainly not present in such specialized fields.

We can continue to accept such special assistance only so long as objectionable restrictions are not placed upon it, and today we have plenty of cause to wonder just how long it will be before such restrictions are put into effect.

We can never accept the slightest degree of Federal control over our public-school system if we hope to remain free citizens in a free republic.

Seeing then, the unavoidable dangers of inviting Federal subsidy of our schools, we must seek and find another solution to the educational problems now pressing upon us.

The job ahead is going to be an exacting one, and new financial resources will be necessary. There are at least three ways in which we can do that job without Federal aid: first, we can demand that the Federal Government return to the States and localities the tax sources which rightfully belong to them; second, we can demand greater economy in the Federal Government, which will leave more money in the State for educational purposes; and third, we can continue to push our industrial-development program to increase our income, and thereby our ability to pay for education. The best source of revenue will be an adjustment in the spheres of taxation which will clearly define the fields of taxation rightly belonging to Federal, State, and local governments. We have permitted our various areas of taxation to become confused, and the Federal Government has gradually usurped practically all tax sources including those which should belong to the States and localities. Our tax system is today a hodge-podge of overlapping, duplication, and injustices.

Unless the unsurpation of tax fields by the Federal Government is checked, it will inevitably turn our States and cities into mere subdivisions, or departments, of the Central Government.

On the other hand, if the States are given back the fields of taxation that are rightfully theirs, and the revenue sources which belong to them, they can do their educational job without Federal assistance, and do it better and cheaper than the Federal Government. There is terrific wear and tear on a tax dollar which goes first to Washington and then comes back in the form of Federal aid.

An equally important way in which we can have more money for schools is by demanding greater economy in the operation of the Federal Government. Experts have said that a financial saving amounting to billions can be brought about without affecting existing programs. A saving of from three to five billions of dollars a year could be saved simply through a more sensible and efficient Federal organization, without eliminating any present functions.

The taxable income left in South Carolina by such a saving would be tremendous. South Carolina's per capita share of a $3,000,000 annual saving would be $40,000,000—considerably more than we now spend for public education, and three times greater than the $13,000,000 which it is claimed we would get from Federal aid to schools.

The best way Uncle Sam can help South Carolina is by cutting down his expenses, not incerasing them. It is a strange sight indeed, to witness a Federal Government already burdened with $260,000,000,000 in debts, proposing to extend financial aid to States whose budgets are without exception in a sounder position than its own.

The standing debt of all the 48 States, added together, is about $2,500,000,000. Thus the debt of the Federal Government is already 100 times greater than of all the States put together.

Yet some people are asking Uncle Sam to go further into debt in order to help all of the States in the Union, including our own State of South Carolina, which owes not a dime in the world not covered by cash on hand or self-liquidating bonds.

The low income of the Southern States handicapped them in the past in supporting their schools to the extent that other States have. The picture, however, is rapidly changing. In 1940 the 16 richest States had 46 percent more income than the 16 poorest States. In 1947 those 16 richest States had only 14 percent more income than the 16 poorest. All indications are that this differential between the South and other States will continue to be cut down.

Our greatest hope for additional support for our schools is South Carolina's amazing economic development during the last few years. Our State today is in an era of economic growth such as we have never known before. Our per capita income is rising steadily. Our industrial potential is expanding faster than that of any State in the Nation. Our agricultural might is growing, and most recently in the livestock field.

As a result of this economic development, our ability to pay for education is steadily increasing. The day is not too distant when our growing wealth will permit a vastly improved public-school program. We are already doing a far better job than we did a few years back. Our expenditures for public schools have more than tripled in the past 3 years. A survey by the Council of State Governments shows that South Carolina was the second highest State in the Nation in the percentage by which we increased our expenditures for education in 1948, as compared with 1938. Our increase was 41 percent higher than the national average.

We are already improving our school program, and the control of that program should be retained in our communities and in the State, where our taxes can be made to yield their maximum returns. Will we gain by sending our educational dollars to Washington, to be put through the Federal shrinking machine?

We have more to gain by encouraging the sense of local pride and responsibility which makes better schools, and by emphasizing the higher values of moral purpose, character, and responsible citizenship which our democracy needs.

I want to repeat to you what I told the general assembly this year:

"Let us resolve to provide whatever is necessary to educate our children through the marshaling of our State resources behind our public-school system, and keep that system free from Federal regimentation and the intermeddling of Federal bureaucrats."

Schools that are close to the people will guarantee that our Government will remain close to the people. We cannot afford to take any step which will lessen the citizen's responsibility for the education of his children, or which will undermine the position of our schools as strongholds of self-government and guardians of our freedom.

Remembering that our children will be what they are taught to be, let us put our own shoulders to the wheel, with the determination that our schools can be, and will be, greater instruments of service to our people. Let us rededicate ourselves to the

well-being of our schools, and go forward together in self-respect and self-reliance, with new confidence in our own ability to manage our own affairs.

The Port of Baltimore and the Ship Subsidy Bill

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, some of the many and complex problems incidental to the present deplorable condition of the United States Merchant Marine as they affect employment and general economic conditions in the great port areas of our country are presented forcibly in an editorial appearing in this morning's Baltimore Sun, entitled "The Port of Baltimore and the Ship-Subsidy Bill."

The editorial serves, among other things, to remind us that the problem of rehabilitating the American Merchant Marine is one that affects not only this one segment of American industry but a great many related phases of our Nation's economy. In view of the importance of the problem discussed I ask unanimous consent that the editorial from the Baltimore Sun be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE PORT OF BALTIMORE AND THE SHIP-SUBSIDY BILL

The bill to give increased Federal aid to the country's maritime interests is being accorded the long and careful consideration called for by the importance of the problems involved. Our own Senator O'CONOR, a cosponsor of the measure and a member of the subcommittee on maritime matters, is taking an active part in that task. That is as it should be. Maryland has a bigger stake in the bill than most of the other States because shipbuilding, ship repairing and water-borne commerce play such a big and direct part in our economic picture.

The bill before Congress would liberalize the plan under which the Nation subsidizes its maritime fleet. It would extend that plan to bring within its provisions ship operations not now covered by subsidies. It would ease the tax burden on private interests in water-borne commerce. And it would, according to its backers, assure this country an adequate mechant fleet in time of emergency.

There are differences of opinion about the need for the bill and about the kind of aid it would provide. Those differences are being aired before the subcommittee on maritime matters. The compromise stage (if there is to be one) has not as yet been reached. There is no need for present purposes to discuss the merits and demerits of the measure. But two pertinent items in the news columns of the Sun yesterday illustrate the nature of the problems at which the bill is directed. And each of those items had to do with our own port of Baltimore.

In the financial pages it was reported that the total business of the Maryland Drydock Co. for 1949 was $14,800,000 as compared with $33,400,000 for the previous year. That more than $18,000,000 drop brought a corresponding contraction in employment figures at the company's shipyard. And the worst of it is that a further fall off in business is expected for 1950.

In the regular news columns it was reported that two big ore carriers which will start operating next year between Liberia and Baltimore will fly the Liberian, not the American flag. The two ships were to have been built at Sparrows Point. But the contract went to Glasgow, Scotland, to save 50 percent in construction costs. That was a single specific loss to the port, however welcome the contracts were to the British. Now there will be the continuing loss resulting from the sailing of the ships under the Liberian flag.

To cite those two cases is not to urge increased Federal aid for the country's private maritime interests. They are presented merely to show the complexity of the maritime problems under consideration in Washington and the great and direct interest Baltimore has in a sound solution for those problems.

The Farmer Pays for His Own Price Support

EXTENSION OF REMARKS
OF
HON. JAMES O. EASTLAND
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement, under date of March 28, 1950, addressed by Mr. O. F. Bledsoe, of Greenwood, Miss., president, Staple Cotton Cooperative Association to the members of the association, on the subject the Farmer Pays for His Own Price Support.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE FARMER PAYS FOR HIS OWN PRICE SUPPORT

To Our Members:

Within our artificial price structure, Congress found it necessary to support agricultural prices so the farmer could live and at the same time pay for his own price supports and Government support. Based on agricultural income, the best tax accountants in agricultural areas estimate the income taxes paid by the farmers were $2,247,000,000 for the year 1947, $2,124,000,000 for the year 1948, and $1,833,000,000 for the year 1949, which totals $6,204,000,000 for the last 3 years, while the Government accumulated $4,000,000,000 worth of surplus agricultural products.

According to the United States Bureau of Agricultural Economics, the per person farm income and the per person nonfarm income was as follows:

Farm income:	
1947	$857
1948	905
1949	763
Nonfarm income:	
1947	1,439
1948	1,572
1949	1,555

This disparity of per person farm income of about one-half with price supports gives the reason for the migration from the farms. The rural population, which is the lowest in the history of this Nation, is now less than 20 percent of our national population, while the Government entered the socialistic plan of building the former agricultural workers homes in the cities, which are already the hotbed of socialism, especially support by the Government. This movement from the economically sound farm group has given socialism its greatest boost. The politicians looking for the big city vote will finish the job with such ideas as the Brannan plan.

Of course, Congress is human and makes mistakes in trying to adjust prices within this artificial price structure, but the biggest mistake was to subsidize industry with the tariff wall, which produced this artificial price structure and prevented the export of our surplus agricultural products. The farm group with the smallest income put the money in the Federal Treasury to pay for these errors, as well as price supports. The air-conditioned city newspapers and radio commentators are playing up these mistakes by telling the public only part of the truth, as their source of revenue comes from advertising subsidized industrial products.

The putting into operation of the natural price-fixing laws of supply and demand with our natural allies who need our surplus agricultural products would remove from Congress this great price-fixing responsibility. It would help to eliminate the bad feeling between the urban and farm group. It would also turn this Government away from artificial devices that promote socialism and governmental regimentation. The farm problem is not on the farm but in Washington, directly behind the tariff wall without a gateway—an economic crime.

If our agricultural problem is not solved on a sound, economic, free-enterprise basis, then good-by to the other sections of our economy that operate under a free-enterprise system. The Brannan plan should be ample warning.

O. F. BLEDSOE,
President, Staple Cotton Cooperative Association.
MARCH 28, 1950.

Why Oklahoma Should Reelect Senator Thomas

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Oscar V. Rose, superintendent of schools, Midwest City, Okla.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

WHY OKLAHOMA SHOULD REELECT ELMER THOMAS TO THE UNITED STATES SENATE

(Statement by Oscar V. Rose, superintendent of schools, Midwest City, Okla.)

The strength of either a Senator or a Congressman in the United States Congress is quite largely determined by the seniority he has gained through the length of his term of service. This is largely true because committee assignments, as well as the positions held on the committees, are wholly determined by seniority. At the present time, only two of the 96 United States Senators

have a longer tenure of service in that body than Senator ELMER THOMAS of Oklahoma.

The legislative processes of the United States Congress are achieved primarily through committee study and action. Upon introduction of legislation by a Member in either House, it is immediately assigned to the appropriate committee. If it is to pass beyond that stage, it must receive a favorable report of the committee to which it is assigned. A large majority of the bills introduced never receive such consideration and therefore are never presented to the floor of either House for action. Whether they receive committee consideration and study is largely dependent on the chairman of the committee. Of course, the various members of a committee may influence the chairman in the same manner as any other human endeavor is influenced. However, the influence of committee members, to a great extent, is determined by their tenure on the committee represented by the position they hold below the chairman. Thus the committee assignments and positions held on the committees are of tremendous importance in determining the effectiveness of a Member of either House in representing his constituents.

Senator ELMER THOMAS is not only the third senior Member of the United States Senate but is chairman of the Agriculture Committee. He is also the second ranking member on the Appropriations Committee and chairman of the Subcommittee on Appropriations for Military Affairs. Both of these committee assignments are among the choice positions in the United States Senate. Since all States have agricultural interests, Senator THOMAS, as chairman of that committee, has an excellent opportunity to cooperate with Senators from all States in working out their respective agricultural problems. This places the other Senators in an excellent position to reciprocate his cooperation in fields over which they hold control but in which Oklahoma is particularly interested. Certainly in this position the Oklahoma farmer has an advocate which it cannot afford to lose. As chairman of the Subcommittee for Military Appropriations, Senator THOMAS has charge of the largest money bill in the Congress, the bill for developing and maintaining our military establishments. Certainly Oklahoma is interested in the continuance of its four largest military establishments; namely, Oklahoma City Air Technical Service Command, Oklahoma City, Fort Sill, Lawton; Vance Air Force Base, Enid, and McAlester Naval Depot, McAlester, Okla. It would seem logical that these installations will receive more consideration from an Oklahoma Senator than one from any other State. As the second ranking member on the Appropriations Committee and a member of the Subcommittees handling Indian appropriations, flood control, and power development, he is in an excellent position to contribute to the interests of Oklahoma.

A Senator is not elected to the important position Senator THOMAS now holds and which is detailed above. A Senator gains this enviable position only through a number of reelections by the voters of a State which enables him to gain the seniority necessary for such advancement. The voters of Oklahoma elected ELMER THOMAS to the United States Senate in 1926 and reelected him in 1932, 1938, and 1944. Because of this repeated confidence and support, he now holds a position which cannot be transferred to any other candidate, but will be lost to the citizens of Oklahoma should ELMER THOMAS not be returned to the Senate.

In the committee organization of the United States Congress each Congressman is given one committee assignment, and each Senator is allowed two committee assignments. They advance toward the top of the committee as vacancies occur above their present position. The present relative positions of the congressional representation of Oklahoma compared to 10 other Southern States on the committees of the United States Congress is shown below.

Committee assignments

State	Total for State	On upper half of committee (percent)	Either as chairman, second or third place (percent)
Oklahoma [1]	12	4 or 33	2 or 17.
Oklahoma [3]	12	1 or 8	0 or 0.
Texas	25	18 or 72	7 or 28.
Georgia	14	14 or 100	9 or 64.
Arkansas	11	10 or 91	3 or 27.
Louisiana	12	6 or 50	5 or 42.
Mississippi	11	10 or 91	5 or 45.
Alabama	13	7 or 54	1 or 8.
South Carolina	10	8 or 80	5 or 50.
North Carolina	16	14 or 87	7 or 44.
Tennessee	14	9 or 64	4 or 29.
Virginia [3]	13	8 or 62	6 or 46.
Total	139	104 or 75	52 or 38.

[1] At the present time 4 of the 12 committee assignments for Oklahoma representatives in the United States Congress are in the upper one-half of the various committees. Two of these are held by Senator Elmer Thomas. One, fourth place on the Banking and Currency Committee is held by the Fifth District Congressman. One, sixth place on the Public Lands Committee is held by the Sixth District Congressman.

[2] Since both of the first, second, and third committee assignments are held by Senator Elmer Thomas and one of the other two assignments in the upper one-half of committees is held by the Fifth District Congressman who is not seeking reelection, Oklahoma will have no representative on the upper one-half of committees in the United States Congress should Senator Elmer Thomas not be reelected.

[3] In the 10 Southern States entitled to 139 committee assignments, we find 104, or 75 percent of them, to be in the upper one-half of the various committees; 52 of these 139 committee assignments, or 38 percent, are either as chairman, second or third place assignments.

These facts show conclusively that Oklahoma is, in comparison, already at a disadvantage insofar as committee assignments are concerned. Certainly, it would not be advisable for the voters to place the further disadvantage on its congressional delegation, through eliminating its most powerful Senate committee assignments at the present time.

How About the Excise Cut?

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1950

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the April 7, 1950, issue of the Bridgeport (Conn.) Telegram relative to wartime excise taxes:

HOW ABOUT THE EXCISE CUT?

Little is being said these days about the reduction or the total elimination of the troublesome wartime excise taxes. Former Speaker MARTIN, in a speech deploring current unemployment, which he said was caused by the "economic quackery" and "irresponsible political philosophy" of the New Deal and Fair Deal administrations, declared the removal of the wartime taxes would help to "reverse the tide," especially here in New England where so many of the products taxed are made, and where incentive is needed for capital investment.

Even Mr. Truman, in his last recommendations on taxation advocated substantial reduction of these burdens. These are the taxes on a sizable list of commodities and services, including the things we buy in the drug stores for the nursery, household uses, the sick room, and ordinary toilet uses; long distance telephone calls and telegraph tolls; transportation of both passengers and freight, and so on. Practically everyone is familiar with the tax that has been so objectionable since the war ended.

The President's views on elimination of these taxes carried a proviso, however. He said that any loss of revenue must be offset by new taxes, and asserted he would not approve any bill which did not accomplish this.

Naturally, Mr. Truman is entitled to his own views, and because of his position, they may prevail. But the fact is that all manufacturers, retailers, and the people in general are against them. Most people agree that they present a definite barrier to trade and employment. They apply not to luxuries, but to necessities.

There is only one sound way to make up for any loss of revenue the elimination of these taxes might cause. That is by cutting even further the cost of Government. The present temper of Congress seems to be in favor of eliminating the wartime taxes, and against any tax increase of any kind. It would be a blessing to all Americans if that temper would flare into action. Congress by cutting these taxes has an opportunity to contribute to our economic stability—and incidentally, gather in a lot of votes in the fall.

The Facts on Minnesota Farm Meeting

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, on April 17, I addressed the Senate regarding the State PMA conference held at St. Paul, Minn., April 3 and 4. In connection with the subject, I ask uanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, an editorial which appeared in the April 11 issue of the Park Region Echo, which is published at Alexandria, Minn.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PMA FACTS DISTORTED BY STAR

Two scathing editorials against the Production and Marketing Administration's 2-day conference in St. Paul last week appeared Thursday and Friday in the Minneapolis Star. One was headed, "Political propaganda for captive audience," and the other, "PMA: aid to farmers or political weapon." We claim that the editorials were deliberate distortions of the truth and the rantings of an editorial writer who had an ax to grind.

What was possibly the most provoking to the Star editorial writer or reporter must have been the praise some of the PMA speakers gave Alfred Stedman, agricultural editor for the St. Paul Pioneer Press and Dispatch. Mr. Stedman had aided the farm program for many years and later he had been of much help to the Federal set-up in giving advice at times when called upon to do so. The Department is still availing itself of Mr. Stedman's knowledge and he spends many offhours along this line. It is natural that the

Star editorial department should become irate over the entire affair.

To state that the 2-day sessions were devoted entirely to political propaganda is a deliberate falsehood. To hint that the committeemen were paid $8 per day for attending a political rally is another falsification of the facts. It is also an attempt to smear the good character of the 4,000 committeemen of the State if they accept money for something to which they are not entitled. The committeemen on Monday attended meetings of instruction pertaining to the 1950 farm program. Most of these talks on PMA matters were important and much needed in order to carry on the farm program this year. Likewise, the Tuesday program was important in several respects and about the only part of it that could be called political was Senator HUMPHREY's talk which was more or less an added section of the program.

It was important that Secretary Charles F. Brannan come to the St. Paul conference to explain his much-discussed farm proposal. That his talk, modest in the extreme, can be distorted to be political propaganda is far from the truth. Mr. Brannan was not presumptive in the least and he did not take advantage of the occasion to lambast the opposition, as the Star editorial writer has done.

For the Star to state that the Brannan plan would make farm-income guaranties high or the support unusually high indicates the Star editorial writer either does not know the details of the plan or else intends to fool its readers. The support price is to be set by a board and if the market price of the products are high the cost will be nil.

Friday's editorial cites the article from the Country Gentleman magazine in connection with the PMA administration in DeKalb County, Ill. It sought to convey the idea that the farmers there were paying excessively for the PMA administrative work, 590 man-days of work needed to complete the work. The Star stated: "That county had 178 part- and full-time Federal employees to provide services to the farmers. Minnesota is comparable."

If the Star editorial writer had taken Mr. Brannan's interpretation of this very case the statement would have been different. The 590 man-days included the time spent by two office girls of the PMA and if this time is taken out, there would not be many man-days for the 178 county committeemen. That this is an extensive set-up in the counties in Minnesota is a prevarication of the truth. Any farm plan that is as effective would cost equally as much.

Undoubtedly, Mr. Stedman's deserved praise is going to bring more subscribers to the St. Paul dailies, but it can also be taken for granted that the outbursts of the Star are going to deflect more subscribers in addition to the process of adjustments.

Because the Star failed to mention, at least in the edition reaching the Alexandria area, the tribute given Mr. Stedman by Frank Wolley, deputy administrator, we want to insert the words of acknowledgment:

"We found a fund of well-documented historical information in the AAA (Agricultural Adjustment Administration) annual reports, which were prepared, as some of you may know, under the leadership of an outstanding citizen of this city, Alfred D. Stedman, now with the Dispatch and Pioneer Press.

"More than once Mr. Stedman has been called away from his writing duties to serve his country in important posts. As triple A's first director of information, Mr. Stedman helped build a solid foundation for the farm action programs which today enable farmers to work together in striving toward a sound agriculture and Nation. He may find some satisfaction in knowing that farm agencies continue to draw on his sound advice, through the written word."

Rendition in Richmond, Va., of Dixie by Toscanini

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. BYRD. Mr. President, on April 19 the great maestro, Toscanini, in conducting the NBC symphony orchestra, suddenly waved his orchestra into a rendition of Dixie, which created a tremendous response from the audience.

The reason for the excitement was that Toscanini's classic symphonies are away up in the higher stratosphere of music, but his grandson, it is reported, who is a student at Yale, had educated the maestro into the subtleties of Dixie, and Toscanini had really done a research job on the score of the music.

I ask unanimous consent to insert in the Appendix of the RECORD the Associated Press dispatch describing the occasion, which was printed in many newspapers.

There being no objection, the dispatch was ordered to be printed in the RECORD, as follows:

RICHMOND, VA., April 19.—Toscanini played Dixie.

That's right—Toscanini. That's right—Dixie. You might call it the national anthem of the South.

It happened tonight in the Mosque Auditorium here as the 83-year-old maestro, appearing with the NBC Symphony Orchestra, conducted his second concert of a cross-country tour of 20 cities.

As the master unbent long enough for the unprecedented encore, rebel yells echoed to the rafters of the auditorium, jammed by a crowd of 5,000 which paid prices starting at $6.

Prior to the climactic encore the program was staid enough.

The finale furnished the excitement, and the surprise.

The audience, stunned momentarily, rose with one accord. Yells, howls of surprise, and rousing cheers crashed through the music.

And the maestro—who had kept a dignified austerity all night—grinned back at the sea of faces before him as he took bow after bow.

The surprise rendition of Dixie is credited to Toscanini's 20-year-old grandson, Walfredo Toscanini, a Yale University student. He'd been after the maestro for some time to interest himself in the South.

But grandfather hadn't ever played Dixie—hadn't even heard of it, in fact, until 10 days ago.

He halfway decided he'd play the tune somewhere during his current tour, which will take him into the deep South.

Toscanini arrived here Tuesday. He went to Williamsburg, visited some of Richmond's monuments—and made up his mind to play Dixie in the capital of the Confederacy.

There were frantic rehearsals today. He heard one arrangement, didn't like it, sent out for others.

Finally, he settled on the authenticity of Dr. Frank Black's music sheets—and he played Dixie as old Dan Emmett wrote it but as it had never been played before.

Now he plans to repeat the playing of Dixie in Atlanta and New Orleans. And, said an orchestra spokesman tonight: "The maestro is more interested in the life of Dan Emmett than in Tschaikovsky."

Taking Credit for Prosperity

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Taking Credit for Prosperity", written by Dan Kidney, and published in the Indianapolis Times of Sunday, April 16, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEAR BOSS
(By Dan Kidney)

TAKING CREDIT FOR PROSPERITY—PRESIDENT TRUMAN MAY BE CHALLENGED ON STATEMENT

WASHINGTON, April 15.—Dear Boss: President Truman proposing to take all the credit for prosperity can well be challenged by both the Republican Eightieth and Democrat Eighty-first Congresses.

Leaders of the Federal Government's legislative branch can just as well say that they brought about prosperity by refusing to enact the Truman program. For that is exactly what happened.

The President told his first press conference at the White House since he returned from Florida that things are in fine shape after his first 5 years as Chief Executive and that he intends to take credit for it.

If the Federal Government had a great deal to do with prosperity though, it certainly wasn't brought about by enacting Truman's Fair Deal promises into law. The GOP Congress did exactly the opposite.

So the President stumped the country crying that the Eightieth Congress was do-nothing. The people reelected him and gave him comfortable Democratic majorities in both the House and Senate.

But the Eighty-first Congress has turned out to be a super-do-nothing so far as the President's program is concerned. And he plans to take the stump again this year, althought he isn't up for reelection until 1952.

LITTLE OF PROGRAM PASSED

Thus the President taking credit for good times now is about like the man who said he saved a fellow's life—shot at him and missed him.

Oleomargarine tax repeal, which hasn't even gone into effect yet, and a middle-income housing bill, with the co-ops cut out, are as close to the Fair Deal program as this Congress has come so far. Nor do they have any intention of doing more of what President Truman wants domestically before adjourning to go home and run for reelection.

Only in foreign relations has the Truman administration won congressional support and that was done on a bipartisan or "unpartisan" basis as Senator ARTHUR H. VANDENBERG (Republican, Michigan), who probably deserves more credit in that field than the President, calls it.

So it may be well to review what President Truman didn't get done. It is all spelled out clearly in a simply written pamphlet distributed by the Democratic National Committee and entitled "Democratic Platform 1948 '

The subtitle is "A Program of Progressive Liberalism."

"PROGRESSIVE" PROGRAM

It starts out by bragging about all the New Deal accomplishments under the late F. D. R. No mention is made about that "progressive" program not having been expanded a bit since 1938, a fact which still holds true.

On the domestic front the program promises curbs on inflation which President Truman asked of the Republican Eightieth Congress and didn't get. These he hasn't asked for lately.

Then there is this gem:

"We pledge the continued maintenance of those sound fiscal policies which under Democratic leadership have brought about a balanced budget and reduction of the debt by $28,000,000,000 since the close of the war."

Instead the President has asked each session of the Democratic Congress for deficit financing of an unbalanced budget, and that is one thing that he did get.

Repeal of the Taft-Hartley law was a Presidential promise which put all organized labor on the Truman bandwagon. The law still stands without even an amendment.

Upping the minimum wage to 75 cents was passed, but that too was bipartisan.

ONLY PROMISSORY NOTE

An expanded and increased social-security program still remains a promissory note and compulsory health insurance a thing that kept Federal Security Administrator Oscar R. (Jack) Ewing out of the Cabinet.

Federal aid for education is in the House ice box. It has been promised by the Democrats for years, but is as far from delivery as their civil-rights pledges on antilynching, poll-tax repeal, and FEPC.

That the Democrats have done all right for themselves during these years of large promises and no deliveries cannot be doubted. All you need to do is count the new millionaires in their midst, or those on the way to making a million based on their Democratic connections.

Maybe that is what President Truman means when he says he is so successful. If so, his attitude might be fittingly described by these lines from Oscar Wilde's play, "Lady Windermere's Fan":

"He thinks like a Tory and talks like a radical, and that's so important nowadays."

Carroll Binder Reports From Europe

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, April 21 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I present and ask to have printed in the RECORD two additional reports written by Mr. Carroll Binder, editorial editor of the Minneapolis Tribune, relating to conditions in Europe. Five of the reports in the series have heretofore appeared in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

WEST EUROPE RED SPOTS LIMITED TO THREE—COMMUNISTS COULD THREATEN FRANCE, ITALY, WEST GERMANY

(By Carroll Binder)

PARIS, FRANCE.—Today Communists appear to be in a position to cause serious trouble in only three countries of western Europe—Italy, France, and western Germany.

In the United Kingdom, Scandinavia, and the low countries they do not have sufficient political or trade-union strength to seriously interfere with the play of free political and economic forces or military defense.

Even in Italy, where they polled 30.7 percent of the vote in April 1948 and are the largest Communist Party outside Russia; France, where they polled 28.2 percent of the vote in November 1946; and in western Germany, where they got the fourth largest vote cast for any party (1,360,443 votes) in August 1949, the Communists appear to be less influential than they were.

ECA GETS BLAME

The Marshall plan is entitled to a considerable share of the credit for this set-back to Communist hopes. So, American aid to Europe is blamed by Communists for everything that is disagreeable from the flu to unemployment.

Wage earners in the cities are told that the Marshall plan is responsible for high prices of foodstuffs. Peasants are told that it is responsible for the low prices they obtain for foodstuffs.

At the moment Communists in France are making fewer overt attacks on the Marshall plan.

They seem to fear that their attacks may have the undesired effect of acquainting Frenchmen previously unaware of American aid with what the United States has done for their country.

But Marshall plan officials occasionally are subjected to hostile demonstrations. "France for the French, America for the Americans," a Communist railwayman muttered to a Marshall plan official getting off the train to dedicate a hydroelectric project built with American aid.

SABOTAGE CHARGED

When the Communists heard that a group of American editors to which I belonged was to visit the Renault Automobile Works in Paris they got out leaflets urging hostile demonstrations to show French defiance of American imperialists. The Communists got set for a demonstration Saturday but our visit was not until Monday. No hostility was shown us and the workers generally were indifferent to our presence.

But anti-Communist French trade-unionists who have spoken well of Marshall-plan aid report having had their tools mislaid and their machines sabotaged with a view to causing accidents.

The Communists brand French, Italian, or German political parties which recognize the role played by Marshall aid in their countries' recovery as agents of Wall Street, looters of strategic materials for the American octopus, colonizers of Europe for decaying American capitalism. Russia is glorified as the paradise of the workers and the liberator of France by the Communists.

TROUBLE EXPECTED

The Communists believe that their finest hour will come in western Europe after Marshall-plan aid ends in 1952.

They expect that discontinuance of dollar assistance will create the kind of economic dislocations which they seemed to be about to exploit so successfully when American aid took the revolution right out of their grasp in Italy and France.

The present diminution of the Communist threat to western Europe thus cannot safely be assumed to be permanent. The Soviet leadership still believes that the world will not be safe for sovietism until capitalistic and socialistic democracies have been supplanted by Soviet regimes.

It is prepared to take whatever time may be necessary to bring about such a consummation. It believes it can outwait, outsmart, and outdo the democracies.

Mayor Ernest Reuter, of Berlin, who is in the farther outpost of European democracy; German Socialist leader, Kurt Schumacher; British Minister of State, Hector McNeill; Anthony Eden, and Italian Foreign Minister Carlo Sforza all discount the possibility of early armed hostilities. American officials and newspaper correspondents with whom I have talked take the same view of Soviet tactics.

DEFEATISM PUSHED

But almost everyone with whom I talked also assumes that the democracies cannot afford to neglect either their military or their social defenses. The best way of avoiding a military show-down is generally assumed to be to have sufficient military strength at the disposition of the democracies to discourage Soviet attempts to take by force what they cannot take by wile.

There remain defeatists who object to their countries taking steps to resist possible Soviet military attack on the ground that western Europe would be overrun before Atlantic Pact countries could put up effective resistance.

The Communists assiduously cultivate this mood among western Europeans.

Pravda gave the cue to its disciples on December 26 when it said: "The United States is now turning Marshallized countries into military bases with local people as cannon fodder. The purpose of the military-aid program is complete submission of Marshallized countries."

So Communist fire tends to be concentrated more on MAP than on the Marshall plan at this time. At Soviet direction, Communist-dominated trade-unions have refused to handle cargoes for Indochina and are organizing demonstrations against the delivery of American military assistance to France and other Atlantic Pact countries.

TROOPS USED

Assuming that the Indochina cargo stoppages are rehearsals for more audacious demonstrations against arms shipment to the democracies, French Defense Minister Rene Pleven has used troops to load goods for Indochina and threatened to cope with anti-MAP strikes in the same way. He also is taking measures to replace workers who go out on such Soviet-inspired strikes.

These strikes reveal Soviet fears that France may become a formidable factor in the defense of western Europe if not thwarted by Moscow's disciples. Pleven is proceeding with plans for using American equipment to mechanize a number of elite divisions which would constitute the backbone of ground resistance to any military attack Russia might make.

American military men who have studied the problem say that in 5 years France and the other western European countries can develop ground forces capable of successfully resisting a Soviet attack in cooperation with our air and naval forces and the air and naval strength of Great Britain.

Their plans envisage close coordination of ground and air forces and use of atomic bombs for tactical as well as strategic purposes.

By being ready to use such defenses it is hoped they may never have to be used. Without such defenses and if rising tides of communism succeed in creating a defeatist mood in western Europe, there are likely to be Soviet coups a la Czechoslovakia every other week end until Russia has taken over the Continent.

UNITED STATES AID GIVES EUROPE LIFT, BINDER FINDS—SPIRIT OF PEOPLE RISES AS JOBS AND FOOD BECOME AVAILABLE

(By Carroll Binder)

PARIS, FRANCE.—One has to know how critical conditions were in western Europe 3 years ago to appreciate fully how much has

been accomplished with $8,000,000,000 worth of Marshall plan aid.

Western Europe's remarkable recovery should not be lost sight of because of disappointment at its failure to integrate economically and politically.

Even those who had seen western Europe recover from the ravages of World War I and appreciate its remarkable recuperative and staying powers did not dare hope 3 years ago that so much progress would be made as can be seen when one journeys through Britain, France, Germany, and Italy.

While the specters of communism and runaway inflation have not been banished permanently from western Europe they have lost their terror for the time being as a result of increased employment, production, and available supplies of food, clothing, and other necessities.

Without the dollar purchasing power provided by American aid this state of affairs could not have been brought about.

Despite their diligence, skills, initiative, and resources, the intelligent, hard-working people of western Europe could not have made as great a comeback without machinery, raw materials, food and other indispensables to be had only with dollars advanced by the American people.

Large numbers of western Europeans are unaware of the character and extent of American aid and many others think we had to give. But this should not obscure the more important fact that our aid helped make it possible for people who belong on our side of the east-west struggle by preference, geography, and institutions to remain there.

CHEAPER THAN LIBERATION

It will take continuing effort to keep western Europe on the side of the free. But the recovery program has won time for that effort.

Instead of having to liberate western Europe for our security we have only to help it lay the bases of enduring stability and independence—a task far less costly in blood, effort, and dollars than liberation.

The contrast between what I saw here in 1946 and what I have just seen is remarkable in many respects.

It is not simply in the buildings rising out of the rubble of wartime destruction; the blasted bridges, culverts, docks, roads, railways, and canals again in normal service; the battle-scarred fields again yielding crops or the factories which had been razed turning out larger production than before they were bombed.

It is the spirit of the people. Hope and confidence have returned to people who were still stunned by war, enemy occupation, collaboration, social revolution, and other experiences of the previous decade.

GAIN FOR UNITED STATES CITED

This is the stuff of which much can be made for the free way of life if given time and the right direction. As the nation with the greatest stake in peace with freedom, justice, security, and prosperity, we may feel that our investment here has not been in vain.

We must not forfeit what we have invested and gained because all of our expectations have not been met.

When one visits land-reclamation projects in overpopulated, land-hungry Italy or fields and factories in France and Britain one sees tangible evidence of benefits due to American aid.

At the Renault automobile works here in France there are rows of transfer machines as up to date and efficient as anything to be found in Detroit, Mich. It is American equipment which could be obtained only with dollar aid.

American assembly-line methods have been introduced into this establishment, which was almost put out of business by Allied bombardment because it produced war materials for the Axis.

The destruction of obsolete equipment in wartime made it easier to modernize this industry. Thus it is producing twice as many cars as it produced prewar with the same number of employees.

Legislation which compels it to employ many more workers than are required so as to help absorb Italy's labor surplus does not give the great Fiat motor works the same incentive to introduce American production techniques.

But Fiat is putting modern American machines bought with Marshall plan dollars to good use. Four hundred cars are being turned out daily and a new model is about to be marketed to help Italy's economy.

(Fiat, Renault, and other firms, as well as farmers who get tractors, pay full value in lire, francs, or pounds for American machinery. The proceeds go into special "counterpart funds" which can only be expended by the governments for purposes approved by the United States. Marshall aid is necessary because the governments lacked dollars with which to pay for essential productive equipment. But individual beneficiaries do not receive "gifts" from the American taxpayers. Only the nation as a whole benefits from such aid in the sense that it does not pay for much of the dollar aid with dollar equivalent.)

Renault and Fiat, which are only two of a wide variety of productive enterprises aided by Marshall plan funds, also use their own considerable resources to increase their productive capacity. They have helped themselves to a far larger extent than they have been helped by American aid.

The margin given by the United States helps provide employment, goods, and earning capacity, which in turn strengthen the economic and social structure of western Europe.

We try to see that the lire, franc, and other local currency equivalents of our dollar aid—the counterpart funds—are used in ways that will permanently benefit the countries we are helping.

In some countries part of these funds go for retirement of internal short-term debt because that serves to reduce inflation and thus furthers social stability.

More visible to the observer are such projects as the reclamation of great tracts of land in Italy which have been unproductive for centuries because of their swampy character.

I have seen two and three crops a year being harvested from land which was useless when I lived in Italy 20 years ago.

By getting rid of malaria and putting in pumps and drainage canals and farm-to-market roads it is being made possible for peasants to come down from their hilltop towns and live in the fields they cultivate.

This saves hours of travel back and forth daily as well as increases the amount of food and labor available to impoverished Italy.

It is estimated that extra employment can be provided for 500,000 Italians annually—nearly one-third of Italy's chronic unemployed—by these reclamation projects partially made possible by American counterpart aid.

Sardinia, hitherto only sparsely settled because of malaria and related problems, is expected to absorb from 300,000 to 400,000 Italians from the mainland as a result of malaria elimination and land reclamation.

By making American hybrid corn available to Italian farmers, the yield has been doubled in some parts of Italy and the average yield is up 30 percent.

Readers of the stark tale of south Italian peasant hopelessness, "Christ Stopped at Eboli," will be interested to know that ERP aid is bringing water and improved methods of cultivation to such long-neglected areas.

Index numbers show production in the 18 participating countries to be well above prewar levels.

Industrial production is 15 to 20 percent greater than it was at the highest prewar level.

Agricultural production is between 95 and 100 percent of the prewar level.

There are now no critical bottlenecks, no commodity shortages that can disrupt the industrial effort. Excluding Germany, the output on a man-year basis is 10 percent above the prewar level.

For these encouraging figures American taxpayers can take considerable credit. So far so good. But our interest in Europe goes beyond its restoration to prewar levels of production.

What we must continue to seek is the construction of a sound basis for the survival of western civilization.

Since that is not yet assured, it is more important to discuss what remains to be done than to report on what has been done. That will be the subject of remaining articles in this series.

Reorganization of NLRB

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minneapolis Morning Tribune of April 19, 1950:

PLAN NO. 12 IN TROUBLE

President Truman's bid to whittle away a portion of the Taft-Hartley Act in the guise of a Hoover Commission reform has run into a snag. The Senate Expenditures Committee voted 9 to 4 against his proposal to abolish the Office of General Counsel to the National Labor Relations Board.

The action means Senator TAFT's resolution of disapproval will reach the Senate floor with a favorable recommendation. If it wins the support of 49 Senators, Reorganization Plan No. 12 will be junked.

Mr. Truman justifies plan No. 12 on the basis of a general recommendation by the Hoover Commission that administrative responsibility ought to be vested in the chairmen of regulatory commissions. The change, he said in his message of transmittal, would restore unified authority and responsibility to the Board.

Obviously, the President was either misinformed about what the Commission actually recommended or he is attempting a dubious maneuver for political purposes. For nowhere in the Hoover reports is there any suggestion that the Office of NLRB General Counsel be abolished. In fact, none of the Commission's final recommendations exclusively affect the Board.

The Commission's task force expressed concern about the General Counsel's broad independent powers and felt that some changes might be desirable. It proposed that a council of labor under the chairmanship of the Secretary of Labor be set up to coordinate Federal labor policy and to advise the President. It would include the General Counsel and other officials concerned with labor problems.

Examining the specific suggestion that the General Counsel's functions be restored to the Board, the task force said:

"To this the objection is made that the prosecuting functions should be separate from the hearing of complaints. But * * * only in part are his duties genuinely prosecution. It may be that the administrative and policy-making functions could be subordinated more clearly to the Board's control while still maintaining an adequate separation of the truly prosecuting activities."

When Congress passed the Taft-Hartley law the Office of General Counsel was made independent of the Board in response to complaints that the Board had been acting as prosecutor, judge, and jury in labor matters.

Perhaps Congress is ready to change its mind about the desirability of separating NLRB functions. Perhaps not. The problem, however, is one that needs to be considered in relation to over-all Federal policy in labor relations. It should not be disposed of separately or by indirection.

I Am an American Day

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. TEAGUE. Mr. Speaker, the annual I Am an American Day program will be under the general chairmanship of Col. Waldron E. Leonard, and I feel sure that these ceremonies on May 21 and 22 will be as impressive as the previous ones that were organized by Colonel Leonard. The occasion of I Am an American Day has been set aside by resolution of Congress and by a proclamation issued by the President of the United States.

With our Capital City being referred to quite often as the capital of the world, I believe it very proper that we give special attention to this 2-day observance, not only as an inspiration to our new American citizens, but as a rededication of our energies and talents to the American way of life.

Under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Washington Times-Herald, entitled "We're Proud of America":

WE'RE PROUD OF AMERICA

These programs are a fitting prelude for the big 2-day observance of "I Am An American Day," scheduled May 21 and 22.

On May 21 which is a Sunday, Washingtonians will celebrate this day, set aside by Congress and the President as a time for reaffirming their citizenship, in their homes and churches.

The following day an enormous program will be held on the Capitol plaza. President Truman will make the principal address. Members of the House and Senate and officials of the various Government departments will participate in the program.

And, we think it would be an excellent idea if the Government departments were let out early enough for all employees to attend the ceremonies planned for 4 p. m. Arrangements should also be made to see that as many school children as possible have an opportunity to attend.

The children will really enjoy this show because the committee in charge has received a promise that Hopalong Cassidy will be present. Hopalong, hero of one of the favorite comic strips appearing in the Times-Herald, is also the big rage among kids on television.

The program will be climaxed with a recitation of the American creed. Music will be furnished by the service bands in this area.

It will be a grand show and Col. Waldron Leonard, chairman of the committee in charge, is due for thanks from the community for working up the program.

Let's give him a great big hand and let's see there is a turn-out at the Capitol big enough to show the rest of the Nation and the world that the people in Washington are proud to be Americans.

Truth Must Prevail

EXTENSION OF REMARKS
OF
HON. JOHN KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. KEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by our President, the Honorable Harry S. Truman, at a luncheon of the American Society of Newspaper Editors, Hotel Statler, Washington, D. C., on Thursday, April 20. The President's address carried a most timely message on using truth as the best weapon to fight the falsities of Communist propaganda. The President has directed the Secretary of State to plan a strengthened and more effective national effort to use the great power of truth in working for peace. His remarks are very much to the point and I am happy to place them in the Appendix to the RECORD so they may receive the attention merited by their importance.

The address follows:

Mr. Chairman, distinguished guests, members of the American Society of Newspaper Editors, I am happy to be here today with this group of editors. You and I have a great many important problems in common, and one of the most important of these is the responsibility we share in helping to make the foreign policy of the United States of America. That is why I am going to take this opportunity to discuss with you some aspects of that policy.

No group of men in this country is of greater importance to our foreign policy than the group your society represents.

In a democracy, foreign policy is based on the decisions of the people.

One vital function of a free press is to present the facts on which the citizens of a democracy can base their decisions. You are a link between the American people and world affairs. If you inform the people well and completely, their decisions will be good. If you misinform them, their decisions will be bad; our country will suffer and the world will suffer.

You cannot make up people's minds for them. What you can do is to give them the facts they need to make up their own minds. That is a tremendous responsibility.

Most of you are meeting that responsibility well—but I am sorry to say a few are meeting it badly. Foreign policy is not a matter for partisan presentation. The facts about Europe or Asia should not be twisted to conform to one side or the other of a political dispute. Twisting the facts might change the course of an election at home, but it would certainly damage our country's program abroad.

In many other countries today, the papers print about foreign affairs only what their governments tell them to print. They can't add anything, or cut anything. In the democracies, the papers have a free hand. Only in a democracy is there such mutual trust and confidence among citizens that a private group is given such an all-important role in determining what the Nation as a whole shall do. There is too much nonsense about striped trousers in foreign affairs. Far more influence is exerted by the baggy pants of the managing editor.

There has never been a time in our history when there was so great a need for our citizens to be informed and to understand what is happening in the world.

The cause of freedom is being challenged throughout the world today by the forces of imperialistic communism. This is a struggle, above all else, for the minds of men. Propaganda is one of the most powerful weapons the Communists have in this struggle. Deceit, distortion, and lies are systematically used by them as a matter of deliberate policy.

This propaganda can be overcome by truth—plain, simple, unvarnished truth—presented by newspapers, radio, and other sources that the people trust. If the people are not told the truth, or if they do not have confidence in the accuracy and fairness of the press, they have no defense against falsehoods. But if they are given the true facts, these falsehoods become laughable instead of dangerous.

We can have confidence that the free press of the United States and most of the other free nations will keep us from being deceived by Communist propaganda. But in other parts of the world the struggle between falsehood and truth is far more intense and dangerous.

Communist propaganda is so false, so crude, so blatant, that we wonder how men can be swayed by it. We forget that most of the people to whom it is directed do not have free access to accurate information. We forget that they do not hear our broadcasts or read impartial newspapers. We forget that they do not have a chance to learn the truth by traveling abroad or by talking freely to travelers in their own countries.

All too often the people who are subject to Communist propaganda do not know Americans, or citizens of the other free nation, as we really are. They do not know us as farmers or as workers. They do not know us as people having hopes and problems like their own. Our way of life is something strange to them. They do not even know what we mean when we say democracy.

This presents one of the greatest tasks facing the free nations today. That task is nothing less than to meet false propaganda with truth all around the globe. Everywhere that the propaganda of Communist totalitarianism is spread, we must meet it and overcome it with honest information about freedom and democracy.

In recent years, there has been tremendous progress all over the world in education and the exchange of ideas. This progress has stirred men everywhere to new desires and new ambitions. They want greater knowledge, they want better lives, they want to be masters of their own affairs. We have helped and encouraged these people, but the Communists have seized upon their desires and ambitions and are seeking to exploit them for their own selfish purposes.

In the Far East, for example, millions are restlessly seeking to break away from the conditions of poverty and misery that have

surrounded them in the past. The Communists understand this situation very well. They are trying to move in and take advantage of these aspirations. They are making glittering promises about the benefits of communism. They reach directly to the peasant or the villager in these vast areas, and talk to him directly in his own tongue about the things he has learned to desire. They say that they can get these things for him. And too often he hears no voice from our side to dispute them.

We know how false these Communist promises are. But it is not enough for us to know this. Unless we get the real story across to people in other countries, we will lose the battle for men's minds by default.

The Communist propaganda portrays the Soviet Union as the world's foremost advocate of peace and the protector of defenseless peoples. The contradiction between what the Communist leaders have promised and what they have actually done is so startling that we are amazed that anyone can be deceived. In Berlin, in Czechoslovakia, in the Balkans, in the Far East, they have proved, time after time, that their talk about peace is only a cloak for imperialism. But their intended victims will not learn these facts from Soviet propaganda. We are the ones who must make sure that the truth about communism is known everywhere.

At the same time, we must overcome the constant stream of slander and vilification that the Communists pour out in an effort to discredit the United States and other free nations.

Soviet propaganda constantly reviles the United States as a Nation of war mongers and imperialists. You and I know how absurd that it. We know that the United States is wholly dedicated to the cause of peace. We have no purpose of going to war except in defense of freedom. Our actions demonstrate that we mean exactly what we say. But when men throughout the world are making their choice between communism and democracy, the important thing is not what we know about our purposes and our actions—the important thing is what they know.

Communist propaganda also seeks to destroy our influence in the world by saying the American economy is weak and about to collapse. We know this is preposterous. The industrial production of the United States is equal to that of the rest of the world combined. Our agricultural production is more than adequate for our needs. Our people enjoy the highest standard of living in the world's history. Our economic strength is the bulwark of the free world.

From every standpoint, our free way of life is vastly superior to the system of oppression which the Communists seek to impose upon mankind. In many parts of the world, however, where men must choose between freedom and communism, the true story is going untold.

We cannot run the risk that nations may be lost to the cause of freedom because their people do not know the facts.

I am convinced that we should greatly extend and strengthen our efforts for making the truth known to people in all the world.

Most of us have recognized for years, of course, how important it is to spread the truth about freedom and democracy. We are already doing some very good work—through the Voice of America and the United States information offices and libraries in many parts of the world, through the exchange of students, through the United Nations and its affiliated organizations, and in other ways. But events have shown, I believe, that we need to do much more, both ourselves and in collaboration with the other free nations. We must use every means at our command, private as well as governmental, to get the truth to other peoples.

Private groups and organizations have an important part to play. Our labor unions have already done fine work in communicating with labor in Europe, in Latin America, and elsewhere. The story of free American labor, told by American trade-unionists, is a better weapon against Communist propaganda among workers in other countries than any number of speeches by Government officials.

The same principle applies to other groups. The best way for farmers in other countries to find out about us is to talk directly with our own farmers. Our businessmen can speak directly to businessmen abroad. We need to promote much more direct contact between our people and those of other countries.

We should encourage many more people from other countries to visit us here, to see for themselves what is true and what is not true about our country. We should find more opportunities for foreign students to study in our schools and universities. They will learn here the skills and techniques needed in their countries. They will also see at first hand the rights and duties of citizens in our land of democratic institutions.

Our colleges should train more Americans to go abroad as teachers, especially to teach modern methods of farming, industry, and public health—and, by example, to teach our concepts of democracy. The notable record of our many charitable and religious organizations who send teachers abroad is proof of what can be done.

Another major part of our effort must be carried out through our great public information channels—newspapers and magazines, radio, and motion pictures. We must strive constantly to break down or leap over barriers to free communication wherever they exist. We must make full use of every effective means of communicating information, in simple, understandable form, to people whose backgrounds and cultures are different from ours.

This poses an enormous challenge to groups such as yours, a challenge which can be met only by extraordinary inventiveness and enterprise. I am confident that the American press can and will make a tremendously useful contribution toward finding new solutions.

The Government's programs for telling the truth about the United States to the peoples of the world also need constant improvement. Our present overseas information and educational exchange program is getting results. For example, the Voice of America has been carrying to people behind the iron curtain the true story of world events. It has been so successful that the Soviet Government is using a vast amount of costly equipment in an attempt to drown out our broadcasts by jamming. We must devise ways to break through that jamming and get our message across. And we must improve and strengthen our whole range of information and educational services.

This is not a conclusion reached by Government officials alone. We have had the valuable aid of the United States Advisory Commission on Information created by the Congress. Your own society is ably represented on that Commission by Mr. Mark Ethridge and Mr. Erwin D. Canham. The members of the Commission have given intensive study to the overseas-information program and have made repeated recommendations that it be substantially expanded. Similar recommendations for the exchange program have been made by the Advisory Commission on Education, headed by Dr. Harvie Branscomb. I have been glad to see that many Members of the Congress have urged an improved and expanded program in these fields—as shown, for example, by the resolution introduced recently by Senator BENTON for himself and a number of his colleagues.

Because of the pressing need to increase our efforts along this line, I have directed the Secretary of State to plan a strengthened and more effective national effort to use the great power of truth in working for peace. This effort will require the imagination and energies of private individuals and groups throughout the country. We shall need to use fully all the private and governmental means that have proved successful so far—and to discover and employ new ones.

Our task is to present the truth to the millions of people who are uninformed or misinformed or unconvinced. Our task is to reach them in their daily lives, as they work and learn. We must be alert, ingenious, and diligent in reaching peoples of other countries, whatever their educational and cultural backgrounds may be. Our task is to show them that freedom is the way to economic and social advancement, the way to political independence, the way to strength, happiness, and peace.

This task is not separate and distinct from other elements of our foreign policy. It is a necessary part of all we are doing to build a peaceful world. It is as important as armed strength or economic aid. The Marshall plan, military aid, point 4—these and other programs depend for their success on the understanding and support of our own citizens and those of other countries.

We must make ourselves known as we really are—not as Communist propaganda pictures us. We must pool our efforts with those of the other free peoples in a sustained, intensified program to promote the cause of freedom against the propaganda of slavery. We must make ourselves heard round the world in a great campaign of truth.

We have tremendous advantages in the struggle for men's minds and loyalties. We have truth and freedom on our side. The appeal of free institutions and self-government springs from the deepest and noblest aspirations of mankind. It is based on every man's desire for liberty and opportunity. It is based on every man's wish to be self-reliant and to shape his own destiny.

As we go forward with our campaign of truth, we will make lasting progress toward the kind of world we seek—a world in which men and nations live not as enemies but as brothers.

Budenz' Unerring Finger

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles T. Lacey, from the Washington Daily News for April 21, 1950:

BUDENZ' UNERRING FINGER

(By Charles T. Lucey)

There is no blithe laughing off of the testimony of Louis F. Budenz by Government officials who have worked most closely with him since he renounced communism 5 years ago.

They look back over the record and give him credit for solid devotion to facts.

Time and again the ex-Communist, now teaching at Fordham University in New York, has appeared publicly against the Communists, and repeatedly his testimony has led to court convictions or has been borne out by subsequent events.

Mr. Budenz was the Government's leading witness in the long New York trial of 11

Communist leaders. For days he sweated under vigorous cross-examination of defense lawyers trying to shake his story. But in the opinion of some who followed the case almost microscopically, they never laid a glove on him.

This same man earlier had put the finger on Gerhart Eisler as the No. 1 power in United States communism. Most Americans never had heard of the little commissar—they thought Earl Browder, later tossed out by Moscow, was the chief revolutionary.

But Mr. Budenz, who held an important Communist command post as managing editor of the party's newspaper, The Daily Worker, was able to tell how Mr. Eisler berated and pushed around lesser fry. Mr. Eisler subsequently was convicted for contempt of Congress, skipped the country, and today serves Stalin in the Russian zone of Germany.

In August 1948, Mr. Budenz testified that it was known among Communist Party officials in New York that Alger Hiss was linked to party affairs.

Mr. Budenz helped put the finger on Sam Carr, convicted in connection with the operation of the Communist spy ring in Canada.

He testified against John Santo, secretary-treasurer of the New York City Transport Workers Union—the man brought to New York to organize the subway system for the Commies—in a deportation case that led to Santo's voluntary departure from the United States.

In that case he knew his past private life was sure to be the target for a smear campaign by the Communists, but he went ahead anyway.

Those who know Mr. Budenz well say it has been only after the deepest soul searching that he has decided to tell all he knows about the operations of the Communist Party in this country. When he renounced communism in 1945, it wasn't a case of suddenly seeing the light, but of prolonged mental struggle within himself.

It was not so difficult for him, his friends say, to expose the party's top leaders, but it was difficult to disclose facts concerning personal friends in the Communist movement.

But eventually he made his decision on the ground that this had to be done to tell the whole story of what communism was attempting in this country.

Mr. Budenz took the step that gave dramatic substance to his renunciation of communism on October 10, 1945, in St. Patrick's Cathedral in New York. There, with his wife and three daughters, he made the profession of faith that carried him back into the Catholic Church he had left many years before.

Another Boost for Big Government

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. SHAFER. Mr. Speaker, I want to discuss President Truman's veto of the Kerr amendments to the Natural Gas Act. Because many consumers of natural gas are of the opinion that the President's veto has warded off the threat of higher rates for this popular fuel, I believe it is well that you should know there is far more danger of higher gas rates now than there would have been had the President signed the Kerr bill. In spite of all the fog that was thrown up during consideration of the Kerr bill, it was purely a measure simply to retain to the various States the control over their natural-gas resources they hitherto have enjoyed; also control over distribution of gas within their borders.

In vetoing the bill the President deliberately broke his word, both express and implied, to leaders of his own political party. He did so, it is obvious, solely because of the tremendous pressure put upon him because of a Nation-wide propaganda campaign sponsored by those who would centralize all power in Washington.

The people of the United States were told that putting the Kerr bill on the statute books would constitute a victory for monopolists and would result in higher natural-gas prices for ultimate consumers. No statement in this connection could possibly have been more false. Yet, the President, who should have known better, if he did not, deliberately inserted this false propaganda in his veto message.

In saying these things I am sure I express the conviction of a majority in Congress. Yes; a majority of both political parties. Everyone on Capitol Hill knows that the Kerr bill, as finally passed, had been rewritten in exact accordance with the expressed wishes of the President. The leaders of his own party in Congress fought for the bill.

But the President, coldly and cynically, betrayed them. It must be assumed that he deserted those who trusted him and were loyal to him to curry favor with those whose political philosophy is that of big government—bigger and bigger government, until socialism is the end result. We all know now that socialism is a form of social and economic slavery. We know it to be the precursor of communism, the antichrist, the ultimate terror.

Now, why did the majority of both Houses of Congress vote to pass the Kerr bill? Was it merely to serve the interests of a selfish minority who would boost the price of natural gas, or was it to defeat the conspiracy of a still smaller and far more selfish minority in Government, in this instance to take another long step toward the ultimate socialization of the Nation's economy? Was a vote for the Kerr bill a vote for big government or a vote for the right of States and municipalities to handle their own business within their borders? Was it a vote for higher or lower gas prices?

Let me tell you about that. Let me make it clear to you that many have been misled by those who would give the bureaucratic Federal Power Commission virtually dictatorial powers over the production and sale of the natural gas they find so cheap and convenient for their daily household uses.

When Congress passed the Natural Gas Act in 1938, the intent was to provide for Federal regulation solely of natural gas moving through interstate pipe lines and interstate commerce—this and nothing more. This policy, moreover, was confirmed by amendments to the act in 1942 and 1947. But as it happened there was a flaw in the statute—a flaw which the Kerr bill was designed to correct. As written, the Natural Gas Act provides that the Federal Power Commission may assume regulatory jurisdiction over a pipe-line company only after it has officially designated it as a natural-gas company as distinguished from a gas-producing or distributing company. Under the statute, such a company must be engaged in interstate commerce and qualify as a natural-gas company.

In the so-called East Ohio case, which was litigation involving only the city of Cleveland and the pipe lines operated entirely within the State by the East Ohio Gas Co., the Federal Power Commission intervened. The East Ohio Co. was designated as a natural gas company. Thus, the Federal Power Commission assumed jurisdiction over a matter pertaining solely to the State and not involving interstate commerce at all. The Supreme Court of the United States later upheld this action of the Federal Power Commission.

Having thus successfully invaded the rights of States to handle their own affairs in this respect, more recently the Federal Power Commission has sought to assume jurisdiction over the production and gathering of gas within the States for sale to interstate pipe line companies. A hearing in this connection is now pending in Oklahoma and, I understand, there are nearly 50 other jurisdiction cases listed. From all this, it becomes apparent that the Federal Power Commission seeks regulatory power over natural gas all the way from its discovery underground to the point where it is burned in the kitchen stove. That is big government; it is socialization.

Why is it socialization? Simply because by this means Washington bureaucrats would determine not only whether the people get gas at all, but how much gas they get, how and where they get it, when they get it, and how much they pay for it. Producers and distributors of gas would, in effect, become appendages of a Government bureau, subject to its every whim.

From all I have said thus far, Mr. Speaker, you may understand that the Federal Power Commission has challenged the authority of every State public utility commission in America, including our own Michigan Public Service Commission. It has arrogantly disregarded the will of Congress by seeking, and in large measure obtaining, authority over every natural gas distributing company in America; and unless stopped, will take authority over the production and gathering of gas.

Now, aside from the socialistic implications of this grab for power, what may be expected so far as concerns the quantity and price of the natural gas available to the consumer under total regulation by the Federal Power Commission? The answer is not a difficult one.

Over the past two or three decades, since natural gas became an important factor in the Nation's fuel market, under State regulation, the price of natural gas at the well-head and at the end of the gathering line, where it is delivered to

the interstate pipe-line companies, consistently has moved downward. Under State regulation the price of natural gas has become lower from year to year. It is cheaper today than it was 20 years ago.

Over the past 12 years, under Federal Power Commission regulation of interstate transmission of gas, the price of gas delivered to distributing companies by the interstate pipe lines has consistently moved upward. Natural gas delivered at the home is still cheaper than it was 20 years ago. But the increases of late years are due almost entirely to the policy of the Federal Power Commission. This policy is to grant rates which yield the interstate pipe-line companies 6 percent above a rate base that contains all costs. These costs include all financing, all operations, amortization of the total investment, local, State and Federal taxes, and everything else a lot of smart lawyers can think up and persuade the Commission to allow in the rate base.

If the Federal Power Commission gains jurisdiction over production and gathering of natural gas, and its sale at retail by distributing companies, there will be a direct conflict of authority between State and Federal commissions. It would throw the natural-gas business into chaos for many years to come, until the battle is won by one side or the other.

Moreover, gas producing and distributing companies would have to keep at least two sets of books, one for the State and the other for the Federal authorities, and these increased costs would have to be paid by gas consumers through higher gas rates.

At any rate, being on the ground and knowing the conditions at first hand, State commissions have reduced natural-gas rates at both producing and distributing ends, while permitting the producers enough income to enable them to explore for new wells and the distributors enough income to give good service. With the Federal Power Commission the opposite has been the case. Prices charged distributing companies have gone up and only in part because of increased costs of labor and materials.

The State commissions have regulated natural gas business within the States without having to hire large numbers of people, at high cost to the taxpayers. But if the Federal Power Commission has its way, you may be sure that thousands will be added to the Government pay roll.

Even if the Federal Power Commission should reduce rates still further at the wells and at the gas burners in your home, you would undoubtedly pay more in boosted taxes to pay for the hordes of new Federal Power Commission employees than you would save in gas rates. moreover, natural gas rates at the wells are now so low that some States have been forced to put floors under prices to make sure that gas producers have enough money to explore for new wells and thus maintain the supply.

The President said interstate pipe lines must be protected from high prices at the wells, because they can buy gas only in restricted areas. This is a direct misrepresentation of the facts. Gas wells cannot be moved from one place to another, but gas pipe lines can be moved. The gas producers need the protection. The President put the cart before the horse, in order to make it look as if he were driving in the direction of lower gas prices instead of higher.

So I submit to you, that a vote for the Kerr bill was a vote for lower gas prices to the consumer, and for ever-growing supplies of gas. The Kerr bill was well designed to prevent further socialization of the natural-gas industry, and to maintain States' rights. It was a bill to protect gas consumers, and not to exploit them.

As I remarked once before, in Washington things hardly ever are what they seem. And in this instance, as in so many others, the Committee for Democratic Action and other big Government boosters were not concerned with the welfare of the people, or even with the truth. They were concerned only with the furtherance of their socialistic ideology.

The National Capital Sesquicentennial

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech of the gentleman from Washington, Hon. WALT HORAN, as part of the Salute to Freedom pageant, April 15, 1950, on the steps of the Capitol:

We Americans are gathered here today to launch a Nation-wide celebration of the founding of our Nation's Capital. It is the only capital city in the world that was hewn out of a wilderness to shelter a government that was first created on paper, then erected of brick and stone. This National Capital, dedicated to freedom, was George Washington's last legacy to the American people. It vindicates Lafayette's prediction, for it has become the central star of the constellation that enlightens the whole world.

I know I can safely say that never before in history has there been an anniversary so important as that which we begin to observe on this spot today. In 150 years this city has become the capital of the greatest nation on earth and the hub of the whole civilized world.. And it is the world's symbol of hope for the future of humanity, of free individuals, of government without tyranny.

Freedom—let me repeat, freedom—must be the heart and theme of this sesquicentennial birthday of the Federal City of Washington. Every feature and event that you witness in the months to come will be dedicated to that theme—just as our country itself is dedicated to preserving the precept of freedom.

For more than 7 months this proud and beautiful city will enact the dramatic Pageant of Freedom. Let each and every one of us be impressed with what it means to be a free American. We of the Sesquicentennial Commission pray that every man, woman, and child in America will, in some way, participate. We pray for a lasting appreciation of the good fortune and tremendous responsibility which are ours. We earnestly hope that an increasing spontaneity will develop the greatest civic celebration in history—an unprecedented display of mutual, nonpartisan faith and good will.

We commemorate today the laying of the cornerstone of the District of Columbia. One hundred and fifty years ago today that cornerstone was laid at Jones Point, in which is now the city of Alexandria, a part of the Federal reservation that has since been ceded back to Virginia. The 22d of November marks the day when, 7 months later, the Sixth Congress convened, the first to meet in the new Federal City of Washington. The infant community, made up of segments of the colonies of Maryland and Virginia, really deserved its early nicknames of "the city of streets without houses," and "the city of magnificent mudholes." Our farsighted patriots were still wrenching it from the wilderness.

Recently I read about the discovery in Asia Minor, on the Persian Gulf, of stone tablets. They told of the principles of government of the ancient Sumerian region of Babylonia, many hundreds of years before Christ. There, in the very cradle of civilization, scientists have unearthed the first known record of a nation with true social conscience. They found a government which not only allowed but demanded the participation of all its people, great and humble—truly a predecessor of our own Republic, dedicated as it is to government of the people, by the people, and for the people.

It is good that this ideal has somehow persevered, to spread from the Tigris and the Euphrates to the Potomac and the Hudson, over thousands of years and miles. Today we Americans can take pride in the fact that our own land has produced the highest fulfillment of that ideal—and created the most successful government ever to be based upon it.

I think that in all the writings of the man whose vision and triumph we celebrate here today, there are none more appropriate than this passage from Washington's Farewell Address:

"The unity of government which constitutes you one people is now dear to you. It is justly so; for it is a main pillar in the edifice of your real independence, the support of your tranquillity at home; your peace abroad; of your safety; of your prosperity; of that very liberty which you so highly prize."

But as it is easy to foresee that from different causes and different quarters, much pains will be taken, many artifices employed, to weaken in your minds the conviction of this truth—as this is the point in your political fortress against which the batteries of internal and external enemies will be most constantly and actively (though covertly and insidiously) directed—it is then of infinite moment that you should properly estimate the immense value of your national union to your collective and individual happiness—discountenancing whatever may suggest even a suspicion that it can in any event be abandoned, and indignantly frowning upon the first dawning of every attempt to alienate any portion of our country from the rest, or to enfeeble the sacred ties which now link together the various parts.

These are the most stirring words I can summon with which to welcome all of you to the National Capital Sesquicentennial Celebration, and commend to your keeping the future of our country and the preservation of the ideals which have made it so great.

Report on Israel

EXTENSION OF REMARKS
OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. KEATING. Mr. Speaker, under the sponsorship of the American Zionist Emergency Council, Rabbi Leon Stitskin, a distinguished clergyman of Rochester, N. Y., and liaison officer between the council and New York State government officials in Washington, visited the infant State of Israel last year and there made a detailed study of political, economic, social, and religious problems.

His report has been forwarded to me with the suggestion that it might merit the attention of my colleagues by inclusion in the RECORD. I am happy to accede to this suggestion, due to the extremely high qualifications of the author and the great importance of the issues he discusses. Although I realize their controversial character in part, the contribution of Rabbi Stitskin to the thinking on this timely subject is significant.

The report follows:

REPORT ON ISRAEL

(By Rabbi Leon Stitskin)

The political cauldron in Israel seethes over four issues which I was asked to investigate: One, the Arab refugee problem; two, territorial adjustment; three, the status of Jerusalem; four, the holy places.

As to the problem of Arab refugees, a wave of slanderous propaganda has been unleashed which distorts the facts and leads to erroneous conclusions. As a result of the propaganda, the Foreign Minister of Israel was forced into a compromising, almost suicidal, position when he consented to the admission of 100,000 refugees into the cramped and impoverished territory of Israel against the protest of the cabinet. Nobody with a practical knowledge of Israel believes that the country can integrate into its strategy and social economy 100,000 Arabs. Nevertheless, our State Department continued to pressure Israel for the admission of 250,000 Arab refugees.

On November 29, 1947, the people of Israel were fully prepared to set up a State on the basis of a settlement which entailed that at the outset 45 percent of its population would be Arabs. This would indeed have been effected had the Arab nations, too, accepted the UN decision and cooperated in maintaining the peace. But the Arabs revolted against the UN decision and wrecked the peace. They did so both within Israel and from without, forcing Israel to fight against five implacable armies, that converged upon the Jewish state from all sides, and an insurgent army from within. Their efforts failed. The invasion and rebellion collapsed. Then followed the Arab exodus. The Arabs fled despite the pleadings of the Jews for them to remain. Why did they go? Who prevailed upon them to leave? It was the Arab high command that promised them that the British were going to reinforce their armies and within a few days all the Jews would be drowned in a torrent of blood and they could return to divide the spoils and take possession of Jewish homes and belongings, settlements, and cities.

The primary and most decisive consideration in the Arab refugee problem is Israel's security. A flood of returning Arabs is liable to blow up the State from within. The Arab refugees will constitute a potential fifth column.

Even if those who return may now be seeking peace, they could not be relied upon in the event of new outbreaks. A mass repatriation of refugees without peace with the neighboring countries would be an act of suicide on the part of Israel. No government placed in such a position would think of doing anything of the sort. Israel is told not to worry about future outbreaks. But who is ready to give a pledge of peace to Israel? In the hour of need, who offered it a helping hand? The UN stood by impotent. The United States imposed an embargo on the export of arms to aggressor and victim alike. Today the Arab states have assurances that Great Britain will renew the supply of arms to them. Egypt has recently increased her war budget and she received eight warships from England. Lebanon is increasing her army to 10,000. Syria has sent 500 men to train in the British Air Force. Arab radio stations are daily pouring forth a stream of vituperative propaganda directed against Israel, threatening a second round. Such being the position of Israel, where is the moral and political justification for the unreasonable demands that are being made upon her? Why should this infant state be asked to undermine its national security with its own hands?

Then there is the economic factor. The truth of the matter is that the Arab economy in Israel has collapsed. Moreover, a large part of the geographical and economic vacuum created by the exodus has been filled by the new immigrants. A mass return of Arab refugees would require a creation of a new Arab economy.

Thirdly, the State is harnessing all its energy and resources to the great task of absorbing the new immigrants. This calls for unusual sacrifice in terms of high taxation and austerity which would have to be shared by the Arab population on an equal basis. The Arabs would no doubt resent being drafted for helping increase the Jewish population and there would be some justification for their disgruntlement.

What then is the solution? One of the wisest international measures taken after the First World War was the exchange of populations between Greece and Turkey. If any single factor has contributed to terminate the age-old enmity between those two countries, it has been the removal of the minority populations. But this may appear to be a far-fetched solution at the moment. In the meantime, Israel has declared its readiness to help in the resettlement of the displaced Arabs.

Israel is prepared to pay compensation for abandoned lands (there are not many precedents for this) and will continue to help in the reunion of families which were separated by the catastrophe. Israel will also admit 100,000 more refugees and will integrate them in its social economy. (We must not forget, however, that there are already in Israel at present close to 170,000 Arabs.) This will be accomplished only after peace negotiations are completed and the Clapp Commission will make its final recommendations on the economic development of that part of the world.

The second point at issue is the territorial question. Although Israel has fully earned its right to the Negev, Egypt has not become reconciled to this state of affairs. Great Britain, too, is dissatisfied with Israel's hold on the Negev. Why? In case of another war it would serve the best interest of Britain that all Arab countries be united by land as well as by sea. The assignment of part of the Negev to Egypt would establish a direct route from Egypt to Transjordan while depriving Israel of the important strategic port of Akaba. Thus, if Egypt were to close the Suez, Israel would have no outlet to the sea.

But aside from this consideration, Israel must have natural boundaries. The Jewish state needs bridgeheads and outposts to protect the heart of the nation. The Negev will not only serve as a vast reservoir for the resettlement of thousands of refugees but also as a military zone protecting the southern entrance to Israel. Every colony and settlement is in a sense a strategic outpost, a military zone, in addition to being an agricultural settlement. Hence Israel needs the Negev not only for settlement but also as a natural boundary for the defense of the land.

The natural frontiers between Israel and Egypt, Lebanon and Syria, are the former boundaries between British mandated territory and these three countries. The same holds good for the frontier between Israel and Transjordan. In the case of Egypt there is a special problem of the Gaza-Rafa strip. In this matter, too, the Government of Israel is prepared to seek a solution by negotiations. The same is true of the road to Bethlehem, which is in Jewish hands, and the road to Mount Scopus, held by the Arabs.

Yet Israel can on no account acquiesce in the seizure by invading armies of any strip of territory forming part of the area of the Jewish state. For this reason Israel will never agree to leave in the hands of Syria the strip lying to the east of the Jordan and Lake of Galilee.

Mr. Sharett has pointed out it will not do to encourage the Arab aggressors by intimating that they might succeed in obtaining territorial concessions by political pressure. Said Sharett: "The contribution made by the United States of America toward adoption of that great historic decision will never be forgotten, just as the outstanding contribution of the Soviet Union and of other powers, large and small, will be remembered. But the lesson taught by the fate of that resolution and the mortal pains of its implementation has also been deeply engraved in letters of fire when the state of Israel at birth hung between life and death. It was not the resolution of November 29, 1947, which proved its salvation. Israel's soldiers did not sacrifice their lives in gaining for this state defense positions and security zones in order that political leaders of the nation should throw away this sacred, blood-drenched patrimony."

The status of Jerusalem is the most controversial and explosive issue. As far as Israel is concerned, Jerusalem constitutes the heart of the nation. It is vital to its future security and Israel will therefore never accept any compromise on New Jerusalem. Any attempt to force the internationalization will lead to renewed warfare in the Middle East. The new city of Jerusalem is 95 percent Jewish and is an integral and inseparable part of the Jewish state. During the war Israel paid for the defense of Jerusalem with untold sacrifices and a heavy toll of life. Israel has made many concessions, but on this question there will be no compromise. As to the holy places in Jerusalem, it is pointed out that 95 percent are situated in the old city, and Israel will agree to accept some form of international supervision over the holy places and shrines.

With regard to the holy places in Israel, slanderous and libelous campaign propaganda has been conducted by certain quarters who are pressing for the internationalization of Jerusalem. There has been a great deal of misrepresentation and mischievous fabrication.

Atrocity stories have been published about alleged violations of the rights of the church,

arrests of priests and high ecclesiastical dignitaries. What are the facts?

There are within the area assigned to Israel approximately 200 Christian churches and monasteries administered by 12 Christian denominations. The value of Christian property within the territory of Israel amounts to $80,000,000 of which damages incurred during the war constitutes less than one-half percent, or less than $500,000. The war damage to Christian property is virtually confined to one Jerusalem church, The Notre Dame, because the Arabs turned it into a fortress. The Jewish Army was reluctant to train its guns on this church, until its position became untenable. There is no damage to any church property in Nazareth. The Government has promised to make all necessary repairs and has set up a special department to look after the interests and welfare of Christian and Moslem sacred shrines.

The Israel Ministry for Religious Affairs watches over the holy places with a vigilance and zeal which cannot be surpassed. A number of heads of Christian churches have their seats in Israel and are active in protecting their rights and interests. They enjoy every facility and are working in close contact with the Israel Ministry for Religious Affairs and the local authorities.

I have a copy of a letter addressed by Father Terence, patriarchal vicar of Jerusalem to the Ministry of Religions of Israel in which he categorically denies "the exaggerated and false impression made public on May 18, 1949, concerning an incident which is said to have occurred in Ain Karem."

Another Catholic leader, Father Terence Kuehn, vicar general for the southern area of Israel and a member of the Franciscan Order in Jerusalem, also testified that the Israel Government's attitude is one of definite good will. "A number of incidents have occurred at the hands of fanatics, including the breaking off of some locks from doors of Franciscan property and the throwing of stones at one of the windows, but I do not think that circumstances would have been different under another government considering what has taken place in the Holy Land. The Jews have made true efforts and I am sure the position of the church in Israel will improve."

Rev. Leigh F. Irish, pastor of the American Gospel Church, who said his church was the first American church in Jerusalem, described the Israel Government as most agreeable, kind, and considerate. He ruled out persecution and desecration, and said: "I am against the false type of propaganda some persons are spreading in the United States and elsewhere to slander Israel. Israel deserves the utmost commendation for what it has done."

Rev. Robert Lindsay, leader of the Jerusalem Baptist Congregation, smiled at the suggestion of any desecration of church property. He expressed opposition to the internationalization of Jerusalem "which would put the Holy City on a pragmatic basis. Israel has done just as good a job in Jerusalem, if not better, than others could have done."

In conclusion: Israel's accomplishments during the first 2 years are phenomenal. Everywhere there is marked progress. The functions of the Government are conducted with western efficiency. Law and order rule supreme. The humanitarian impulse and the willingness to build cooperatively a state based on justice, equity, and peace—are auspicious portents for the future.

All in all, Israel is the best investment as far as western democratic ideals are concerned in a sea of reaction and primitive feudalism. The Jewish state constitutes an oasis in a desert of undeveloped areas.

Dr. Shoulders Endorses Hospital Construction Program

EXTENSION OF REMARKS
OF
HON. ALBERT GORE
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. GORE. Mr. Speaker, since making the statement here on April 4 that I would offer at the proper time in consideration of this bill an amendment to restore the unjustified $75,000,000 reduction in funds for construction of hospitals under the Hill-Burton Act, and giving my reasons therefor, I have received many letters and telegrams endorsing the program and urging support of the amendment.

One of the most thoughtful letters on the subject comes from Dr. H. H. Shoulders, of Nashville, Tenn.

Dr. Shoulders, who endorses the hospital construction program and endorses, too, the amendment which I propose to offer, makes such an interesting commentary upon certain of my remarks regarding the scarcity of doctors, in which he raises a point of view that I did not have thoroughly in mind at the time I spoke, that I would like to read certain excerpts of Dr. Shoulders' letter, which I think my colleagues will find interesting:

MY DEAR ALBERT: I have read your speech with interest. I heartily approve of the position you have taken on this issue. I heartily approve of the arguments you have made with one exception. I hope I can express myself with regard to this exception in such a way as not to offend you, but rather amplify your arguments in favor of the amendment you propose.

You cite figures as to the number of doctors in Tennessee in 1921 and 1948, together with an increase in the population, and interpret these facts to mean there is a marked shortage of doctors and urgent need of less waste of time on the part of the physician. This is another important reason for the support you are giving to the Hill-Burton program. It is also a reason why those figures, however accurate, don't tell the story.

I have used just two examples. I could use many more.

There is not an over-all dearth of physicians, in my opinion, at all. The deficiency in physicians exists where hospital facilities do not exist. There is a surplus of physicians in many areas where hospitals exist. It is my opinion, therefore, that the maldistribution of physicians is due very largely to the maldistribution of hospital facilities and that this maldistribution of physicians will be corrected automatically by accomplishing a more even distribution of hospital facilities, and without the Federal Government entering into the field of medical education and without the enactment of any compulsory measures whatsoever.

I would now cite to you the fact that more than 20,000 young graduates of medicine were inducted into military service in World War II on the completion of only 9 months of postgraduate training.

Under the GI bill of rights these young physicians have been able to carry their postgraduate training to completion. Many have already completed training and are looking for locations where hospital facilities exist. Certainly a young surgeon with complete training could not utilize the skills and judgment he has acquired in his training in a town or community where hospital facilities do not exist. I don't know of a place where a good, modern, new hospital has located in which a well-trained young man has not located soon thereafter.

The point I am trying to make is this, that this correction of maldistribution takes place as a result of the Federal aid in medical education.

The figures, as is often true of statistics, are misleading. I will endeavor to state my reasons for such an opinion.

To a marked extent the same things have happened in medicine that have happened in agriculture. A very much smaller number of farmers, as result of progress in farming techniques and equipment, are still producing a surplus for a greatly increased population.

Progress in the art, science, and techniques of medicine have also altered practices in medicine. For example: Before the days of the antibiotic drugs (penicillin, etc.) a physician treating a case of pneumonia in the home would probably make daily visits or twice daily visits to the patient for a period of 7 to 15 days, whereas today he may visit the patient twice or three times.

In 1921, a vast majority of deliveries took place in the home. The physician in attendance spent a majority of his time in waiting for developments.

Each of those patients today would be admitted to a hospital if accessible. As a result the time of the physician is not consumed in travel and waiting. He could properly treat both cases under modern conditions in a modern hospital with great advantage to both types of patients without spending a vast majority of his time in travel and waiting.

Other progressive developments have taken place which have an intimate bearing on this question also.

Roads have been improved. Modes of transportation have been altered. A few miles of distance between a patient and a hospital is not the handicap it used to be. By car or ambulance any patient can be brought to a modern hospital facility where the physician can render the most modern type of service under the most advantageous conditions with establishment of modern facilities and that it is not a result of a compulsion in any sense and that the Hill-Burton program does not disturb in any way the local autonomy of the institution nor the freedom of the patient and the physician.

The Hill-Burton program is going forward in Tennessee in fine shape, in my opinion.

Most sincerely yours,
H. H. SHOULDERS, M. D.

Mr. Speaker, the amendment will probably be voted upon next Monday. I request your careful consideration and urge support of this meritorious program.

Tariff Rates on Shoes and Rubber and Canvas Footwear

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my re-

marks in the RECORD, I include the following letters:

TREASURY DEPARTMENT,
Washington, March 30, 1950.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR MRS. ROGERS: For the Secretary, I wish to acknowledge your letter of March 29, 1950, in which you state that you have received a copy of the communication which Mr. Maxwell Field, executive vice president of the New England Shoe and Leather Association, directed to the Secretary, asking that action be taken under the Anti-Dumping Act of 1921 in connection with the alleged dumping of Czechoslovakian shoes in the United States.

This matter has been brought to the attention of the appropriate Treasury officials for consideration and a reply will be forthcoming as soon as possible.

Very truly yours,

WILLIAM L. LYNCH,
Acting Administrative Assistant to the Secretary.

DEPARTMENT OF STATE,
Washington, April 6, 1950.

The Honorable EDITH NOURSE ROGERS,
House of Representatives.

MY DEAR MRS. ROGERS: The receipt is acknowledged of your letter of March 29, in which you state you have received a copy of a letter dated February 28 from Mr. Field, executive vice president of the New England Shoe and Leather Association, Boston, Mass.

In accordance with your request, the following is the text of the Department's reply to Mr. Field's letter of February 28:

"The receipt is acknowledged of your letter of February 28, in which you request information on the official policy of the Department of State with respect to the importation of footwear from Czechoslovakia. You also state it has been brought to your attention that the Department of State has approved the importation of these shoes and has set a quota on the quantity of shoes which can be imported from Czechoslovakia to the United Staes during 1950.

"The Department of State has not established a quota on shoes and, in fact, has no authority to establish such a quota. Neither can it be said that the Department has 'approved' the importation of these shoes.

"Trade between the United States and Czechoslovakia is carried on within the framework of the General Agreement on Tariffs and Trade, concluded at Geneva, Switzerland, October 30, 1947, the signatories of which include the United States and Czechoslovakia. On April 22, 1948, the President proclaimed the following changes in rates under paragraph 1530 (e) of the Tariff Act of 1930, which rates were negotiated with Czechoslovakia under the General Agreement on Tariffs and Trade:

	General agreement rate
Commodity:	*Percent*
Boots, shoes, or other footwear:	
McKay sewed, other than skating	20
Molded soles laced to uppers	10
Other (principally cemented soles)	20
With fabric uppers and leather soles	20

"These concessions are subject to Article XIX (the 'escape clause') which permits a contracting party to withdraw or modify any concession if, as a result of unforeseen developments and of such concession or other obligations, increased imports threaten or cause serious injury to domestic industry. If it is felt that injury is being suffered in this case, a request for consideration and action should be addressed to the United States Tariff Commission, Washington, D. C."

Sincerely yours,

JACK K. MCFALL,
Assistant Secretary
(For the Secretary of State).

UNITED STATES TARIFF COMMISSION,
Washington, D. C., April 7, 1950.

The Honorable EDITH NOURSE ROGERS,
House of Representatives.

DEAR MRS. ROGERS: I have your letter of March 29, 1950, in which you refer to a bill which would reduce the duty on imported rubber and canvas footwear. Enclosed with your letter are several pages from the CONGRESSIONAL RECORD of March 28, giving your remarks concerning the competition from Czechoslovakia on rubber shoes and canvas shoes.

We have no information concerning a bill which would reduce the duty on rubber and canvas footwear. Possibly the editorial in the Watertown Sun refers to a bill, mentioned in the press in recent weeks, which would change certain customs administrative laws. This bill is being drawn up by the Treasury Department and I suggest you refer your request for a copy of the bill to that agency.

Under article VII of the General Agreement on Tariffs and Trade signed at Geneva in 1947, the United States has agreed to change its method of evaluating merchandise for duty purposes which, when carried out, would preclude the use of American selling price as a basis of customs valuation. This basis is currently used for the assessment of duty on rubber footwear and on rubber-soled footwear with canvas uppers. Before the United States could carry out this part of the general agreement, legislation by Congress would be necessary. Whether or not the bill being drafted by the Treasury Department will contain a provision on American selling price has not been finally determined.

I should like to point out that if the basis of valuation is changed, the United States has the right to adjust the rate of duty so that the total amount of duty collected will be the same under the new basis as it would have been under the old basis. If this right is exercised, it does not appear that the rubber-footwear industry is likely to be injured as a result of such a change in the basis of valuation.

I am enclosing an excerpt from the Tariff Commission's publication, Summaries of Tariff Information, which gives information on production and imports of rubber footwear through 1947. Also enclosed are tables which show more recent import statistics on rubber footwear.

If I can be of any further service in this or any other matter, please do not hesitate to call upon me.

Sincerely yours,

OSCAR B. RYDER,
Chairman.

LOCAL NO. 22763,
RUBBER WORKERS F. L. UNION,
Malden, Mass., April 10, 1950.

Mrs. EDITH NOURSE ROGERS,
House of Representatives,
Office Building, Washington, D. C.

DEAR MRS. ROGERS: I observed in the Boston Globe of Sunday, April 9, an Associated Press dispatch from Washington which carried the headline "Tariff board denies move to cut duty on rubber footwear." There followed a story to the effect that a report had been addressed to you from the United States Tariff Commission which stated that there was no move to cut directly duty on rubber footwear, but that there might be a change in the method of computing the duty.

Several weeks ago when we first learned of the proposals to cut the tariff on rubber footwear, I wrote letters to the entire Massachusetts delegation in Congress and some of the replies that I received from the Massachusetts members were accompanied by letters from the United States Tariff Commission over the signature of Mr. Oscar B. Ryder, chairman, which, I supect, were similar to the communication Mr. Ryder addressed to you. With your permission, I would like to point out that this letter is considerably less reassuring than it at first appears to be, and that the newspaper article referred to above indicates.

Firstly, there is a paragraph in Mr. Ryder's letter, in my copy, it is the second paragraph which says that the duty on rubber sole footwear with fabric uppers, which is now 35 percent ad valorem, based on the American selling price, could be reduced to 17½ percent; it then goes on to state further that the rate on other rubber footwear, "which is now $1.50 per dozen pairs, but not less than 12½ percent nor more than 25 percent ad valorem, based on American selling price, could be reduced to 12½ percent ad valorem."

The inference here is that this is something which might occur. Actually, it has occurred. The duty on Czechoslovakian rubber footwear is now 12½ percent ad valorem on the American selling price. You are probably familiar with the concern the leather shoe industry is manifesting over imports from Czechoslovakia. In fact, they make the charge of "dumping."

The second point, and this is major, is that under article 7 of the general agreement on tariff and trade, the United States has agreed to change its method of valuing merchandise for duty purposes which would preclude the use of the American selling price. The argument is then advanced that the rubber-footwear industry will not suffer from this arrangement because the United States has reserved the right to adjust the rate of duty so that the total amount of duty collected will be the same under the new basis as it would be under the old.

This is unconvincing and unsatisfactory to us because the foreign invoice price is variable and subject to governmental control; and because these industries are either socialized or subsidized, and therefore, the Czechoslovakian Government, for instance, could determine both the price and the quantity to be exported according to its need for dollars. The percentage rate necessary to yield the same protection as now granted would be at the rate of several hundred percent. It would be difficult to determine; it would be fantastically high; and would therefore be a far greater violation of administration trade policies than anything else which could possibly be proposed. It would appear to be also a considerable amount of movement to the end result of merely remaining in the same place. However, even if present policy makers were to arrange adjustments of the rate of duty furnishing the industry with the same measure of protection which it has now, the fact still remains that with the abrogation of the American selling-price principle, the way would be open for any future set of policy makers to open the floodgates to a deluge of products from these low-wage nationalized or subsidized industries.

The abrogation of the American selling price principle may occur in either of two ways—(1) is from a bill to be introduced by the Treasury Department which has the harmless sounding title of a Bill to Revise the Administrative Procedures of the Bureau of the Customs. This bill contains provisions to revoke the American selling price principle as it applies to rubber footwear.

The other means by which tariff reductions could occur would be through negotiations under the framework of the general agreement on tariff and trade which would take place in December 1950.

We feel that this is a real threat. We know that our industry cannot possibly compete with the nationalized industries of Czechoslovakia or with the products of Japanese workers, with their Oriental wage and living standards. And even if the maximum which is promised by the Tariff Commission is awarded us in the way of protection, the removal of the American selling price principle would leave us in the state of permanent uncertainty.

The rubber-footwear industry is located chiefly in southern New England, a very substantial portion of it in Massachusetts. This is the section which already has more than its share of distressed areas and which has already seen two of its major industries—leather shoes and textiles—blighted in the last few years.

The nature and source of this low-wage competition should also be taken into consideration.

Very truly yours,

FRANCIS MULCAHY,
President.

UNITED STATES RUBBER CO.,
New York, N. Y.

As a supplier of materials entering into the manufacture of our waterproof rubber footwear and canvas-upper rubber-soled footwear, we feel you would wish to be informed as to the possible jeopardy of this truly American enterprise and its effect upon you.

This situation will develop if the State Department and other governmental agencies continue along the lines of encouraging foreign imports through a lowering of tariffs to a point where the American manufacturer can no longer compete and survive.

Tariff rates at the present time on these commodities apply on the domestic selling price of American-made footwear like or similar to the imported items. We have unofficial but authoritative information that under the guise of revising the administrative procedures of the Bureau of Customs, a bill is to be introduced in the House of Representatives repealing the American selling price principle established by a Presidential proclamation in 1933 and which was sustained in 1937 by President Roosevelt when a Czechoslovakian trade treaty was under consideration.

At the Reciprocal Trade Conference held in Geneva in 1947, the American delegation granted concessions in duty rates on waterproof rubber footwear to this same iron-curtain country which for practical purposes cut the American duty in half. This was done over the clearly defined and logical protests of the entire American industry involved in the production of this necessary commodity. This trade treaty became effective in April 1948.

Fortunately, canvas-upper rubber-soled footwear was not on the 1947 agenda—but will probably appear without too much advance notice on the list of products to be considered for tariff concessions in the reciprocal trade-agreement negotiation with foreign countries to be held in southern England in September of this year.

The attached schedule tends to show the effects that can be expected if the American selling price principle is abolished and if the duty on canvas footwear is reduced by the full 50 percent which is permissible under the Reciprocal Trade Act.

Members of Congress in both Houses in the States in which you operate could be helpful in bringing this problem to the attention of the President, the Secretary of Labor, the Secretary of Defense, and others, including Members of Congress from other States. If your employees are organized, they could probably call the situation to the attention of their various labor organizations.

The enclosed booklet, The Case of Rubber Footwear, contains some pertinent facts.

As one of your customers, we earnestly solicit your cooperation in our effort to protect this old and long-established industry. We should like to specifically request that you let us know what you think you can do to help us and yourselves.

Very truly yours,

H. A. JOHNSON,
Division Purchasing Agent.

Imports of rubber footwear—waterproof and canvas

Item	Approximate invoice price landed	Tariff rate	Tariff	Total landed price	Price of comparable United States item
Men's canvas oxford (Japan)	$0.49	At 35 percent American selling price	$0.62	$1.11	$1.80
Do	.49	At 17½ percent American selling price	.31	.80	1.80
Do	.49	At 35 percent ad valorem	.17	.66	1.80
Do	.49	At 17½ percent ad valorem	.085	.575	1.80
Waterproof strap overboot	.99	At 25 percent American selling price	.61	1.60	2.50
Do	.99	At 12½ percent American selling price	.305	1.295	2.50
Do	.99	At 12½ percent ad valorem	.125	1.115	2.50
Stadium-type boot	1.47	At 25 percent American selling price	1.04	2.51	4.25
Do	1.47	At 12½ percent American selling price	.52	1.99	4.25
Do	1.47	At 12½ percent ad valorem	.18	1.65	4.25

The above tabulations are intended as a rough measure to indicate the effects which would result from the 50-percent reduction in the existing duty on rubber-soled canvas footwear and the effects of the elimination of the American-selling-price principle on both waterproof and canvas footwear.

This tabulation is based on a men's canvas oxford (Japanese) which is being offered for delivery in New York this spring. The tabulations on the waterproof items are from offerings that were made during the past season.

With reference to the canvas oxford, line 1 reflects the approximate delivery price in New York after duty based on the present 35 percent of the American selling price. Line 2 shows what would happen if that duty is cut in half which is permissible under the present Reciprocal Trade Act. Line 3 shows what would happen if the present rate of duty (35 percent) was applied on the ad valorem rather than the American selling price. Line 4 shows the result of cutting in half the present 35 percent rate of duty and applying it on an ad valorem basis rather than on the American selling price. In the tabulations on the waterproof items, line 1 takes a duty of 25 percent of the American selling price which was effective prior to the reduction granted at the Geneva Conference in 1947 and which became effective April 1948. Line 2 reflects the present duty, 12½ percent of the American selling price. Line 3 reflects the approximate result if the American-selling-price principle is repealed and the present 12½-percent duty is applied on an ad valorem basis. The extreme right-hand column is the American selling price of like or similar articles quoted by one member of the footwear industry.

Encouragement of Science

EXTENSION OF REMARKS
OF
HON. CARL HINSHAW
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. HINSHAW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article entitled "Encouragement of Science," by Robert Oppenheimer, of the Institute for Advanced Study, Princeton, N. J., based on an address given at the awards banquet of the ninth annual science talent search in Washington, D. C., March 6, 1950:

ENCOURAGEMENT OF SCIENCE

(By Robert Oppenheimer, the Institute for Advanced Study, Princeton, N. J.)

Science has profoundly altered the conditions of man's life. During the last centuries, the discoveries in science and their applications to practice have changed the material conditions of life. They have changed as well many matters of the spirit. They have changed the form in which practical problems of right and wrong come before us; they have changed the focus of moral issues, both for the individual and for governments. They have given us new methods for defining the meaning of problems that face us, and for judging whether or not our solutions are just.

The most manifest of the changes are the material ones. Yet even here it takes a certain perspective to see their true extent. Advances in the study of man and other living forms have extended our life span by decades. Discoveries in physical science have immeasurably lightened our toil and enriched our lives. They have given leisure to an ever-widening group of men. They have made a reasonable education not a special privilege, but a common right. They have made the world, in its physical dimensions, a small place, and established the means by which people in remote parts of the earth can communicate with each other, can get to know each other, and can learn to work together. They have put at the disposal of everyone the resources of physical power, of ease, and of knowledge that were in the past reserved for the few.

Not all of the changes in material well-being that science offers are realities. Yet the very fact that they are possibilities has changed the nature of the responsibility that we bear, both as individuals and as a community of men and women banded together in government. In the Greek cities, political democracy, and civilization itself, appeared possible only on the basis of a slave economy. Technology, born of science, has altered that; it has enabled mankind, as it has forced mankind, to deal with the issues of slavery as a moral issue. Poverty has always been an ugly thing, and in its extremes a desperate one. Today, it is an evil, in the sense that it lies within human hands and human

hearts to abate it. Science can provide us, for the first time in history, with the means of abating hunger for everyone on earth.

Perhaps nowhere has the impact of science more clearly altered the specific terms of a great political issue than in the effects of scientific development on warfare. This is a can of worms with which I have myself unhappily been engaged for some years. It would not be honest to say—as it would be folly not to hope—that the very terror of modern weapons would in itself put an end to war; it would not even be honest to say that because of this terror the abolition of war and the maintenance of peace have become the one absolute, final objective of all political decisions. There are other things in man's life: his freedom, his decency, and his sense of right and wrong, that cannot so lightly be subjected to a single end. But what we need to remember is that war today has become, and is increasingly becoming, something very different from what it was a century ago or a millennium ago. We need to recognize the new situation as new; we need to come to it with something of the same spirit as the scientist's, when he has conducted an experiment and finds that the results are totally other than those that he had anticipated.

Four months before Hiroshima, in the last days of his life, President Roosevelt's thoughts turned to these questions. In the last words that he wrote, in words he did not live to speak, the President looked to the future, to the atomic age. He looked to the past, to the days of the founding of the Republic. He wrote:

"Thomas Jefferson, himself a distinguished scientist, once spoke of the 'brotherly spirit of science, which unites into one family all its votaries of whatever grade, and however widely dispersed throughout the different quarters of the globe.'

"Today science has brought all the different quarters of the globe so close together that it is impossible to isolate them one from another.

"Today we are faced with the preeminent fact that, if civilization is to survive, we must cultivate the science of human relationships—the ability of all peoples, of all kinds, to live together and work together, in the same world, at peace."

Science has greatly extended the range of questions in which man has a choice; it has extended man's freedom to make significant decisions. Is there anything in the methods of science itself, or in the spirit of science, that can help in the making of these decisions? To what extent is there a play on the word "science" which can mislead us and take us up false roads when we speak of this science of human relationships? Is there anything we can learn from the relevance of science to politics?

If we are to answer these questions, and answer them honestly, we must recognize important and basic differences between problems of science and problems of action, as they arise in personal or in political life. If we fail to recognize these differences, we shall be seeking magic solutions and not real ones. We shall delude ourselves into laying aside responsibility, which it is an essential part of man's life to bear.

In most scientific study, questions of good and evil, or right and wrong, play at most a minor and secondary part. For practical decisions of policy, they are basic. Without them political action would be meaningless. Practical decisions and, above all, political decisions can never quite be freed from the conflicting claims of special interest. These, too, are part of the meaning of a decision and, of course, of action, and they must be an essential part of the force of its implementation.

Political decisions are unique acts. In politics there is little that can correspond to the scientist's repetition of an experiment. An experiment that fails in its purpose may be as good as or better than one that succeeds, because it may well be more instructive. A political decision cannot be taken twice. All the factors that are relevant to it will conjoin only once. The analogies of history can provide a guide, but only a very partial one.

These are formidable differences between the problems of science and those of practice. They show that the method of science cannot be directly adapted to the solution of problems in politics and in man's spiritual life. Yet there is relevance of a more subtle, but by no means trivial, kind.

In trying more fully to explore this relevance, I should like to start with a text. This text is a letter [1] written by Thomas Jefferson to a young man who had enquired of him as to the usefulness of his studies of science. It was written in the middle of the year 1799, the year in which Napoleon abolished the directory and began to assume dictatorial power in France, the year before Thomas Jefferson was elected for the first time as President of the United States. Jefferson and the diverse brave and hopeful men who with him laid the foundations of our own Government had learned much from the peoples of other nations. Many of their highest political ideals and their most powerful political instruments were built on the experience, the insight and wisdom of European scientists and philosophers. Even today we need to remember that this was so, and that there may be much that we can learn from others, and that we should be glad to learn, as in turn by example we should be glad to teach.

Jefferson's letter starts with a survey of the subjects in science which he believes young Munford ought to pursue. I will quote one characteristic passage which may strike a familiar and homely note for you:

"The science of calculation also is indispensable as far as the extraction of the square and cube roots; Algebra as far as the quadratic equation and the use of logarithms are often of value in ordinary cases; but all beyond these is but a luxury; a delicious luxury indeed; but not to be indulged in by one who is to have a profession to follow for his subsistence."

But that is not really the part of Jefferson's letter which I commend to you. Here it is:

"I am among those who think well of the human character generally. I consider man as formed for society, and endowed by nature with those dispositions which fit him for society. I believe also, with Condorcet, as mentioned in your letter, that his mind is perfectible to a degree of which we cannot as yet form any conception. It is impossible for a man who takes a survey of what is already known, not to see what an immensity in every branch of science yet remains to be discovered, and that too of articles to which our faculties seem adequate."

And later, in the same letter, still more explicitly:

"And it is still more certain that in the other branches of science great fields are yet to be explored to which our faculties are equal, and that to an extent of which we cannot fix the limits. I join you therefore in branding as cowardly the idea that the human mind is incapable of further advances. This is precisely the doctrine which the present despots of the earth are inculcating, and their friends here reechoing; and applying especially to religion and politics; 'that it is not probable that anything better will be discovered than what was known to our fathers.' We are to look backward then and not forward for the improvement of science, and to find it amidst feudal barbarism and the fires of Spitalfields. But thank heaven the American mind is already too much opened, to listen to these impostures; and while the art of printing is left to us, science can never be retrograde; what is once acquired of real knowledge can never be lost. To preserve the freedom of the human mind then and freedom of the press, every spirit should be ready to devote itself to martyrdom; for as long as we may think as we will, and speak as we think, the condition of man will proceed in improvement. The generation which is going off the stage has deserved well of mankind for the struggles it has made, and for having arrested that course of despotism which had overwhelmed the world for thousands and thousands of years. If there seems to be danger that the ground they have gained will be lost again, that danger comes from the generation of your contemporary. But that the enthusiasm which characterizes youth should lift its parracide hands against freedom and science would be such a monstrous phenomenon as I cannot place among possible things in this age and this country."

To me there are two striking impressions this letter of Jefferson's makes, even beyond its eloquence and its beauty. The first is that the letter is pervaded with the idea of progress, that ideal that owes so much to the development of science and that in turn has provided the great enriching human faith in which scientific discovery and invention has flourished. Jefferson is confident that an increased understanding of the world will lead to progress; he is convinced that the barbarisms of the past cannot stand up against inquiry and understanding and enlightenment; he is confident in man and sure that as men know more they will act more wisely and live better. In our contemporary expressions of hope that catastrophe could be averted and civilization yet be saved, that confidence has lost much of its robustness.

The second point is that for Jefferson there is something in the ways of science that is relevant to political life. Even in religion and politics, he holds that it is probable that things better will be discovered than what was known to our fathers. This conviction that new knowledge is possible, and that not all the answers are known, is, of course, the stuff of the day-to-day life of the scientist. Science itself does progress; new knowledge is possible; and new knowledge, because it does not destroy or ignore the old, can only increase our understanding. The very idea of the development of science is an example of progress, and of progress which in no true sense can ever be reversed. But this is only part of the story. It is true, as Jefferson knew, that, in the large, science has flourished in conditions of human freedom, and that its growth is parallel to the growth of democratic institutions. Today, looking back on more than a century and a half of further history, we can be even more sure of this. We have seen not only the inspiriting example of science and democracy flourishing together, but the tragic examples of their foundering together. We express the hope that of this tragedy we shall soon have seen the end.

What are these lessons that the spirit of science teaches us for our practical affairs? Basic to them all is that there may be no barriers to freedom of inquiry. Basic to them all is the ideal of open-mindedness with regard to new knowledge, new experience, and new truth. Science is not based

[1] I am indebted to Dr. Julian Boyd, of Princeton University, for the copy of this hitherto unpublished letter.

on authority. It owes its acceptance and its universality to an appeal to intelligible, communicable evidence that any interested man can evaluate.

There is no place for dogma in science. The scientist is free to ask any question, to doubt any assertion, to seek for any evidence, to correct any error. Where science has been used in the past to erect a new dogmatism, that dogmatism has found itself incompatible with the progress of science; and in the end, the dogma has yielded, or science and freedom have perished together.

Our own political life is predicated on openness. We do not believe any group of men adequate enough or wise enough to operate without scrutiny or without criticism. We know that the only way to avoid error is to detect it; that the only way to detect it is to be free to inquire. We know that the wages of secrecy are corruption. We know that in secrecy error, undetected, will flourish and subvert.

Let me be clear. Science is not skepticism. It is not the practice of science to look for things to doubt. It was not by deliberate attempt of skepticism that physicists were led to doubt the absolute nature of simultaneity, or to recognize that the ideas of strict causality embodied in classical physics could not be applied in the domain of atomic phenomena. There is probably no group of men who take more for granted in their daily work than the scientists. Common sense, and all that flows from it, is their principal basis for what they do in the laboratory and for what they make of it on paper. But for scientists it is not only honorable to doubt, it is mandatory to do that when there appears to be evidence in support of the doubt. In place of authority in science, we have and we need to have only the consensus of informed opinion, only the guide of example. No scientist needs to order his colleagues to use a new technique of experiment or to enter a new field of discovery. If he has done this, it will be an invitation to his fellows to follow.

These then are some of the attitudes of mind, these are some of the disciplines of spirit, that grow naturally in the scientist's world. They have grown there in part as a result of a humane and liberal tradition in political life, and in part as a cause of that. The open mind, the reliance on example and persuasion, rather than on authority—these are the heritage of the centuries in which science has altered the face of the earth. Science can help in diverse ways in preserving and extending this heritage. Its very universality speaks across frontiers to make truth manifest in lands otherwise darkened; its material applications create the preconditions—in leisure, in education, in means of communication—for the converse of men with each other. Science provides the material and the intellectual basis for a world in which example and understanding can help all men to fulfill their hopes. Today we need to remember that our country, founded on these practices, and grown strong by their exercise, owes its strength to them. In this time of crisis, we need to cherish that strength.

Resolutions of Agriculture Committee of American Small Business Organizations

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. HESELTON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I want to insert certain resolutions adopted by the Conference of American Small Business Organizations at its eleventh national session here on March 27–29, 1950.

In my judgment, these resolutions constitute constructive and affirmative suggestions worthy of the immediate and careful consideration of the congressional committees concerned and of all of us.

I call particular attention to the recommendation of the creation of a special commission charged with the careful and complete study of the agriculture problem and the recommendation for enactment of basic legislation covering agriculture in the United States. We have had a clear demonstration of how effective such a commission could be in the work of the so-called Hoover Commission. Certainly with the problem of the agricultural program involving the jurisdiction of so many congressional committees, it would seem as though a single approach by a single commission, composed of members of our congressional committees, leaders in recognized farm organizations, businessmen and businesswomen, men and women in the fields of education and labor, offers the best prospect of the satisfactory solution of the problem which is of vital importance to the future of this country.

I am also including a copy of the resolution I have filed today covering this suggestion.

The matters follow:

CONFERENCE OF AMERICAN SMALL BUSINESS ORGANIZATIONS, ELEVENTH NATIONAL SESSION, WASHINGTON, D. C., MARCH 27–29, 1950

AGRICULTURE COMMITTEE RESOLUTION ON THE FARM-PRICE-SUPPORT ISSUE

Whereas for 2 years this conference has expressed its steadfast opposition to uneconomically high price supports for agricultural commodities and has repeatedly exhorted Congress and the Department of Agriculture in carrying out existing price-support laws and commitments to aim for price-support levels which would prevent serious subnormal agricultural income, but yet would avoid price incentive to excess production; and

Whereas, despite the admonition of many competent agricultural leaders, Congress has seen fit to continue Government price-support operations at such high price levels as to bring certain inevitable evil results, viz:

(1) The piling up of unmanageable surpluses of many of the supported commodities involving Government inventories and loans already in excess of $4,000,000,000;

(2) Consequent prohibitive cost of these operations, already requiring additional billions to handle 1950 crops;

(3) The loss of export markets for many of these commodities except on a give-away basis to foreign countries;

(4) The displacement of private taxpaying business from the handling of these commodities;

(5) The extensive and growing regimentation of agriculture through acreage, production, and marketing controls;

(6) The gradual elimination of opportunity for individuals to freely enter agricultural pursuits where acreage already in production is being rigidly prescribed;

(7) The projection of agriculture into the realm of partisan politics; and

Whereas the people of the United States do need, and must have, an assurance of adequate food and fiber production from an economically healthy and stable agriculture: Therefore be it

Resolved:

1. That the Congress of the United States be, and herewith is, petitioned by the Conference of American Small Business Organizations to set up a special commission to consider the whole situation of necessary and adequate farm legislation.

2. That the commission be composed of outstanding national leaders, headed by some individual whose fairness, wisdom, and loyalty are recognized by a majority of our people; with committees to include Members of Congress, leaders in recognized farm organizations, businessmen, and men from the fields of education and labor.

3. That this commission, from information and recommendations from its committees, be directed to formulate and then to report to the Congress, within a time reasonably adequate for careful and complete study of the problem, a recommendation for enactment of basic legislation covering agriculture in the United States.

NO. 1—COMMODITY EXCHANGES

Whereas the commodity exchanges have successfully for over a century broadened and stimulated the marketing of agricultural products at the lowest cost to the producer and redounding to the benefit of the consumer: Now, therefore, be it

Resolved, That the Conference of American Small Business Organizations endorse the continuance of our free competitive system of marketing commodities; and be it further

Resolved, That the present government regulatory powers over the conduct of commodity exchanges are ample and that Congress should guard against the granting of more arbitrary Federal powers of control over these exchanges which might readily lead to their sudden destruction.

NO. 2—COMMODITY CREDIT CORPORATION

Whereas it is the function of the Commodity Credit Corporation to make loans on, and to support the prices of, agricultural commodities under requirements of law; and

Whereas the Corporation now has nearly $5,000,000,000 of available funds for its programs, and is asking for another $2,000,000,000; and

Whereas in spite of restrictions in present law the CCC is tending toward the acquiring of permanent interests in real estate, which if effected would threaten further the many small-business firms of the Nation with which they now are in direct or indirect competition: Now, therefore, be it

Resolved, That the Conference of American Small Business Organizations does oppose any authority to the CCC which will enable it to own real estate, and opposes authority which allows CCC to expand emergency commodity storage facilities without public establishment of the necessity therefor.

NO. 4—GOVERNMENT ECONOMY IN AGRICULTURE

Whereas the cost of the Federal Government has reached an almost prohibitive level; and

Whereas the continued high cost of Government operation places the solvency of our Government in jeopardy; and

Whereas the first step toward the reduction of our national debt must be the drastic reduction in the cost of peacetime operation of Government: Now, therefore, be it

Resolved, That the Department of Agriculture be streamlined to the end that the appropriations for the Department would be reduced substantially without affecting the good work done by the Department, and that to carry out the purpose of this resolution the recommendations contained in the Hoover Commisison Report be given most careful consideration.

NO. 5—ANTITRUST LAWS

Whereas various agricultural industries have been indicted by the Federal Government on antitrust charges rather frequently; and

Whereas even when cleared the adverse publicity has done irreparable harm and destroyed public confidence unjustly: Now, therefore, be it

Resolved, That the Conference of American Small Business Organizations meeting in Washington, D. C., March 27, 28, and 29, 1950, endorses and supports the work of the Sawyer committee to bring about clarification and codification of the various antitrust laws.

NO. 6—THE KEFAUVER BILL

Whereas H. R. 2734, called the Kefauver bill or the acquisition of assets bill, has passed the House and is now in Senate Committee; and

Whereas this bill prohibits the purchases of small businesses to eliminate competition, and may limit or prevent sale of small businesses to larger competitors and so work hardship on owners or heirs of small businesses: Now, therefore, be it

Resolved, That the Conference of American Small Business Organizations meeting in Washington, D. C., March 27, 28, and 29, 1950, opposes the passage of this bill.

A bill for the establishment of a Commission to study the agriculture situation and to recommend adequate farm legislation

Be it enacted, etc.—

SECTION 1. (a) There is hereby established a bipartisan commission to be composed of 12 members appointed as follows:

(1) Four appointed by the President of the United States, two from the executive branch of the Government and two from private life;

(2) Four appointed by the President protempore of the Senate, two from the Senate and two from private life; and

(3) Four appointed by the Speaker of the House of Representatives, two from the House of Representatives and two from private life.

(b) Of each class of two members mentioned in subsection (a), not more than one member shall be from each of the two major political parties.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

SEC. 2. The Commission shall elect a Chairman and a Vice Chairman from among its members.

SEC. 3. Seven members of the Commission shall constitute a quorum.

SEC. 4. (a) Members of Congress who are members of the Commission shall serve without compensation in addition to that received for their services as Members of Congress; but they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(b) The members of the Commission who are in the executive branch of the Government shall each receive the compensation which he would receive if he were not a member of the Commission, plus such additional compensation, if any (notwithstanding section 6 of the act of May 10, 1916, as amended; 39 Stat. 582; 5 U. S. C. 58), as is necessary to make his aggregate salary $12,500; and they shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission.

(c) The members from private life shall each receive $50 per diem when engaged in the performance of duties vested in the Commission, plus reimbursement for travel, subsistence, and other necessary expenses incurred by them in the performance of such duties.

SEC. 5. The Commission shall have power to appoint and fix the compensation of such personnel as it deems advisable, in accordance with the provisions of the civil-service laws and the Classification Act of 1949, as amended.

SEC. 6. (a) The Commission shall study and investigate the present organization and methods of operation of all departments, bureaus, agencies, boards, commissions, offices, independent establishments, and instrumentalities of the executive branch of the Government engaged in agriculture or related activities, to determine what changes therein are necessary to prevent serious subnormal agricultural income without placing an undue burden on the consumers and taxpayers of the country.

(b) Within 30 days after the Eighty-second Congress is convened and organized, the Commission shall make a report of its findings and recommendations to the Congress.

SEC. 7. (a) The Commission, or any member thereof, may, for the purpose of carrying out the provisions of this act, hold such hearings and sit and act at such times and places, and take such testimony, as the Commission or such member may deem advisable. Any member of the Commission may administer oaths or affirmations to witnesses appearing before the Commission or before such member.

(b) The Commission is authorized to secure directly from any executive department, bureau, agency, board, commission, office, independent establishment, or instrumentality information, suggestions, estimates, and statistics for the purpose of this act; and each such department, bureau, agency, board, commission, office, establishment, or instrumentality is authorized and directed to furnish such information, suggestions, estimates, and statistics directly to the Commission, upon request made by the chairman or vice chairman.

SEC. 8. There is hereby authorized to be appropriated, out of any money in the Treasury not otherwise appropriated, so much as may be necessary to carry out the provisions of this act.

How To Buy More Unemployment

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks I include an article by Henry Hazlitt, How to Buy More Unemployment, which I believe is "must" reading for all Members of Congress. The article appears in the current issue of Newsweek.

HOW TO BUY MORE UNEMPLOYMENT

(By Henry Hazlitt)

In the first 3 months of this year, according to official estimates, there has been an average of nearly 4,500,000 unemployed.

This is paradoxical and premonitory. For this unemployment, the greatest since prewar days, exists not in a depression but in the midst of an inflationary boom. It exists, in fact, in a period when the Administration boasts that personal incomes have reached the highest levels in our history.

Yet this paradox is not inexplicable. It is simply what discerning economists predicted was certain to happen if we continued to push up wage rates and labor costs faster than prices and productivity. And we have kept boosting labor costs recklessly through union policy, pension demands, Government fact-finding awards, the Wagner-Taft-Hartley Act, and the new law jumping minimum-wage hourly rates from 40 to 75 cents last January.

The presumptive effect of this last factor is striking. Unemployment averaged 3,395,000 throughout 1949 and stood at 3,489,000 in December. This January it shot up to 4,480,000.

Does the administration recognize the cause of this unemployment? Has it taken warning? On the contrary, it does everything to intensify the problem. In a message to Congress on April 6, President Truman called for a further increase in unemployment benefits. For existing unemployment he offered two explanations, both wrong. He explained that more people have been coming into the labor market every year. But they have been doing that since the beginning of our history, with the annual increase in population. Increased population means not only more people looking for jobs; it also means more consumers and consumer demand.

Mr. Truman's other explanation is that "as new plants and equipment have been added * * * businessmen have been able to produce more with the same number of workers." This assumes the immemorial fallacy that machinery creates net unemployment. But as man-hour productivity increases, prices go down or wages and profits go up, and per capita demand increases with per capita supply.

Because he makes the wrong diagnosis, Mr. Truman proposes the wrong remedy. We need not examine here the real revisions required in unemployment insurance. It is enough to point out that all Mr. Truman's own arguments ignore the salient fact that as we increase the amounts and period of payment of unemployment benefits we encourage an increase in unemployment itself. The more we pay men who are idle, the more we reduce the penalties and increase the incentives for idleness. Mr. Truman wants to pay a man who has been earning $60 a week as high as $42 a week for not working. But if this man is offered another $60 job before his unemployment benefits expire, he may logically ask himself: "Why should I work for only $18 a week?" Or if he is offered a temporary $42 job: "Why should I work for nothing?"

Our national labor policy is, in fact, the equivalent of the farm-price-support policy. Government support boosts the price of farm products so high that part of the supply must remain unsold. The taxpayer is then forced to hold the unsold surplus. Government and union labor policy, likewise, pushes up wage costs to the point where part of the labor force must remain unemployed. Then the taxpayer must pay unemployment benefits to this idle labor. "Surplus" labor rots in storage like "surplus" eggs, butter, and potatoes.

The present American situation—of high unemployment even at the peak of an inflationary boom—is not unprecedented. Precisely the same anomaly occurred in Germany in 1927, and for the same reasons.

In 1927 economists like Gustav Cassel warned in vain that the German wage policy was senseless. Will such warnings today, in America, prove equally futile?

Oil and Blood

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. TEAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by David Berry entitled "Oil and Blood" which appeared in the Vet-Times, on April 22, 195°:

OIL AND BLOOD
(By David Berry)

Congress is hip-deep these days in its favorite election-year sport—investigation.

Its newest target is the Reconstruction Finance Corporation—the RFC—which aids private business with loans not otherwise available from commercial lenders and investors.

Ordinarily we don't run a temperature when a big multimillion-dollar corporation such as RFC gets tangled up with Congress; nor do we lose any sleep if the big and little oil interests of the country get slapped around a little.

However, we remember that, just 5 years back, oil meant life and death to millions of American GI's fighting in Europe and Asia. In the final analysis, oil was the vital component which kept the machinery of freedom lubricated.

All that—and the fact that civilian travel in this country was slowed down materially by the wartime shortage of gasoline and oil—seems to have been forgotten by some Members of Congress, as they seek an issue on which to curb the authority of the RFC to lend money to private business interests.

To some Congressmen—and some newspapers—RFC looks like a fat target and the boys are whetting their knives. Perhaps we wouldn't even run a temperature in this case except that some veterans are involved.

We like a good investigation as well as the next man—when the conditions and the facts support it. But our memory is not as short as the memories of some Congressmen.

What could be more important to the United States—and to its fighting men—than to lend financial assistance to increase our national capacity to produce oil in case the threat of world war III becomes real?

In this case it appears that politics is more important. A subcommittee of the Senate, headed by Senator J. WILLIAM FULBRIGHT (Democrat, Arkansas), presently is exercising itself—and the newspapers—over the fact that RFC is considering approval of the application of a group of World War II veterans for a $10,000,000 loan to develop proved oil lands in Texas and five other States.

The veterans control the Texmass Petroleum Co., which, as the name implies, involves a number of big and little investors in Texas and Massachusetts. We'll concede that the veterans weren't enlisted men; several were lieutenant colonels, and one was a full colonel during the war, and their branches of service included the Air Force, the Infantry, and armored divisions.

Nowadays most people admit that officers helped win the war—and thus are entitled to be known as veterans.

From reading the papers and reading Senator FULBRIGHT'S remarks we aren't quite sure what—if anything—these Texmass veterans have done to warrant coming under the investigative eye of the subcommittee. As far as we can make out, their presumed crime is twofold: They want to develop $44,500,000 worth of proved and productive oil lands and wells located in six States—that's on the basis of Government estimates—and they want to borrow $10,000,000 from RFC to rehabilitate the properties and pay off long-term lenders under a general reorganization plan.

Consider this charge from a Scripps-Howard newspaper editorial: "Maybe it is a good loan, but what does the RFC mean using taxpayers' money to take such risks?"

Maybe it would be smarter to risk defeat in world war III?

And consider this remarks by Senator FULBRIGHT: "Without wanting to prejudge the case, it looks to me like an unjustified use of RFC lending power."

Perhaps, instead of approving a loan to produce oil in the United States, we should appropriate a few hundred millions under the point 4 program, to use searching for oil in the undeveloped areas of the world.

Both the newspaper's and the Senator's statements are, in themselves, damaging statements, but each is hedged with qualifying phrases. Why? Why? If it's a bum deal, it's a bum deal.

As a matter of fact, from all we can gather, it's a good deal. The fact is that the Texmass Co., as presently constituted, is a sound business enterprise. It has title to 493 producing oil and gas wells located on 20,000 acres of proved oil lands in 6 States—proved lands being areas in which oil reserves have been geologically and scientifically measured. In addition, it holds the lease on 2,000 additional acres of proved land which have not yet been drilled.

Independent petroleum engineers, hired by the company, have estimated that these lands have reserves of more than 15,500,000 barrels of oil, plus 34,800,000,000 cubic feet of natural gas, and this does not include estimated reserves of 14,600,000 barrels of oil in undrilled lands.

The Texmass engineers place the total valuation of the company, exclusive of allowances for drilling and other operations, at $48,000,000.

But the RFC, upon receipt of their loan application, didn't accept that as gospel. To protect the taxpayer, it hired its own petroleum engineers, whose minimum estimate of reserves was only 3,000,000 barrels less than the company's. And the RFC's own estimate of collateral is $44,500,000, which is only $4,000,000 less than the company's.

Even then the RFC hesitated. The company had sought a $15,100,000 loan to rehabilitate its properties and pay off long-term lenders. Said RFC: Raise $5,000,000 in private capital and we'll lend you the other $10,000,000. This Texmass did. And then came the Fulbright committee—and the newspapers.

A "questionable investment," they called it. Why? Because RFC had never been in the oil business before. They hadn't been in the housing or automobile business either until they made their first loans in those industries. "Too speculative," said the committee and the press, apparently confusing proved oil leases with wildcatting operations which are two entirely different problems.

The charge that the investment is bad business is interesting in the light of a recent article in the magazine Oil World by Fred Florence, president of the Republic National Bank of Dallas—largest oil bank in the country. "Making oil loans is good business," he wrote. "Just how good is indicated by this institution's loss record on oil loans. During the last 16 years net losses in this field have totaled $90,000, a sum substantially less than 1 month's interest and representing a loss ratio of 0.03 percent of the total loans made." And that's typical—not unusual.

We're willing to forget that the Texmass Co. is representative of World War II veterans trying to put free enterprise to work for themselves and their investors.

However, we aren't willing to forget that oil is to war machinery what blood is to you and me. And we hope Senator FULBRIGHT and Congress don't forget that this time.

Rent Control or Chaos

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Sun-Times of April 19, 1950:

RENT CONTROL OR CHAOS

Federal rent control will end within 11 weeks unless Congress takes action to extend it.

If Congress does nothing, the State of Illinois should follow the example of New York State and adopt an emergency rent law. In the absence of any law, rents in Chicago probably will go up on an average between 20 and 40 percent. That's the finding of Sun-Timesman Bruce Taylor, who has been talking with real estate people, public officials, and others interested in the housing problem.

If you are a tenant, the amount of rent boost you can expect depends on your individual case.

In the confusion that is certain to follow if rent controls die, municipal court judges probably will allow plenty of time before enforcing eviction notices. But even such consideration will not spare Chicago—which has an extraordinarily severe housing shortage—from undergoing chaos that could bring severe economic damage and social turmoil.

What's the answer? Will Congress extend controls?

There is stronger pressure on Congress to wipe out rent controls now than at any time since war's end. Owners contend that they have been deprived of their property without due process of law. Although the law has provided for rent increases to prevent hardship on landlords, many have failed to take advantage of those provisions. The landlord resentment at continued rent controls while most other prices have gone sky high has made an impression on many Members of Congress.

As we have often said in this column, we believe landlords are entitled to reasonable increases in their rent collections. Let's repeat that word: Reasonable. And, to their credit, many landlords have been reasonable.

If controls are stopped suddenly many gougers will turn the screws on helpless tenants and demand unreasonable increases. As long as there is a real housing shortage the gougers will be able to profit from it. Any society has the right and the duty to provide for the general welfare by prohibiting profiteering that results from famine, disaster or the effects of war.

Congress is expected to consider a bill which would extend rent controls but make it mandatory upon cities to allow citizens to vote on continued controls within 6 months. If such a bill passes, Chicago would have to vote to retain rent control—probably at the November election—or else allow controls to die here on January 1.

Chicago's housing shortage is so acute that it's unlikely that there would be a popular vote in favor of ending controls. There is a question whether such a vote would satisfy the need for fairness. Tenants would naturally vote to retain controls. Just because there are more tenants than landlords doesn't mean that they should be able to keep their rents down by ballot. Rents should be controlled for the general welfare, not for individual welfare. Landlords, too, are entitled to consideration.

Rather than lift rent control completely, or continue as is, it seems to us a limited rise in rents would be preferred. The main idea is to prevent unreasonable rent increases that would throw the city into an economic tailspin.

RFC Versus ECA—Or Which Government Agency Can Produce the Greatest Absurdity

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. SHAFER. Mr. Speaker, with the kind forbearance of my distinguished colleagues, I should like to take the time of this House to tell a bedtime story to those who will listen, in the hope that it will not put them to sleep. It may cause the more thoughtful among us first to roll in the aisles and then to start tearing their hair.

You know, Mr. Speaker, so many things happen in so many different places in Washington, it is difficult for our right hand to know what our left hand is doing. I cannot pretend that I keep up with everything that happens in all the thousands of bureaus, in which hundreds of thousands of bureaucrats take part, but I do believe that I must see a few more of the absurdities than others. As a result I am constantly puzzled. Puzzled at the American people for keeping such a gang in power. Puzzled at the bureaucrats who are taking part in these absurdities, for these bureaucrats are Americans and, at heart, in most instances, should realize that they are going to have to live in the country they are creating. Puzzled at sensible men—many of them on the Republican side of the aisle, but most of them fortunately on the other side—who not only smile at these absurdities, but sometimes protect the men and policies that bring such absurdities to pass.

Now, let us read about the absurd happenings.

The first thing to keep in mind in this bedtime story is that the United States, under the New Deal and Fair Deal, for years has been heading toward a free-trade policy. Cordell Hull, James F. Byrnes, Dean Acheson, and all the other free-traders have been saying that we must encourage European manufacturers to sell more over here so that our manufacturers, in turn, could sell more over there. They have been promoting this policy through lowering our tariffs, giving huge sums to European industrialists with which to build plants to compete with ours, and otherwise striving to tear down America and build up Europe, Asia, Africa—any place but the old home place.

Now, during World War II, our Government faced almost a blockade for a while, due to the submarine menace. There was a great hue and cry about the lack of skilled watchmakers—men who could work with precision machinery, to make bombsights, and so forth. Everybody suddenly realized that it was a good thing we had an American watch industry, although the New Deal had been trying for 10 years to build up the Swiss watch industry and to kill the American watch industry.

Then, the war ended. We won, or at least, we defeated the enemies. Now, the American watch industry begins to fold. Waltham Watch Co., in Massachusetts, went on the financial rocks. It was hopelessly lost, so everyone thought. The New Deal finally had killed the Waltham Watch Co. Elgin Watch Co., which recently has been cutting off workers, is going on the rocks eventually unless something is done.

But be that as it may, what then happens? The State Department, keep in mind, has been killing Waltham Watch Co. through its low-tariff policies. Now, another Government agency, the Reconstruction Finance Corporation enters the picture. Mr. John L. Hagerty, one of the RFC's bright boys, cooks up a plan by means of which RFC can lend about $6,000,000 to Waltham. Mr. Hagerty, after selling RFC on the plan, promptly resigned and became $30,000-a-year president of the newly-reorganized Waltham Watch Co. He was going to do wonders for it, in spite of the mean old State Department and its absurd policies. But he could not. Not even a Fair Dealer, working inside with other Fair Dealers, can repeal the laws of economics. RFC directors finally decided they would not let even their fair-haired Mr. Hagerty have the balance of $2,000,000 worth of credit which they originally promised.

Now, instead of being punished in any way, scolded in any way, for having poured $4,000,000 worth of RFC money down a drain, what happens to our good Fair Dealer, Mr. Hagerty? Why, he turns up "advising" the RFC at $10,330 a year. What advice he could give that would be worth 10 cents a year, I am not in a position to say, but there he rests.

Unfortunately for our sanity, this is not the end of the story.

While all of this is going on—while RFC is lending a stricken industry money to get well, if it can, and the Department of State is perpetuating policies to kill the same industry, another alphabetical agency enters the picture. Slyly, to be sure, but it enters the picture nevertheless.

We learn from a release put out by the Economic Cooperation Administration, the ECA, to those who are not familiar with the bureaucratic alphabetical jargon, that the ECA has authorized to the General Time Instruments Corp., New York, N. Y., $1,000,000 in cash "to establish the manufacture of clocks and watches in the United Kingdom." According to the ECA release, this loan "will reduce previous heavy United Kingdom imports of timepieces from the United States and Switzerland."

In other words, Mr. Speaker, it is bad for us old Republicans to think of keeping a watch industry alive in the United States just in case there is a war and we need the help of the skilled employees in that industry. That is reactionary. It is obscurantism. It is Hawley-Smoot, and all those other bad terms the New Republic and our liberals toss from one to the other.

But, it is good, it says here in the ECA release, for American money to be sent to Great Britain so that Great Britain can reduce its imports of clocks and watches. In other words, we are supposed to be dumb and stupid enough to think we ought to kill the watch industry in the United States, but should build up the watch industry in the United Kingdom with American money. That is progress. It is enlightenment. It is, by some magic abracadabra, economic progress as the Fair Deal interprets it. More unemployed in the United States. More watchmakers in the United Kingdom. This ECA grant is not even in line with the Department of State's apparent purpose to create the only watch-making industry in the western world in a little country we know as Switzerland, which, incidentally, never has been an ally of ours in any war. Then, in case of a war, Russia could neutralize Switzerland and our Nation would be caught without any watch-making industry, without any of the skilled workers such an industry would have prepared for use in our military and other highly strategic industry.

Mr. Speaker, I must confess that none of this makes sense to me. As I noted before, the actions of our bureaucrats, each working at cross-purposes and each in possession of huge public sums to throw around, are so absurd as to make a sensible man want to bite tenpenny nails. If we could not develop a sense of humor, it is likely most of us could not last until the time comes when the people, long-suffering and patient, awaken to the stupidities which are being perpetrated in the name of "progress." If there is any man who can explain the action of our Department of State, our Reconstruction Finance Corporation, and our Economic Cooperation Administration in relation to the question of watches, their import and export, and the protection of America in case of an emergency, I should like to hear him make the explanation in simple words.

That is the end of this bedtime story, but I am afraid it will not put many Americans to sleep. It is a mystery. The final chapter might be entitled, "Which agency actually killed the American jeweled-bearing industry?"

Collectivism Subsidized by United States of America

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, Henry Hazlitt, of Newsweek, again points out how private enterprise in this country supplies the money to make collectivism in Europe possible. The administration takes the profits from a free economy to support State cartels and phony exchange controls. I commend to all Members a challenging article by Mr. Hazlitt which I include as part of my remarks:

HOW WE SUBSIDIZE COLLECTIVISM

(By Henry Hazlitt)

The action of the House on continuance of ERP does not indicate that we are going to use any more common sense in dealing with the European economic problem in the future than we have in the past.

The administration has dismissed all critical discussion of the Marshall plan as partisan and isolationist. It attempted to drive the new ERP bill through Congress under a barrage of emotional slogans and scare words. Though we originally offered Marshall aid to Communist Russia itself, it is now represented as our chief weapon for combating communism. Once more it is implied, by the President, that refusal to vote for the administration bill may bring on the third world war. "Failure to enact its full amount," he writes, "would do irreparable damage."

Properly resenting these tactics, but without leadership of their own, a bipartisan majority in the House did have the temerity to cut the authorization by the moderate amount of $250,000,000. They also cut the authorization for point 4 by $20,000,000. But they failed to recognize that in accepting the premise of point 4—that the American taxpayer owes the rest of the world a living—they were letting him in for a bottomless obligation.

If the Senate is interested in the kind of revision that is really needed in the ERP program it could not do better than to read the article by Dr. William Roepke in the Commercial and Financial Chronicle of March 16. Writing from his European watch tower in Geneva, Dr. Roepke says supremely well what some of us have also been trying to say over here for the last 3 years. The present economic troubles of the countries of western Europe, he points out, spring mainly from the nationalistic policies being pursued within those countries:

"It is no longer necessary to define those national policies. They are familiar ever since Hitler came to power and, under the guidance of Dr. Schacht, set the example of a type of national economic policy which we propose to call national collectivism. It is the well-known combination of repressed inflation, collectivist controls, 'full employment,' exchange control, State monopolies, bilateralism, subsidies, fiscal socialism, 'cheap money' policies, and the strange mixture of the restriction of private consumption and of public waste which goes under the name of Austerity. * * *

"With the exception of Switzerland and Belgium, all European governments still practice national collectivism to the extent that they feel compelled to retain exchange control. It is exchange control which is the real keystone of national collectivism. * * *

"The devaluations certainly eased the strain, and they were in most countries the indispensable condition for the removal of exchange control. * * * But the chance offered by the devaluations has not been used, which means that the European governments resemble a surgeon who opens the abdomen without removing the inflamed appendix."

Dr. Roepke then turns to the proposed European Payments Union. "It is being realized by most observers that convertibility of currencies is the cardinal problem. To restore convertibility, however, is tantamount to abolishing exchange control. Not daring to face this thorny issue, many people prefer to believe that there is something 'almost just as good.' It is the idea of a European Clearing Union. * * *

"The crucial point, however, is again whether the national governments retain exchange control or not. If they do, then the idea of a European Currency Union has hardly more sense than an American currency system would have if the United States would split into 49 systems of state collectivism and of state exchange control. If they abolished exchange control, then we have all the monetary integration we need without the new cumbersome machinery of a European Monetary Union."

As a result of the evangelistic and intolerant fervor with which its sponsors promote the ERP over here, none of these economic realities is getting any serious attention.

Government Policies Are a Menace to the Coal Industry

REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. VAN ZANDT. Mr. Speaker, much is being said today about the coal industry being "sick" and the need for a Government Coal Commission to study the industry.

My congressional district is one that depends upon coal for its lifeblood and when the miners are digging coal and the railroads are transporting it to market we have a happy population.

The idea has become prevalent that the coal industry is sick, but I do not believe that is a complete diagnosis of the ills that have befallen it.

Nor do I believe that the creation of a Coal Commission is the answer to the problem. Any information that a Coal Commission could develop is already available through Federal agencies, the United Mine Workers of America, and through the National Coal Association.

In discussing the plight of the coal industry I recognize the differences that from time to time have existed between labor and management. Then, too, there is a natural trend on the part of the consumer to use substitute fuels for many reasons.

Anyone who has studied the coal industry has found that the industry's greater threat comes from policies of the Government of the United States. All of these policies have been formulated by Congress. Therefore, if any real contribution is to be made to the coal industry, Congress is its only means of salvation.

Before discussing how Government policies are destroying the coal industry, it is imperative that we realize how the demand for coal has fallen sharply from war and postwar levels.

Let me quote information on this subject from an article in the March 21, 1950, issue of the Wall Street Journal, written by Staff Correspondent Philip Geyelin:

In 1947 exports to coal-short European countries and to Canada totaled 69,000,000 tons. Last year they were down to some 27,000,000 as European mines got back in full operation.

In this country 3 years ago, coal was supplying 50 percent of the energy for homes and industry. By last year its share was down to 38.9 percent.

The railroads have been taking less and less coal as they put in more oil-burning Diesel engines. In 1947 they bought 109,000,000 tons of coal. Last year they took less than 70,000,000 tons, a drop of 37 percent. More electric utility companies are finding it's an economy to shift to oil, too. They consumed only 80,000,000 tons of coal last year, compared with 95,000,000 in 1948.

Meanwhile, householders have been swinging to oil at a rapid clip. Last year oil burner sales were up 39 percent over 1948, while factory shipments of warm-air coal furnaces dropped 47 percent. Where natural gas is available, this fuel is grabbing some coal customers, too.

These shifts to competitive fuels are expected to continue apace unless the coal industry can lower the price of its fuel, industry observers believe.

In discussing Government policies and their threat to the coal industry let us consider the Tennessee Valley Authority, commonly called TVA. As of June 30, 1949, the Congress of the United States had appropriated for TVA approximately $767,000,000 with an additional appropriation of $49,500,000 made available as of July 1, 1949. If you total the cost of TVA to the taxpayers including interest and tax costs of TVA production that are not paid by TVA, you then have an over-all figure ranging from $884,000,000 up to $1,200,000,000.

During the fiscal year ending June 30, 1949, the TVA, which operated at a total net loss of over $113,000,000, if interest cost of financing is charged to TVA for the period from 1934 through 1947, generated by water power more than 13,000,000,000 kilowatt-hours of electricity. This production of electricity, subsidized by the Government up to $1,200,000,000 in terms of coal equivalent, amounts to about eight and one-half million tons. This amount of coal means over $44,000,000 in revenue to coal companies and over $23,000,000 in miners' wages, or an annual wage of $4,000 to 5,750 workers.

To the railroads the eight and one-half million tons of coal displaced by TVA means a loss of twenty-seven and one-half million dollars in revenue, with over $12,000,000 representing wages of railroad employees, or a salary of $3,600 a year to 3,333 railroad workers.

In addition to the TVA and passing over similar Government projects, we have the threat of the St. Lawrence sea-

way project which has been in and out of Congress since 1914. The total estimated cost of this economic monstrosity has been placed at anywhere from one and one-half billion dollars to almost three times that amount, or three and one-half billion dollars.

These estimates of the St. Lawrence seaway were made prior to 1940 and must be increased to reflect price increases if a true cost as of today is to be shown. By increasing these estimates in the same proportion as wholesale prices of all commodities other than farm products and foods increased in January 1950 over January 1940, they range from three-quarters of a billion dollars to over $2,000,000,000.

It is recognized that the United States portion of the cost is more than half, and therefore the cost of the St. Lawrence seaway could easily cost the American taxpayer more than the TVA has cost to date, which is up to $1,200,000,000.

The St. Lawrence project as originally planned, looking at the power part of it, only would displace about five and one-half million tons of coal annually, which would mean a loss in revenue to coal companies of $28,000,000. Of this amount, almost $15,000,000 would be lost in miners' wages, or an annual salary of $4,000 to 3,750 workers.

From the standpoint of the railroads, they would likewise suffer a loss of over $18,000,000 in revenue, with about $8,000,000 of that amount representing a loss to railroad employees in wages, or a salary of $3,600 a year to 2,222 employees.

Another factor to be considered is the importation of cheap foreign oil, as well as any foreign oil. At the present time foreign oil is being dumped on our American market at the rate of 885,000 barrels a day and covers all grades and kinds of oil. This is an increase of 72 percent over the daily average in 1947.

Out of this total of 885,000 barrels, about 460,000 barrels are fuel oil, and this quantity is equal to 115,000 tons of coal per day. I do not claim that every barrel of low-priced oil from foreign countries displaces coal, but the great majority of the foreign oil imported does take the place of coal. Over a period of a year, this quantity of foreign oil displaces 40,000,000 tons of coal, which means the loss of $104,000,000 in miners' wages, or an annual wage of $4,000 to 26,000 workers. It also means the loss of $130,000,000 in railroad revenue, of which about $59,000,000 would represent workers' wages, or $3,600 annually to 16,389 railroad employees.

Let us look at the steel industry for a moment. Because of importers of foreign-made steel offering fast delivery at prices 10 to 18 percent lower than domestic vendors, our steel industry suffers, as does coal, from the result of our foreign-trade policy.

As I said in the beginning, Government policies are a menace to the coal industry, and the present administration or Congress cannot deny this fact. If the Government wants to help the coal industry, let it cease the program of subsidizing hydro-power projects, such as TVA and others. Let Congress shelve the St. Lawrence seaway project and let the administration restrict imports of foreign-mined coal, oil, and steel.

The coal industry can be helped if it receives assistance in regaining its markets which have been lost through the use of subsidized fuels.

One Hundred and Seventy-fifth Anniversary of Lexington and Concord

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. GOODWIN. Mr. Speaker, I am sure I reflect the gratitude of every Member from Massachusetts when I express appreciation of the action of the House and Senate in passing the resolution providing for the creation of a Commission to celebrate the one hundred and seventy-fifth anniversary of Lexington and Concord and I am grateful to you, Mr. Speaker, for honoring me by an appointment to that Commission.

We who come from the old Bay State take intense pride in our possession of hallowed shrines in those two historic Middlesex towns and April 19 has long been celebrated in our State as a legal holiday.

Among all the historic spots in Massachusetts, none are revered more highly. As long as tourists flock to New England to draw inspiration from that part of our land where liberty began, loyal and patriotic Americans will visit the site of the rude bridge that arched the flood and thrill at the realization that here was fired the shot heard round the world. Then at Lexington Green, the same loyal Americans will gain inspiration from the letters hewn in the everlasting granite quoting the undying words of Captain Parker "If they mean to have a war, let it begin here."

As long as history is written, our boys and girls of succeeding generations will read the thrilling story of Lexington and Concord and realize that here was the actual birthplace of the Nation.

A century and three-quarters has passed into history since that April morning in 1775 during which time the people of the globe have seen this Nation of ours write glorious history until our onward and upward path to prosperity and power has become one of the wonders of the world.

Now, after 175 years, we find ourselves in a world doubtful and confused. This much we do know, that war-weary peoples across the seas are looking to America for direction and guidance just as surely as the mariner scans the darkness of the night for the reassuring rays of the beacon light. This much also we must bear in mind as we seek to evaluate the lesson from Lexington and Concord, that if an emergency should arise where our leadership is actually in need, we will hardly be in a position to make that leadership fully effective unless we continue to hold fast the principles of freedom and liberty and self-reliance which were the prime elements in the spiirt of the Minutemen of '75.

Our Defeat in China

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. GWINN. Mr. Speaker, the saboteurs, who twist American foreign policy at the orders of a foreign power, are more dangerous to American security than those who trained to sabotage our railroads or our munitions plants.

The United States has suffered a military defeat in China, more serious than its defeat at Pearl Harbor. The voters did not know for years how great our losses were in Pearl Harbor. So it will be in the case of China. How vulnerable has it made our own coast? Who is responsible for this terrible defeat? McCARTHY is trying desperately to find out. The administration is covering up. It hides behind national security crisis talks.

The defeat of China was accomplished in our State Department. People believe that there was something rotten in that Department long before the McCARTHY charges. Since then Peurifoy admits nearly 100 sex perverts have been fired. Obviously that is only part of what has caused the fantastic defeat of the once most powerful military Nation on earth.

For 10 years we have had a Communist cell in charge of our foreign policy-making. These men are not deluded young students. Their business is to confuse our top officials so that they will adopt policies advantageous to the U. S. S. R. and fatal to our military security.

Ten years ago, there began a curious series of resignations and transfers of officials, like Ambassador Grew. He had had long and honorable experience in our far-eastern policy. Such men were replaced by newcomers who consistently favored Soviet Russia in their decisions. We had a succession of men as Secretary of State who were either blind or were suddenly relieved from office when they began to see.

When Marshall was made Secretary, after the very sudden resignation of Byrnes, he went to China and insisted on a truce. He demanded that the Chinese Nationalist armies be disbanded and sent home. But he got no reciprocal action from the Communists. He imposed an embargo on our shipment of war material to free China, but he got no embargo on shipments of arms from Soviet Russia to Communist China. Why? Was it because he was surrounded by advisers who favored the Communist side?

The Republican Eightieth Congress opposed President Truman's abandonment

of China and insisted that aid be given the Nationalist government. The Chinese bought arms of us, but, because of the State Department red tape, they could not get ammunition. Nor, oddly enough, could they get permits for shipment. These permits had to come from a bureau in the Commerce Department. The chief of this bureau was born in Manchuria. He had been appointed by Henry Wallace, although twice rejected for American citizenship for his un-American opinions. The paper work on these arms shipments was for some strange reason not finished until Harry Bridges had called a strike on the west coast. Then not a vessel could move from our Pacific ports to China or Alaska. That was, curiously enough, the moment when the Communist armies began their final push in China.

McCARTHY wants more light on this. The Fair Deal Party has chosen to laugh at his charges. Great names are used to inspire feelings of danger to our foreign policy. What foreign policy?

When China fell, we lost the air bases from which bombers could fly to inner Siberia, bases which were our best insurance against war. Some morning we may wake up and learn that the Philippines have been captured, as China was captured, by a domestic uprising, armed by the U. S. S. R. Then Formosa, Japan, and Korea will be outflanked. Alaska and California will be our front line. Such mistakes are paid for in the lives of our young men. They may have to retake, under withering fire, what our State Department so lightly gave up.

We must clean the Communists and all their dupes out of our foreign policy-making. Then the United States can resume its obligations to its ally, free China, and help train the Chinese soldiers who are bravely trying to recapture the air bases on the Chinese mainland. Such air bases might not only serve China but also constitute our first line of defense.

The New President General of the National Society, Daughters of the American Revolution, Mrs. James B. Patton, of Columbus

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mrs. BOLTON of Ohio. Mr. Speaker, Ohio is very proud that, at the National Congress of the Daughters of the American Revolution, just ended, Mrs. James B. Patton, of Columbus, Ohio, was elected president-general.

Mrs. Patton is known far and wide for her fine Christian spirit, her executive ability, and her understanding of human needs. She has had a long term in the organization, serving her State with consecrated devotion. Her elevation to national responsibility is a natural recognition of her capacity.

The Ohio Republican delegation, having extended their felicitations to her, have asked me to express their appreciation of this recognition, congratulating both the new president-general and the national organization.

Address of Brig. Gen. E. Dorman O'Gowan

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. PHILBIN. Mr. Speaker, I am pleased indeed to insert in the RECORD as part of my remarks the excellent speech of a former distinguished officer of the British Army which admirably sets forth certain strategic elements in our present distressing world situation.

General O'Gowan, who is Irish-born, has brilliantly pointed up some of the weaknesses arising from the iniquitous partition of Ireland, which in event of war might well bring dire and disastrous results to western civilization.

It is time that this Congress and this Government, in self-interest as well as altruism, took cognizance of the plight of Ireland and her unanswerable claims to unity and self-determination. I hope and urge that action may be taken at an early date to eliminate partition and implement full-fledged, total, and complete self-government for Ireland.

The address follows:

As you have heard, I served for 32 years in the British Army. Five years ago I retired to my birthplace in Ireland, where I hoped to settle down to archeology and farming. Instead, my proximity to what has become the Anglo-Irish boundary, inside my home Province, Ulster, compelled me to look into Irish and Anglo-Irish affairs. So much did I dislike what I saw, both from the national and international angle, that archeology had to go by the board, and, at this moment, the farm is looking after itself. Neither of these facts do I regret since I am today being given an opportunity to present you with some of my conclusions.

I need hardly remind you that my youth was spent in an undivided Ireland. Then the very idea of there even being three separate governments involved in Ireland would have seemed fantastic. Though this thing has happened it still seems fantastic. To the great Anglo-Irish parliamentarians of the late eighteenth century the idea of the parliamentary union with Britain must have seemed equally fantastic, but it happened, and it has had to be undone. It is natural for me, therefore, to regard the division of Ireland as the final effects of that act of union, and something in due course to be undone in the interest of sanity.

You have been told something of my military record. I would like you to realize that its importance lies in my almost unique experience of disaster in the operational and organizational fields, for most of my actual eperience in war has been at the losing end, before the winning began. In two world wars I have seen the price, the enormous price, and the quite unnecessary price, which civilization has had to pay for fundamental unpreparedness, particularly for political unpreparedness, before the war began. Civilization has survived. But each time with a smaller margin. There is no guaranty, in fact there is little likelihood that, if we enter unprepared into the third crisis of this century, should that occur, our civilization will again survive.

War preparedness in a democracy, or group of democracies, must be fundamentally political preparedness. It is the business, it is the duty, of political leaders to provide their military planners with a realistic and practical political background. It is the business and the duty of military planners to indicate to their political chiefs any deficiencies in this regard. But they seldom do so. The military mind is allergic to politics. And the military mind is accustomed to working, particularly in times of peace, with a large basis of assumption. A trained staff officer can assume almost anything, and start working from there. Nothing is more dangerous to war preparedness, or in fact to any human activity, than to begin action on an unreal political basis. A body such as this, so well grounded in the past, and so highly trained in prognostication of the future, will hardly require me to support this contention by many examples.

Let me remind you that the Maginot line, constructed at enormous expense, was left with its northern flank in the air at Mezieres, because political planning was unable to tell the French High Command, what, in the circumstances of a war with Germany, neutral Belgium would do. Again the British fortified Singapore only against seaward attack. Those great weapons never even fired, because the "Nips" who took Singapore, had the advantage of operating from an unresolved political situation, no political assumption having been made covering the entry of Japan into Indochina and Thailand and so into the Malay peninsula. Similar examples cover the failure of political planning for the defense of Burma. To return to the west, the British General Staff had authority to plan for military action in France and Germany, but the possibility of its forces being thrown off the continent, had never been foreseen. Yet this possibility was inherent in the political set-up in western Europe at the beginning of World War II.

In Cairo, in April 1941, when I was Director of Operations, General Wavell handed me one morning a slip of paper on which was noted "Start examining the WPC." General Wavell is a man of few words, and normally I respected reticence, but I asked him, so that I could begin work, what WPC meant. He replied, "Eric, you should know by now it can only mean one thing. The Worst Possible Case." General Wavell is a consummate strategist and a high-grade political philosopher. In fact the only soldier I know supreme in both fields, Eisenhower excepted. It is from him that I learned that in all military matters politics must take precedence of operational planning.

War is fought between two extremes, the best possible case, when our side has complete freedom of action, and the worst possible case, when one's own side has no freedom at all. It is a curiosity of the military mind that, before war begins, planning only takes account of the period prior to either side achieving any freedom of action. This, of course, was not unreasonable 30 years ago, today having regard to the speed and range of ballistics and logistics, it is patently absurd. Prewar operational planning has now to be total planning, and must therefore, because of the speed at which victory and defeat can be expanded, take into account, from the beginning, the worst possible case. You are aware of the vast effort financial, military, and political, now being made to ensure, in the case of world war III, an

Atlantic Pact victory east of the Rhine But supposing Lord Montgomery, who has never yet fought any enemy superior in armament and numbers to himself, should fail. There can be for us only one unsuccessful battle in northwest Europe, in the opening phase of the war.

There is only territorial room, in the present set-up, for one lost battle in northeast Europe. The worst possible case may begin, on land, 1 week after world war III breaks. In fact, taking account of the range and blast power of guided missiles, the worst possible case may well begin for the inhabitants of southern Britain from D+1 minutes. The gage in this early struggle is Russian access from the Baltic to the eastern Atlantic, past the barrier of the British Isles. If that eventuates, the east coast of the United States becomes the front line. That is, ultimately, civilization's worst possible case. Our immediate problem then is to insure in the event of defeat in Europe that the British Isles do not fall to Russia, as the Philippines fell to Japan. This can only be insured by an over-all defense coordination of the British Isles, politically and strategically, to cater for the worst possible case, long before war begins, in the light of the foreseeable effects that will result should Russia reach the Atlantic coast and the channel.

Clearly southern and eastern Britain will then become a war zone, exposed to heavy guided-missile bombardment from the continent, on a scale which might well demand a major shift of the civil population to a safer area, which would certainly necessitate the deployment of large military forces in southern Britain, and would, partially at least, incapacitate such vital ports as Liverpool and Glasgow, and totally cancel out the port of London, on which Britain depended for survival in World War II. Besides, not only would guided missiles reach southern Britain from France, eastern England and eastern Scotland would get those coming in from Norway. In such circumstances any planning which presumes the nonparticipation of all Ireland, condemn Britain to fight without depth in her strategical set-up, and largely without entrance ports.

Moreover, we westerners may omit Ireland from our strategy, but will the Russians do so? In such lamentable circumstances, the arrival of an airborne invasion in Ireland, might well be the end. In World War II Britain escaped invasion after the fall of France because the Germans had never planned for their best possible case, the rapid total defeat of France, which took place unforeseen. They began, only then to study, too late the follow-up into Britain. Were history to repeat itself, that hiatus would not recur. Why is there this hole in the strategical map of the Atlantic Pact where Ireland is? Surely, it is because the political chiefs of the Atlantic Pact fail to see the necessity for a sound political background for their strategical planning, and have not yet realized that any strategical plan, without a worst-possible-case codicil is unrealistic. Conceive for a moment the cooperation which would be required, were a politically integrated Ireland to be called into the planning councils of the Atlantic powers.

It would be necessary, not only to prepare Ireland operationally as an air base, to ring its coasts with the most modern radar devices, to arm and organize Ireland's man power for defence against modern air-borne invasion, but also to organize the country logistically, so that when the great ports of Britain became ineffective, Ireland would become a depot and a material base, from which would go a wide-front shuttle-transit of air craft and small ships, to the invulnerable, because highly dispersed harbors and coves and emergency landing grounds in the west of Britain, and, for that purpose, it might be necessary to create on the coast of Connaught, in the deep fiords of southeast Munster, modern Mulberry harbors, able to receive the seaborne traffic which, under present planning, will expect to use the great vulnerable target-ports of Glasgow, Liverpool, and Bristol. Again, where is the displaced population of southeast Britain to go if not to Ireland once the rockets and V2's come rolling in on the south coast of Britain and on London? No provision for these serious matters can be written into the Atlantic Pact planning, because the political leaders of Ireland are excluded, by a political situation created by one of the major Atlantic powers, from even thinking of such contingencies as I have just outlined. This, of course, is highly unrealistic, and yet is inherent in the very wording of the Pact itself, which, without full consideration of the meaning involved, guaranteed the integrity of existing frontiers in western Europe, and thus underwrote among other frontiers, the Anglo-Irish frontier, in the middle of the Irish Province of Ulster; so making it politically impossible for any Government of Ireland to survive for 24 hours, if it sought to cooperate in the Atlantic Pact, at the price of underwriting the partition of its own territory, and thus abandoning, for all time, its conationals who are unwilling British subjects inside the British bridgehead in Ulster.

The Government of the United Kingdom rules in Northern Ireland for reasons of imperial politics, economics, and strategy which were obsolete by the end of World War I, and thereadbare during World War II. You have therefore the paradox of the Irish nation, a nation recognized by Russia to be fundamentally hostile to communism, the one nation in the whole Atlantic world where there cannot be a Communist fifth column, a nation which is almost certainly marked down for the most condign re-education should she ever fall into Russian hands, remaining for political reasons, aloof, frustrated, and powerless to assist the anti-Communist powers. It may be said, that, with this background, it will be easy, border or no border, to involve Ireland to the full once war starts. Any such drastic and high-handed action would meet with rigid noncooperation on the part of Irish democracy. But moreover, it would be ineffectual in the short run because it would be both belated and uncoordinated. If, however, Ireland were to be occupied without consent it would be a sine-qua-non of effective action, that the insular defense of Ireland should be conducted under one military command, responsible or, at least geared to, one government, an all-Irish government.

Of course, in such circumstances, Britain might be only too ready to cut her losses in Ireland, if the alternative were her own national extinction, a contingency which did not arise in World War II with the same force. But is it not absurd that, while civilization is forging the chain which will hold her from ultimate collapse, neither the political nor military leaders of the western world seem to be aware of this missing link?

It has been said by the agents of the British Government in British Northern Ireland, that there is no incompatibility in the government of Free Ireland taking part at this moment in the Atlantic Pact, and the Irish Government's failure to do so is unrealistic and pedantic. There are no pedants in the Irish Government. It is a realistic government. In World War I, Ireland, governed as a unit by Britain, could both suppress a serious internal rising, and also provide large bodies of troops for external use, because it was under one military command responsible to the then government in Dublin. In World War II the situation was considerably more hazardous for all concerned, though the worst did not happen. But preparations to defend Ireland in World War III would, in present circumstances, demand collaboration between three governments, two sovereign and one subordinate. All would be exposed to heavy internal political strain, because, for historical reasons, that collaboration would be opposed by the Orange element in Northern Ireland as well as the extreme national element in the republic.

In the military field, were the British Government to assure the role of senior partner, that would be equivalent to the renewed military subordination of the Irish nation to Great Britain, an unthinkable political situation. Any attempt to involve the British command in northern Ireland in a defense plan in which the Irish Government was the senior partner, would be opposed by the pro-British minority in Belfast and the Tory party in Britain. With unity these factions would disappear. Till then these political factors are supreme. While they continue to obtain they nullify all strategical planning before the outbreak of war. In consequence there is no more vulnerable instrument today than the Atlantic Pact, as at present constituted. It can, like so many other pacts in the past, for instance the British guaranty to Poland, make it possible for war to begin; it can also make it possible for defeat to be swift and complete. As a soldier with considerable high-level operational experience I find the situation alarming. As a citizen of Ireland, I find it little short of desperate. I may be forgiven by saying that I do not believe we should permit the obsolete prejudices of a 20-percent minority of the population of Ireland, less than 300,000 adults concentrated unfortunately around Belfast, to nullify the great edifice of nonaggressive defense which the people of the United States are constructing in their own interest, and that of civilization. Particularly when in fact the susceptibilities of the Ulster Orangemen are completely out of place in our own time. Moreover, we must realize that those susceptibilities would rapidly wilt and wither, were they not backed by successive United Kingdom Governments be they Conservative or Socialist. It has been necessary, in the interest of a better world, to break down this residual imperialism in the British mind in India and elsewhere.

It was equally necessary to insist, democratically, on the Netherlands being realistic in the matter of Indonesia. Is it impossible at this present time, with all its urgency, to tackle as a world problem, the Anglo-Irish issue, and persuade the British people that not until they finally withdraw from Ireland's six northern counties, can their own strategical safety be guaranteed?

The United States, Ireland, Canada, and the United Kingdom should sit down together at the council table to strive to compose old differences in the face of such new and urgent dangers.

When that day comes a reunited Ireland will not be unworthy of her responsibilities to Europe and America.

Reorganization of Government

EXTENSION OF REMARKS

OF

HON. JOHN W. HESELTON

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. HESELTON. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I am inserting the press release issued by the Commission on Organization of the Executive Branch of the Government at the time it made its report on certain recommendations as

to the basic organizational changes, consolidating major land agencies and grouping them in the Department of Agriculture.

Basic organizational changes which would consolidate major land agencies and group them in the Department of Agriculture were proposed today by the Commission on Organization of the Executive branch of the Government.

The Commission recommended that the land activities of the Department of the Interior, chiefly the public domain (except mineral questions), be transferred to the Department of Agriculture. Water-development activities (except the local farm supply of water) would be transferred to the Department of the Interior.

"There has been a long and wasteful conflict and overlap between certain soil conservation, range, forest and allied services due to the division of their functions between the Department of Agriculture and the Department of the Interior," the Commission declared, adding that it "believes the logic and public policy require that major land agencies be grouped in the Department of Agriculture." (Separate views of a minority of the Commission will be filed with a subsequent report on the reorganization of the Department of the Interior.)

The report on the Department of Agriculture is the sixth section in a series of about 15 which will be given to Congress between now and March 13 by the 12-man, bipartisan Commission which was created by Congress in July 1947. The report proposes an extension of the functional organizations of the Department of Agriculture and a new grouping of major purpose activities. It also recommends a thorough overhaul of the Department at State, county, and farm levels.

The report notes that "The Department of Agriculture has been a vital and effective agency of Government since its creation in 1862. In the last 20 years the Department has expanded from about 22,000 employees to over 82,000 and expenditures have increased from about $25,800,000 to $834,000,000 in the fiscal year 1948."

PROPOSED DEPARTMENTAL STRUCTURE

The Commission recommends that the present positions of Under Secretary and two Assistant Secretaries be retained and that an additional Assistant Secretary and an Administrative Secretary be added. These officials should be appointed by the President, by and with the advice and consent of the Senate with the possible exception of the Administrative Assistant Secretary. The duties of these officials in supervision of Departmental activities should be assigned by the Secretary. All officials below the Under Secretary and the Assistant Secretaries should, preferably, be appointed from the career service.

It is intended that the Administrative Assistant Secretary should have charge of staff services and should, if possible, be selected from the career service.

The Commission recommends that operational functions of the Department in Washington be grouped into eight major units: 1. Staff services; 2. Research Service; 3. Extension Service; 4. Agricultural Resources Conservation Service; 5. Commodity Adjustment Service; 6. Regulatory Service; 7. Agricultural Credit Service; 8. Rural Electrification Service (pp. 8–9–10).

DEFICIENCIES OF THE DEPARTMENT (P. 3)

The Commission's task force on agricultural activities enumerates the following problems in the organization of the Department:

"(a) Its rapid growth has resulted in some 20 different offices reporting directly to the Secretary, causing an unnecessary diffusion of authority.

"(b) The Department has grown to its present size without sufficient integration of its parts and with considerable overlap and duplication. It is a loose confederation of independent bureaus and agencies.

"(c) There are agricultural activities in other parts of the Government which overlap and duplicate those of the Department of Agriculture.

"(d.) The Cooperative Extension Service established by the Federal Government and the States for educational purposes is being increasingly bypassed by several of the bureaus and agencies of the Department.

"(e) With the rapid growth of new activities, many field organizations at State and county levels have developed. Their work results in duplications, overlappings, and often conflicting policies. They confuse and multiply the difficulties of the farmer in his relations to the Department.

"(f) The Department has organized a variety of local advisory committees at the county level, and their members tend to become local administrators of uncoordinated agencies instead of advisers.

"(g) The inspection of agricultural products for protection of the consumer and the farmer is scattered through many agencies of the Government, and the resulting confusion requires producers and manufacturers to comply with regulations issued by agencies of two or more departments or administrations.

"(h) The present systems of budgeting, treatment of intra-departmental funds and earmarking of recurring funds have the cumulative effect of obscuring bureau expenditures and of promoting waste.

"(i) The services and policies of the several Farm Credit Agencies overlap. Their organization is contrary to sound banking principles. Some of them make loans which require costly individual supervision."

FIELD ORGANIZATION (P. 11)

The Commission recommends a thorough overhaul of the organization of the Department at State, county and farmer levels.

State level: "The State governments operate effective agricultural departments and have in the past engaged in effective cooperative activities with the Department at State, county, and farmer levels: In recent years, the Department has not taken full advantage of the established and effective State organizations in performing many agricultural programs and has thereby produced some duplication of national and State effort at local levels."

County level: "The Commission was unable to conduct a detailed survey of activities at the county level. Sampling inquiries, however, revealed that considerable duplication has developed. For example, 47 employees attached to 7 distinct and separate field services of the Department of Agriculture in one cotton-producing county in Georgia were working with 1,500 farmers; a fruit and grazing county in the State of Washington has 184 employees of separate field services working with some 6,700 farmers: a dairy county in Maryland had 88 employees attached to these field services working with less than 3,400 farmers. In these and other counties, representatives of each agency frequently advise the same farmers on the same problems. Farmers are confused and irritated, as climaxed in one Missouri county where a farmer recently received from five different agencies varying advice on the application of fertilizer on his farm."

The Commission noted that the separate field services usually found at the county level include the Soil Conservation Service; Extension Service; Farmers Home Administration; Production and Marketing Administration with its conservation payment program and school-lunch program; Farm Credit Administration through its Production Credit Associations and National Farm Local Associations and the Rural Electrification Administration.

In addition, the Forest Service may be represented by Federal-State farm forest management advisers; the Bureau of Animal Industry by specialists on animal disease eradication programs; and the Bureau of Entomology and Plant Quarantine by others who work on plant disease eradication and insect control.

Separate from those of the Department of Agriculture, representatives of the Veterans Administration are usually present to administer the on-farm industrial training program for veterans. The farm labor representatives of the Federal-State Employment Service and Federal-State Department of Agriculture may also be in the field at the county level.

A multitude of county advisory committees of farmers has been created and employed by these various activities at a cost exceeding $5,000,000 a year. The Commission's task force recommends that only one committee be set up for each county and estimates that their annual cost for the entire Nation would not exceed $700,000.

Farmer level (p. 13): The Commission recommends that Department of Agriculture councils comprising representatives of the several departmental services in each county be organized to exchange information on their programs.

"In view of the widespread activities of the State governments in agriculture, the Commission recommends that, except in the most unusual circumstances, activities that are services to individual farmers should be administered in the field by departmental employees through offices based on the States as units," the report says. "The services at county levels and to farm units should be so merged as to reduce the number of duplicating and unnecessary employees, with due regard to avoiding divided authority."

The Commission also recommends the establishment of one State council in each State, and one county council in each agricultural county, as aids to orderly operations in the field (p. 14).

FURTHER RECOMMENDATIONS (P. 15)

"(a) In the future, new Federal agricultural research stations should generally be established only where existing joint Federal-State facilities cannot be developed to fill the need.

"(b) We recommend that conservation payments to a farmer should be restricted to those which will bring about the adoption of complete and balanced conservation programs on his farm. They should not be used as income supplements in disguise. When the conservation plan on any farm has been completed, such payments to the owner should stop.

"(c) We recommend that adjustment programs with respect to commodities and commodity groups should be operated on a standby, rather than a continuous, basis.

"(d) To obtain economy and efficiency, this Commission recommends that inspection costs on farm products, when imposed for the benefit and protection of the general public, be paid by the Federal Government. Inspection and grading services primarily for the benefit or protection of producers or processors should be paid for by the producers or processors.

"(e) We recommend that customs receipts now allotted directly to the Department be paid into the Treasury and that direct annual appropriations be made by the Congress for specified purposes."

AGRICULTURAL CREDIT ACTIVITIES (P. 17)

The Government has an investment of about $2,000,000,000 in a maze of agricultural credit agencies. Current loans approximate $3,500,000,000 as compared with lending authorizations of nearly $7,000,000,000. Borrowings from private sources included in

the above total authorization have been utilized to the extent of approximately $1,200,000,000. The Commission in its upcoming report on business enterprises will recommend a number of requirements which apply in part to the agricultural lending agencies. These recommendations are designed to strengthen and simplify the agriculture credit structure and to bring about savings of capital and expenditures.

The administration cost to the Federal Government of these agencies might be reduced by more than $36,000,000 while much larger sums can be saved by better organized lending agencies.

IRRIGATION PROJECTS (P. 18)

The Commission notes that long-continued friction between the Bureau of Reclamation in the Department of the Interior and the Department of Agriculture has marked the planning and operation of irrigation projects. The Commission recommends that the Department of Agriculture be required to report to the President and the Congress on all irrigation or reclamation projects about their use or timeliness.

REGULATION OF FOOD PRODUCTS TO PROTECT CONSUMER (P. 19)

There are some 21 legislative acts bearing on the purity of food and drugs, standards and grades of products, etc. (See annex II, p. 35.) The Agriculture Department is vested with regulatory authority to grade various agricultural products, is directed to inspect meat, animal-virus serum, toxins, insecticides, and seeds. It also supervises the standardization of containers. The Federal Security Agency, the Federal Trade Commission, and the Bureau of Internal Revenue in the Treasury are also involved in similar regulatory activities.

"Many of these authorities were once in the Department of Agriculture," the Commission said. "Their separation from other departmental activities in these fields creates great overlap and also confuses the public. The Department (Agriculture) is much better equipped for research in these matters. * * * We believe, as does our task force, that the Department of Agriculture will be vigorous in the protection of consumer interest."

TRANSFER OF BUREAUS FROM OTHER DEPARTMENTS (P. 22)

Certain major questions of functions to be included in this Department or removed to other departments of the Government have necessitated major conclusions by this Commission.

Citing a "long and wasteful conflict and overlap" because of a division of functions between the Department of Agriculture and the Department of the Interior, the report says one of the important areas of duplication relates to the management of the forest and range lands of the public domain. The Forest Service, the Bureau of Land Management, and in some areas the Soil Conservation Service, operate on adjacent or intermingled Federal land areas under different statutory and administrative policies. Conflicting, confusing, and duplicating activities of the agencies concerned present problems, the Commission said, which call for basic organizational changes.

The Commission's report says:

1. "Our task forces on agriculture, natural resources, and public works all urgently recommend the consolidations of these agencies. It has been urged for many years by students of government. The Commission agrees with this recommendation." (Annex I, p. 31.)

2. "This Commission believes that logic and public policy require that major land agencies be grouped in the Department of Agriculture. (Separate views of a minority of the Commission will be filed with a subsequent report on the reorganization of the Department of the Interior.) It recommends that the land activities of the Department of the Interior, chiefly the public domain—except mineral questions—and the Oregon and California revested lands, be transferred to the Department of Agriculture, and that the water-development activities—except the local farm supply of water—be transferred to the Department of the Interior.

Finally, the Commission recommends:

"That on completion of the organization of the Department as contemplated in this report, the Secretary of Agriculture institute immediately a comprehensive management survey to determine further savings, and to eliminate facilities, stations, and offices that duplicate facilities and work otherwise conducted by the Department or the States."

The Commission's task force on agriculture was headed by Dean H. P. Rusk, of the Illinois State College of Agriculture. The committee included: Dean H. W. Martin, of the Rutgers University School of Agriculture; Dr. D. Howard Doane, of the Doane Agricultural Service; F. W. Peck, of the Farm Foundation; Prof. John Gaus, of Harvard University; Dean W. A. Schoenfeld, of Oregon State College; Chester Davis, president of the Federal Reserve Bank of St. Louis; and William Rhea Blake, of the National Cotton Council.

G. Harris Collingwood was research director of the task force and Frederic P. Lee its legal counsel. Consultants were Gen. H. P. Seidemann, formerly of Brookings Institution, and E. H. Taylor, associate editor of the Country Gentleman.

COMMISSIONERS

Hon. Herbert Hoover, Chairman, New York, N. Y.

Hon. Dean Acheson, Vice Chairman, Secretary of State, State Department, Washington, D. C.

Hon. George D. Aiken, Senate Office Building, Washington, D. C.

Hon. Clarence J. Brown, House Office Building, Washington, D. C.

Hon. James Rowe, Jr., Washington, D. C.

One Hundredth Anniversary of Clinton, Mass.

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include excerpts from a recent editorial appearing in the Clinton Daily Item on the growth and progress of the town of Clinton since its founding. The community is celebrating its one hundredth anniversary this year.

The matter referred to follows:

In the field of music, John Redmond and William H. Heagney, both of New York City, today, hold high rank in the field of music, while Clarence E. Brown, a former resident of Grove Street, as considered among the top movie directors, in Hollywood.

Carroll Gibbons, a Clinton native, has attained international fame, for many years, as the director of the Hotel Savoy Orchestra, in London.

Edward O'Connor, of 26 Prescott Street, is in charge of the Metro-Goldwyn-Mayer interests in Indonesia and Al Altman, both born here, serves as a M-G-M talent scout, with headquarters in New York City.

Just before the turn of the century Clinton claimed more big league baseball players than any town or city, in Massachu etts, with such famous diamond stars as the late William R. Hamilton, whose stolen base record has stood untouched for 50 years; Shavey Ryan and Malachi Kittredge, of the Chicago Cubs; Frank H. Connaughton, of the Boston Braves, and John C. McGeachey of the Indianapolis Club, a member of the old National League at one time.

Clinton saw the genesis of Brockelman Bros,. Inc., which originated in a little store, on Green Street, until its removal to the Tyler Block, when it acquired the Boston branch store, then located at the northerly end of that structure and which soon expanded into its present quarters embracing the entire ground floor and basement.

Singularly enough the site of the chain enterprise which now operates units in many New England cities and towns is in the same building where Gustavus F. Swift and his brothers conceived the idea of bringing dressed beef east in refrigerators cars from Chicago, which at that period, was rapidly becoming the center of shipments of cattle for slaughtering.

The Swifts removed from Cape Cod to Clinton in the early seventies and operated, in the Tyler block, a meat and provision store, and in accordance with the then prevailing universal custom of retail merchants of food products owned a small fleet of meat carts which went from house to house on established routes serving local and out-of-town customers.

In 1850 Clinton sported but few streets, all of short length. Berlin Road was not laid out until 1852, and the road to Sterling came into being in 1853 and 1854, while Boylston Road was not built until 1860 and 1861.

The new town spent $603.87 in 1850–51 for the construction of Grove Street, California Road, Wilson Hill Road, and bridges, but today Clinton has 35 miles of modern highways.

In 1850 the selectmen asked for and received an appropriation totaling $8,200 for expenditures during that year, and according to Ford's History of Clinton the amount raised, by taxation, was $9,059.33 on a total valuation of $262,803, and at the rate of $7 per $1,000 valuation.

The town had 575 poll-tax payers, and Ford's History reports the debt that year of $24,525, a few thousands over the 1950 debt of $18,000.

Clinton's expenditures totaled approximately $1,450,000 in 1949, with most of the income coming from the taxation of real estate and personal property valued at $11,947,000 on a tax rate of $55.80 per $1,000.

At the date of the incorporation Clinton possessed, according to the assessors, a population of 2,788, but the United States census, taken that year, announced a population of 3,118.

It was a time of beginning for all residents of the new-born town.

Economy in the present for the sake of a competence in the future was the motto of private life, but, at the same time, the spirit of enterprise was abroad with a full recognition of the fact that false economy in laying the foundations of our municipal institutions spelled a great increase of expenses in the future, and the citizens wisely adopted a farseeing program of liberality.

While the town owned some school property and a few roads and bridges it lacked provisions for the care of the poor, a place for interment of deceased citizens, and a protection against fire.

When the needs of the community are considered the $3,200 appropriation asked by the selectmen appears small, yet at the close of the first year of municipal life a net balance in favor of the town of $371.11 remained in the treasury.

It is a far cry from the modest living costs of 1850 and the average share of the Federal debt of that period that was borne by every Clintonian with those prevailing as the town enters upon its second century of municipal existence and even a contrast with 50 years ago when it observed its semicentennial is amazing.

The average share of every Clinton man, woman, and child of the 1950 Federal debt is $1,694, or 113 times as much as it was in 1902 and 130 times larger than it was in 1912.

He or she owes nearly 11 times as much as in 1932, 5 times as much as in 1947, 7 years after Roosevelt entered the White House, and 3 times as much as in 1942.

These authentic figures were revealed by the United States Census Bureau, December 16, 1949, in a survey of tax trends, Federal, State, and local.

Back in 1902, the per capita amount of the debt of each Clintonian was $15, and 10 years later, in the Taft administration it was $13.

In 1932, in the Hoover administration, it had risen to $156, and in 1940, after 7 years of the Roosevelt administration, it stood at $326, and in 1942 at $538.

Until the New Deal came in, the statistics showed that State and local government actually cost more than the Federal Government.

In 1902, the State and local debts of each person was $28; in 1912, it was $46, and in 1932 it stood at $157.

Today, it is even less than it was in 1932—$140, or one-twelfth the average citizen's share of the Federal debt.

Added together the per capita public debt stands at $1,834, with the Federal debt 92.4 percent, and the State and local debt only 7.6 percent.

The Federal debt, the Census Bureau figures showed, was $252,770,000,000 at the end of this fiscal year, while the 48 States owed $4,024,000,000 and local governments $16,851,000,000, for an over-all public debt of $273,645,000,000.

In contrast, the total public debt, in 1902, was $3,373,000,000, of which $1,178,000,000 was Federal and $2,195,000,000 was State and local.

The Federal debt has multiplied 80 times in the period between 1902 and 1950, and is 4½ times larger than in 1940 and about 3 times that of 1942.

State and local debts have remained about the same since 1932. In that year they totaled $19,576,000,000 and in 1940 they had increased to $20,246,000,000 and dropped steadily during World War II to $15,992,000,000 in 1946 and have since risen to $20,875,000,000, or still less than one-twelfth of the Federal debt.

On top of the debt of each Clinton man, woman, and child the average citizen pays $39 a year in interest alone, of which $35 goes to the Federal Government and $1 and $3, respectively, to the State and local governments.

The interest charges on the entire public debt amount to $5,732,000,000 more than the total debt itself in 1912.

The Massachusetts State debt, as broken down by the Census Bureau, was $207,261,000 in 1947 and $179,296,000 in 1948.

The interest on the Federal debt is $5,188,000,000 each year; on the State debt, $87,000,000 and on local debts, $457,000,000.

The men who make up the State budgets have been doing right well, too, as not since 1933 has a single one of the 48 States decreased the amount of money it took from taxpayers.

In 1949, the States alone grabbed $8,342,000,000 out of the pockets of their taxpayers and between Uncle Sam, the 48 States and the cities and towns in the Nation they paid $54,500,000,000 in tax levies, in 1948 one-fifth of the entire national income of all the people in the country, according to the official figures of the United States Census Bureau.

This year, three governors have decided that a little thrift might come in handy with two of them actually urging their respective legislatures to save the taxpayer a few dollars.

One of the most astute leaders of the Democratic Party was the late Gov. Albert C. Ritchie, of Maryland, a thoughtful man and an exceedingly clear-headed statesman who, in perusing the national situation a few days after the second election of Roosevelt remarked to a group of friends: "They have started something that can't be stopped." His reference was to the political program of appealing to large groups of voters, not with reason but with promises and gifts.

The gifts, of course, came from the United States Government and from the pockets of every taxpayer and formed the foundation of the New Deal—cash subsidies for the farmers, unemployment relief for the idle, social-security payments for the indigent and the aged, legislative favors and White House support for the labor union bosses, unlimited pay-roll patronage for the politicians, all of which created the huge deficits which the Democratic Party had pledged to decrease and pile up the national debt to hitherto unapproached heights, but which was laughed off as wholesome, particularly the national debt, "because," as those in power said, "we owe it to ourselves."

Of course it was apparent to the man in the street that it was poor arithmetic and worse logic but it was eminently successful at the polls. Conditions in 1950, 12 years later, make it clear that the Maryland Governor knew what he was talking about. In that period we have gone to extremes in the business of buying groups that were not dreamed of when it was started, with more than 2,000,000 on the Federal pay rolls and with one out of every nine persons in the United States directly or indirectly receiving Government funds.

The size of the national debt and the depth of the recurring annual deficits are far beyond the direst predictions of the most pessimistic of the antispending element. The Washington administration and the party in power are more closely bound to the labor bosses, particularly the CIO than ever before.

To the lonely voices of Democratic Senator HARRY F. BYRD and a few others, who for years, have pointed out that this policy of buying voting groups and ever enlarging the Government pay rolls was the sure way to calamitous national bankruptcy has now been added the powerful one of former Supreme Court Justice, former Secretary of State, and former Governor of South Carolina.

Perilously unsound as these vote-buying policies are and little as some of their conspicuous advocates believe in them, their political success has been so great that few men in public life have had the courage to rise up and say so.

Most of them are pusillanimously content to coast along cheered by the notion that the collapse will not come in their own time. It is, of course, a cowardly path they have taken but it is the one they are committed to and they can't stand still either. They realize that if they don't turn around they have to go on.

A notable example of this condition is in the present passionate advocacies of pensions for the aged which have broken out in both major political parties all over the country. A decade ago, both parties shunned the so-called Townsend plan and branded its proponents as morons or crackpots, but not today by any means.

Just a few months ago James Roosevelt announcing his gubernatorial candidacy in California, came out for pensions for everybody, while the Secretary of Labor in addition is urging $1 an hour as a minimum wage and insisting that the country must, at once, inaugurate a plan to give every retired person a pension of $100 a month. That was the original Townsend plan a few years ago.

The record shows that every pension proposed to which Congress has given close study and consideration has eventually been enacted into law and the warning of the BYRDS and the Byrneses do not even slow them up. If we are not over the brink before this $100 a month pension plan passes we will be after it becomes law.

The results of economic ignorance, the kindest phrase that can be used, applies the worst dictionary definition of "liberal"—"licentious." By feeding their bible of slogans and catch-phrases through blinding propaganda machinery the electorate has been deluded with dizzy pictures of the welfare state, a brief synonym for totalitarian collectivism and only a reactionary step from the slave state which the United States Constitution was designed to wrench from its age-old grip.

The taxation of pay rolls by the Federal Government has became one of the devices by which the New Deal strove to convert the United States into a socialistic welfare state.

The gadget is that pay roll taxes may produce, in small units, enormous sums of money which need not be especially accounted for and which may be used as economic planners desire. This insidious form of taxation was introduced when the Social Security System was adopted.

Dual taxes up to $30 a year each were levied on employees, being made deductible from their pay envelopes, and also on employers for the avowed purpose of providing old-age retirement pensions for the workers.

At the same time other taxes were imposed on employers along in conjunction with State unemployment compensation programs. Under the second arrangement State agencies operated the unemployment compensation programs but the Federal Government collects three-tenths of 1 percent of pay rolls to pay for the administrative expenses of the State agencies, which is a subtle scheme that makes the State dependent on the bureaucracy.

In both instances the taxes exacted by the Federal Government have been greatly in excess of current requirements and billions of dollars for old-age pensions have been collected and spent by the Federal Government with only a minor portion being needed for the legitimate payment of pensions.

Almost $2,000,000,000 have been paid by employers to the Federal Government for State expenses under the unemployment-compensation program. Out of this sum the States have received back only $850,000,000, or less than half of the total, leaving a surplus of more than $900,000,000 in the custody of the Federal Government.

Morally this surplus is a trust fund belonging to the State governments or to the employers from whom it was needlessly taken.

But a rapacious Federal bureaucracy wants to spend the money to influence pay roll votes and accordingly the Secretary of Labor proposes that the unearned surplus be used up by requiring the the States "to increase the amount and duration of jobless benefits under Federal standards."

Actually the scheme would perpetuate a steal on every State and employer in the country. Not only every employer but every State legislator, every worker, and every voter ought to become aware of the encroaching danger to free enterprise and to individual liberty that exists in Federal pay-roll taxes.

Such is the outlook, in Clinton, in 1950, as the town starts on its one hundred and first year—a municipality of small area, but with every life essential within easy reach; lines of three railroads, with direct connections with the main arteries of travel to all parts of the Nation; postal service unsurpassed by any town of its size in the country; ample banking facilities, telegraphic and telephonic connections with the entire world; an industrious population with thousands owning their homes and all skilled and thrifty; a fine market for the surplus products of the farms in the six agricultural towns that adjoin it and with a potential consumer public of between 25,000 and 30,000 souls; a modern gravity system of the purest water to be found anywhere in Worcester County and unrivaled for domestic and manufacturing purposes; a well-equipped fire department, an efficient police department, unsurpassed school facilities, an extensive public library, churches of many denominations, a collection of municipal buildings unequaled by any town of its size in the Commonwealth; four parks; a health country so elevated as to command extensive views of unusual New England beauty; modern highways, shaded residential streets and a law-abiding population.

It is not within the ken of any of us to predict the future of our beloved town, but every resident hopes that the fears besetting them at the present time may be only ephemeral and that the next 100 years will be as fruitful as those that are closing.

New Low in Crime

EXTENSION OF REMARKS

OF

HON. JOHN B. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. SULLIVAN. Mr. Speaker, under leave to extend my remarks, I include an editorial from the St. Louis Star-Times of Wednesday, April 19, 1950, entitled "New Low in Crime," which discusses the tragedies and near-tragedies in airplane transportation. These man-made "accidents," caused by heartless fiends seeking vengeance on one particular person and involving other helpless passengers, is fully discussed in this fine editorial, and a remedy is suggested. I commend this editorial of the Star-Times to my colleagues in the Congress. I am sure this subject will receive the attention of our Committee on Interstate and Foreign Commerce.

The editorial follows:

NEW LOW IN CRIME

It is only because of a miracle that the headlines today do not read "16 Die As Airliner Crashes in Flames." That miracle was the discovery of a home-made bomb by a United Air Lines baggageman. Only the accident of the baggageman's dropping a gasoline-filled suitcase, causing it to catch fire just before the take-off, saved the passengers and crew, not to mention the plane costing several hundred thousand dollars.

It is hard for a normal human being to realize that this world includes fiends who would murder their families and a dozen to 50 other persons to collect a life-insurance policy. But it is a fact, as has been proven three times.

It happened once near St. Joachims, Quebec, when a twin-engined Canadian Pacific air liner exploded in the air and crashed, bringing 23 people to their deaths. Included among them were E. T. Stannard, president of the Kennecott Copper Co.; Arthur D. Stork, who reportedly was touring the company's facilities before succeeding Stannard as president; and R. J. Parker, vice president. The other time it happened was in the Philippines.

It almost happened again on the Los Angeles-San Diego flight of a twin-engined United Air Lines DC-3. John H. Grant had planted the gasoline-filled suitcase, along with a time bomb, in the baggage of a plane that was to carry his wife and two small children. It almost went undiscovered.

There is no way of knowing whether any of the other unexplained crashes after an airplane burst into flames in the air may have been due to the same cause.

In the St. Joachims, the Philippines, and the Los Angeles cases the culprits were caught. Catching them is not enough, however. That will not bring back to life the 23 victims of the Canadian accident; it would not have brought back the 16 persons on the United air liner who would have been killed if it had not been for the miracle.

Clearly a Federal law is needed, so drastic that it will wipe out such crimes. This can be done as certainly as the Lindbergh law has wiped out kidnaping, and by the same method. Congress should pass a Federal law that any attempt, successful or not, to blow up or wreck an airplane in interstate travel is punishable by death. Every such case would then automatically fall to the FBI, which would almost certainly find the motive and the murderer every time such a heinous crime was attempted.

An effort should be made now to get such a law while memory is keen and indignation high about the Canadian and California incidents.

A Good Citizen of the World

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. TEAGUE. Mr. Speaker, my attention has recently been directed to the thinking of some of our young citizens and their concern over accepting the responsibilities of American citizenship as well as receiving the many benefits from it. In particular, are the thoughts of one young citizen, Cyrus Johnston, of Corsicana, Tex., whose theme on the subject of a good citizen of the world won an award from the local civic organizations.

Under leave to extend my remarks in the RECORD, I wish to include this theme by Cyrus Johnston of the Corsicana High School, Corsicana, Tex.:

A GOOD CITIZEN OF THE WORLD

The dictionary tells us that a citizen is "an inhabitant of a city or town—specifically one enjoying its privileges and freedom as freemen. A member of a state; a person, native or naturalized, who owes allegiance to a government." Upon birth one becomes a citizen of a city or town, a county, a State, the United States. Especially since World War II the world has been brought very close together. The airplane has made distance a matter of hours. The United Nations organization has brought representative citizens from most of the countries of the world around the same table in New York City. As one observes these citizens of many nationalities, one wonders how long it may take to build a world of good citizens with the fundamental things in common.

As citizens we have privileges. We enjoy citizenship, which is the relation of an individual to his state, which relationship is of a dual nature in our country: "That of the Nation and that of the particular State of which one is a resident." The meaning of our citizenship is defined in the fourteenth amendment of the Constitution. Along with this privilege of citizenship goes protection of the person and his property at home and abroad.

Accompanying privileges are responsibilities. Every citizen owes obedience and loyalty for this protection. It is the citizen's responsibility to grow physically, mentally, morally, socially sound, clean, and right, so that he may do his share in developing his country to the best interests of all the people. In this development education is very important. The first citizens of our country—our forefathers—who came from other parts of the world, believed that education was not only a right but a duty which freemen owed to their Creator. They believed that church members should choose their own pastor and help rule their own church. As you know, this democratic idea can be traced wherever the church spire rises in an American town. These pioneers created self-governing towns which were the basis of local government, and they established the first free schools in America. I mention these things because they are fundamental in the spiritual, mental, and moral growth of good citizens. They are the factors that make people good citizens.

What is a good citizen? What qualities may a person have that place him in the category of a good citizen There are many such qualities that might be named, but I shall name and comment briefly on seven.

In the first place, I think a good citizen is a working citizen. Work is a noble thing, and by noble, honorable pursuits man goes forward and makes the world a better place to live in. Someone has said "Better to wear out than to rust out," and 'tis true that "The dog that trots around finds a bone."

The men we call great, the men who have been good world citizens, the men whose birthdays are marked on the calendar have been the men who have worked and found the bone. They have been hard-working citizens. Take Abraham Lincoln as an outstanding example. He worked himself, and he believed in a man's right to work and keep the fruits of his labor. He believed in free enterprise which has come to be known as the American way of life. This is the system of work that has made our country great, and as the generation that will be in places of leadership tomorrow, we high-school students must take advantage of our opportunities—opportunities made possible by good citizens from all over the world who have had the courage to work for that which they loved.

The thrifty person, one who is frugal, industrious, and provident, is a good citizen to have anywhere in this world. When we think of the quality of thrift, our mind turns to the good and great Benjamin Franklin. His philosophy as stated by Poor Richard is well known, for who of us has not read The Autobiography of Benjamin Franklin?

"Plow deep while sluggards sleep, and you shall have corn to sell and to keep.

"God helps them that help themselves.

"A penny saved is a penny earned.

"Wine and women, game and deceit, make the wealth small and the want great."

We do well to ponder these thoughts from the well-disciplined mind of Franklin. We should be mindful of the fact that good citizens are thrifty with time and efforts as well as money.

The quality of self-reliance makes me think of my recent visit to our Mesa Verde National Park. The dole, social security and societies for the advancement of this, that and the other things were unknown to the Indian living on this green mesa from 1,200 to 700 years ago. They didn't have present-day Robin Hoods, bureaucrats, self-styled liberals to soak the rich to give to the poor. No, these red men were self-reliant people. They took what God gave them and made the best of it. They were realists. They worked hard. They made definite contributions to civilization, and the products of their labors still stand today.

The next three qualities of a good world citizen: fair play, tolerance and respect for the rights of others, may be summed up in the words of our Master, the greatest Citizen who ever lived, when He said:

"All things therefore whatsoever ye would that men should do unto you, even so do ye also unto them" (Matthew 7: 12).

And now we come to the seventh quality of a good world citizen. This is the most important of all, in fact, it is the fundamental. If a man has the love of God in his heart, then these first six essentials will just naturally follow.

God-fearing people have been the instruments through which civilization has progressed upon its course always in a westerly direction. Take a look at our own country with its background of the Puritan spirit. Our forefathers had the unshakable faith that God was on their side both in war and in peace. This conviction gave these first citizens the strength to make the first powerful American commonwealth out of the wilderness of New England. It gave them a feeling of independence that was different from anything that had happened before on the North American continent. We learn from American history that the Puritans brought with them their own charter, proceeded to organize their own churches, make their own laws, elect their own magistrates, and build their own schools. When they made money by hard work, they kept it among themselves. These Puritans started doing the things that all Americans have sought to do ever since. Their spirit lives on, because wherever they went they carried with them the indomitable faith of their Puritan ancestors who believed that God had chosen America as a specially favored land.

Since God has been so good to us and because of His many blessings to His people here in America, we of this generation in the public schools of our land should take advantage of the opportunities we have to prepare ourselves for honorable work. We should be frugal, industrious, and provident. We should be self-reliant and make the very best we can with the opportunities we have. We must be fair-minded and respect the rights of others. Above all, we must love and obey God and, like the wise man, build our house on the rock foundation. We must build a character that can withstand the storms of life.

By so doing, we'll be able "to make our lives sublime" like all the host of good citizens who have gone before us.

"Lives of great men all remind us
We can make our lives sublime,
And, departing, leave behind us
Footprints on the sands of time."

Opposition to Postmaster General Donaldson's Order

EXTENSION OF REMARKS

OF

HON. JOHN R. WALSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. WALSH. Mr. Speaker, yesterday I served notice that today I would introduce a House resolution to authorize and direct a sweeping investigation of the scandalous situation existing in the Post Office Department, particularly with reference to the subsidies and overpayments made by the Department to railroads for transportation of the mails.

I have caused the introduction of the House resolution referred to; it is House Resolution 547.

In my statement of yesterday, I called attention to the deplorable condition wherein the Post Office Department pays double transportation charges for space purchased from the railroads, out of postal appropriations, for the transmission of the mails. Postmaster General Donaldson testified as much before a committee of the House of Representatives on March 7 of last year.

In hearings before the Committee on Post Office and Civil Service, on H. R. 2945—which had for its purpose a readjustment of postal rates—the following colloquy took place:

Mr. HAGEN. At that point, let me ask this question: Has any survey been made recently as to what percentage of the actual paid-up space that is used in railway cars—and I understand it is on a cubic-foot basis—is used on the average run? In other words, we now pay the railroads, as I understand it, for the baggage cars for mail and the mail cars, so much per cubic foot on each railroad run, and we pay for that space regardless of whether there is 1 sack or 100 sacks, and some days it is more and some days less. Has any survey been made to show the average amount of usable space that has been used on these various runs over a period of time?

Postmaster General Donaldson made the following reply to Congressman HAGEN'S inquiry:

Yes, Mr. HAGEN; there is a difference of pay to railroads. In other words, I think what you are talking about is space purchased by full cars or storage cars or what-not. That is different from the regular RPO lines, the lines in which railway postal clerks operate.

Now with reference to the space for transporting mails by full carlots or by 15 feet or 30 feet or 45 feet or what not, I think that our investigation indicated that we used about half of the space that we paid for. Under the law, if we transport a carload of mail from New York City to San Francisco, we pay for that so much per foot per mile, so to speak, and then we pay for the return movement of the car, whether we use it or not. There is far more mail moving west than there is mail moving back.

I might add in this connection that an investigation on the basis of cost-ascertainment figures in 1946 indicated that the Post Office Department paid for 580,462,152,219 cubic-foot-miles for the transportation of mails, and actually carried only 323,677,344,195 cubic-foot-miles of nonlocal surface mails. This indicates that 44.24 percent of space was paid for but not used.

Now here we find an administrator who testifies before a congressional committee that his Department contracts with the railroads for so much storage space, uses only half of it, and, mind you, pays for the total amount contracted for with the taxpayers' money. This same administrator, on April 18, issued drastic curtailment orders reducing delivery service in the Post Office Department to such an extent that it will mean a reduction in force of a minimum of 10,000 employees. One can only surmise that empty boxcars are more important than human beings.

I should like to invite attention to the apparent policy pursued by the Post Office Department with respect to payments for service furnished by railroads transporting the mails. The policy adopted gives no consideration or, at best, very little to the taxpayer.

On February 14, 1946, William V. Griffin and Hugh William Purvis, receivers for the Georgia & Florida Railroad, were suing the United States Government. The case was heard in the United States Court of Claims. John Hardy, General Superintendent, Railway Mail Service, Post Office Department, was on the stand. Under oath he declared:

I might add that the most—probably the determining factor in my decision was the fact that the railroad company pleaded that we continue the service because of the financial benefits that were accruing to the railroad, and that has been one of the policies of the Department, that in considering any curtailment or discontinuance of rail service is to first make inquiry of the railroad company as to what effect upon the finances of the operation of their railroad any such curtailment would have, and we are invariably governed in our decision by the plea of the railroad in response to our inquiry.

During this same litigation Mr. Hardy was asked the following question by Mr. Stern:

Question 19. Have you had occasion to deal with and compare the rates for your service and railway express service?

Mr. Hardy replied:

Well, all large railroads have what is known as managers of the mail and express traffic. The majority of those employees are former employees of the Post Office Department, Railway Mail Service, and in my position we have almost daily contact with these managers of mail and express traffic, and from frequent conversations with those railroad representatives I can positively state that the railroads value the mail traffic greater than the express traffic; that is that they consider that their revenue from mail traffic, in consideration of what is furnished for the Post Office Department as compared with that which is furnished the express company, brings them a greater return.

Mr. Donaldson has stated that the Post Office Department used about half the space that was paid for. From the evidence at hand, that might well be described as an understatement. Mr. Peter J. Schardt, chairman of the committee on railway mail transportation is quoted in the November 20, 1948, issue

of the Railway Age, in an article entitled "What Future for Mail Revenue?" as follows:

Mail traffic is not evenly balanced; it is heavier going south and west than north and east. The unbalance, moreover, varies sharply on different roads. The ratio of loaded mail space to total mail space authorized varies from 98.9 percent on one big class I road, down to 57.9 percent on another.

It is my firm conviction that the entire question of postal subsidies should be thoroughly investigated. Railroads are not the only ones to benefit by subsidies at the expense of the taxpayers. Let me show what a waste of taxpayers' funds is going on in the air industry under the pious name of postal subsidies. House Document No. 1242, Survey and Study of the Postal Service, Preliminary Report, January 15, 1948, page 6, reported:

In paying the air-mail subsidy, the Post Office Department is called upon to finance inefficient management, parties, hotel suites, entertainment, excessive public relations costs, and to finance competition between existing scheduled carriers.

Getting back to the railroads, the statement has been made that the Postmaster General has no control over rail rates. That is true only in part. It is true that the Interstate Commerce Commission has the right to determine the rate to charge per unit, but the Postmaster General determines how many units are to be purchased. In a hearing on S. 1596 before the Senate Post Office and Civil Service Committee on May 27, 1949, Frank J. Delany, Solicitor of the Post Office Department, pointed out:

In other words, we prescribe the service; the Commission—the Commission figures how much it costs the carriers and fixes the rates, also figures the mechanics, whether the rate is to be calculated in terms of space as provided by the Railway Mail Pay Act, or weight, the old weight system, but nothing about directing the Postmaster General in his determination as to what service he requires or how often he requires it, or whether he wants it on a one-way basis or a round-trip basis.

On more than one occasion the Postmaster General has stated in effect that his is an untenable position with respect to fees paid railroads for the transportation of mails. As I pointed out above, that is only half true.

Here is another interesting aspect of this question. Page 23 of the report on the post office appropriation bill for 1949 carried the following:

Special contracts with railroads are authorized by statute for transportation of mails where the Postmaster General believes special conditions warrant higher rates. Testimony reveals that there were six such special contracts in effect as of July 1, 1947, providing for an annual increase over regular rates in amount of $111,763. The committee questions the necessity for such special contracts, and desires that the Department undertake a survey to determine the possibility of their discontinuance.

I understand that these preferential contracts are still in effect, despite the recommendation of the committee. It is interesting to point out the swiftness with which the Postmaster General complied with the recommendation of the House Appropriations Committee this year with respect to looking for economies by a reduction in services that would not be a hardship or inconvenience to the general public. The Postmaster General, in my opinion, went much further than the recommendations of the committee implied.

the general public. The Postmaster General under the law has authority to negotiate with railroads for more favorable rates; this authority has not been used to secure favorable rates where a competitive situation exists. This is exactly opposite to the policy followed by the Department where small contractors are involved. As a matter of fact, the Department encourages cutthroat competition among letter carriers on so-called mounted routes where the difference in their contract bids is seldom more than a few paltry dollars.

The resolution I have introduced will investigate these unhealthy conditions and bring about corrective action to the end that legitimate rates will be determined for legitimate services performed by the railroads, the air lines, and the steamships. If the Congress in its wisdom decides that these agencies require help from the Federal Government through subsidies, then I am sure they will give consideration to that question. I do hope that any subsidies authorized will be distinctly separated from payments for actual services performed so that these subsidies will not be charged against the operating cost of the Post Office Department.

I invite support of my resolution. Something must be done to save the postal service and the American taxpayer from the horrible situation which exists today.

Security—A Myth?

EXTENSION OF REMARKS

OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Friday, April 21, 1950

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following editorial by Prof. Walter J. Jerde, of Northern State Teachers College at Aberdeen, S. Dak. The editorial appeared in the student publication of that school, the Exponent.

Professor Jerde has set forth his thoughts on the important subject of security and what he has to say is well worth reading and thinking about. I call the attention to the Members of this body to Professor Jerde's editorial.

SECURITY—A MYTH?

(By Prof. Walter J. Jerde)

When the writers of the history of our generation get around to evaluating the events of the midtwentieth century, they may well call it the era of search for security. It would be interesting to know how many column-inches have appeared in newspapers and magazines and how many hours of radio time have been used since 1930 in discussing economical security, social security, old-age pensions, income security, freedom from want, freedom from fear, and so on ad infinitum.

What is the security which people of our times want? As we hear it discussed, it becomes apparent that it has almost as many meanings and implications as there are persons who discuss it. There seems to be one thing on which they all agree, that is, that somehow the Government is supposed to be the possessor of this security. There has developed in the thinking of the American people a strong conviction that security is some commodity which the Government has stock-piled as you might an inventory of goods. There is good reason for the people 18 to 50 years of age to have developed this attitude. Was it not the Government which came to their aid and to the aid of their fathers in the catastrophic thirties? It gave them financial aid and new hope. The error, it would seem, is in thinking that the security comes from such a source. Only the conditions within which security can be developed is the most any people can expect from its government.

Peace and security are closely knit together. It seems quite evident that one cannot exist long without the other. There can be no argument with the statement that Americans want peace. But they do not want peace at any price. If the price of peace is injustice, they will reject peace. If the price of peace is loss of freedom, they will reject the proffered peace. How about security? Is it a more precious jewel than peace? Is it worth giving up freedom of speech, action, choice of vocation, choice of how you shall invest your savings? Is security in old age as represented by the receipt of a pittance worth mortgaging future generations? There seems to be a deep-rooted conviction that somehow government can do things better than the people themselves. This thought reminds me of what a Briton remarked: "This nationalization is a very queer thing. The more you own, the less you have. We own the Bank of England in Britain, but I am no better off. We own the coal mines, and I have less coal. We own the railroads, but I can't get a railroad for my holiday. This is socialism; the more we own, the less we get." Perhaps we should ask ourselves the question, Shall future generations of Americans be freemen or puppetmen?

It seems that security must be more a frame of mind than anything measured in dollars and cents. Our founding fathers were satisfied that here was security, security based on opportunity to work out individual problems, free from the dictates of an all-powerful state. Not security for the indolent, not security for the spendthrift at the expense of the thrifty. Security from interference in the matter of where, how, and how much, economically speaking, the individual might wish to accomplish. Real security is of the individual's own making. Collectively the individuals in a society can make a government secure; never can a government make security for the individuals of that society.

How does education fit into this whole matter of security? Education is being challenged as never before. Security for the individual can come only through the development of well-informed, self-reliant individuals equipped with well-disciplined minds. Education must demand from its leaders and its learners alike a vigorous program which leaves no room for lazy thinking and the too prevalent habit of rationalizing. The educational system on any level is certainly not perfect, no more so than the functioning of our free enterprise system of business nor our republican form of government. Education, both formal and informal, has much to

offer by way of assistance in making individuals secure, secure in the conviction that they are capable of working out their own economic and social destiny.

I would remind you of a sentence from the preamble to the charter of UNESCO. "Since wars are made in the minds of men, it is in the minds of men that the defense of peace must be constructed." If the minds of men can make war or peace, then certainly the minds of men can fashion a lasting security. What fashions the minds of men? More than any other one institution, the schools and colleges of the land.

Congressional Haste Makes Waste

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. DAGUE. Mr. Speaker, the answer to those pressure groups who continually ridicule Congress for the deliberate manner in which it considers the business before it is found in the article by Mr. Wheeler McMillen in the current issue of Pathfinder magazine. Especially do I invite your attention to the statement that Congress is the President's coequal and that it has no obligation to follow his direction no matter how large the must label that is attached to his recommendations. I also like Mr. McMillen's suggestion that a Congress that passed no bills at all, except essential appropriations, might well do the most for the people. His able article follows:

ALONG THE AMERICAN WAY—LONG LIVE THE "BOG-DOWN"

(By Wheeler McMillen)

By now the people have been thoroughly told that Congress has "bogged down." Every year this story appears, just preceding the opening of the baseball season. Like the Washington cherry blossoms, it tends to be overwritten.

When Congress opens in January, bills begin to pour in. The President presents a program of new legislation. The bills are referred to House and Senate committees for detailed study. Meanwhile the pressures for and against descend upon Congress.

About 60 days later, the annual cry rises that, because Congress has not passed any major legislation, it has bogged down. The citizen distant from the Capitol is offered the impression that his Representatives and Senators have been dawdling.

The President is required by the Constitution to report to Congress on the state of the Union. It is within his prerogative to recommend legislation.

But Congress is his coequal. It has no obligation to follow any President, every obligation to scrutinize in detail each bill, from whatever source. Its verdict should reflect the best information that can be obtained. Seldom can unanimous agreement be expected from among 531 Members so compromises have to be worked out if a law is to be passed.

The bog-down usually is charged when administration measures move slowly. The charge is one form of Executive pressure. Where dictatorships arise, the Executive program gets enacted quickly.

One might easily argue that the most useful service Congress performs is not to pass laws.

If Congress at any one session were to pass every bill proposed, the Republic would soon be wrecked. Some bills are introduced purely for private or political effect; even their own sponsors vote against them. Foolish bills and evil bills are introduced, sometimes sincerely—and soon put aside.

A Congress that passed no laws at all, except essential appropriations, might well do more for the people than any Congress has ever done. Better yet would be a Congress that concentrated on repealing laws.

The deliberations of Congress contribute to the formation of sound public opinion. When issues are discussed through a period of months, information about them flows out to the people. Informed opinion, reflected back to Washington, makes for wiser legislation.

Congress deserves gratitude rather than criticism when it takes its time. July laws are likely to be wiser than January laws simply because more study and analysis will have gone into their making. When Congress ceases to study and debate, this will cease to be a Republic of free people.

In a way, Congress has no "spokesman." It is a large body made up of many kinds of men. Each speaks for himself, for his party and for his constituents. No one can speak, even in defense, for the whole body. It stands as a safe target for criticism.

Certainly the acts and intentions of Congress should be under constant public scrutiny. Its sessions are public for that purpose. Every committee hearing, except for a few, is public.

This body, chosen directly by the people to exercise the legislative function, contains within itself the best guarantee of continued American freedom. The mistakes it makes are generally the people's mistakes. A clear understanding of how Congress works, and of why it works the way it does, is essential if the Republic is to enjoy the best government.

United States Coast Guard Reserve Should Have Funds

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. SIKES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the able pen of John McMullen of the Panama City (Fla.) News-Herald:

A VALUABLE ASSET IN WAR AND PEACE—UNITED STATES COAST GUARD RESERVE SHOULD HAVE FUNDS

An integral part of the United States armed forces, with an outstanding record in war and peace dating back to 1790, can't get $4,000,000 from the Congress of the United States to operate a creditable reserve program.

The United States Coast Guard has a reserve, but for some unknown reason the Congress which established that unit has failed to give it any operating funds.

The Coast Guard serves as the Federal police force and protector of life and property on the sea and in navigable waters of the United States. This role includes maintenance of more than 36,000 aids to navigation along 40,000 miles of waters; lifesaving activities; removal of derelicts and other menaces to navigation; marine inspection; medical aid to seamen; law enforcement on the high seas and navigable waters of the United States and in Alaska; the prevention of smuggling; patrol of the North Pacific Ocean and Mering Sea to regulate the taking of fur-bearing sea mammals and fish; aid during flood and hurricanes; maintenance of the International Ice Patrol to report the amount of iceberg drift for the benefit of vessels crossing the North Atlantic; maintaining ocean weather stations.

Those are just a few of the many peacetime duties of the Coast Guard. We in Panama City know the United States Coast Guard cutter *Boutwell*. Some of us remember the cutter *Dix*. Many of us were here during the war years when the beaches and port facilities of the Gulf coast were carefully guarded from possible sabotage by aliens, guard work performed primarily by the Coast Guard or subsidiary units of the Coast Guard.

Those who served overseas during World War II know that the Coast Guard manned LST's, troop transports, patrol boats, and many other floating units. The Coast Guard also participated in assault landings during practically all major operations in the Pacific and European theaters of war.

During World War II, the Coast Guard also maintained air and surface submarine patrols off both major coast lines of the United States.

In every daily newspaper, almost every day, the Coast Guard figures in at least one rescue, one distress call answer, one errand of mercy, one more task in the continuous performance of peacetime duties.

How much is $4,000,000?

Compared with our national budget of $47,000,000,000, it is only $1 out of each $12,000. Compared with the total (and reduced) defense budget $13,000,000,000, it is only $1 out of each $3,250. Compared to the current NSLI dividend, it is only 50 cents out of every $350.

President Truman, Secretary of Defense Louis Johnson, Admiral Forrest Sherman, Chief of Naval Operations; Secretary of the Treasury Snyder, and the United States Senate all have approved the Coast Guard Reserve training program.

The Bureau of the Budget has approved the $4,000,000 appropriation, but the House has rejected it.

An organization that has proven its value in peace and war should not be rendered impotent because of an inadequate training program for its reserves.

The several thousand officers and enlisted men who are holding on to commissions and enlistments in the Coast Guard Reserve should be given an opportunity to maintain peak efficiency.

Congress should see that the needed funds are made available at the earliest possible moment.

Commissioner Mead's Testimony Before Celler Committee

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 3, 1950

Mr. CELLER. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD part of a statement given before the Subcommittee on Monopoly Power of the House Judiciary Committee by Commissioner James Mead of the Federal Trade Commission on April 18, 1950.

In this statement Commissioner Mead indicated that in addition to the matter of pricing practices the Federal Trade Commission is concerned with three other problems raised by the steel industry—the problem of iron-ore supply, the problem of forward integration through acquisitions of customers, and the problem of the adequacy of steel capacity. Commissioner Mead indicated that each of these problems may well result in a substantial lessening of competition not only in the steel industry itself but in the much broader area of metal fabrication.

A legislative means to deal with the second of these problems is now before the Congress in the form of H. R. 2734 (Celler bill), a bill to amend section 7 of the Clayton Act. This bill, which bears my name, has already passed the House but is awaiting action by the Senate. This bill will close the wide-open loophole in the Clayton Act whereby large corporations easily evade the original intent of Congress and acquire other firms by the simple means of purchasing their assets rather than or in addition to their capital stock. Although all of Commissioner Mead's statement should be of interest to every Member of Congress, that part of his statement dealing with this problem of acquisitions and mergers should be of particular interest in view of the present state of legislation on this matter.

The statement follows:

Although steel producers have been engaged in this practice (i. e., buying up their own customers) since the earliest days of the industry, this form of expansion was rather limited in scope until around 1930. Prior to that time the energies of the steel producers in promoting mergers had largely been expended in bringing together other steel companies, i. e., horizontal mergers; and in acquiring their own sources of iron ore, coal, and related products—i. e., backward vertical acquisitions. In commenting on the apparent disinclination of the steel companies to enter the fabricating fields, E. S. Mead, a prominent writer on corporate finance, stated in 1930 that:

"Vertical consolidation in the steel industry stopped with the raw material of other industries. The steel corporation sells its products to machine tool builders, building erectors, automobile manufacturers, manufacturers of agricultural machinery, railroads, public utilities, and a variety of other industries which use steel as raw material of their operations. The steel corporation has not, however, gone into these industries either to own or operate. It stops short at the line of rails, sheets, plates, billets, wire, and structural shapes." (Corporate Finance, D. Appleton & Co., 1930, p. 460.)

I would like now to list briefly the acquisitions of fabricated and finished goods producers which have been made since 1930 by just two of the large steel companies—United States Steel and Bethlehem Steel.

During this period the United States Steel Corp. has acquired:

1. Oil Well Supply Co., one of the largest manufacturers of supplies for drilling oil and gas wells in the United States.
2. Witte Engine Works, another producer in the same field.
3. Neilson Pump Co., a third producer of oil-well machinery.
4. Boyle Manufacturing Co., a leading manufacturer of steel drums and barrels.
5. Petroleum Iron Works, another steel-drum manufacturer.
6. Bennett Manufacturing Co., a third steel-drum producer.
7. Virginia Bridge & Iron Co., a large firm with fabricating plants in Virginia, Alabama, and Tennessee, having an annual productive capacity of approximately 100,000 tons of finished structural work.
8. Gerrard Co., Inc., a manufacturer of oil strapping machines.
9. Jackson Fence Co., a manufacturer of fences.
10. Gunnison Housing Corp., a leading producer of prefabricated houses.
11. Consolidated Steel Corp., the largest steel fabricator on the west coast.
12. Savannah Wire Cloth Mills.
13. Moise Steel Co.

The acquisitions by Bethlehem Steel during this period followed somewhat this same pattern, with the exception that Bethlehem has been more active in purchasing firms engaged in the fabrication of structural steel. Since 1930 Bethlehem Steel has acquired the following producers of fabricated and finished goods:

1. McClintic-Marshall Corp., a large firm engaged in the fabrication of bridges, buildings, tanks, river barges, etc.
2. Levering and Garrigues Co., another firm engaged in the fabrication of structural steel and the erection of buildings.
3. Hay Foundry and Iron Works, a third firm engaged in the fabrication and erection of iron and steel.
4. Hedden Iron Construction Co., a fourth firm engaged in the same field.
5. Taubman Supply Co., a firm engaged in manufacturing and selling oil-company supplies.
6. International Supply Co., another producer of oil-well equipment.
7. American Well & Prospecting Co., a third firm engaged in the same field.
8. The Buffalo Tank Corp., a manufacturer of steel storage tanks and other welded plate products.
9. Rheem Manufacturing Corp., one of the Nation's largest manufacturers of steel drums.
10. Atlas Steel Barrel Corp., another producer in the same field.
11. United Shipyards, Inc., a large firm engaged in the business of building, repairing, and drydocking vessels in New York harbor.
12. Union Shipbuilding Corp., another company in the same field.
13. Pennsylvania Shipyards, Inc., a third shipbuilding company.
14. Pacific Coast Forge Co., a manufacturer of bolts, nuts, spikes, rivets, and similar products.
15. Shoemaker Bridge Co.

In some industries the effect of these forward acquisitions has been to give the steel companies almost complete dominance over the fabricating field. Such is the case of steel drums, which, since the war, has been absorbed almost in its entirety by the large steel producers, a movement which was succinctly described by Iron Age as follows:

"Long, long ago, in 1939, before the words postwar and planning were wedded, the manufacture of heavy steel barrels and drums was a rather volatile business firmly in the hands of a large number of highly individualistic enterpreneurs. Most of these fabricators had started on a precarious shoestring and were justifiably vocal in their pride of success in the classical Horatio Alger pluck and luck tradition.

"A few weeks ago, the purchase of Bennett Mfg., Chicago, by the United States Steel Corp. pretty well completed the capture of the entire barrel and drum business by major steel producers. Some 87 percent of the business, representing about 435,500 tons of steel consumption yearly has been corralled by the mills and the remaining 64,500 tons of independent capacity will probably remain so for a variety of reasons" (September 21, 1944, p. 103).

Today, the country's leading steel producer is also the leading steel drum producer. In the steel drum industry, U. S. Steel shares the Pacific coast region on a 50–50 basis with Bethlehem Steel. It is the leading steel drum producer in the Houston-New Orleans area; and it is one of the leading producers in the Chicago-Cleveland-Pittsburgh region. Bethlehem, through Rheem Manufacturing Co., (of which it owns 28.9 percent of the stock) not only divides the Pacific coast region with U. S. Steel, but also is a leading producer in the important Atlantic coast region, where it accounts for more than 40 percent of the steel drum industry. In addition, it is an important factor in the Houston-New Orleans region. All told, six leading steel companies now own more than 80 percent of the heavy steel drum capacity of the United States.

There are, of course, many other fabricating fields in which the effect of the forward acquisitions by the steel firms has not been as complete as in the steel drum industry. Among these is the steel stamping industry in which the steel companies have also entered to a significant though lesser extent. The steel stamping industry provides an example of what might be called "partial absorption" by the steel companies, as compared to virtually "complete absorption," represented by the steel drum industry. But even in these areas, the competitive position of the smaller firms which continue to operate has been seriously undermined by the effect of the acquisitions.

The steel stamping industry, which produces a great variety of parts for other industries such as automobiles, farm machinery, refrigerators, radios, and even kitchen utensils and toys, developed almost entirely in the hands of independent stampers. In recent years, however, the large steel companies have entered the field through forward acquisitions. In speaking before a meeting of the Cleveland District Pressed Metal Institute, Mr. Tom Smith, president of the Pressed Metal Institute was reported in Iron Age (April 29, 1948) to have stated that "the most serious problem facing the stamping industry is the accelerated encroachment through subsidiary organizations of a majority of metal producers into the stamping business." And a year later, on May 5, 1949, Iron Age, after noting that there was a general slump in the buying of stampings, stated that some captive plants of steel producers were reverting to the "prewar practice of letting out the tough jobs (to independent stampers hungry for business) and keeping simple work that takes a lot of steel."

The effect of this policy on the small independent stamper is obvious. His field of operation tends to be narrowed to the difficult jobs and even there he must compete sharply with the large stamper, perhaps becoming only a subcontractor dependent on such scraps of business as his larger competitors may turn over to him.

This problem of forward expansion by the steel companies becomes particularly acute when supplies are short. During such periods it is only to be expected that the steel companies will channel supplies of steel to their fabricating subsidiaries, which are in competition with independent fabricators who frequently are unable to obtain steel. During the recent postwar period when steel has been in tight supply, many independent fabricators have complained that there has been an increasing flow of steel to the fabricating subsidiaries of the steel companies; that, consequently, the proportion of the total steel supply available for small business has been correspondingly reduced; and that this development has been one of the principal factors behind the inability of small business to obtain steel. Typical of these

complaints was the statement made by Mr. Frank A. Duerr, general manager, Troop Water Heater Co., Pittsburgh, Pa., who testified before the Senate Small Business Committee of the Eightieth Congress as follows:

"Senator MARTIN. You state that you were informed by Jones & Laughlin last fall that they could not retain their contract with you?

"Mr. DUERR. Yes, sir. That was in their office, in their sales department.

"Senator MARTIN. And you state that it later developed, you learned, that the steel was to go to one of their own subsidiaries?

"Mr. DUERR. That is correct.

"Senator MARTIN. When did they acquire this subsidiary?

"Mr. DUERR. As far as I know—they told me during that conversation that they had acquired some of these plants in 1939 and others in the last year or two.

"Senator MARTIN. What does this particular plant produce?

"Mr. DUERR. Steel drums." (Hearings, pt. 7, p. 909.)

Similar testimony was offered by Mr. Arthur Boehm, secretary-treasurer, the Boehm Pressed Steel Co., Cleveland, Ohio, who stated:

"While I was talking to Mr. Boyd, of Jones & Laughlin, I inquired whether it has been a matter of policy with Jones & Laughlin, and the other big mills, not Jones & Laughlin exclusively, to limit production capacity. During the war, I recall that there was quite a bit of pressure from the Senate and the Government for increased capacity of the mills. In other words, steel capacity had been critical all through the war years, and the Government wanted the steel mills to put in additional production facilities.

"The answer then, by the big basic producers, was to the effect that no additional production facilities were needed. Existing capacity sufficed before the war. Why increase capacity now and have it idle after the war? Boyd said, at that time, Jones & Laughlin didn't anticipate the fact that it would take on additional subsidiaries of its own to supply. Jones & Laughlin had purchased the Draper Barrel Works at Cleveland, and a good bit of their hot-rolled pickled is going into the barrel works." (Hearings, pt. 6, p. 846.)

Mr. Frank R. Nichols, president, Nichols Wire & Steel Co., Davenport, Iowa, implied that the steel companies have shipped steel to their own subsidiaries in excess of the amounts permitted by the use of the so-called historical quota method:

"Mr. WIMER. Have you had any indication that the large integrated companies favor their own subsidiaries who produce wire and nails?

"Mr. NICHOLS. They most naturally would do so.

"Mr. WIMER. As far as tonnage quotas go?

"Mr. NICHOLS. Naturally.

"Mr. DICKEY. In other words, Mr. Nichols, you mean that the historical quota that there has been testimony about here, agreed to by the steel companies when allocations were lifted, hasn't necessarily held true in the wire and nail business?

"Mr. NICHOLS. It hasn't held true at all.

"Mr. DICKEY. And is it your opinion, or is it a fact, as far as you know, that they are channeling more into their own subsidiaries?

"Mr. NICHOLS. It is a definite fact, into their own subsidiaries and into their own finishing departments.

"Mr. DICKEY. Either a subsidiary or part of their own business?

"Mr. NICHOLS. Yes." (Hearings, pt. 17, p. 1897.)

The facts revealed in a report of the Senate Small Business Committee completely corroborate this type of complaint by small business. The facts clearly indicate that the proportion of steel output which was channeled to the fabricating subsidiaries definitely increased between 1940 and 1947. In the case of hot-rolled sheets, which is the principal steel product consumed by the fabricating companies that have been acquired, the share of the output going into the fabricating subsidiaries rose from 5.7 percent in 1940 to 10.5 percent in 1947. (Changes in the Distribution of Steel, p. 10.)

But even in so-called normal times, when steel is not tight, the expansion by the steel companies into fabricating fields constitutes a serious, potential danger to the maintenance of competition. It is only to be expected that the fabricating subsidiaries will be able to secure their steel at a lower price than their independent competitors. This would be particularly true in the event that vigorous price competition broke out between the independents and the fabricating subsidiaries.

Thus, whether steel is in tight or in normal supply, a serious problem is presented by the expansion of the steel producers into the fabricating fields. If the loophole is plugged in section 7 of the Clayton Act, that is, if H. R. 2734, which has already passed the House and is now before the Senate Judiciary Committee, is finally enacted into law, the Commission will be able to prevent certain types of acquisitions. Whether it will be able to prevent all of the types which create the particular problem that I have been discussing remains to be seen. At any event, however, as a result of the acquisitions which have already taken place, a problem now exists which must be regarded as a serious danger to the competitive system.

Who Is the Real Patriot—McCarthy or Tydings?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, a fearless editor, one Richard Lloyd Jones, of the Tulsa Tribune, has written an important editorial on the current investigation into charges made by Senator MCCARTHY against the State Department. The American people now realize that every effort will be made to white-wash the investigation by the partisan efforts of the Democrats on the committee. I include the editorial of April 15 at this point:

MORE PARTISAN THAN PATRIOT

(By Richard Lloyd Jones)

What's the matter with our country? Mr. TYDINGS, of Baltimore, is a good example of what's the matter with our country. The people of Maryland elected him to be a United States Senator. But in Washington he is just a Democratic Senator. He isn't working for his country. He is working for his party.

In the Hiss case we learned that our Secretary of State, most responsible position in the President's Cabinet, is not only a friend of a traitor but sympathetic with the fellow who operated with treachery against our country.

The Hiss case opened the people's eyes. Something is rotten in our State Department. So rotten they are desperate. They are trying to hide something.

One United States Senator, JOE MCCARTHY, of Wisconsin, had the courage to demand that the State Department clean out all who are unfit.

MCCARTHY is a Senator of the United States. TYDINGS is a Senator of the Democratic Party. He has obstructed the investigation which, as a United States Senator, he should insist upon.

Harry Truman, president of the Democratic Party, has locked up all the evidence that Senator MCCARTHY has insisted is essential to an honest investigation. What has the president of the Democratic Party got to be afraid of? If all of MCCARTHY's charges are without foundation, if they are all a complete fabrication, if they are all imaginary, why not unlock the files and prove the lily-white innocence of those about whom MCCARTHY has cast the cloak of suspicion. If these people were noble and pure they should quit their cussing and demand that their record be read.

If Harry Truman were a true President of the American people he would be impatient to prove Senator MCCARTHY's charges false and without foundation, or with equal impatience he would insist that the records be revealed that proved the truth of the accusations. Something is rotten in Washington, and the Democrats are afraid to lift the lid. It might let loose a bad smell.

There is no denying the fact that the President of the United States is hiding the facts. He is determined that the truth shall not be known. His fear of the truth is enough to convince any rational mind that there is a lot of dangerous truth in the charges of MCCARTHY.

We, the people, have the right to know the truth. It is time we branded as partisans rather than patriots chaps like TYDINGS who try to hold up to public contempt any man who tries to protect us from our enemies within.

United States Senator MCCARTHY has accused one Owen Lattimore of being at least sympathetic and cooperative with our enemy. What does this fellow Lattimore do? He blew his top like Vesuvius in eruption. He crossed the line of drawing-room vocabulary and grew violent with profane outrage. He can call MCCARTHY all the names he wants to, but the public is still aware of the fact that his records are in hiding. And those that are revealed are not good.

The public is aware of the fact that Harry Truman ordered the records locked up. Is the Democratic Party so afraid that more treason may be fixed on individual party workers that they have to lock up the records and bar the doors while the left-wing writers bawl out MCCARTHY because he is a Senator of the United States? Because he demands that the people be told the truth. And that is where TYDINGS falls down flat as a Senator of the United States. He is just a party Senator.

If TYDINGS is honest in his pretensions as a truth-seeker, let him read a book called Situation in Asia, published only last year and written by this Owen Lattimore, who MCCARTHY accuses of cooperation with and sympathy for our enemy.

Let Mr. Lattimore swear and fume like an epileptic, but here is his own written record, published in book form. Available on the book counters of book merchants who handle books of tainted patriotism.

"Wherever the Communists have taken over," writes this Owen Lattimore, "they have increased food production, and stabilized prices, successfully breaking the old cycle of reoccurring shortages and famines."

Well, now this just isn't true. Fifty million wretched people in Red China are now confronted by one of the worst famines in the world's history. The Russians took all the food away.

Whatever the leftist writers say in defense of our foes, however much they may abuse a patriotic Senator for searching for the truth, this one single written statement by this Owen Lattimore is enough to convict

him of Russian sympathies. This statement he makes is false. He pictures the greatest famine in history as a magnificent blessing bestowed upon 50,000,000 perishing people by the benevolent Russian bear.

And this is the man our Democratic Party President has selected to advise the American people as to their conduct and relations with the Communist marshals of human misery.

Does this excite the Democratic Senator TYDINGS? Apparently not. The Democrats' President, Mr. Truman? Yes. It excites him. He says, "Lock up the records and bar the doors and don't let them in."

Mr. Lattimore is the fellow who was sent to China 6 years ago with Henry Wallace. We were fighting the Communist invasion of China when he and Wallace went to look into the tragic affairs of the Chinese people. They returned to tell us that "we were backing the wrong horse in China."

That is procommunism. Sure, this fellow Lattimore's writings are tainted. They are full of Communist sympathies. In his book he holds that the Marshall plan should have been channeled through the United Nations so that Russia and her satellites might have participated in our relief subsidies.

Just last year this fellow Lattimore writes that he foresaw an inevitable demand that Japan break away from America in order to come to terms with Communist China. And he apparently viewed this as a wholesome trend and development. He said, "By withholding raw iron ore and supplying Japan only with pig iron, China would have absolute power to cut off the revival of Japanese war industry." And he did not seem to be alarmed at the prospect that this might leave Japanese industry at the mercy of a satellite of the Soviet Union. Quite the contrary.

In Mr. Lattimore's recent book he reports that he found "Asia turning to communism because progress made by the Soviet Republics of Asia has inspired awe and wonder."

The same people, he inferred, were turning against the United States because they didn't want to be used as cannon fodder.

As Congressman LAWRENCE H. SMITH declared the other day, "Uncle Joe couldn't have handled the subject better himself."

Any fellow who has put himself on record in his own writings as one who admires communism, praises it, and accuses us of being war mongers, deserves to be investigated. If MILLARD TYDINGS were a Senator of the United States he would join United States Senator JOE MCCARTHY in demanding that the president of the Democratic Party become the President of the American people and order the doors unlocked that admit to the secret chambers where seeds of treason may be sown.

Know Your Waterways

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement from Marine News:

KNOW YOUR WATERWAYS

GREAT NATIONAL ASSETS

Harbors, channels, inland, and intracoastal waterways are vital to America, during either peace or war. Of 95 cities listed in the 1940 census with populations greater than 100,000, 62 are on harbors and navigable channels improved by the Federal Government, as are all navy yards. Regions and communities having facilities for low-cost water-borne commerce have great advantages over locations without them. Many areas now without water transportation can obtain it through vision and initiative. Every expenditure for navigation improvements is not only an investment in the development and growth of a community but also in the building of a nation.

MARINE NEWS,
GEORGE H. PALMER,
President and Publisher.
NEW YORK, N. Y.

Status of the ITO

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an editorial appearing in the New York Times of April 20, 1950. Coming from one of our vigorous and consistent supporters of international cooperation, this editorial should be of interest to Members of Congress, and particularly to members of the Foreign Affairs Committee. The editorial, in effect, suggests that there is no occasion for haste in the enactment of an extremely complicated and controversial document of more than 30,000 words. Many of its basic provisions, moreover, are identical with or resemble closely corresponding provisions in the Geneva agreement, of which this country is a member. In other words, we are already functioning under an international code of fair practices which it merely remains for the ITO to formalize, elaborate, and implement with permanent machinery..

In concluding, the editorial observes that "its long-term desirability should not be mistaken for short-time urgency."

The editorial follows:

STATUS OF THE ITO

Secretary Acheson yesterday urged early action by Congress approving American participation in the International Trade Organization (ITO), whose charter was agreed upon by the representatives of 54 nations at Habana in March 1948. This agreement, which is designed to provide a permanent code of fair practices in world economic relations, goes into effect, theoretically, on ratification by the governments of 20 of the signatory countries.

Actually, only 2 countries, Australia and Liberia, have ratified the charter to date. The others are marking time, Mr. Acheson told the House Foreign Affairs Committee, pending action by the United States. This wait-and-see attitude on the part of the other nations is easily understandable. In the first place, the ITO plan, while it was hammered out in its present form under the auspices of the United Nations, had its beginning in the United States. Specifically, it appeared first in the Anglo-American Loan Agreement, published December 6, 1945. Comprising an essential part of that agreement were proposals for the expansion of world commerce and employment, and the creation of a world trade organization to be attached to the United Nations. The first draft was the work of an interdepartmental committee of the American Government. It was recognized that a basic requirement was a charter setting forth the general rules under which trade should be conducted among the nations. That task was completed by stages between February 1946 and March 1948.

The second reason why action elsewhere has waited on that of the United States is equally obvious. It is generally recognized that whether the ITO stands or falls depends upon whether the United States, economically the most powerful Nation in the world, participates actively in its affairs. That is what Secretary Acheson meant when he said yesterday that it is up to Congress whether there will be an International Trade Organization.

Whether Congress will be convinced, on the other hand, that it is desirable to hasten ratification of the ITO is more debatable. It is no criticism of the basic idea behind the proposed organization to suggest that the order of priority with respect to the urgency of international economic legislation has undergone substantial changes since 1946, and even since 1948. The No. 1 problem in the months ahead is to develop a policy toward Europe for the period following the termination of the Marshall plan in mid-1952. And there are at least three measures which are of more immediate importance than ratifying the ITO so far as this purpose is concerned. These are: (1) action on the Customs Simplification Act of 1950, which is expected to come before Congress shortly; (2) planning for, and carrying out, the proposed "third round" of tariff negotiations, scheduled to be held later this year; and (3) reconciling the differences which are holding up action on the establishment of the European Payments Union. Of these three the first looms as perhaps the most important. It is based on the belief that imports to this country can be stimulated more effectively at this point by the elimination of customs red tape and the clarifying of rules and regulations than by even an actual reduction in rates themselves.

The ITO charter, it should be borne in mind, is an extremely complicated and controversial document of more than 30,000 words. Many of its basic provisions, moreover, are identical with or resemble closely corresponding provisions in the Geneva agreement, of which this country is a member. In other words, we are already functioning under an international code of fair practices which it merely remains for the ITO to formalize, elaborate, and implement with permanent machinery. It is not too much to say, perhaps, that the ITO represents the capstone of the postwar trade policy we have been seeking to build with the aid of the reciprocal trade agreements program, the Geneva agreement, and the World Bank and Fund. But at a time when there are so many legislative and administrative problems pressing for early action on the same front its long-term desirability should not be mistaken for short-term urgency.

The Party of Achievement and Confidence

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. LYNCH. Mr. Speaker, under leave granted me by unanimous consent, I take pleasure in including in my remarks a stirring address made in New

York City on April 19, 1950, by Hon. W. Averell Harriman, United States Ambassador at Large, on the occasion of the annual dinner of the New York State Democratic Committee at the Waldorf-Astoria. His remarks follow:

We are drawn together tonight by a great cause—the Democratic Party. It is a great cause, for in a realistic sense, it has come to be in our day almost synonymous with the cause of democracy.

The Democratic Party, I feel deeply, is the party of democracy, because it is the party of progress, of human freedom, and human security. It not only has the faith that these high objectives can be achieved; it also has the courage to take bold, decisive action to see that they are achieved. The Democratic Party not only believes that man is entitled to have dignity and freedom; it believes that these words do not have full meaning unless he can "eat regular," too. And our party is ready to take whatever steps are necessary to fight off those two great fears which beset our generation—the fear of want, and the fear of war.

I have seen our party operate at close hand in Washington and abroad for nearly 20 years. In 1933, I joined the ranks of those who went to work to clean up the wreckage left us by Republican policy. The Republican Party, responsible for the disaster of 1929, had remained down in a cyclone cellar for 3 years, waiting for the storm to die down.

When the Democratic Party took over it immediately started a program of action under the leadership of a man who believed in action—Franklin D. Roosevelt.

Ten years ago, when Nazi aggression was threatening to engulf the world, I joined the ranks of those who again responded to Roosevelt's leadership in facing the new peril from abroad.

Since then I have been in a position to see, in a number of different posts at home and abroad, how effectively the Democratic administration has dealt with threats to our national life.

To me, the Democratic Party is the party of confidence. It has confidence in the strength of a free people. It is not afraid to meet squarely any problem, no matter how great. It does not sit by complacently waiting for a problem to solve itself. It takes affirmative action before the problem overwhelms us. In Democratic leadership there is confidence, but not complacency. There is alertness to danger, but not fear.

For these reasons, I believe, the American people have rejected the timid and vacillating leadership of the Republican Party. Too many of its leaders are terrified of progress. It is forever looking fondly backward for safety. It squints timidly at the future, hoping that nothing new will ever have to be done. We are told that the elephant never forgets. I wonder why. Perhaps it is because the elephant dreams only of the past.

This kind of straddling and vacillating Republican leadership is present in our State—in the person of its governor. At one time Dewey claims to believe in the social objectives of the New Deal. At another time he condemns them as socialistic. At one time he ridicules the defense levels of airplane production set by Roosevelt; later he seeks to blame the Democrats for inadequate war preparedness. Originally he was partly isolationist, then he became partly internationalist—never quite sure—always seeming to wait for the polls of popular opinion before making up his mind where he stood. And finally, when he read the election polls of 1948, he evidently made up his mind the election was such a cinch that it was safer to take a stand on nothing—that is, nothing but two things. He was for "unity"; and he was for "Dewey for President." That wasn't good enough.

The American people turned to a fighting leader, a man who made his objectives clear—a man ready to look into the future with confidence and action. And that man is carrying on today with the same bold Democratic offensive. He does not wait for blows to strike us. He too goes out to meet them in the traditional way of the Democratic Party. Our party has confidence—and so have the American people confidence—in the leadership of Harry S. Truman.

It is a leadership of action to meet any and all threats. At home it is the leadership of the Fair Deal against poverty, disease, ignorance, intolerance, race prejudice—a fight continually to improve the American life. Abroad it is a leadership to support faithfully the Charter of the United Nations. It is a leadership to repel chaos, to help rebuild, to resist aggression, to unite all men of good will all over the world in the struggle against want and against fear. It is a fight for peace. It is a fight in which everyone of us here tonight, and every peace-loving American, plays his full part.

And to carry on such a fight abroad in the kind of world we now face, in the kind of cold war which imperialistic Soviet Russia has imposed upon us, we must have clear, firm, and consistent American foreign policies. We have such policies. They are not the policies of any one party. They are American policies.

It is the duty of the President to develop foreign policies which transcend all partisan considerations. That is exactly what he has done.

We Democrats recognize and respect those Republican leaders—such as Senator VANDENBERG and many others in the Senate and and in the House—who have put party considerations aside, and have helped to develop policies which are concerned only with the highest national interest and security. These have been called bipartisan policies, but Senator VANDENBERG has perhaps more appropriately labeled them unpartisan policies.

The ECA is an outstanding example of such a policy. After full debate, it was authorized by an overwhelming majority of both parties in the Congress. It has been administrated in a completely unpartisan way.

In the words of Senator VANDENBERG, "This working unity typified our finest traditions and our greatest safety in the presence of external hazards to all Americans, regardless of party. * * * United, we stand. Divided, we fall. I want America to stand."

Let us all here tonight pray that Senator VANDENBERG will soon recover from his illness, to continue to add his wisdom to the guidance of our country at this time.

The objective of American foreign policy can be expressed in various ways. In essence it is to attain peace with freedom and justice. But the desperate reality is that an aggressive, determined force is loose in the world today which has a completely different objective—to extinguish both freedom and justice.

The strength of our economy and the strength of our spirit will be the deciding factors in maintaining freedom and peace. On this, I hold three deep convictions:

First, that the American people must secure and broaden our own well-being at home.

Second, that the American people must give inspiration, assistance, and leadership, as partners, to the free nations of the world.

My third conviction is that if the American people do both these things, war can be avoided.

The policies of the Fair Deal work toward a dynamic and expanding economy with a steadily rising national income in which all can share. They are directed toward the eradication of injustices and intolerance against our fellow Americans of minority races and religions. They are designed to provide the kind of security and opportunity which gives each citizen a real stake in the material prosperity of his country.

Republicans have tried to argue that social security interferes with opportunity. We Democrats reject such narrow concepts. We believe that our country can achieve security for the people, and at the same time give greater opportunity to the individual—to more individuals.

Republicans are again doing their best to picture the social objectives of the Fair Deal as monstrous and terrible things which will swallow up our American freedom.

That's just the bunk! It is an uninformed, inaccurate reading of contemporary history. The truth is that the danger to freedom mounts when the economic system fails to feed, clothe, and house the great mass of the people at a decent level, when it fails to hold out the prospect of an improving standard of living for those willing to work hard enough to get it. If our experience during the past 30 years proves anything, it proves that the happiest hunting ground for fascism and communism is mass unemployment and human misery. It is the environment of economic security which strengthens freedom and renders it safe from the lies and the plots of the Communists.

Some Republican leaders and candidates seem to be looking upon certain recent elections in various countries as a kind of unearned increment for themselves—as evidence that the people in other parts of the world are turning back to reaction. These Republican politicians are evidently hoping that all they have to do is to wait passively by the ballot box here at home to get back into office. As usual, they are misreading political facts. Actually, the elections are encouraging to us of the Democratic Party. I have watched these elections at first hand. All of them reflect a definite trend away from the extreme left—from the Communists, from the fellow travelers and from the fellow wanderers. In general, they reflect a trend toward our kind of democratic belief. But let's not begrudge the Republicans their temporary delusions. They'll find out when the time comes.

When I speak of Republican leaders, I differentiate them from the rank and file of the Republican Party. Many of them consider themselves Republicans out of a natural sense of loyalty and tradition. But they vote for progressive candidates only—whether they are Democrats or Republicans. We welcome their support, and we must continue to be worthy of it by putting up forward-looking candidates and carrying on a program of progressive action.

The essential foundation on which we can wage a successful fight for freedom and peace is to make our society healthy, intelligent and economically secure, based upon a system of free enterprise which, together with Government, recognizes and discharges its social responsibilities to the whole people.

That is our preeminent task at home.

Abroad, we have been giving inspiration and assistance to the free nations of Europe—our partners in this fight for freedom and peace. By the Truman doctrine, by the Marshall plan and by the North Atlantic Treaty, we have already made long strides together in this fight. The development of the far-sighted concept of point 4 will strengthen the cause of freedom in the underdeveloped areas, and will expand the trade and prosperity of our own country and other industrial countries.

The free nations of the world are going to win this fight. I am confident of it—for two fundamental reasons:

One reason is that history and morality are on our side. The Kremlin proclaims the inevitability of the dictatorship of the prole-

tariat. Well, it is not inevitable. History does not teach the inevitability of tyranny. It teaches just the opposite. The whole stream of human development has been a successful struggle of mankind for ever-growing freedom. There have been many set-backs; but eventually dictatorships have been overthrown by the strongest of human forces, man's passionate desire for liberty. Liberty, not tyranny, is a man's birthright. The moral force of that birthright is our most powerful ally.

The second reason I am confident is that the material resources on the side of freedom are far stronger. The United States and Canada have about half of the heavy manufacturing capacity of the world. Including the free nations of Europe, the Atlantic community has at its command about 75 percent of the entire world's vital industrial capacity. We have access to the needed food and raw materials.

If the free nations of the North Atlantic—with all these resources—work together to improve economic conditions in the free world, if we all do our share in the development of the means of mutual defense, then the free world will be unbeatable.

Our partners in western Europe are steadily gaining economic health and democratic strength. Hunger has been driven out. When I went to Europe 2 years ago for ECA the people of France, for example, were living on a bread ration of only two-thirds of the ration given them by the Germans during the occupation. Today bread and most foods are no longer rationed. In western Europe, war-shattered industry is already producing well above prewar levels, and is continuing to rise. Trade is expanding, and most important of all, the fearful specter of inflation has been laid at rest. In 1947, when the Communist threat to seize control was most menacing, the prospect of the Marshall plan revived hope. Today, confidence has returned. That is why in country after country, as free elections have been held, communism has been rolled back.

No wonder Communists hate free elections, and no wonder they fight the Marshall plan.

The front line of the battle for freedom in western Europe has been the labor front. The Communist strategy—dictated from Moscow—was to gain control of the labor movement in order to destroy the free countries of Europe. With the failure of strikes called for Kremlin political objectives, the free labor movement has been strengthened. The present attempts of the Communists to use the trade-unions to prevent the unloading of American military assistance is again proving a boomerang. In the ranks of European labor, communism has suffered decisive set-backs.

I want to pay tribute to the vision of the American trade-union movement in helping the workers of Europe in their battle. The A. F. of L. and the CIO and the railroad unions have given effective support to the cause of freedom in Europe.

There is growing vigor in Europe. The same spirit that created the resistance movement during German occupation, is again alive. In traveling through Europe as I have, and in meeting the men who are leading the battle, I have become confident of the new hope and new vitality of our partners in Europe. There is the will to work, the will to fight, and the will to win.

Their decision to join with us in the North Atlantic Treaty meant setting aside forever reliance on appeasement or neutrality to maintain peace. This courageous decision stemmed from their belief—as we believe—that unity among the free nations is the greatest single deterrent to aggression.

But we must remember that hope and confidence in Europe naturally rests on faith in the firmness and consistency of American policy. It is bewildering to our friends abroad when, in the United States Senate, reckless and irresponsible charges are slung against those in important positions who are carrying out our foreign policy. People abroad do not understand, as we do, that these maneuvers are for personal publicity and partisan politics. This political persecution of individuals might be ignored if it did not play right into the hands of the Communists. It weakens confidence in us abroad, and there could be no greater handicap to the administration's efforts to stamp out subversive elements.

As Mr. Henry L. Stimson has said: "It should by now be wholly clear that indiscriminate accusations are doubly offensive; they damage the innocent and they help protect the guilty. For if the accuser is so stupid as to connect a man like Ambassador Jessup with communism, are not all such accusations made suspect?"

Others are following Mr. Stimson's leadership in denouncing these malicious tactics. Would there were more. Instead, there are some who, though unwilling to share responsibility with McCarthy in his indiscriminate tirade of unsubstantiated charges, are hoping to gather some political windfall out of them if they can.

The American people will see through these un-American political maneuvers. They know that no administration can possibly be friendly to Communists which has proposed and is carrying out with vigor the Truman doctrine, the Marshall plan, and the North Atlantic Treaty. The American people will repudiate those who are undermining for selfish purpose the confidence of other free nations in our country at this critical time.

I believe that if our foreign policies are consistently and vigorously carried forward and expanded in cooperation with our partners of the North Atlantic Treaty, we will develop an impregnable position of strength in western Europe and in other parts of the free world.

With life secure and healthy in the free world, I am convinced that pressures will begin to operate behind the iron curtain to break down the Kremlin control. When and how no one can predict. But there can be no doubt that the disaffection of Tito has resulted from the success of the Marshall plan.

Let there be no mistake: It will be a long and tough struggle, requiring present-day sacrifices by us and our partners—sacrifices which are in fact investments in the cause of peace and in the cause of freedom.

Early this month I was with Secretary Johnson and General Bradley at a meeting in The Hague of the defense ministers of the nations of the North Atlantic Treaty. I was struck by the determination shown by our associates sitting around that table. These men, representing their governments, mean business. They mean to do their share in developing with us an integrated defense force for mutual security.

The United States, the most powerful nation in the world, is helping to forge an association of partners whose strength will lie in its unity—whose strength is based on mutual respect and mutual confidence.

In sharp contrast, Soviet imperialism is seeking to create a world of nations subordinate to Russia—a world of satellites forced to do her bidding.

Russia itself is ruled by fear and is out to rule the world by fear.

Within Russia, the Kremlin is afraid of the people and the people are afraid of the Kremlin.

I remember one occasion in the summer of 1945 when General Eisenhower and I were invited to stand on Lenin's tomb as Stalin was reviewing a great youth sports parade in the Red Square. Standing next to Stalin, I looked around, and as far as I could see every window from which anyone could view the scene had been blocked or guarded. In front of Lenin's tomb and running the length of the square before the Kremlin, the Red soldiers stood rifle to rifle with bayonets in place to protect the Russian rulers from their people.

I have also seen how fearful the Russian leaders are of the people of their satellites. In January 1946 I was in Bucharest with the British Ambassador to negotiate with Vishinsky the carrying out of one provision of the Yalta agreement. This called for the participation of all democratic parties in the Rumanian Government preparatory to holding a free and unfettered election. This was one of the innumerable attempts to get the Soviets to keep their promises made at Yalta. One day, we were all invited to lunch with King Michael at his country place. My daughter and I drove out in a small car with a GI as driver and bearing an American flag. Through the countryside, there was friendliness—cheers for our flag. On the way, we passed one stalled cavalcade of seven huge motorcars (they were evidently repairing a blow-out). There were three cars in the front and three cars in the rear filled with guards. In the middle car sat Mr. Vishinsky. The American Military Mission to Rumania numbered only 100 officers and men; the Russians had 700,000 soldiers in the country at the time, but Mr. Vishinsky was not trusting to the friendliness of the Rumanian people.

The Kremlin is intent upon using fear to disrupt and paralyze, and ultimately to dominate the world—they use fear of war, fear of terror.

The association of free nations, on the other hand, is based on confidence and mutual trust—it is based on faith in democracy and in people, faith in each other. That is the way to meet Moscow's attempt to rule by fear.

In faith there is eternal strength; in fear, inevitable weakness.

It is the high purpose of the Democratic Party to continue to preserve that faith and confidence at home and abroad. That is a mission the Democratic Party has set for itself—and will fight to achieve.

But political victories, like liberty, have to be won over and over again. That is the essence and the strength of democracy. There are political victories that are going to have to be won this fall. Political victories, like liberty, cannot be taken for granted. We have to fight to win them. There is too much at stake at home and in the world to lose them now.

Five years ago last week, in a little white cottage at Warm Springs, Ga., President Roosevelt was preparing a speech to be delivered on the Jefferson Day of that year. He died before he could deliver it; but his manuscript has come down to us. The last words of that speech—in a sense his farewell message to us—were these: "To you and to all Americans who dedicate themselves with us in making an abiding peace, I say: the only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

To Roosevelt, to Wilson, to Jackson, to Jefferson, to all our great leaders of the past, we can say tonight: "There are no doubts among the true followers of the Democratic Party—your party, our party. We have faith, we have a strong and active faith. And we will move forward—we and all Americans of good will—to a realization of our aims: a secure and a good life at home; peace, security and international good faith throughout the free nations of the world."

Tax Revision

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include the following letter by Mr. Harold Riegelman, distinguished New York lawyer, which appeared in a recent issue of the New York Times:

MR. COUDERT'S PROPOSAL—IT IS SAID TO BE AIMED AT GROWING CENTRALIZATION OF POWER

To the EDITOR OF THE NEW YORK TIMES:

The attack upon Representative FREDERIC R. COUDERT, JR., in a letter to the Times of April 10 calls for comment.

The attack centers upon Mr. COUDERT'S dramatic proposal that the power to tax individual incomes be withdrawn by constitutional amendment from the Federal Government except for debt services and national emergencies (which presently include national defense) and that this power be reserved, with the exceptions above noted, to the several States. The dramatic aspect of the proposal is not that welfare and social services should be discontinued (which is not proposed) or that income taxes would necessarily be reduced: It is that the administration of welfare and social services would be transferred and restored to the sovereign States, and the resources of the State, including taxable incomes of their residents, would be made available to the States for those and other proper purposes.

This proposal is aimed at the great and growing centralization of power in the Federal Government and the difficulty of controlling at that remote level expenditures not of necessity national in character.

This purpose would be implemented, according to Mr. COUDERT, by charging the States with functions relating to the domestic well-being of their people and imposing upon the States responsibility for financing the administration of those functions under the observation and control of those who are immediately affected and who pay in taxes their cost.

Mr. COUDERT'S estimate of savings from elimination of existing duplications and dispensable Federal bureaucratic overhead and activities indicates the fiscal feasibility of this proposal. In this connection it is well to bear in mind that the period of authorized foreign aid at present levels will expire substantially before it is physically possible to complete the process of required Federal constitutional amendment; and if a national emergency subsequent to the amendment requires a continuance of foreign aid, such aid could still be financed as far as necesary by Federal taxation of individual incomes. The question of whether or not such a national emergency exists could be determined jointly by the President and the Congress.

Mr. COUDERT'S proposal, whether acceptable or not, has the merit of going to the very root of a trend toward centralization of government which many informed citizens and students of government regard as endangering our traditional political and economic system.

Mr. COUDERT'S subsequent resolution for the appointment of a nonpartisan commission to study revision of the Federal tax structure was designed to permit a careful and objective appraisal of the steps by which his principal objective could be accomplished in an orderly and prudent manner, consistent with our international obligations and those internal affairs which must be handled by the Federal Government if they are to be handled at all.

I believe the issue defined by Mr. COUDERT is of such grave importance that it should be studied and debated on its merits and not presented, as it was, merely as an example of propaganda serving to obscure or mislead the citizen as to activities of his Government.

HAROLD RIEGELMAN.
NEW YORK, *April 14, 1950.*

Peace in the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 4, 1950

Mr. MULTER. Mr. Speaker, I am pleased to direct the attention of my colleagues to the joint statement by president William Green, of the American Federation of Labor, and president Philip Murray, of the Congress of Industrial Organizations, issued by them on February 10, 1950, after conferring with our President Harry S. Truman. It is unfortunate that since that conference the reports indicate that the situation is getting worse rather than better. I sincerely trust that vigorous efforts on the part of our Government will soon bring this armament race to an end.

The statement follows:

PEACE IN THE MIDDLE EAST—A JOINT STATEMENT BY THE PRESIDENTS OF THE CIO AND A. F. OF L.

In the name of the overwhelming majority of organized labor in America, we have today expressed to the President our firm support of the new democratic State of Israel, and our anxiety over the threats to this state and to the people of the Middle East through the heavy and needless armaments race now being undertaken by the governments of Egypt and other Arabic countries in the middle eastern areas.

From authoritative newspaper reports and other trustworthy sources of information, we are convinced that the objective of this drive toward militarism is a second war against the State of Israel.

We regard this development as a threat not only to the new democratic republic of Israel but also to the hopes of the American people for stability and peaceful progress wherever possible in the world.

Labor in America—both CIO and A. F. of L.—has long supported the reestablishment of Jewish sovereignty in Palestine. We took great pride in the prompt action of our Government in giving recognition and support to the new State of Israel, which is the fruition of centuries of Jewish aspirations and hopes. We have followed with close interest and approval the efforts of the democratic Government of Israel to achieve peace and progress for its citizens.

We have come to recognize the Republic of Israel as a bastion of our hopes for strengthening the democratic processes in the Middle East. We have maintained close and friendly relations with Histadrut, the splendid labor federation of Israel, which is accomplishing so much for the well-being of its members and for the new state as a whole.

We had hoped that after the conclusion of Israel's rightful struggle for national independence, it would be allowed to develop its human and natural resources in peace and with the cooperation of its neighbors.

The growing menace of renewed armed intervention by reactionary and unrepresentative neighboring governments—as reported in considerable detail in the press—has caused growing alarm.

This renewed military threat is being aimed at a state which is working more effectively than any other in the Middle East to bring its people higher standards of living, literacy, housing, and health. It has made tremendous strides in its first 18 months of experience, and great progress can be expected if peace is maintained throughout the entire region.

The effective advancement of living and cultural standards in Israel will inevitably bring improvements in the lives of millions of other persons in the Middle East—the great majority of whom live in ignorance, poverty, and disease. Indeed, Israel is ideally equipped to be a pivotal factor in developing the resources of the Middle East when President Truman's point 4 program, which we heartily endorse, is enacted into law and placed in operation.

Newspaper reports and other creditable evidence indicate that Egypt, Transjordan, Iraq, and the other Arabic countries unfriendly to Israel are receiving large supplies of armaments from the government of Great Britain. We appealed to the President to make appropriate representations on behalf of our Government to Great Britain to discontinue supplying these Arabic countries with instruments of aggressive warfare obviously designed for use against Israel.

We likewise appealed to President Truman, since the flow of arms to the Arabic countries still continues, to permit the sale of arms to the Israeli Government in order to meet the daily increasing threat to the security of the State of Israel. We see no reason why Israel should not be given the opportunity to purchase means of defense while the arms machinery of its neighbors is constantly increased, for obviously aggressive purposes.

At the same time, we have voiced to the President our hope for continued American support to help achieve a just and permanent peace settlement between the Government of Israel on the one hand and Egypt, Transjordan, and the other Arabic countries. We have expressed our strong belief that the Government of the United States should continue its reasonable and enlightened attitude concerning the position of Jerusalem to the end that the impracticable UN decision relating to Jerusalem shall be reconsidered.

We have likewise appealed to the President for additional financial support for Israel. That small and new state has admitted—during the 18 months of its existence—365,000 Jewish immigrants. They have been liberated from displaced-persons camps in Germany, the ghettos of Arabic countries, and the increasing discrimination of Soviet satellite nations. The $100,000,000 loan of the Export-Import Bank which the President so generously supported is now virtually exhausted. The assistance extended by American Jewry cannot entirely meet the immediate and overwhelming need.

We are hopeful that our Government will again support a new loan from the Export-Import Bank and the World Bank in order to make it possible for the state of Israel to cope with these manifold problems.

American influence and actions can help preserve peace and democracy in the Middle East and bring stability, progress and enlightenment to that part of the world.

As unionists and as believers in the continuance of the peace and in democratic opportunity, we trust that our Government will stand against further aggression directed at the State of Israel and its courageous enlightened people who, like we, are seeking to achieve a decent economy and a full utilization of the resources of nature for the benefit of mankind.

Address by T. Russ Hill Before the National Society, Daughters of the American Revolution

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19 (legislative day of Wednesday, March 29), 1950

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an address delivered by T. Russ Hill, Detroit, Mich., at the opening of the Fifty-ninth Continental Congress, National Society, Daughters of the American Revolution, at Washington, D. C., on April 17, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor and a pleasure to be present at the gala opening of the Fifty-ninth Continental Congress, National Society, Daughters of the American Revolution.

This organization is remarkable in character, accomplishments, and steadfastness to the principles of the era from which your name is derived. Since the gulf between man and his past is widening with each generation, the dedication of your current activities to history, patriotism, and teaching is increasingly important to the Nation.

At the same time, you have a rather alarming responsibility, being one of the leading organizations of the controlling group in the Nation, its women. The women of America are the bulwarks of our democracy, particularly when they are realists instead of sentimentalists as far as men in public life are concerned.

Since women have the biggest stake in our Nation's economy and security, their responsibility is, therefore, alarming. So much so, that they cannot be content to sit in lecture halls and then merely wonder what they can do. Women are the strongest influence with which to resist the tide of destructive or misnamed constructive forces rising within the Union and attempting to submerge the free capitalistic system which is the Nation's strength and the guaranty of the people's freedom.

In this age of lunacy, greed, shallowness, fear, and decaying moral fiber, as in all periods of stress, the condition of the Nation's bulwarks determines its chances of riding out the storm and fixes the job to be done by its citizens aboard the ship. Furthermore, the realization that this stressful period is not unusual and that it had to be, increases the confidence required to do the job.

Unfortunately, the American people are very impatient when solutions are difficult. We become irritated, discouraged, and alarmed when we cannot wipe the slate clean with one swipe. It seems only yesterday that we were laughing at Mussolini, the clown; at Hitler, a little man with a funny mustache; and joking about how long the Russian 5-year plan would last. The smiles disappeared in a storm of anguish and the world paid a terrible price to ride it out. Still there is no peace within or without. Instead, the people are disturbed and fearful. America, the oldest pure democracy left, is agitated because of that fact. The impact of this era of upheaval has us nervous because we are so accustomed to solving things quickly and then having done with them.

Faster motorcars, faster trains, faster planes, faster ships, faster production, faster education, faster salvation, and even faster destruction of millions of people have not solved the problems of peace and security. On the contrary, they have bred frustration. We are regretfully realizing that we cannot snap our fingers and find a cure for cancer, heart disease, nor the social and economic unrest of the day, so we indulge in fits of fancy and fallacy. The answer is deeper and slower, but the answer can be found through the dogged efforts of you and millions like you in this Nation whose concepts are solidly American. Given the true facts, our people will find a true solution. Otherwise, there can be no strength in a democracy.

The issue in America is really between free capitalism and authoritarianism whether called socialism, fascism, or communism. All other names for either side are window dressing. It isn't liberty, freedom, free enterprise, or our way of life against authoritarianism. It is free capitalism which guarantees all of these and more. In fact, free capitalism is the only form of economic existence that has ever worked in any land and today democracies control two-thirds of the world's trade and most of its resources; yet disciples of collectivism, ofttimes refugees of failure in other lands, tinker with the workings of democracy.

Likewise, the opponent of free capitalism is not progressivism, social justice, equality for all, social security, a share of the wealth, or any other attractive phrases that are as old as history. The opponent is authoritarianism as exemplified by socialism, at least for the moment. Calling it by any other name does not change its objectives.

I am a believer, therefore, in free capitalism and the fact that the supporters of Marx sneer when they use the word increases my enthusiasm for free capitalism. I left a rural section of Kentucky at the age of 13 to get an education. As soon as college was behind me, I had to make some money. I was in debt for my schooling, so I became a capitalist as every wage earner on a business payroll is today. Later on, some other people who had the same idea, joined me in establishing a business. We made money, built other businesses, distributed merchandise that rendered a service to the public, donated money to many causes, employed people and paid good wages and dividends, paid substantial taxes, and served the communities in which we lived. I hope that every boy in America will continue to have that kind of an opportunity. If that is to be, those who believe in it must stand up for free capitalism. Free capitalism is no saint in white robes but it is by far the best child in the economic family. The blessings which God has showered upon it attest that fact.

Since free capitalism's means and methods built this Nation, put up and endowed its colleges, libraries and hospitals, erected and preserved its historical shrines, saved the world twice and is still carrying a major portion of that world, any American can openly endorse it with pride. It is worthy of your vigorous championing and the people need to be reminded of the same.

Furthermore, all Americans are capitalists except probably three classifications: the religious sect dedicated to poverty, the loafer and the criminal parasite, and the demagogic politician who creates nothing and lives off the money earned by taxpaying capitalists. So, you see, we have tremendous strength on the side of this Peck's bad boy. Uniting it is the job to be done. The people need to be reminded of both these facts.

I believe that can best be done by clarifying the issues. Those who believe in statism, in part or in whole, which I believe is socialism and a forerunner of communism, are probably as honest, zealous, and unselfish in their beliefs as those who champion free enterprise. Let the issue then be joined squarely and settled in the democratic way. This can be done by the people working for what they believe, voting for it (all of them, not 50 to 60 percent as in recent elections) and striving to put the future ahead of themselves or the stress of the moment. The immediate problem is not to stop Communists. I do not believe that communism can take over this country from within or without. The task of those who believe in free capitalism is to check the infiltration of socialistic trends and ideas into our presumably respectable institutions which are a major portion of the Nation's bulwarks. If that is done, I am sure that communism has no chance in this Nation.

Some educators tell us that mass education is the crime of the century against American youth. It is certainly obvious that cultural teaching, the foundation of the western world, has declined under mass education and that the intensification of specialized courses thereunder is teaching the student to battle, to acquire, but not to live. This educational process has been popularized. That destroys the basic virtues of cultural and patriotic citizenship. It creates fertile ground for socialization of the educational process under the guise of providing easy, elective educational opportunities for all. Such opportunities and such educational processes would not build citizens of democracies. To subscribe to that, it seems to me, is to overlook the historical fact that few if any students who have really sought an education in this country failed to get it because they were poor. Those who did not want it, though having ample funds, did not profit by the process of going through the motions of receiving it, and contributed little to the common good thereafter. Nationalization of education will not change that pattern. It will increase the waste and magnify means instead of minds. A sound, free educational process is essential to the continuance of free capitalism. Therefore, it is fertile ground for the cultivation of their ideas by those who oppose it. Miss Bentley, confessed former Communist spy, blames her being taken in by communism upon her failure to study American history, political science and civics, despite an otherwise expensive education.

The old line political parties, long bulwarks of the Nation, have also been softened up, both of them, by the blows of collectivism power groups. We have for some time witnessed both parties seeking votes through promising campaigns of unusual magnitude. There is no better example of the results of this course, it seems to me, than the laws that have been enacted under the impact of the pressure groups controlling large blocks of votes. The farm subsidies are probably the best known example of such because they can be seen, but the bait in other directions has been proportionately heavy.

In a limestone cave near Atchison, Kans., the Government has stored 112,000,000 pounds of dried eggs and 33,000,000 pounds

of dried prunes and raisins. That is enough to provide breakfast for 150,000,000 Americans. Free capitalism, mainly the women of free capitalism, paid for these twice. First with tax money to do the buying and storing. Second, in the higher prices that the same commodities cost when they purchased them.

Elsewhere there are 364,000,000 pounds of linseed oil—enough to make all of the paint that is used in America in 1 year; 182,000,000 bushels of wheat; 15,000,000 bushels of flaxseed; 89,000,000 pounds of wool and still other mountains of cotton, butter, flax, peanuts, soybeans, potato starch, dried milk, barley, dry edible beans and peas, corn, rice, rye, hay and pasture seeds, rosin, and tobacco, not to mention potatoes. Three billion dollars have been spent in these mountains of subsidies. The statistics are dry but the results are drier. CCC, of course, hoped to make a profit out of the investment, but lost $254,000,000 in the 12 months ended June 30, 1949, and is currently asking for $2,000,000,000 to keep going. Economists really have a bear by the tail when they attempt to extend the law of diminishing returns to all incomes down to the necessity point. It is not too difficult to tax profits and incomes for that purpose. It is a different animal when it is extended to farm products, education, and medicine, to mention a few.

Closely allied with this aid to the farmer and the bid for his vote is the quest for the labor vote upon much the same basis. Here again the desire for size has weakened the bulwarks of the Nation and made possible the infiltration of socialistic ideas and programs. Many industries busy with mass production neglected their masses. The leaders of those masses, now busy with extending their powers, are likewise neglecting their people. Some are actually, consciously or unconsciously, leading them into the corrals of regimentation. Human relations are in the arena with the labor law a political football. Collective bargaining has in many cases been reduced almost to the level of violence with viciousness indulged in on both sides of the table. Obviously, the country cannot continue strong under such pressures, especially when the advocates of either side are supported by the Government.

Men willing to fight and die for brick and mortar or for their selfish organizations are a sorry sight in a nation whose sons have been dying for the flag and whose shrines and the records of their deeds this organization has done so much to preserve. In this situation, we see men exchanging their liberties, their initiative, their heritage as freemen for theories—most of which are imported from countries now dependent upon the United States for support. This was manifested recently in Detroit when the press reported an official of a great union as telling a mass meeting of one of its striking members: "We are only asking for a little of what we produce. One of these days, when we are organized politically, we are going to ask for everything we produce."

Under slogans such as free speech, social justice, equality of all men, a fair return to all workers for their efforts, no discrimination of any sort, etc., socialistic measures gain ground and fasten themselves upon the people. The gradual encroachment of Government controls keeps step with taxing policies which are sapping the Nation's fiscal strength. The resistance strength of the strong is being steadily broken down through promises to the weak. Eventually, all will be weak, even the individual and industrial giants whose earnings are making the headlines now. The large earnings of such industries as the automotive are taken as criterions for all businesses and loud denunciations are voiced. The 1949 profit trend, however, was down in most industries as the drop in the tax yield to the Government will confirm. Measuring the take from these by the automotive yardstick will mean the death warrant for many.

You know, of course, that Britain's socialistic government, which the United States has largely underwritten, has not taken over all business—just credit, communications, civil aviation, transport, coal mines, electricity, gas, and medical services. That is enough to control any other business. The balance of "private" industry there now has the responsibility of trying to make enough money to pay the operating losses sustained by the industries under Government control. We are so well along the road of taxing individuals and corporations for funds with which to underwrite government projects that the inclusion of entire businesses in such projects would not be too difficult. A little more time and a few more votes and the job could be done and coal might be the starter.

Communism is the second stage of the struggle, not the first. The battle today must, therefore, be joined on the battlegrounds and not at teas, clubs, bridge and canasta sessions, or in summer colonies. The chief battlegrounds now, I believe, are the schools and colleges, the unions, the churches, and the polls on every election day. Before asking what you can do, check your interest and activity in the PTA, in college and university management and curricula, in labor relations, in church affairs, and in ward politics. Free capitalism must survive there if it is to survive. Donald Richberg said recently: "Higher taxes mean less money for individual spending; and more political controls mean less individual liberty." I believe it is as simple as that.

If war comes and it will come when Russia feels that she has enough with which to win (and this Nation should never let her get that far ahead), the miracle performed by industry in the last world war will be but a token compared with the requirements upon industry in the next one. For the sake of our salvation, I trust that free capitalism is still the economic system in this Nation when the shooting starts. It will be if the people who really believe in free capitalism push the spoons filled with the opiate of government hand-outs away from their lips and stand up. It will be if the same people openly and cleanly meet such charges as "capitalists, special interests, Wall Street, privileged class, reactionaries, and financial tycoons," all devised to cast suspicion upon the free capitalistic system and to arouse the people to the support of measures aimed at crippling it into impotence so the leaders of the opposition may take over. It will be if the same people show by the record where greed for power and greed for gain is truly to be found. Regardless of sectionalism, material worth of party affiliations, such people must come from the North, the South, the East, and the West, united in one purpose, the preservation of the Union through retention of its strength, free capitalism. If such are afraid of that term or of the mud that has been thrown upon it, then they will have no passion for the crusade. The flood of government, sincerely believed in by its advocates and slowly rising across the land, will engulf all, not merely the so-called vested interests.

The best people have been telling us for 5,000 years that there is something eternal in every human being. I believe that applies also to a nation where God is respected. Therefore, I believe that the Valley Forge shrine, the monuments of Gettysburg, and the white crosses in America and foreign soil will stir the people to make eternal the fruits of the sacrifices of those who performed the deeds which these monuments and markings symbolize. May Almighty God lead us in the fullest participation in the issues relevant to the preservation of such a heritage.

The Situation in Germany

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able radio statement delivered by the junior Senator from New York [Mr. LEHMAN] on April 20, 1950.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

I can think of no undertaking which is more badly needed today than a study and reexamination of the entire situation as it has developed in Germany.

Five times—I repeat five times—within the last century Germany has been the starting point of aggressive wars. The last two of these wars threatened the very existence of western civilization. And all during the centuries before Germany was the scene and theater of almost endless wars which raged across the face of Europe, involving one country and then another in devastation and destruction.

Today the chief threat in the world is undoubtedly that of Soviet expansion and aggression. This should not blind us, however, to the importance of looking closely at the situation in Germany to see what is happening there. What is going on in this heart of central Europe. What has happened to our original war and peace aims for the German people? What has happened to our dreams of democratizing this unhappy land? What are the German people doing and thinking while the cold war rages around them?

We are all pleased that Germany is recovering from the economic wounds of the recent conflict. But if there is being recreated the same Germany that confronted the world 10 years ago, we are making another date with a terrible destiny for Europe and the world.

But I am not ready to pass my own judgment on this situation. I would like to know the facts. The American people should know the facts. A bipartisan commission such as we have proposed in the resolution submitted to the Senate last week will throw a searchlight of inquiry upon an area which is only vaguely illuminated in the public mind today.

If we forget the German people in our concentration on the battle for Germany, we may win the battle but lose the war—both the war that we fought and the war we may yet—God forbid—be called upon to fight.

History has an uncanny way of repeating itself. The resolution of which I am a coauthor is intended only to inquire whether the western German republic is a really new Germany or just the same Germany with a new facade.

The Current World Situation

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last Wednesday at a dinner sponsored by the Democratic State committee of New York, Ambassador Averell Harriman gave a very powerful and informative address on a number of subjects, political and international. Ambassador Harriman's analysis of the current world situation, as well as his analysis of the current political situation are well worth reading. I ask the unanimous consent of the Senate to insert this speech in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are drawn together tonight by a great cause—the Democratic Party. It is a great cause, for in a realistic sense, it has come to be in our day almost synonymous with the cause of democracy.

The Democratic Party, I feel deeply, is the party of democracy, because it is the party of progress, of human freedom, and human security. It not only has the faith that these high objectives can be achieved; it also has the courage to take bold, decisive action to see that they are achieved. The Democratic Party not only believes that man is entitled to have dignity and freedom; it believes that these words do not have full meaning unless he can eat regular, too. And our party is ready to take whatever steps are necessary to fight off those two great fears which beset our generation: the fear of want, and the fear of war.

I have seen our party operate at close hand in Washington and abroad for nearly 20 years. In 1933, I joined the ranks of those who went to work to clean up the wreckage left us by Republican policy. The Republican Party, responsible for the disaster of 1929, had remained down in a cyclone cellar for 3 years, waiting for the storm to die down.

When the Democratic Party took over, it immediately started a program of action under the leadership of a man who believed in action—Franklin D. Roosevelt.

Ten years ago, when Nazi aggression was threatening to engulf the world, I joined the ranks of those who again responded to Roosevelt's leadership in facing the new peril from abroad.

Since then, I have been in a position to see, in a number of different posts at home and abroad, how effectively the Democratic administration has dealt with threats to our national life.

To me, the Democratic Party is the party of confidence. It has confidence in the strength of a free people. It is not afraid to meet squarely any problem no matter how great. It does not sit by complacently waiting for a problem to solve itself. It takes affirmative action before the problem overwhelms us. In Democratic leadership there is confidence, but not complacency. There is alertness to danger, but not fear.

For these reasons, I believe, the American people have rejected the timid and vacillating leadership of the Republican Party. Too many of its leaders are terrified of progress. It is forever looking fondly backward for safety. It squints timidly at the future, hoping that nothing new will ever have to be done. We are told that the elephant never forgets. I wonder why. Perhaps it is because the elephant dreams only of the past.

This kind of straddling and vacillating Republican leadership is present in our State—in the person of its Governor. At one time Dewey claims to believe in the social objectives of the New Deal. At another time he condemns them as socialistic. At one time he ridicules the defense levels of airplane production set by Roosevelt; later he seeks to blame the Democrats for inadequate war preparedness. Originally he was partly isolationist, then he became partly internationalist—never quite sure—always seeming to wait for the polls of popular opinion before making up his mind where he stood. And finally, when he read the election polls of 1948 he evidently made up his mind the election was such a cinch that it was safer to take a stand on nothing—that is, nothing but two things. He was for unity; and he was for Dewey for President. That wasn't good enough.

The American people turned to a fighting leader, a man who made his objectives clear—a man ready to look into the future with confidence and action. And that man is carrying on today with the same bold Democratic offensive. He does not wait for blows to strike us. He too goes out to meet them in the traditional way of the Democratic Party. Our party has confidence—and so have the American people confidence—in the leadership of Harry S. Truman.

It is a leadership of action to meet any and all threats. At home it is the leadership of the Fair Deal against poverty, disease, ignorance, intolerance, race prejudice—a fight continually to improve the American life. Abroad, it is a leadership to support faithfully the Charter of the United Nations. It is a leadership to repel chaos, to help rebuild, to resist aggression, to unite all men of good will all over the world in the struggle against want and against fear. It is a fight for peace. It is a fight in which everyone of us here tonight, and every peace-loving American, plays his full part.

And to carry on such a fight abroad in the kind of world we now face, in the kind of cold war which imperialistic Soviet Russia has imposed upon us, we must have clear, firm, and consistent American foreign policies. We have such policies. They are not the policies of any one party. They are American policies.

It is the duty of the President to develop foreign policies which transcend all partisan considerations. That is exactly what he has done.

We Democrats recognize and respect those Republican leaders—such as Senator VANDENBERG and many others in the Senate and in the House—who have put party considerations aside, and have helped to develop policies which are concerned only with the highest national interest and security. These have been called bipartisan policies, but Senator VANDENBERG has perhaps more appropriately labeled them unpartisan policies.

The ECA is an outstanding example of such a policy. After full debate, it was authorized by an overwhelming majority of both parties in the Congress. It has been administrated in a completely unpartisan way.

In the words of Senator VANDENBERG, "This working unity typified our finest traditions and our greatest safety in the presence of external hazards to all Americans, regardless of party. * * * United, we stand. Divided, we fall. I want America to stand."

Let us all here tonight pray that Senator VANDENBERG will soon recover from his illness, to continue to add his wisdom to the guidance of our country at this time.

The objective of American foreign policy can be expressed in various ways. In essence, it is to attain peace with freedom and justice. But the desperate reality is that an aggressive, determined force is loose in the world today which has a completely different objective—to extinguish both freedom and justice.

The strength of our economy and the strength of our spirit will be the deciding factors in maintaining freedom and peace. On this, I hold three deep convictions:

First, that the American people must secure and broaden our own well-being at home.

Second, that the American people must give inspiration, assistance, and leadership, as partners, to the free nations of the world.

My third conviction is that if the American people do both these things, war can be avoided.

The policies of the Fair Deal work toward a dynamic and expanding economy with a steadily rising national income in which all can share. They are directed toward the eradication of injustices and intolerance against our fellow Americans of minority races and religions. They are designed to provide the kind of security and opportunity which gives each citizen a real stake in the material prosperity of his country.

Republicans have tried to argue that social security interferes with opportunity. We Democrats reject such narrow concepts. We believe that our country can achieve security for the people, and at the same time give greater opportunity to the individual—to more individuals.

Republicans are again doing their best to picture the social objectives of the Fair Deal as monstrous and terrible things which will swallow up our American freedom.

That's just the bunk. It is an uninformed, inaccurate reading of contemporary history. The truth is that the danger to freedom mounts when the economic system fails to feed, clothe, and house the great mass of the people at a decent level, when it fails to hold out the prospect of an improving standard of living for those willing to work hard enough to get it. If our experience during the past 30 years proves anything, it proves that the happiest hunting ground for fascism and communism is mass unemployment and human misery. It is the environment of economic security which strengthens freedom and renders it safe from the lies and the plots of the Communists.

Some Republican leaders and candidates seem to be looking upon certain recent elections in various countries as a kind of unearned increment for themselves—as evidence that the people in other parts of the world are turning back to reaction. These Republican politicians are evidently hoping that all they have to do is to wait passively by the ballot box here at home to get back into office. As usual, they are misreading political facts. Actually, the elections are encouraging to us of the Democratic Party. I have watched these elections at first-hand. All of them reflect a definite trend away from the extreme left—from the Communists, from the fellow travelers, and from the fellow wanderers. In general, they reflect a trend toward our kind of democratic belief. But let's not begrudge the Republicans their temporary delusions. They'll find out when the time comes.

When I speak of Republican leaders, I differentiate them from the rank and file of the Republican Party. Many of them consider themselves Republicans out of a natural sense of loyalty and tradition. But they vote for progressive candidates only—whether they are Democrats or Republicans. We welcome their support, and we must continue to be worthy of it by putting up forward-looking candidates and carrying on a program of progressive action.

The essential foundation on which we can wage a successful fight for freedom and peace is to make our society healthy, intelligent, and economically secure, based upon a system of free enterprise which, together with government, recognizes and discharges its social responsibilities to the whole people.

That is our preeminent task at home.

Abroad we have been giving inspiration and assistance to the free nations of Europe—our partners in this fight for freedom and peace. By the Truman doctrine, by the Marshall plan, and by the North Atlantic Treaty, we have already made long strides together in this fight. The development of the far-sighted concept of point 4 will strengthen the cause of freedom in the underdeveloped areas, and will expand the trade and prosperity of our own country and other industrial countries.

The free nations of the world are going to win this fight. I am confident of it—for two fundmental reasons:

One reason is that history and morality are on our side. The Kremlin proclaims "the inevitability of the dictatorship of the proletariat." Well, it is not inevitable. History does not teach the inevitability of tyranny. It teaches just the opposite. The whole stream of human development has been a successful struggle of mankind for ever-growing freedom. There have been many set-backs, but eventually dictatorships have been overthrown by the strongest of human forces, man's passionate desire for liberty. Liberty, not tyranny, is man's birthright. The moral force of that birthright is our most powerful ally.

The second reason I am confident is that the material resources on the side of freedom are far stronger. The United States and Canada have about half of the heavy manufacturing capacity of the world. Including the free nations of Europe, the Atlantic community has at its command about 75 percent of the entire world's vital industrial capacity. We have access to the needed food and raw materials.

If the free nations of the North Atlantic—with all these resources—work together to improve economic conditions in the free world, if we all do our share in the development of the means of mutual defense, then the free world will be unbeatable.

Our partners in western Europe are steadily gaining economic health and democratic strength. Hunger has been driven out. When I went to Europe 2 years ago for ECA the people of France, for example, were living on a bread ration of only two-thirds of the ration given them by the Germans during the occupation. Today bread and most foods are no longer rationed. In western Europe war-shattered industry is already producing well above prewar levels. And is continuing to rise. Trade is expanding, and most important of all, the fearful specter of inflation has been laid at rest. In 1947, when the Communist threat to seize control was most menacing, the prospect of the Marshall plan revived hope. Today confidence has returned. That is why in country after country, as free elections have been held, communism has been rolled back.

No wonder Communists hate free elections, and no wonder they fight the Marshall plan.

The front line of the battle for freedom in western Europe has been the labor front. The Communist strategy—dictated from Moscow—was to gain control of the labor movement in order to destroy the free countries of Europe. With the failure of strikes called for Kremlin political objectives, the free labor movement has been strengthened. The present attempts of the Communists to use the trade-unions to prevent the unloading of American military assistance is again proving a boomerang. In the ranks of European labor communism has suffered decisive set-backs.

I want to pay tribute to the vision of the American trade-union movement in helping the workers of Europe in their battle. The A. F. of L. and the CIO and the railroad unions have given effective support to the cause of freedom in Europe.

There is growing vigor in Europe. The same spirit that created the resistance movement during German occupation is again alive. In traveling through Europe as I have, and in meeting the men who are leading the battle, I have become confident of the new hope and new vitality of our partners in Europe. There is the will to work, the will to fight, and the will to win.

Their decision to join with us in the North Atlantic Treaty meant setting aside forever reliance on appeasement or neutrality to maintain peace. This courageous decision stemmed from their belief—as we believe—that unity among the free nations is the greatest single deterrent to aggression.

But we must remember that hope and confidence in Europe naturally rests on faith in the firmness and consistency of American policy. It is bewildering to our friends abroad when, in the United States Senate, reckless and irresponsible charges are slung against those in important positions who are carrying out our foreign policy. People abroad do not understand, as we do, that these maneuvers are for personal publicity and partisan politics. This political persecution of individuals might be ignored if it did not play right into the hands of the Communists. It weakens confidence in us abroad. And there could be no greater handicap to the administration's efforts to stamp out subversive elements.

As Mr. Henry L. Stimson has said: "It should by now be wholly clear that indiscriminate accusations are doubly offensive; they damage the innocent and they help protect the guilty. For if the accuser is so stupid as to connect a man like Ambassador Jessup with communism, are not all such accusations made suspect?"

Others are following Mr. Stimson's leadership in denouncing these malicious tactics. Would there were more. Instead there are some, who, though unwilling to share responsibility with McCarthy in his indiscriminate tirade of unsubstantiated charges, are hoping to gather some political windfall out of them if they can.

The American people will see through these un-American political maneuvers. They know that no administration can possibly be friendly to Communists which has proposed and is carrying out with vigor the Truman doctrine, the Marshall plan, and the North Atlantic Treaty. The American people will repudiate those who are undermining for selfish purpose the confidence of other free nations in our country at this critical time.

I believe that if our foreign policies are consistently and vigorously carried forward and expanded in cooperation with our partners of the North Atlantic Treaty, we will develop an impregnable position of strength in western Europe and in other parts of the free world.

With life secure and healthy in the free world, I am convinced that pressures will begin to operate behind the iron curtain to break down the Kremlin control. When and how no one can predict. But there can be no doubt that the disaffection of Tito has resulted from the success of the Marshall plan.

Let there be no mistake: It will be a long and tough struggle, requiring present-day sacrifices by us and our partners—sacrifices which are in fact investments in the cause of peace and in the cause of freedom.

Early this month I was with Secretary Johnson and General Bradley at a meeting in The Hague of the Defense Ministers of the nations of the North Atlantic Treaty. I was struck by the determination shown by our associates sitting around that table. These men, representing their governments, mean business. They mean to do their share in developing with us an integrated defense force for mutual security.

The United States, the most powerful nation in the world, is helping to forge an association of partners whose strength will lie in its unity—whose strength is based on mutual respect and mutual confidence.

In sharp contrast, Soviet imperialism is seeking to create a world of nations subordinate to Russia—a world of satellites forced to do her bidding.

Russia itself is ruled by fear and is out to rule the world by fear.

Within Russia, the Kremlin is afraid of the people and the people are afraid of the Kremlin.

I remember one occasion in the summer of 1945 when General Eisenhower and I were invited to stand on Lenin's tomb as Stalin was reviewing a great youth sports parade in the Red Square. Standing next to Stalin, I looked around, and as far as I could see every window from which anyone could view the scene had been blocked or guarded. In front of Lenin's tomb and running the length of the square before the Kremlin, the Red soldiers stood rifle to rifle with bayonets in place to protect the Russian rulers from their people.

I have also seen how fearful the Russian leaders are of the people of their satellites. In January 1946 I was in Bucharest with the British ambassador to negotiate with Vishinsky the carrying out of one provision of the Yalta agreement. This called for the participation of all democratic parties in the Rumanian Government preparatory to holding a free and unfettered election. This was one of the innumerable attempts to get the Soviets to keep their promises made at Yalta. One day, we were all invited to lunch with King Michael at his country place. My daughter and I drove out in a small car with a GI as driver and bearing an American flag. Through the countryside, there was friendliness—cheers for our flag. On the way, we passed one stalled cavalcade of seven huge motor cars (they were evidently repairing a blowout). There were three cars in the front and three cars in the rear filled with guards. In the middle car sat Mr. Vishinsky. The American Military Mission to Rumania numbered only 100 officers and men; the Russians had 700,000 soldiers in the country at the time, but Mr. Vishinsky was not trusting to the friendliness of the Rumanian people.

The Kremlin is intent upon using fear to disrupt and paralyze, and ultimately to dominate the world—they use fear of war, fear of terror.

The association of free nations, on the other hand, is based on confidence and mutual trust—it is based on faith in democracy and in people, faith in each other. That is the way to meet Moscow's attempt to rule by fear!

In faith there is eternal strength; in fear—inevitable weakness.

It is the high purpose of the Democratic Party to continue to preserve that faith and confidence at home and abroad. That is a mission the Democratic Party has set for itself—and will fight to achieve.

But political victories, like liberty, have to be won over and over again. That is the essence and the strength of democracy. There are political victories that are going to have to be won this fall. Political victories, like liberty, cannot be taken for granted. We have to fight to win them. There is too much at stake at home and in the world to lose them now.

Five years ago last week, in a little white cottage at Warm Springs, Ga., President Roosevelt was preparing a speech to be delivered on the Jefferson Day of that year. He died before he could deliver it; but his manuscript has come down to us. The last words

of that speech—in a sense his farewell message to us—were these: "To you and to all Americans who dedicate themselves with us in making an abiding peace, I say: the only limit to our realization of tomorrow will be our doubts of today. Let us move forward with strong and active faith."

To Roosevelt, to Wilson, to Jackson, to Jefferson, to all our great leaders of the past, we can say tonight: "There are no doubts among the true followers of the Democratic Party—your party, our party. We have faith, we have a strong and active faith. And we will move forward—we and all Americans of good will—to a realization of our aims: a secure and a good life at home; peace, security, and international good faith throughout the free nations of the world."

Rainfall in Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me entitled "Wisconsin Rainfall Situation Satisfactory," together with a letter from Robert Taylor, director of the University News Service, and an article by Jerry Wollan.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

WISCONSIN RAINFALL SITUATION SATISFACTORY

(Statement by Senator ALEXANDER WILEY, of Wisconsin)

Mr. President, it has been my pleasure on many occasions to invite attention to the fact that the State of Wisconsin is America's dairyland, and is blessed by nature with a magnificent climate, beautiful scenic attractions, and splendid resources, of which any commonwealth could indeed be proud.

I have proven by factual records that my sincere praise of the attractiveness of my native State is no act merely of the pride of a Senator in his own State—which is only natural—but an accurate, objective attitude based on the facts in the situation.

As summer once more approaches, the thoughts of hundreds of thousands of Americans turn to tourist travels in Wisconsin, to leisure time enjoyment, to fishing and hunting, swimming, and just plain relaxing. Moreover, as summer approaches the full rhythm of agricultural production begins to really roll throughout America's dairyland. On our 175,000 model, well-kept farms, we are out to break new records in quality and quantity of agricultural items, particularly, of course, our dairy products.

Against the background of these facts, it was with considerable disappointment that we of Wisconsin have noted certain recent newspaper and magazine articles as to the alleged heavy loss of rainfall in the Badger State. It seems, Mr. President, that all sorts of gloomy and utterly unfounded predictions have been made to the effect that Wisconsin is facing a semiarid future. Naturally, any such news story or magazine write-up must bear the closest scrutiny, because the effect of those stories can be very harmful, both economically, sociologically, and psychologically. The alert University of Wisconsin News Service has, therefore, very promptly sent out to the Nation's press a documented refutation of the phony write-ups as to Wisconsin rainfall.

Mr. Robert Taylor, director of the University News Service at Madison, has conveyed to me conclusive scientific proof that the Badger State is very definitely not suffering a decrease in rainfall. Moreover, the Badger State has a bright future insofar as ground water is concerned, provided, of course, that we and for that matter everyone else, develop and use our resources intelligently on the basis of up-to-the-minute scientific data.

Ordinarily, Mr. President, I do not like even to give attention to phony write-ups by presenting their refutation, but I think that in this instance, the thoroughly scientific refutation so completely demolishes the fear-provoking propaganda that many constructive uses will be served by my colleagues noting the splendid proof cited by the University of Wisconsin News Service.

I ask unanimous consent, therefore, that there be printed in the Appendix of the CONGRESSIONAL RECORD, the text of a letter sent on April 13 to the Nation's editors by Mr. Taylor as well as the text of two articles by Mr. Jerry Wollan. The news service also sent out a splendid graph prepared by Professor Bryson, University of Wisconsin meteorologist—a graph which led the professor to conclude firmly that "there has been no significant change in Wisconsin rainfall." Were it possible to reproduce this graph, I would do so, but since this is not possible, I am merely asking that these three items be printed in the Appendix.

UNIVERSITY OF WISCONSIN NEWS SERVICE,
Madison, Wis., April 13, 1950.

DEAR EDITOR: In December John J. O'Neill, science editor of the New York Herald-Tribune, made a survey of the national rainfall picture and came up with a statement that Wisconsin is losing more rainfall than any other State in the country and is facing a semiarid future.

In February an article of similar nature appeared in American magazine under the byline of Oscar L. Chapman, Secretary of the Interior. A part of this article dealing with Wisconsin was reprinted in the April issue of Readers Digest.

Such a charge has serious implications for an agricultural State like Wisconsin. Already, alarmed farmers have asked what to do and whether the charge is true. The same applies to hydroelectric projects for which loans are being sought.

If the charge is generally believed, officials feel that farm and hydroelectric loans may be difficult to obtain and that Wisconsin will be considered a poor risk for any type of investment which ultimately will be beneficial for the State.

An immediate investigation of the charge by scientists at the University of Wisconsin has resulted in an absolute denial that the State is suffering a decrease in rainfall. These scientists feel that the Chapman article figures were adopted from the O'Neill findings.

They flatly state that O'Neill is incorrect.

Enclosed is a series of two stories which present the actual picture of Wisconsin's rainfall situation as decribed by four competent authorities. The experts are Prof. R. A. Bryson, university meterologist; Lothar A. Joos, United States Weather Bureau meteorologist at the university; Ernest F. Bean, Wisconsin State geologist; and Frank C. Foley, United States Geological Survey.

These men definitely conclude that Wisconsin rainfall is not changing and that the State does not in any way face a semiarid future.

These articles are being sent you for your information and for publication if you so desire.

Sincerely,

ROBERT TAYLOR,
Director, University News Service.

(EDITOR'S NOTE.—This is the first in a series of two articles on the Wisconsin rainfall and ground-water situation. It is presented in answer to recent charges that Wisconsin is suffering a severe rainfall decrease.)

(By Jerry Wollan)

MADISON, WIS.—The serious charge that Wisconsin tops the dubious national "honor" roll of States in rainfall loss has drawn explosive comment from scientists at the University of Wisconsin.

To the charge they say, "Hogwash."

"Wisconsin is not suffering any appreciable loss of rainfall," Prof. R. A. Bryson, University of Wisconsin meteorologist, emphatically declares.

First rumblings on the rainfall loss question popped up during the New York water shortage. John J. O'Neill, science editor of the New York Herald-Tribune, made a national survey on the problem and came up with figures which indicated Wisconsin had lost 3.84 inches of rainfall over the past 60 years and was facing the danger of becoming semiarid.

In February American magazine published an article under the byline of Oscar L. Chapman, Secretary of the Interior, which restated the same figures, and which was reprinted in Readers Digest. Wisconsin scientists feel that the Department has adopted the O'Neill findings.

These men—Professor Bryson; Ernest F. Bean, Wisconsin State geologist; Frank C. Foley, United States Geological Survey; and Lothar A. Joos, United States Weather Bureau meteorologist—were quick to see the impact such a charge would have on farmers and hydroelectric enterprises in the State.

They immediately went to their record books to check the published findings, and what they found led to the "hogwash" comment.

Here, according to the scientists, is the Wisconsin rainfall picture:

"Wisconsin rainfall records since 1890 show that the average annual total is 30.52 inches," says Joos. "The records also show that the average for the past 10 years is 30.61 inches, slightly more than the long-term average."

These figures hardly indicate rainfall loss, but let's look further.

In looking over the record one fact stands out—the large variations of precipitation from year to year.

As Professor Bryson puts it:

"The year to year rainfall in Wisconsin varies from about 21 inches to 41 inches, so let's look at average rainfall over 5-year periods.

"If we look at the 5-year average record from 1940 on, it looks like our rainfall is decreasing (see broken line of graph). But the previous 10 years record, during recovery from a national drought, looks like a big increase, and the 10 before that is normal.

"This certainly suggests that the changes we see are temporary, due to passing changes in the over-all weather pattern," Bryson points out.

The fluctuations in rainfall present an interesting picture. Wet and dry periods follow each other with amazing consistency and patterns over the years show considerable similarity.

For example, the record shows that two consecutive very wet or very dry years never have occurred. The year following a particularly wet or dry year always has rainfall in amounts closer to the normal range.

Even the periods of slightly wetter or slightly drier than normal follow a definite pattern. The records prove that Wisconsin never has had more than six consecutive years wetter than normal nor five consecutive years drier than normal.

Wisconsin scientists admit that over the past 60 to 70 years changes in rainfall can be found for many parts of the country. Several States have shown declining rainfall, particularly west of Wisconsin.

However, the experts firmly contend that the Wisconsin pattern has remained virtually the same.

O'Neill compared the years 1886–1909 (a 24-year period) with 1914–38 (a 25-year period). Taking the average yearly rainfall for each period and comparing them should show the amount of decrease or increase of one period over the other.

Bryson and Joos made this comparison and found the latter period averaged less than one-half inch less than the former.

Then they added 1910 to the first era to make each 25 years long. The answer showed a decrease of less than one-tenth of an inch.

The pair tried every method they could devise to find how O'Neill arrived at the 3.84-inch-loss figure. They never obtained an answer which corresponded even closely to his findings.

Bryson devised another way of determining the possibility of change. He laid out overlapping 5-year-rainfall averages on a graph, then compared the last 30 years with the first 30.

By superimposing one era on the other it is apparent that they follow each other closely. As Bryson says:

"It doesn't matter much which line is which because they practically fall on top of each other. This, to me, means just one thing: No significant change in rainfall."

To use another figuring possibility, that of comparing the last 10 years with 1891–1900 (a 50-year jump), results show that the last 10-year average is 30.61 inches, compared to a 29.49-inch average for the decade prior to the turn of the century.

"We know," Joos declared, "that it takes more than 1 or 2 years to make a serious drought. Wisconsin rainfall was below normal from 1929 to 1937, a period that included the most serious drought in recent United States history.

"Yet, 1938 brought Wisconsin the wettest year in 59 years of record. This wet period ended in 1945 and we now have completed the fourth year of below normal rainfall."

What then, in summary, is the Wisconsin picture? Bryson speaks first.

"The annual rainfall in Wisconsin is highly variable, but the average rainfall over the years has remained remarkably constant. Five or six wet or dry years may come together, but not more. Our records reveal that the annual rainfall, while fluctuating, has shown no appreciable downward trend."

And Joos concludes:

"Many people have tried to predict future rainfall cycles but such forecast of wet and dry years have not worked out well so far.

"But, we can determine from our past records whether or not there has been a downward trend in the Wisconsin rainfall pattern. Weather records since 1890 do not show a trend toward a drier climate in this State."

Both men join emphatically in saying:

"There are many ways of trying to determine the true rainfall picture. We have tried all the ways we can devise, and our evidence points to the fact that the figures advanced by John J. O'Neill and those appearing in the American article by Oscar L. Chapman are incorrect.

"Wisconsin, as of now, faces no danger of becoming semiarid through diminishing rainfall."

(EDITOR'S NOTE: This is the second in a series of two articles on the Wisconsin rainfall and ground-water situation. It is presented in answer to recent charges that Wisconsin has suffered a severe rainfall decrease.)

(By Jerry Wollan)

MADISON, WIS.—There is no general depletion of ground water in Wisconsin.

This announcement by scientists at the University of Wisconsin adds another clinching link to the chain of denial of recent charges that the State is facing a future semiarid condition due to diminishing rainfall.

Rainfall and ground water are closely tied in determining the State's true situation. There is a direct relation between ground-water levels and the amount of rainfall, according to Frank C. Foley, United States Geological Survey, in charge of ground-water studies in Wisconsin.

He points out that if the State is suffering decreased rains, levels of observation wells would fall and reflect the loss.

Levels in the shallower wells closely follow the wet and dry rainfall periods. During wet years the water levels are high, during dry years they are low. Seasonal fluctuations due to rainfall are much less, even unmeasurable, in artesian wells.

Records of shallow wells in Wisconsin were begun in 1934, during a severe national drought, and levels were extremely low. In 1935 the levels began to come up fast and climbed more or less steadily to 1945–46, when they hit their highest point. Since that time there has been a gradual drop.

This well-record picture is practically identical with the rainfall pattern.

What does this mean?

Foley explains that if Wisconsin rainfall has been decreasing as charged, then ground water in the State must also decrease in a like proportion, barring the normal fluctuations which occur.

"But," Foley declares, "our records show no general decrease in water levels. There is no general depletion of ground water in the State as a whole. This strongly indicates that rainfall, which is the source of ground water, has not decreased on the average."

There are points in the State, however, where ground water is a matter of concern. But the difficulties in these given areas easily can be explained.

In the Marshfield-Neillsville area, for example, the bedrock beneath shallow surface materials will not allow fluids to pass and does not hold water. Because of this geological factor there is a ground-water problem in this locality.

Milwaukee-Waukesha, Green Bay-Fox River valley, and Fond du Lac are areas where substantial drops in ground-water levels and artesian supply have been noted.

Why have levels dropped in these places? Here is what Foley says:

"These areas are heavy municipal and industrial users of water, much of which comes from the ground. Water consumption in the State, and particularly in these regions, has risen greatly because of increased demands of industry and the public during and after the war.

"Because of this continually increasing demand, the withdrawal of vast quantities of ground water has lowered water levels and taken water from storage more rapidly than it has been replenished in some areas.

"Heavy consumption is the real cause of falling ground-water levels in these localities."

Recharge of ground-water supplies at the source is quite constant. Of the State average rainfall of slightly over 30 inches yearly, about 10 inches runs off in the streams and rivers. More is lost through evaporation and transpiration and the remainder goes into ground water, Foley points out.

"Our problem is one of withdrawal, not of supply. We know this because in some areas recharge has kept pace with and even exceeded use.

"The State's ground-water supply is not dropping in certain areas due to natural causes. The causes primarily are man-made," he concludes.

Wisconsin's ground-water program is based on this premise. Scientists are not nearly so concerned about rains recharging and maintaining water reserves as they are about sensible utilization of what is already there and the stable amounts that are expected in the future.

State Geologist Ernest F. Bean sums up the problem this way:

"Continued State development depends on an adequate water supply, much of which must continue to come from the ground. Some control of ground-water withdrawal, in critical areas at least, is essential to afford equitable distribution and to protect present users.

"Some legislation already has appeared and conservation measures are to be encouraged.

"But I want to set the record straight. We do not urge conservation because diminishing rainfall is causing ground-water stores to decrease. The major problem is heavy use in localized areas, use so heavy that natural recharge is not capable of meeting these local demands.

"Wisconsin has a bright future so far as ground water is concerned, provided that future developments and uses are made intelligently and on the basis of adequate scientific and technical data."

This is the Wisconsin picture: Adequate ground-water stores despite recognized critical areas which are man-made. No long term or permanent drop in the amount of rainfall.

American Policy in Germany

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on American policy in Germany delivered by the junior Senator from Iowa last week.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The officers of the American Jewish Congress have done me a great honor in inviting me to participate in this meeting tonight. The purpose for which this meeting has been called has, of course, my full endorsement, and the spirit which has prompted so many of you to assemble here is a spirit for which I have deep respect and warm sympathy.

Furthermore, I am frankly delighted to have this opportunity to say a few things that I have wanted to say for a long time. I genuinely welcome this chance to take off my gloves, roll up my sleeves, and grapple with a few of the raw facts about what is happening to America and American interests in Germany today.

The sponsors of this meeting deserve the thanks of everyone, here and abroad, who is aware of the terrifying implications of resurgent German power. I congratulate you who have organized this meeting, as well as you who have come to Town Hall tonight in this demonstration of your high sense of citizenship. Perhaps we will all look back on this occasion as the beginning of a Nation-wide campaign to awaken the American people to the meaning of present trends in Germany and to the need for swift action to avert the impending catastrophe.

I am convinced that thoughtful people everywhere are increasingly apprehensive

over the crisis they see approaching in Germany and are increasingly troubled by all that they read and hear from that country.

For months we have been bombarded with headlines about Germany telling stories none of us ever expected to hear again. Let me read you a few of the kind of headlines that have appeared in the American press just in the past 3 months.

These are headlines of newspaper stories appearing in the New York Times, Herald Tribune and Washington Post in the first 3 months of 1950.

January 24: "Ruhr board found of little use now—With only an advisory role left, it is held in danger of becoming a white elephant."

January 28: "German nationalism rising to new climax—Soviet Russia has the power to turn it into a serious crisis at any time."

January 30: "Recovery figures distorted by Bonn—Allied sources say Germans altered industrial index to minimize gains.

February 6: McCloy wants full inquiry on denazification—warns Stuttgart officials; Americans in bribery scandal studied.

February 21: "East German Army of 45,000 men reported trained to aid Russians."

February 23: "Bonn speeds bill to end Nazi trials—Measure eliminating special courts passes its first reading in Parliament. Allied law is attacked. German speakers charge that top Nazis were acquitted while lesser ones paid."

February 24: "New Farben trust seen in Germany. Subsidiaries in Argentina and Spain are said to be tied to budding cartel."

March 2: "Limited atomic work allowed west Germans. Allied Commission grants research in fields of medicine and education."

January 28: "Bonn seen placing check on cartels. West Germans expected to let trusts operate but under rein by government."

March 5: "Russia is building new 'jugend'."

March 8: "SS men get homes of Hitler victims. Another scandal is revealed as United States authorities refuse to act on Nazis' release."

March 12: "German Rightists drawing together. Refugee groups in west also moving consolidation for political purposes."

March 26: "German Reds push 'action' campaign in western zones. Party line exploits Nationalist sentiment, aiming at small farmers and middle class. Inroads visible in Ruhr. Threat of agitation said to lie in drawing together of radical right and left.

April 6: "West strikes snag on trusts in Ruhr. Issue of future ownership sent to Foreign Ministers as Commissioners disagree."

April 8: "ECA says German revival is both 'rapid and dramatic.'"

Finally, from the New York Journal American, April 9, just a week ago last Sunday: "West Germans threaten direct deal with Soviet."

These are 15 or 16 typical headlines in American newspapers this spring. There have been hundreds of others like them. Is it any wonder that people who read these stories day after day are beginning to write to their Senators and Congressmen asking whether the Allies have already lost control of events in occupied Germany?

These reports, which have been coming to us in growing volume for the past year or more, have persuaded me that the time is now long past due for a general, public debate in every city, town, and village in this country on the question of where the present course in Germany is leading us.

On May 8, just 20 days from now, the world will mark the fifth anniversary of the Allied victory over the Nazi armies, the fifth anniversary of the second defeat of a German attempt to conquer the world. Many of us, too, will recall the inexpressible horror we felt when the Nazi murder camps were torn open and the whole world learned the full black record of the Hitler regime.

And many of those who survived that second German onslaught of this century will be asking, on May 8, whether the great war ending in 1945 was the last they will ever have to fight against a German army, or whether it was only another in a series of such wars, the next of which is already in the making.

That, my friends, is why I say that the time has come to find out what lies ahead in Germany.

In recent months we have been having a prolonged debate in the Senate on the disaster that has occurred in China. We have not yet had one on the disaster that may occur in Germany.

Perhaps there would have been no disaster in China, or at least not a disaster of such dimensions, if we had had enough informed public debate in and out of Congress before the conquest of China by the Communists, instead of afterward.

My own purpose, at this stage of developments in Europe, is to aid in generating such broad and active interest in the German problem that, this time, we shall have devoted so much attention to the approaching crisis in Germany that, no matter how it may turn out, there will be no one who can say we have failed to amass the facts, assess the alternatives, and reach a decision on a definite course before, instead of after, the explosion occurs.

My topic this evening is "American Policy in Germany." Unfortunately, I am not certain that the United States has a policy in Germany—or, to put it another way, I am not sure which of the steps we are taking constitute policy originally initiated by us, and which are counteractions taken hurriedly to meet policies laid down in the Soviet Union.

Also, I am as confused as many of you must be, by what seems to be a policy on two levels in Germany, one of verbal pronouncements, the other of actual deeds.

On the record of the last 5 years in Germany we are justified in concluding that all the occupying powers without exception have had a twofold approach to Germany: one represented by noble statements of intention, the other found in the record of their real actions.

Allied intentions were set down with great clarity at the end of the war: we agreed to transform Germany into a democracy and to prevent Germany's armed industrial might from every again menacting the rest of the world. This policy called for democratization of German society, denazification of German politics, decartelization, and deconcentration of German industry, and demilitarization of the German Army and the German state.

Without any knowledge of what went on between 1945 and 1950, a man picking up a newspaper this year, and glancing at headlines such as I have just cited to you, would have a clear picture of how far the Allies have all strayed from the intentions they all stated at the end of the war.

When the enormous gap between verbal pronouncement and actual achievement is called to official attention, of course—when it is pointed out that democracy is a facade in the west and a fraud in the east, when Nazis are shown to be climbing back into the seats of power, when cartels are found prospering under the benevolent protection of the German Republic, and when rearming of Germany is commonplace talk in high government circles on both sides of the iron curtain—when these conditions are pointed out, the official reaction is to blithely say: "Well, what do you expect? We had to rebuild a powerful Germany to stop the Communist drive toward the west."

This response suggests to me that in Germany, as in many other parts of the world, our Government has not yet any real policy worthy of the name, but rather a sort of reactor mechanism, set up to record what the Russians are trying to do, so that we in turn may attempt to stop them from doing it.

The Germans recognized the existence of this reactor mechanism very early after the war, and have played upon it for all it was worth. The mechanism works in the following way: If the Russians are trying to unify Germany, on the basis of resurgent nationalism, the Western Powers must do the same thing. If the Russians incorporate Nazis into their puppet regime in the east, that is excuse enough for ignoring denazification in the west. If the Russians are rebuilding a German Army under their control, then the western Allies must not hesitate long in rearming the German state in the west. So, our policy, if such it can be called, is a reflection of Russian policy.

There is only one sure winner in a game like this—the one who calls the cards—and the Russians, so far, have been calling the cards with increasing rapidity these past few months. They may soon call another in Berlin, if the reported Communist demonstration on May 28 takes place.

We of the west are condemned to lose one trick after another, as long as this sort of game continues. Until we have liberated our thinking from the almost hypnotic trance that has been caused by the rise of Communist power since the war, we shall never be able to seize the initiative—in Germany or anywhere else. We must, at the very least, liberate our thinking to the point where we can deal with the resurgence of Germany, not only in terms of the Russian threat, but in terms of Germany itself, its relations to its neighbors, and its place in our world. In fact, only if we succeed in this, can we ever hope to create the kind of Germany which will not end up in the Russian camp.

Until there has been the kind of widespread public debate on Germany that I am arguing, our Government will not be able to develop a real American policy for Germany; a policy that says what it means and means what it says; a policy that is no mere reaction to another policy made in Moscow; a policy that sets out to save for democracy, whatever can still be saved in Germany; and that neutralizes, if it cannot fully eliminate, the efforts of a resurgent Germany to drag the world once again into war.

Until there has been this kind of discussion, the Congress, the administration, and the people will be the victims of dubious pressure groups, special interest lobbies, and undercover manipulation on behalf of enemies of America in Germany.

Already the Germans are sending agents over here to carry out special missions behind the scenes. One of these agents came to my attention last December, and I tell you the story as a striking illustration of what is happening while public attention is diverted to other, more immediate issues:

I discovered last December that Adolf Hitler's top financial adviser, Hermann Abs, had slipped into New York on a visit reported to involve efforts to raise a substantial loan for the giant German cartel, the United Steel Works (Vereinigte Stahlwerke). During the several weeks Abs had been here before I heard about him, he had visited the following agencies in Washington: the Federal Reserve Board, the Treasury Department, the ECA, the International Monetary Fund, the International Bank, and the Bureau of German Affairs of the State Department.

Rather than for me to tell you what the Abs incident meant, let me read you a paragraph from the United States News, a magazine published in Washington by David Lawrence, in its edition of December 30, 1949:

"Under Hitler, Abs rose to be head of Germany's biggest bank, one that had a key role in financing Hitler's war machine, in plundering occupied Europe. Under the Allies, Abs was first vetoed for a top bank job, then allowed to manage the Reconstruction Loan Corporation, chief banker for German industry. Official explanation is that, since Allies

want Germans to govern selves, Germans must be allowed to choose their own officials. It's a calculated risk. To ex-Nazis, resurrection of big shots of the Hitler era is encouraging. To anti-Nazis, it begins to look as if they have been played for suckers. Antinazism doesn't seem to pay. It may even become dangerous once more. That's the trend in western Germany today. Allied officials are reluctant to admit it. Other observers see it clearly. It's already a major problem."

If it was a major problem last December, it is now becoming a major catastrophe. What will be the official explanation when the Nazis openly take over power in western Germany? What will be the official explanation when German cartels, refinanced by United States dollars, spread their tentacles throughout the western European economy? What will be the official explanation when gentlemen from the same political camp as Mr. Abs sign a pact with gentlemen from Moscow—and Allied policy all over Europe appears as the formless, amorphus, and shapeless thing that it actually is?

I, for one, am not going to wait to find out what official explanations for these phenomena will be. There are many in the Congress who feel the same way.

I am glad to announce to you that Members of both the House and Senate are taking action to bring the facts on Germany before the Congress and before the people as soon as it can be done. We are determined to get the full truth on the record.

Yesterday seven other Senators and I introduced a resolution requesting the establishment of a bipartisan Presidential commission of inquiry into all matters relating to American policy in Germany. Associated with me are Senators of both parties. You will be proud to know that both the Senators from New York, Senator IVES and Senator LEHMAN, are cosponsors of this resolution. The others are Senators HENDRICKSON, of New Jersey; PEPPER, of Florida; KILGORE, of West Virginia; DOUGLAS, of Illinois; and CHAVEZ, of New Mexico. And I understand Members of the House, including Representatives CELLER, JAVITS, and ROOSEVELT, of New York, and others from other States, intend to introduce similar resolutions this week.

We want to know, and we think the American people are entitled to know, the names, the real purposes, and the actual potential strength of all the antidemocratic political parties, groups, and movements active today in Germany; who finances them, for what hidden interests they speak, what are the connections among them, which ones are secretly fronting for the Communists in east Germany, which ones represent indigenous Nazi, pan-German, and other authoritarian forces, and which ones have outside connections with Fascist and Nazi elements lingering on in other countries.

Second, we want to know how far the recartelization of German industry has proceeded, which cartels and trusts are flourishing again, what power they exert over the German political scene, and what influence they have over the relations between the German Republic and other countries in the world.

In other words, we are interested in the extent to which German business has been reconquered by monopoly instead of being transformed into the sort of free, competitive economy which is essential to the functioning of political democracy.

We want to know, third, what, if anything, has been done to reform the German schools and universities, so that they teach democratic ideas and principles to the new generation of German children. We are asking, in effect, whether the German educational system has become an instrument for guiding German youth toward a free society or whether it has remained a machine in the hands of the old ruling elements to produce obedient and willing slaves of the army and of the state.

Fourth, we want to know how widespread is the use of militaristic, ultranationalistic, anti-Semitic, and other antidemocratic propaganda in the German press, radio, and cinema. We are interested in knowing who are the masters of the principal media of news and opinion in Germany today, and to what extent they are the same masters who dominated these media before and during the late war.

Fifth, we want to know what the real level of industrial productivity is, and not merely what the German industrialists are willing to tell the Allied control boards. We must know this if we are to judge the extent to which German war potential is being restored. We are also interested in the reappearance of German military or paramilitary organizations. What, for example, is the mysterious Bruederschaft, the brotherhood of former German Army officers, and what is its power and its aim? How many German generals are secretly working for the Soviet Union toward a day when a new totalitarian Russo-German Axis may be proclaimed to the world.

Likewise, who would be the men in control of any German military force the western Allies might be so foolish as to permit to be formed?

Sixth, we want to know how far Nazis and other enemies of democracy have repenetrated into the political parties and movements, into the courts, into the industrial and commercial life of the country, into the school system, and, last but not least, into the civil service of the new state, the bureaucracy which operates the day-to-day administration of the German Government. Is it true, as reporters have told us, that if the occupation ended tomorrow, Nazis would move back into every seat of power within 24 hours and purge every person who had in any way worked with the Allies in the past 5 years?

Seventh, we want to know the extent to which such prodemocratic elements as survived the Nazi terror have been prevented from taking active part in building postwar Germany. If we know the answer to this, as well as to the question of what strength such prodemocratic elements still have, we may be able to judge what hope there still remains of salvaging something of value in the country.

Eighth, we are interested in knowing what encouragement is being given the Germans to raise their eyes above the level of purely nationalistic aims toward participation in a broader association of free nations. There is plenty of evidence that they are being encouraged to join the Communist association of slave nations. There is also evidence that they are being asked to join a kind of western association that would have little in common with free society, and that might, in fact, end up with Germany in control of it, via the Ruhr and the Rhineland cartels. But we don't know how much effort is expended to lead Germany toward participating in, for example, the proposed Atlantic federal union or some other broad intercontinental group of free countries.

Ninth, we also seek to find out what has happened to economic power in Germany since the war. Has there been any shift of control over basic economic power into the hands of new groups in German society, or, on the contrary, has the same small feudalistic class of the same individuals, families and groups regained economic power that it exerted before the outbreak of war? Political power in Germany, it must be remembered, has always been secondary to economic power—hence, those who dominate the great blocs of economic power, especially in coal, iron, steel and other heavy industry, as well as those who control vast portions of the agricultural land, are inevitably the ones who rule the State above and outside the political parties and regimes. When we have the answer to this particular question, we will know how far we have succeeded or failed in our efforts to make Germany into a democratic country. If we find that economic power still rests in the hands of the same feudal group that has always held it, we will know that whatever democratic institutions, parties and constitutions we may have helped build will go down in total collapse the moment we are no longer there to prop them up.

Finally, our resolution asks the presidential commission of inquiry to determine whether or not ECA funds have been used to strengthen prodemocratic elements and tendencies in western Germany. As of April 2, 1950, Marshall plan authorizations to Germany had totalled $840,403,000. This year the sums allocated to Germany will be so great as to place her second in the receiving line after Great Britain. We must not allow ourselves to be enthralled by the handsome charts and graphs which the economists provide us, showing curves of production, comparison with the 1936 index, and so on.

What is crucial is what is being done with all this production, who is benefiting by it in terms of economic and political power, how will 11,000,000 tons of steel, 18,000,000 tons, or any number of million tons of steel in the Ruhr aid the growth of democracy in western Germany? We wish to know what will happen to German democracy if all those tons of steel are produced and distributed under the absolute control of the very same men, man for man, who produced steel for the German Army and the Nazi war machine.

These are questions which the sponsors of this resolution ask to have answered by a Presidential commission of inquiry, on behalf of the Congress and of the people of the Nation. Until we have those answers, we in the Congress cannot hope to legislate intelligently. Until the American people have those answers, they cannot instruct us, their representatives, how they think we should act in their interest. And, frankly, I do not believe that the executive departments themselves, including the ECA, the State Department, and the Defense Department, can plan and make policy intelligently without the answers to these questions before them at every step.

It is fatuous to assume, as some of our supposedly realistic policy makers seem to assume, that we don't need to worry much about what kind of German state exists in the west (so long as it isn't Communist), because we need German production and German manpower in the contest with Moscow and, anyway, we can outbid the Russians for Germany's allegiance wherever we have to.

I say it is fatuous, because great questions of international politics are not settled by bribery, no matter how defined. The rulers of Germany will make up their minds according to their own self-interest, as they see it. The real question is who are to be the rulers of Germany.

Responsible officers in our Government appear to understand very well the threat of communism in Germany and the nature of the Soviet bid for its kind of German unity. But do they recognize the threat of resurgent nazism in Germany and the nature of its bid for a Soviet alliance?

Are we even mentally prepared for a putsch by the sinister elements that have reemerged in western Germany—the cartel industrialists, the pan-German politicians, the feudal militarists, the Nazis, ex-Nazis, and neo-Nazis of every stripe? How will we deal with these elements when they have finally blackmailed the Allies into yielding full liberty of action to their German Republic? What will we do when they install a naked totalitarian

regime, smash the labor unions, organize a conquest of western Europe by cartel and political penetration, expel American influence from the continent of Europe—and then proceed to ally themselves in a gigantic totalitarian bloc with their supposed enemies, the Communists of the Soviet Union?

Today we do not have the information such as our resolution seeks to obtain. We must depend on newspaper accounts, magazine articles, and books. From these sources we are obliged to accept, for lack of contradictory evidence, a shattering indictment of the real, as distinguished from the verbal, Allied policy in the postwar years in Germany.

But, worse than the grisly farce of denazification, worse than the sabotage of the decartelization program, worse than the cruel rejection of the few German democratic elements left after Hitler, worse even than the abject capitulation to the most outrageous demands of German nationalism—worse than all these has been the complete refusal or inexcusable failure to undertake the most obviously necessary step of all: to set the stage for remaking the whole underlying social and economic structure of Germany by wiping out the powerful feudal basis from which Prussian militarism, industrial cartelism, pan-German aggression, and national socialism have sprung.

Because of this monstrous failure, we and the French and the British and the Russians all share the frightful responsibility for recreating the German menace. The occupying countries in 1945 had the power to save Europe from another German war. None of them has exercised that power. All Germany's neighbors know this. All Germany's neighbors again are trembling for their safety. They tremble all the more since they know that the menace this time may very well mean their subjugation not merely by German force, but by an alliance of a re-Nazified Germany with the Soviet Union—by another and far more fearsome totalitarian Axis.

The simple rule we have not yet learned is that the only allies of democracy are democratic people. Failure to transform Germany into a democratic society means that power reverts to the same elements that ruled Germany in the past. Failure to democratize Germany, as we said we intended to do, is the result of a complete misunderstanding of what had to be done to prevent a Soviet triumph in central Europe. We seem to have done all the wrong things, and none of the right ones. A day of reckoning will come over Germany, just as it came over China. I suspect that the resulting explosion in the United States will make the outcry over China seem like a pleasant afternoon tea. For in Germany it will be seen that we have not only lost the Second World War—that the Nazis rather than we were the victors—but that we have prepared the way for us to lose a third world war, if it comes.

I realize that I have painted a black picture tonight, blacker than some may believe it to be. But until evidence is shown me that contradicts what I have said, I cannot in honesty relieve the blackness by even a touch of gray.

Of one thing I am certain, however, and this thought I hope you will ponder at length. In all the years I have spent in public life, I have never seen the American people fail to be right on great public questions when all the facts were spread before them. In an issue as complex as Germany, covered over as it is by layers of propaganda from every conceivable source, it is taking the people of this country longer than usual to grasp exactly what is going on. When they do—and it is certain that they will—they will see to it that Washington hears from them in unmistakable terms as to what they want done. I pray only that their awareness will come in time for the effects of their thinking to be translated into action by our Government in its relations with the German state and the German people.

What the States Pay Out in Revenue and What They Receive in Return

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. REED of New York. Mr. Speaker, I am inserting in the RECORD, under leave to extend heretofore granted, two tables which I think will be revealing to the Members from the various States.

The first table shows the total internal-revenue collections by States and Territories, fiscal years 1940–49 in millions of dollars. The second table gives a summary of Federal expenditures by year and by State made as direct payments to States under cooperative arrangements and within States to provide relief and other aid, fiscal years 1940–49, inclusive, in millions of dollars.

The tables follow:

TABLE 1.—*Total internal revenue collections by States and Territories, fiscal years 1940–49* [1]

[In millions of dollars]

State	1940	1941	1942	1943	1944	1945	1946	1947	1948	1949
Alabama	17.1	25.8	67.4	142.4	248.0	253.9	239.0	244.3	276.9	259.5
Alaska	1.0	1.5	4.0	4.9	18.8	19.9	15.2	15.8	18.9	18.2
Arizona	5.1	6.2	13.5	33.5	69.0	71.3	76.2	76.0	83.8	82.1
Arkansas	8.5	12.6	29.0	54.7	92.3	98.5	102.3	109.0	121.8	115.9
California	315.3	405.7	755.7	1,411.3	3,371.7	3,722.5	3,369.4	3,144.4	3,103.7	2,955.9
Colorado	35.9	41.5	67.7	117.6	214.6	226.9	243.2	263.9	291.8	277.0

[1] Internal revenue collections include income taxes, estate and gift taxes, excise taxes, and employment taxes. Tax receipts are credited by the States in which the collections are made. Receipts in the various States do not indicate the tax burden of the respective States, since the taxes may be eventually borne by persons in other States.

[2] Separate figures no longer available. Included with Maryland.

Marshall Plan of Ideas

EXTENSION OF REMARKS
OF
HON. WILLIAM BENTON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the RECORD a three-column featured editorial appearing in the April 19 issue of the Christian Century, entitled "Marshall Plan of Ideas." This great magazine asks, "Does Congress really want a democratic world?" It endorses my resolution and calls for nothing less than a world missionary movement on behalf of democracy.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MARSHALL PLAN OF IDEAS

The Marshall plan recently passed its midpoint. After 2 years of operation, it is obvious to any impartial mind that it is playing a significant role in European recovery. If that recovery fails, as it may, it will not be because of the Marshall Plan, but in spite of it. Europe still has a long way to go, but without American aid, given through what Mr. Churchill called "one of the most unsordid acts of history," it would not have made a beginning.

The success of the economic Marshall Plan has caused Senator WILLIAM BENTON to pro-

pose a "Marshall plan in the realm of ideas." The Connecticut Senator is the only Member of the present Senate who has served as an Assistant Secretary of State. Out of his 2 years' experience under Secretary Byrnes, he realizes more keenly than most Senators how intense is the battle now being fought between communism and democracy for the minds and loyalties of men. Senator BENTON is also one of the few Members of the senior legislative body who have worked in advertising, publication, and education. Out of this background he has developed a conviction that world public opinion can be influenced for good and has formed some ideas as to how to go about it.

This faith and know-how Senator BENTON sets forth in a resolution which he has introduced in the Senate. Recognizing that force, the threat of violence and the expenditure of vast sums cannot in themselves answer Communist propaganda, he proposes a global offensive in behalf of the ideas which express democratic principles and aspirations. It may be argued that his timing is bad, since the upper house seems determined to let the business of government slide while it plays politics with Senator MCCARTHY. But this fact may rebound to the benefit of a constructive proposal of this character when the upper house recovers its sense of duty and its perspective.

The world situation certainly demands that we take the lead in a greatly expanded program of information and education among the peoples of the world, who are not permitted to share the Senate's leisure and who are only mildly interested in its passions. James Burnham argues that point cogently in his recent book, The Coming Defeat of Communism. Believing that the Soviet structure of power is essentially vulnerable, he declares that it can be overthrown without war if the western nations use the means at their disposal, including a massive propaganda attack, to that end.

Senator BENTON'S proposal is confined to the development of a world-wide program of information and education. This can be done, he says, in six ways. (1) Our diplomacy must be geared to securing universal freedom of information. (2) We should greatly extend the support we give to the work of the United Nations Educational, Scientific, and Cultural Organization. (3) We should expand the Office of International Information and Educational Exchange in our own State Department by increasing the number of educational films sent abroad, multiplying the number of foreign students brought to the United States, and setting up ways of a world broadcasting network. In these and other ways we should do everything possible to penetrate the walls of censorship which isolate the people under Communist control, as well as to reach others not yet overrun.

Senator BENTON seeks also (4) to increase the current efforts to promote democratic education abroad, especially in Germany and Japan; (5) to convene a conference of non-Communist nations to coordinate and improve their information programs; and (6) to establish a non-governmental agency to guide and inspire the efforts of the millions of private American citizens who might use their talents and resources and contact overseas in furtherance of the programs and objectives of this resolution. This is a bold and spacious conception, and it deserves serious consideration.

More than that, it deserves support in principle. If we are losing the cold war, as many believe, it is because we are losing the battle for the minds and loyalties of men. This is not because the conceptions of freedom and democracy inherently lack strength and liberating power. The contrary is true. Rather, it is in part, because, as Senator BENTON says, "day in and day out, in two score languages, in every medium of communication from a whispered rumor to a globe-girdling radio, everywhere from a remote Burmese village to the Security Council of the United Nations, the Communists play the same propaganda tune. * * * It revolves around five themes: (1) The United States is headed for a cataclysmic economic crash. (2) The rulers of the United States are Fascists, warmongers, and capitalists. (3) Although the rich of the United States are getting richer, everybody else is getting poorer, and there is starvation, unrest, and growing sympathy for the Soviet Union among the masses. (4) America's vaunted freedom is a fraud and our doctrine of equality is belied by racial and religious discrimination. (5) Our character is bad—we are culturally barbarous, money-mad, lawless, crime-ridden, and effete."

This Communist propaganda offensive is having a profound effect, particularly among the peoples of southeast Asia and Asia, who have not had first-hand experience with communism but have had such relations with colonialism. Walter Lippmann recently declared that "we are losing touch with the peoples of the world—with their fears, their hopes, their needs, their purposes, and their will to survive—and we are talking not to them but to ourselves, in a self-induced mood of defeatism and impotence, about how much we must distrust one another and our own better instincts and our own capacity to think and believe." We ought to make it a first consideration to recover effective contact with the peoples of the world. We should realize that this is essentially a missionary task in the field of politics. In its essence, democracy is the application to the relationships of men of true and morally right principle. As a political concept, it needs to be proclaimed with skill in the use of modern media of mass communication, with sacrificial zeal and convincing power. It has nothing to fear from Communist competition so long as men are in position to learn the truth and to make a free choice. It can rely on the truth, and the truth can always win over what Communists seek to justify as the historic lie if it is fearlessly and diligently proclaimed and defended.

Senator BENTON'S resolution, which is cosponsored by a dozen Senators of both parties, simply asks the Senate to endorse the outline of his proposal for a Marshall Plan in the field of ideas. It does not carry an estimate of costs and it is not linked with an authorization for expenditure. It would obviously cost a great deal more than the $31,000,000 which the Department of State is spending this year for its world-wide program of public relations. But if some action of this kind can contribute vitally to victory in the ideological contest which is now going on in the world, as it can, it deserves support. Even if the whole program is not approved by an economy-minded Congress, a part of it may be.

Today half the member nations of the United Nations practice some form of censorship. American influence is helping to break down these walls and it can do more. UNESCO, with a budget of only $8,000,000 a year, is making a significant contribution to world peace and security. It could do a great deal more if it were adequately supported, as the United States delegation to that body is urging. The few documentary films on American life which the State Department has distributed abroad portray, generally accurately and effectively, what life as we know it in this country actually is. What might it not mean if one-fourth of the population of the earth could see documentaries of this kind once a month. Foreign students educated in America have almost always been among our best friends abroad. An exchange program which would absorb 50,000 or 100,000 such students a year would make an incalculable contribution to world understanding.

An example cited by Mr. BENTON is worth pondering. "The ECA, under its technical assistance program, brought 600 people from European industry and agriculture last year to study our methods. Two among the 600 were influential Italian labor leaders. When these two had seen American labor-management relations at first hand, when they had seen that our workers share in the benefits of increased productivity and from the use of labor-saving machinery, when they had seen that competition is not without its economic value to our workers, they went back to Italy, pulled 700,000 workers out of the big Communist-dominated general trade union and launched an independent union."

America's task, we repeat, is nothing less than to organize a world missionary movement on behalf of democracy. Such an attempt does not imply that we have nothing more to do to make democratic principles more effective at home. It does not imply that the Christian missionary movement should become in any way organizationally entangled or involved in this essentially political effort. That indeed would be a grave disservice to the Christian church, which all concerned should seek to avoid. A world-wide missionary campaign on behalf of liberty and equality would have powerful effects among colonial peoples who are seeking the freedom which so many millions have gained in recent years.

It might even backfire to make our own underprivileged minorities demand a larger share of participation in the political and economic benefits which the majority have. Let it! A risk that the missionary always runs is that the creed he preaches will lay hold of his own life and revolutionize it to a degree he did not anticipate. If he wholeheartedly believes, he will not fear but welcome such an outcome. Does Congress really want a democratic world? Do we?

False Picture of United States Abroad Held To Antedate Red Efforts

EXTENSION OF REMARKS

OF

HON. WILLIAM BENTON

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. BENTON. Mr. President, I ask unanimous consent to insert in the Appendix of the CONGRESSIONAL RECORD an article by a distinguished foreign correspondent, Harold Callender, which appeared in this morning's New York Times. As Assistant Secretary of State, I used to point out that there was a great need for a United States informational and educational exchange program throughout the world—even, if, as I once put it, the Pacific Ocean were to open up and swallow the U. S. S. R., and communism were to be abolished from the earth. Misunderstanding and mistrust of the United States is deeply entrenched in many areas of the world, and is widespread even in England. The Communist propaganda has capitalized upon and exaggerated attitudes toward America and beliefs

about us, the origins of which go back for decades or centuries.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FALSE PICTURE OF UNITED STATES ABROAD HELD TO ANTEDATE RED EFFORTS—TRUMAN DISPUTED BY OBSERVERS IN EUROPE WHO SAY HATRED OF CAPITALISM IS PROBLEM

(By Harold Callender)

PARIS, April 23.—Upon reading President Truman's speech to the American Society of Newspaper Editors, now available textually, experienced observers here were surprised by the apparent disposition of the President and his advisers to assume that Communist propaganda was mainly responsible for the distorted views of the United States held abroad.

Calling for a campaign of enlightenment to counteract this propaganda, the President emphasized its exploitation of the desires for peace and for social justice on the part of the masses of Europe and Asia and the false picture it gave of the United States.

But it was pointed out that prejudices against the United States far antedate this propaganda, and that they derive in Europe from a long-standing hatred of what Europeans consider capitalism, from anti-American sentiments that have become traditional, and from a lack of understanding of current American foreign policy.

Communism did not create any of these rich resources that lie ready for use by its propaganda but it has adroitly utilized them, in the opinion of those who have given most attention to the question.

APPEAL TO OLD PREJUDICES

These observers consider that Moscow's propaganda would lose much of its sting were it not for its ability to appeal to old and deep-seated prejudices against the United States that exist in circles extending far beyond the wage-earning groups and that are still propagated by some on both the left and the right.

It is contended that in facing the problem of enlightening the world regarding the United States and its policies, full account must be taken not only of the picture of the United States drawn by Communist propaganda but of that which existed in European minds before the Communists started to work on them.

In the Far East the United States faces not merely or mainly Communist propaganda but profound fear and dislike of the west and its colonial encroachments, it is pointed out. This fear and dislike had spread over Asia long before Premier Stalin began to exploit them in favor of what he ingeniously calls popular democracy.

This fact is painfully familiar to the State Department, which for this reason has been urging the French to promise full independence to Indochina or eventual French withdrawal from that country. The Department realizes the handicap under which it labors in appearing to support a remnant of the former colonial rule of the west in Asia.

TWO OUTSTANDING KINDS

In much the same way the United States must contend in Europe not only with skillful Communist propaganda but with prejudices that may be called indigenous non-Communist and pre-Communist. The two outstanding kinds are the following:

First, a deeply rooted and long-cultivated anticapitalist sentiment among the wage earners. It reflects the low wages and bad housing long associated with capitalism as understood by these wage earners—that is, with European capitalism, a different species from the American. But European workers do not understand this distinction. To them the United States is the classic type of a capitalistic society of which they believe low pay is an indispensable attribute.

Second, equally deeply rooted and long-cultivated prejudices against the United States in the more fortunate classes, notably among many intellectuals who look upon the United States as a culturally backward country that has not caught up with—or is rapidly departing from—the high and unique civilization of Europe.

By playing upon these two types of prejudice, the Communists appeal not only to those who work hard for an ill-paid livelihood but also to many who live well and have leisure for the intellectual enjoyments that often include expression of contempt for the United States. Those who read the Communist press of western Europe know how skillfully this double appeal is made.

IGNORANCE, MISTRUST OF UNITED STATES

In France, where Communist propaganda has perhaps made the greatest headway anywhere in western Europe except Italy, its principal assets are the anticapitalism instilled during a generation or two by both Socialists and Communists, and a widespread ignorance and distrust of the United States in other than the wage-earning classes.

It does no harm to Communist propaganda when distinguished conservative writers, contributing to very conservative newspapers, take pot shots at the United States on other grounds—like the recent writer who proclaimed that the United States and the Soviet Union were both menaces for Europe because they were killing individualism by their mass production. He did not take the next logical step and say that western Europe should be neutral as between the two. But other writers did.

This was not Communist propaganda. But it was grist for the Communists' mill since the spirit of neutrality in western Europe would suit their strategy and injure that of the United States.

As for the economic assets of Communist propaganda, the Marshall plan has helped restore French production, and wages have risen to a level probably not far from that in 1938. The Communists have suffered as a result. But this wage level was not satisfactory in 1938 and is even less satisfactory today. So the Communists have plenty of ammunition left, as the French Government knows to its sorrow.

HAS ALIENATED WAGE EARNERS

On the economic side it appears that United States propaganda must contrast the American way of life not only with that of Russia but with that of western Europe, which has alienated wage earners from what they think is American capitalism.

As for the anti-American intellectuals, any counterpropaganda must meet their argument that the United States has abandoned European standards of culture based on individualism and the Latin heritage. It must counteract the picture, drawn in scholarly books and pictures, of the United States as a kind of highly mechanized barbarism.

Observers in Europe believe that United States policies need a lot of explaining too. Europeans are being asked to rearm in accordance with the North Atlantic Treaty. But neither governments nor the public quite see how this treaty is to guarantee against an invasion of western Europe. The French want to know how far and how long the United States will help them defend Indochina and how strong the United States intends that western Germany shall become.

After 1952—West Europe Faces Up to a Dilemma

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a significant article by Harold Callender, appearing in the New York Times, entitled "After 1952—West Europe Faces Up To a Dilemma."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AFTER 1952—WEST EUROPE FACES UP TO A DILEMMA

(By Harold Callender)

PARIS, April 22.—Georges Bidault, Premier of France, made this week a proposal that had in it far more than met the eye.

It amounted to a suggestion for a reappraisal of the entire field of strategic, economic and political relations among the nations of western Europe and North America—those relations having become obscure, contradictory and in some respects unreal.

M. Bidault's proposal implied a reexamination of United States foreign policy—the major factor in all those relations—as it has been expressed in the Marshall plan, in the North Atlantic Treaty and in the planning, aspirations and slogans engendered by those two enterprises.

The purpose was to reconcile the aims of the Marshall plan looking to the economic recovery of western Europe and the aims of the Atlantic Treaty, which seem to threaten this recovery by necessitating expenditures on armaments that the European nations cannot afford.

To put it in another way, the urgency behind M. Bidault's proposal was the need to insure that the North Atlantic group of nations could avoid in coming years both inflation and depression, either of which would appear to confirm the Moscow thesis that the capitalist world was doomed.

BALANCE OF FORCES

The apparent confirmation of this thesis might frustrate the huge efforts now being made to maintain peace by a balance of forces and certainly would impair the ability of the western world to "create strength" in areas where it was necessary, as Secretary of State Acheson expressed it.

The economy of the western world is considered as important in the cold war as its military equipment. The dilemma is to determine how to ration resources and effort between the two. The conviction in western Europe is that this cannot be done on a national or even a continental scale, but it can be done only by North America and western Europe working together to an extent not yet envisaged in accepted policies.

Such was the meaning of the rather brief proposal of M. Bidault for creation of an Atlantic High Council to coordinate the defense, economic policies and politics of the Atlantic coalition.

These three subjects have so far been carefully kept apart and confided to different authorities, as if they were unrelated or only tenuously or incidentally related. French

logic has now linked them together as forming a single task that the western world will ignore at its peril. The French have lost much of their former power and political prestige, but M. Bidault's proposal shows they can still produce ideas.

Washington apparently had already foreseen at least some of these problems when President Truman appointed Gordon Gray to study what the United States could do after the end of the Marshall plan in 1952, to steady the trade and insure the solvency of western Europe.

It was thus recognized that the economic viability of western Europe, which it was once thought would result from the Marshall plan, would still be dubious and that the surplus production of the United States would remain a problem.

It was widely believed that the Marshall plan would enable western Europe to stand on its feet economically by 1952 and cease to be either an economic or a strategic headache for the United States. This was dangerously exaggerated conception, like some of the other arguments used to sell the Marshall plan to Congress.

One of these was that the plan would contribute to the unity of western Europe or its economic integration. Some United States officials have since regretted the use of these deceptive terms. For very little unity will result, and even if western Europe were fully unified, it would still face the balance of payments problem that Mr. Gray is to study.

WEAPON IN COLD WAR

While in Europe the emphasis was upon restoration of economic life with Marshall aid, in the United States the Marshall plan was seen increasingly as an instrument in the cold war. Perhaps it was considered a sufficient instrument in the beginning, since Soviet pressure was mainly exerted through the Communist parties within the European countries.

But soon the feeling developed that the economic arm of American foreign policy was not enough and that some military gesture by the United States was necessary. This feeling owed much to the Soviet blockade of Berlin in 1948. The North Atlantic Pact was the result.

The usefulness of the pact lay first of all in the fact that it involved or implied a United States commitment to go to war if western Europe were invaded, and in the idea that the United States alone appeared to have a stock of atomic bombs. The commitment remains, although some Europeans question it because it is implicit rather than explicit. The monopoly of the atomic bomb by the United States seems to have vanished.

Consequently, even those Europeans who do not question the immediate and active military aid of the United States in an emergency are constrained to wonder just how prompt and effective this aid would be. They see the Atlantic Pact as giving moral assurance but falling short of physical guaranties against invasion.

Washington, too, believes there should be something more solid behind the pact, since it has urged creation of defense forces in western Europe. The character and the distribution of these forces have now been fully planned on paper. But the Ministers of Foreign Affairs, Finance and Defense of Britain, France, Belgium, the Netherlands, and Luxemburg, who met in Brussels this week, apparently all agreed they could not possibly finance such forces, especially if at the same time they were to go on financing the economic recovery for which the Marshall plan had laid the foundation.

CONTRADICTORY TASKS

Thus the cold war has laid upon western Europe two contradictory tasks. Washington has been telling Europe for more than 2 years that it must hurry and recover because there would be no more dollar aid after 1952. But in recent months Europe has been told it must divert a large part of its resources in money, materials, and labor from recovery to defense.

It is still doubtful whether western Europe would be independent of United States economic aid by 1952 even if it had to pay for no armaments. Much would depend upon the trend of business activity in the United States in the next 2 years and upon Europe's ability to develop new sources to replace dollar imports.

But if, now, western Europe must finance defense production as well as normal production, no doubt remains. Western Europe will surely need American aid long after 1952.

This is why European officials began several weeks ago to say privately that the elaborate plans and calculations made pursuant to the Marshall plan, and the assumption of peacetime needs only, might soon have to be scrapped unless there were to be another Marshall plan after 1952—a Marshall plan that would still be an instrument in the cold war, but this time not an economic but a military instrument.

When the Marshall plan began, the great question was how much Europe could do, and should be obliged to do, for itself while receiving American aid. The same issue of self-help must arise if strategic imperatives cause the Marshall plan gradually to merge into a defense plan entailing the same kind—and probably much the same amount—of American aid for Europe.

Surveying this outlook, the French and other officials have suggested that western Europe would be obliged again to appeal to the United States, being as unable to finance its defense under the Atlantic Pact as it was to finance its indispensable imports for which the Marshall plan provided.

These were the culminating reasons for the conclusion that western Europe, being unable to live up to the slogans of the Marshall plan propaganda by attaining political or economic unity, much less defensive self-sufficiency, was justified in proposing that the common problems of Europe and the United States should be tackled on a wider scale and by different methods.

ALLIANCE UNDER SINGLE PLAN

The aim of the Marshall plan, in one sense, was to isolate Western Europe as an economic problem and to induce it to cure itself by becoming financially independent of the United States. The logic of the Atlantic Pact, on the contrary, is to link western Europe closely with the United States in one huge strategic region subject to a single plan.

The recovery sought by the Marshall plan and the security sought by the Atlantic Pact must be balanced one against the other. They are almost as closely related economically as mathematical coordinates. Moreover, they represent merely two aspects of the single problem of stiffening western Europe against hostile pressure.

Therefore, they should be recognized as fitting into the same context, Europeans contend. This context, they insist, must be that of the Atlantic Pact, not that of the Marshall plan.

The smaller context of western Europe chosen by the Marshall plan is regarded as having lost reality in the light of recent developments. The goals of western European unity are considered to have become both impossible and insufficient—impossible, because western Germany cannot be integrated with the rest of western Europe while Britain refuses to be; insufficient, because even if this integration were possible, western Europe would still be unable to recover and rearm herself at the same time.

Hells Canyon Project in Oregon

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the RECORD a memorandum on the Hells Canyon project in Oregon, prepared by Mr. Albert C. Ullman, the very able president of the Hells Canyon Development Association.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

HELLS CANYON DEVELOPMENT ASSOCIATION
COORDINATED PLAN MUST BE ACTIVATED

When the Senate on April 17 passed the omnibus rivers and harbors bill without the Interior amendment, a hard blow was dealt to the Pacific Northwest, but more particularly to the new coordinated development program in which the region has come to place so much faith. The implications of this action are so far-reaching and so serious in nature that it must gain the attention of everyone even remotely interested in basin development.

By carving the coordinated agreement vertically, projects in the area of Corps of Engineer operations are authorized, including the John Day and The Dalles Dams of the lower Columbia, admittedly long-distance objectives, neither settled in agreement nor projected on power studies of this decade. Projects in the jurisdiction of BuRec are not authorized, leaving out the Key Hells Canyon Dam and certain irrigation projects. Under coordinated agreement both agencies were to work. Under the Senate action one agency and all its projects in all its territory waits. Projects on the Bonneville Power Administration timetable are not authorized while projects not on that schedule have been approved. Needs have not been met; urgency has been ignored; areas have not been considered; coordination, planning, resource conservation, and political considerations have not been satisfied; half a program remains to be activated.

The Bonneville Power Administration schedule calls for the first generators of Hells Canyon to go into operation in 1956. There are many reasons for this high priority recommendation, among them:

1. Flood and river control in addition to power production are urgent, with Hells Canyon the major storage facility.

2. The power output of Bonneville and McNary will not reach maximum efficiency without Hells Canyon. Hells Canyon's installed capacity is 800,000 kilowatts but through its storage releases it will actually produce 1,069,000 kilowatts of system firm power.

3. The moratorium on projects interfering with migratory fish runs downstream places priority on Hells Canyon which is above all the major spawning tributaries. It would be unfortunate to again ignore the interagency fishing moratorium agreement of 1947.

4. The upper Snake area is in urgent need of major power for the development of phosphate and mineral potential; and the Northwest is in need of a dispersal of strategic installations, Hells Canyon being far interior and in new load centers.

This has been the first major test of the coordinated agreement development program and present action constitutes a defeat for that program. The interior projects were not argued on their merits but were rejected because of a jurisdictional dispute. In order to keep the spirit of the coordinated program alive the Bureau of Reclamation projects, especially the key Hells Canyon Dam, must be approved through separate legislation this session.

Continued orderly development according to proven plan is the great need in the Northwest today. Power for existing industrial needs and future industrial requirements, power for critical defense purposes, flood control to prevent a recurrence of the Vanport disaster, are factors that cannot wait. Hells Canyon is the next step in the studied timetable of development. This Congress cannot allow that timetable which is the heart of the coordinated planning to be thrown out of gear. A separate bill in this session authorizing Hells Canyon and urgent Bureau projects will bring that program back into focus.

ALBERT C. ULLMAN,
Hells Canyon Development Association.

The Hells Canyon Development Association is a nonprofit, nonsalaried organization composed of independent businessmen, farmers, and working people of Oregon and Idaho, financed through dollar contributions from its membership.

Continuation of United Nations Children's Fund

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, in a bill, S. 3420, recently introduced by the senior Senator from Ohio [Mr. TAFT] and other Senators, including myself, it is proposed that the work of the United Nations Children's Fund go on. The New York Times of April 18 published an editorial in regard to this bill and this humane and worth-while activity. I ask unanimous consent to insert in the Appendix of the RECORD this editorial describing the work of the Children's Fund and urging support of S. 3420.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CHILDREN'S FUND SAGA

The saga of the UN's Children's Fund since the end of the war is one of the proudest chapters of modern man's devotion to helping his fellow man. While international politics and partisanship have disrupted a score of the UN's specialized agencies—not excluding the fund, from which the Russian and Polish delegates recently took a walk—this group gets on with its planning, feeding, healing, with steadfastness and purpose.

In the past several months the saga of the Children's Fund has led it away from countries that are recovering adequately to help their own to new areas that are—some always were—in desperate need. Thus the emphasis is shifting to India and the Middle East, to the Far East, to underdeveloped areas in Latin America. Because of lack of government contributions, the Children's Fund has only been able to touch the fringe of the problem. But the marvel is that it has been able to surmount financial obstacles, that it has doggedly held to its nonpartisan program, spread itself thin when necessary, kept the life-giving milk and cod-liver oil and food flowing to the needy. Perhaps never was the worth of its achievements more dramatically seen than among the Arab refugees, who would have died by the thousands except for Children's Fund contributions.

The fund's vital work—at the individual level—must go on. This is the meaning of the excellent bipartisan bill just introduced by Senator TAFT to continue American participation in the fund for another year. The long-term programs and intelligence surveys that have been proposed are fine, but only if they are to be concurrent with active continuation of the Children's Fund work and are not intended to displace it. To continue that work the fund needs hard cash—from governments, from people with understanding hearts. The $25,000,000 appropriation still due the fund from this Nation should be made available without strings.

Unemployment Caused by Imports

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. REED of New York. Mr. Speaker, the failure of the Truman administration to take action to preserve the jobs of hundreds of thousands of employees caused by an ever-increasing volume of imports is tragic. Imports of oil are closing coal mines, thus throwing the men who work in the mines out of employment. The railroad employees of the railroads that haul the coal are losing their jobs. The employees in our domestic oil fields are being thrown out of employment. All of this unemployment is spreading day by day, and it will continue until imports are decisively checked. I feel that there is a direct responsibility of the United States Government to take some action which will protect the oil industry of the United States from the threat which the Government itself has helped to create.

There is now a world surplus of oil. It is clamoring for outlet into our markets. The imports of crude oil and products have steadily increased. In 1949 the daily average of such imports was 642,000 barrels daily, which was 129,000 barrels daily more than in 1948. The increase was 25 percent. The average for the first 2 months of 1950 was 792,000 barrels per day.

During the war the United States encouraged the development of foreign producing and refining. Some of the assistance was necessary. Some of it was the result of influence wielded by officials of companies which held large concessions and which were faced with the necessity of spending large amounts of money. A notable instance was revealed in the investigation of Middle East operations by the Brewster Committee in the Eightieth Congress. A former official of the group of companies interested in Saudi Arabia testified that he acted to have Arabia added to the list of recipients of lend-lease, thus satisfying the demands for money which the King of Arabia was making on the companies. He sued his former associates and won a jury award of a million dollars for the use of his influence. The fact that a higher court set aside the verdict in no way disproved his claim that he had been instrumental in transferring a company's financial problem to the taxpayers of the United States.

Manpower, materials—every possible assistance was given to the same companies which import oil into the United States to expand their operations in the Middle East and in Venezuela during the war. With the end of the war the assistance continued in the form of approval of exports of scarce equipment and materials needed in the development of oil resources in the United States. In a long period of scarcity of such goods the flow of them for foreign use continued.

Then we entered the phase of the ECA. Assistance has been poured out lavishly to expand the oil producing and refining industry in Europe and the possessions, mandated territories, and countries under influence and control of European nations. The authorizations for the purchase of crude oil and products for the Marshall plan countries in the first 21 months of the plan's operation—to December 31, 1949—totaled $775,200,000. As the money went to the companies which produce and refine oil and as the world surplus of oil outside the United States is controlled by seven companies—five of which are United States corporations—it follows that there was, in effect, a subsidy of their operations by the people of the United States. The greater part of the oil supplied to Europe under the ECA operations was from the Middle East and Venezuela. The principal importers into the markets of the United States are the same companies which received the greater part of the ECA expenditures for petroleum and they have thus been aided in their plans for further expansion of foreign activities.

A measure of the growth abroad is provided in the production statistics for 1949, compared with the figures for 1947. The production of Venezuela increased 10 percent; Middle East (Iran, Iraq, Saudi Arabia, and Kuwait), 66 percent; Far East (British, Dutch, and American interests in the East Indies), 209 percent.

The production in the United States was 1 percent less in 1949 than in 1947.

In addition to the ECA expenditures for petroleum products, grants have been made for refinery expansion within the participating countries. The ECA statement as of March 10, 1950 was that refinery projects to the total of $160,850,000 in dollar and dollar equivalents had been approved; of this $23,782,500 were ECA dollars. In the 16 Marshall-plan countries the refinery capacity at the end of 1948 was 485,000 barrels daily. At the end of fiscal 1953, according to ECA reports, the capacity will be 1,041,700 barrels a day—more than doubled, taking into account only the existing capacity plus the completion of projects now under construction. And if the ambitions of those countries are realized, as ex-

pressed by their Organization for European Economic Cooperation are realized, the refinery capacity will be 1,315,000 barrels daily. ECA petroleum branch men have testified to the Small Business Committee of the House that they have attempted to prevent expansion to the figure desired by the recipients of ECA aid, but that they expected the final capacity figure would be more than 1,010,000 and under 1,250,000 barrels daily. It was their opinion that the lower capacity could be used in meeting Europe's needs.

United States companies are fully keeping pace with the expansion. Their capacity in Europe at the end of 1948 was 116,000 barrels a day; present construction will bring it to 303,000 barrels and if the OEEC long-term program is realized, they will have a capacity of 401,900 barrels daily at the end of fiscal 1953.

It is interesting to note that United States companies have been getting ECA money for refinery expansion. Peculiar as it sounds, the Standard Oil Co. of New Jersey, one of the corporate giants of the world, actually received from ECA $1,427,000 for the expansion of a refinery in France in which minor interests are owned by two other giants, Gulf Oil and Atlantic Refining, with some French ownership. In another instance, Socony-Vacuum Oil Co. got $850,000 in ECA funds for refinery expansion in France.

The oil industry abroad is being pushed and rushed to a condition of overexpansion. Already the effect is being felt in numerous ways. The "sterling area" countries—Great Britain's eight commonwealth countries—are reducing the allowed imports of "dollar" oil. Greater and greater portions of the European market are being taken by Middle East oil produced by British and Dutch companies and the American companies, confronted by their overexpanded and overstimulated producing and refining programs, look increasingly to the United States for market outlet.

Building a Better America by Perpetuating the Ideals and Teachings of Booker T. Washington

EXTENSION OF REMARKS

OF

HON. COMPTON I. WHITE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 29, 1950

Mr. WHITE of Idaho. Mr. Speaker, approximately 3½ years ago, the House Committee on Coinage, Weights, and Measures, of which I had the honor to be chairman, reported unanimously a bill for the minting of 5,000,000 Booker T. Washington memorial silver half-dollars to commemorate the birth and perpetuate the ideals and teachings of that great Negro leader, who did so much for the people of his race and contributed so much to better racial understanding.

These coins are being sold by the Booker T. Washington Birthplace Memorial, a nonprofit organization, for $1; and the premium on these sales is being used to establish trade and industrial schools for the training of Negro youth, thereby not only improving the economic status of the Negro but contributing greatly to our entire national economy.

The remarkable achievements of this organization in carrying out the objectives for which it was organized is fittingly described in the appended article by the noted Negro author, traveler, and public speaker, George S. Schuyler, which appeared in the Pittsburgh Courier, April 22, 1950.

I recently had the privilege of visiting the Booker T. Washington birthplace and the Trade Schools of Roanoke and want to say the work that is being done is a real inspiration to carry on similar work in other parts of our country where there is a substantial Negro population.

I trust that everyone reading Mr. Schuyler's article will send $1 to the Booker T. Washington Birthplace Memorial at Booker Washington Birthplace, Virginia, for one of these memorial coins and share the joy of helping those who are furtherest down in the economic scale to help themselves to climb the ladder to economic security.

The article follows:

VIEWS AND REVIEWS—SCHUYLER FINDS AMAZING TRANSFORMATION AT BOOKER T. WASHINGTON'S BIRTHPLACE

(By George S. Schuyler)

S. J. Phillips, of Booker T. Washington Birthplace, Va., is a good-looking, dark, middle-aged Negro who not only believes in the great American educator's philosophy of skilled industrial and business schooling, and "letting down your bucket where you are," but he is definitely doing something to put that philosophy into practice.

Before I met Mr. Phillips early this month, I only knew him by name and newspaper reports, and I had only the haziest notion where Booker Washington's birthplace was when I accepted his invitation to attend the memorial services there. I knew that he had promoted the Booker T. Washington memorial half dollar, but I was astounded to learn that this, the fifty-first special coin of its kind, had sold more than all of the other 50 authorized by Congress. Indeed, I learned it had sold twice as many, selling for $1 each, and it is still selling. I should think every Negro in the United States would want to own at least one of these coins, and obviously hundreds of thousands do.

It is not too easy to get to Booker T. Washington's birthplace. Going to Roanoke by airplane, train, or bus, it is necessary to motor some 20 miles over hill and dale through some mighty picturesque country before the isolated place near Rocky Mount, Va., is reached. It is a beautiful ride on a clear day, as Sunday, April 2, was.

I expected to find the log cabin where the great man was born whose bust now stands in the hall of fame, but the avenue lined with American flags, the gleaming new buildings, the scores of parked cars from all over the region and the hundreds of visitors in holiday mood were more than I had bargained for.

Benches were arranged for the outdoor ceremonies and there was a loudspeaker system. A new two-story, modern brick building, for dormitories and recreation draped with flags, was dedicated later that afternoon. There was the log cabin birthplace of the big man, draped with bunting and hung inside with mottos; and alongside it was the old well, now glorified with cement, stone work and a large tin bucket above which the well-known legend read: "Let down your bucket where you are." In the bottom of the bucket, covered by 2 inches of water, were many coins tossed in by admiring visitors. I learned that during 1949, over $300 was contributed in that manner.

It was evident soon that this memorial to a man who gave his country and the world a new concept of mass education was something more than a refurbished log cabin and a glorified well. This 600 acres of land had been bought from the white owners for $50,000. Planted acres number 250, while 30 acres are given over to orchards. In addition there are two tractors, four trucks, two station wagons, 12 automobiles, a couple of cows, some three dozen hogs, over 2,000 chickens, two poultry houses of the most modern design, a residence cleverly converted from an old barn, six tobacco barns, two other barns, a large new residence, an office building and the birthplace's own post office with an attractive young brown postmistress. When I was there the place was stacked with bags of mail incoming and outgoing. I hadn't known that there was a post office called Booker Washington Birthplace, Va.

In addition to all this, there is a night school, teaching trades, operated for the benefit of ambitious students from the surround-countryside.

Unlike many rural communities, this one boasts electric lights and hot and cold running water.

All this has been accomplished since World War II.

Next day we drove into Roanoke to the Booker T. Washington Memorial Trades School which is located in four different buildings rented for the purpose. It was established by Mr. Phillips September 4, 1949, after the surmounting of various obstacles not the least of which was the opposition of some jealous Negroes. This school, whose 222 students are largely ex-service men, teaches bricklaying, carpentry, radio and television, beauty culture, and business skills. It is significant that already seventeen graduates in bricklaying and beauty culture have secured jobs.

Whether teaching motor mechanics, typing, or cabinet making, the young instructors seem to know their business. The workrooms were busy as beehives and yet everything was clean and orderly. I noted that the latest machinery and equipment was in use.

Well, it all adds up to something really inspiring, and it is a great credit to a dynamic man like S. J. Phillips and his devoted workers that all of this has been accomplished during a period when many people were wagging their heads and viewing the future with alarm.

Of course, there are some shallow pates who will say that Booker Washington's philosophy was good at a certain period, but is now dead. However, artisans and farmers who are well trained will always be in demand and will never know privation. One reason why the Negro has been "last to be hired and first to be fired" is because so few Negroes could do anything well that the economy wanted done. If there were a big group of highly skilled Negro craftsmen no one will argue that we would not be better off.

Every person should be highly skilled in at least one craft. Our great difficulty today, as in the past, is that we have tens of thousands of Negro so-called workers, urban and rural, who really do not know how to do anything well, except moan for security and Government freebies. Many cannot even shine shoes or do domestic work properly. How the picture would change if we had a few hundred more consecrated men like far-sighted S. J. Phillips of Booker Washington Birthplace, Va.

Alaska, Hawaii on Verge of Statehood

EXTENSION OF REMARKS

OF

HON. HENRY D. LARCADE, JR.

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. LARCADE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Gould Lincoln from the Washington Sunday Star of April 23, 1950:

ALASKA, HAWAII ON VERGE OF STATEHOOD—HEARINGS TOMORROW IN FINAL DRIVE TO WIN GOAL

(By Gould Lincoln)

Hawaii and Alaska, knocking at the door for statehood, begin tomorrow a final drive to attain their ends during the present Congress. Hearings on the Alaska statehood bill open before the Senate Committee on Interior and Insular Affairs, and the committee has set May 1 for its hearings on the Hawaiian bill. Both measures already have passed the House. It begins to look as though the last barriers to statehood for the two Territories will be surmounted.

Although as chairman of the committee, Senator O'MAHONEY, Democrat, of Wyoming, is withholding final judgment, it is known he is inclined to favor statehood. In the Eightieth Congress the House also passed an enabling bill for Hawaii and Alaska.

The House Public Lands Committee reported one for Alaska. The determined opposition then of Senator BUTLER, Republican, of Nebraska, chairman of the committee, effectually bottled up the Hawaiian bill and it died with the Congress. Mr. BUTLER is now the ranking Republican member of the committee.

The admission of the two Territories would make the United States an even 50—would bring the membership of the Senate up to 100, and would add two or three Members to the House. It is 38 years since the two youngest States were admitted—Arizona and New Mexico. Five years earlier, in 1907, Oklahoma—the combined Oklahoma and Indian Territories—became a State.

TERRITORIES FOR MANY YEARS

The two proposed new States are noncontiguous territory of the United States. Both, however, have been Territories for many years. Hawaii was acquired by annexation through treaties approved by the Senate of the United States and by the Senate of the former Republic of Hawaii shortly before the turn of the century. Alaska was purchased from Russia in 1867. How wise that purchase was has been demonstrated many times—but never more so than today when the relations of the United States and Soviet Russia have settled into a cold war which may become a hot war at any time. World War II has emphasized Alaska's strategic value, and brought to memory Gen. Billy Mitchell's statement that: "He who holds Alaska holds the world."

Indeed, argument is made for statehood, for both Hawaii and Alaska on the ground that each is an important outpost, and that under statehood, each would become stronger.

Opposition to statehood for Hawaii, at least on the surface, has centered on reports of Communist infiltration and on the fact that the population has many large racial groups, particularly Japanese, which are foreign to the United States. Senator CORDON, Republican, of Oregon, a member of the Interior and Insular Affairs Committee, during the Eightieth Congress, made an extensive investigation of Communist activity and influence in the islands and reported that it constituted no barrier to statehood. Today, an inquiry into the same subject is being made by a subcommittee of the House Un-American Activities Committee, now in the Territory, and the findings of that committee may have definite bearing on final action regarding Hawaii.

HAWAII TRIES SHORT CUT

Hawaii recently has moved toward getting into the Union without the passage of an enabling act by Congress. It has elected delegates to a constitutional convention to write a constitution for the proposed State. When this constitution shall have been drafted, it will be submitted to the people of the Territory for ratification, and if the people vote for it, the constitution will be forwarded to Congress for approval, with a petition that Hawaii be admitted as a State. This is the second string to Hawaii's bow. Fifteen States have been admitted after such a procedure, when Congress failed to pass enabling acts in their cases. Two States, Kentucky and Vermont, as early as 1791, and two others, Idaho and Wyoming, as recently as 1890 acquired statehood through such congressional acts of admission, after drafting constitutions in the absence of congressional enabling acts.

This does not mean, however, that Hawaii will cease its efforts to obtain passage of the pending enabling bill. Under the terms of the bill, Hawaii, in any case, would have to draft a State constitution, and obtain approval of that constitution before it could be admitted.

The total land area of the Hawaiian Islands is approximately the size of Connecticut and Rhode Island combined. They are populated by more than half a million people. A report made by a subcommittee of the House Committee on Territories in 1946 showed that, ethnically, the population of the Territory in 1945 was 10,988 Hawaiians, or 2.2 percent of the total population; 61,422 part Hawaiians, or 12.2 percent; Puerto Ricans, 9,090, or 1.8 percent; 172,563 Caucasians, or 34.4 percent; 30,005 Chinese, or 6 percent; 163,300 Japanese, or 32.5 percent; 7,042 Koreans, or 1.4 percent; 46,464 Filipinos, or 9.3 percent; all others, 1,228, or .02 percent. The Hawaiians declined from an estimated 300,000 in 1778, when a British Navy captain, James Cook, visited the islands, to a little more than 10,000 today.

In 1820, 17 New England missionaries went to Hawaii and before many years, as the report of the House committee says, "the natives were converted to Christianity and made familiar with the ways of the west." At any rate, the period of American influence set in that was eventually to bring about annexation of the islands by this country. Hawaii previously had ceased to be a kingdom and become a republic. Texas is the only other example of annexation by the United States of an independent State. Texas, however, was immediately a State of the Union. There has been always an implication that Hawaii, also, was to become a State and many times in recent years the matter has been broached.

MAC ARTHUR, NIMITZ IN FAVOR

Gen. Douglas MacArthur has been quoted as favoring statehood for Hawaii on the promise that such a policy would definitely support his efforts in democratizing Japan. Admiral Nimitz, testifying as a private citizen, said he had great admiration for and appreciation of the complete and wholehearted cooperation the people of Hawaii gave to the war effort and that from a military and naval standpoint he saw no objection to the islands achieving statehood.

It has been estimated that well over 85 percent of the population of Hawaii was born in the islands and that 90 percent are American citizens. Not only did Hawaii have a commendable record during the Second World War, but also there was no sabotage or fifth-column activity committed there, according to the FBI.

The people of Alaska, like those of Hawaii, have asked for statehood through plebiscite. And while the population of this vast Territory is small—estimated to be from 95,000 to 105,000—it is larger than was the population of a dozen States when they were admitted. These States are Arkansas, Florida, Missouri, Nevada, Oregon, Wyoming, Minnesota, Iowa, Colorado, Montana, North Dakota, and Nebraska. In 1940 the population of Alaska, according to the census, was 72,524 persons. At that time 54 percent of the population was white as distinguished from the native stocks. Nearly one-fourth of these whites were born in Alaska. In the years since then the permanent population of the Territory has steadily increased. It is confidently predicted, too, that with statehood the population of Alaska will grow speedily—just as happened in other Territories.

LAND OF RESOURCES

The importance of Alaska to the United States does not rest alone on military considerations, although those are of great moment. Its great resources are still only partially developed. Fish, forest products, minerals, all have great futures in development of Alaska.

Alaska, it has been pointed out, has served a long tutelage in a territorial status. It belonged to the United States for 17 years before even a temporary form of government was provided. The first criminal code was not enacted until 1899, and the first civil code in 1900. Since 1912 Alaska has had its own legislature. However, within the limits of the organic act passed by Congress, Alaska has enacted progressive measures. It granted suffrage to women 6 years before the suffrage amendment to the Constitution was adopted for the United States.

One of the principal objections raised to statehood for Alaska now is that Alaska could not support the cost of statehood. Among the additional expenses the new State would have to bear are the salaries of the Governor and of the secretary of state; all, instead of part of, the costs of the legislature, the State court system, the fishery administration, and the care of the insane. As a State, Alaska would be permitted to borrow for State purposes, pledging the faith of the people of Alaska. This is a common practice among the States now. History, moreover, has shown that territories, when becoming States, have been able to meet their financial responsibilities.

HISTORIC CASES

The history of admission of Territories into the Union contains other hard-fought battles. There was a bitter row in Congress at the time of the admission of Arizona and New Mexico, under a joint enabling act. The act directed the Territories to frame State constitutions and placed upon the President—then William Howard Taft—the duty of approving these constitutions. Arizona wrote into its constitution the initiative and referendum, for legislation, and the recall of judges and other officers. President Taft could not stomach the recall of judges. So Congress was forced to put through another act, which in effect compelled Arizona to take the recall of judges out of its constitution in order to gain admission. The recall of judges was removed from the constitution and Arizona has never revived it, although, when once a State, it could amend its own constitution in any way it saw fit.

The debate in the Senate on the Arizona Constitution showed some of the Senators, in 1911, gravely concerned over the initiative, referendum, and recall. For example, Senator Heyburn, Republican, of Idaho suggested:

"Under this recall system, or under the initiative and referendum, there would not

be time to put in any wheat. There would not be any time for anything but politics. Elections would be the order of the day and all the great economic questions that we have been discussing would become of minor importance because no one would have time for anything except holding elections—elections for the purpose of nominating somebody for office, for the purpose of determining whether they should be recalled, only a few days to elapse between and then elections to determine whether or not the successors should be recalled—and so with the laws.

"Mr. President (of the Senate), men are going mad."

Awards for Fliers

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of April 21, 1950:

AWARDS FOR FLIERS

The action of the United States Senate in voting unanimously for a resolution directing the Secretary of the Navy to confer appropriate posthumous decorations on the crew of the American airplane which was shot down by Soviet fighter planes over the Baltic Sea may be little consolation for the families of the lost men; but it at least indicates the high resentment in Congress and throughout the Nation over this incident.

One would have to search through the blackest pages of the history of the least civilized and most vicious barbarians to bring to light an incident of such barefaced treachery and cruelty as this Baltic incident. In the first place, our airplane was unarmed and the crew had specific instructions to keep away from the Russian frontier to avoid just such an incident as occurred. Secondly, we knew nothing about the loss of the plane for 4 days after it was shot down, and thus lost the precious time in which we might have been able to find the missing men. During these precious days the Russians obviously made no attempt to rescue the plane which, they reported to us, was last seen out over an open ocean after having been riddled with gunfire.

We still don't know, in fact, whether the Russians captured the crippled plane and are now holding our men as prisoners in a concentration camp. Certainly, in view of their whole attitude over the incident, this would not be beyond the bounds of possibility.

An article in a Moscow paper calling upon the United States to punish our officials for the responsibility of the crime would make it evident that the Russian Government intends to reject the note of protest and request for indemnity made by the United States Government.

What move we shall make if this is done, remains to be seen. Officials at Washington, it is reported, believe that the whole matter will blow over after a series of sharp notes on both sides, with the only result being a deterioration in our relations with the Soviets.

That may be. But the day must come when the American people, little as they desire another war, will not stand for any more pushing around by Russia. The day must come when we shall have to say to Mr. Stalin, "One more move on your part will be the last. From there on the bombs will start dropping."

Perhaps we moderns are too softhearted. Some 2,000 years ago, when Rome was being pestered by threats from Carthage, the Romans declared that "Carthage must be destroyed"; and they destroyed it so that it has never been heard from since.

Address by Hon. Wayne Coy at National Association of Broadcasters' Annual Convention

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, Wayne Coy, Chairman of the Federal Communications Commission, in a brilliant speech to the Twenty-eighth Annual Convention of the National Association of Broadcasters, at Chicago, on April 18, 1950, spoke truths which are basic to freedom of speech. I ask unanimous consent to insert that portion of his address in the CONGRESSIONAL RECORD.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The key to sleeping on a windy night involves your preparation to serve the public interest.

If you plan now to serve the real needs of your community, if you plan to make your station an indispensable part of your community's life, a source of leadership and aid in every civic project, a forum for the discussion of local issues, an institution where local talent can be heard and encouraged, then you will have gone a long way toward conditioning yourself for sleeping on a windy night. Such preparation will include new approaches, new formats, a renewed emphasis on imaginative planning.

Of course, some people profess not to know what the phrase, "public interest" means. Some people call it vague and ambiguous. But this is a form of skepticism and scoffing which does those who cannot discern what is the public interest no credit. The Commission has in one of its opinions quite properly pointed out the duty to operate in the public interest is no esoteric mystery, but is essentially a duty to operate a radio station with good judgment and good faith guided by a reasonable regard for the interests of the community to be served. Of course, there is no Government agency or broadcaster who can in advance hammer out, down to the last detail, a blueprint which will give the sensible answer to all of the innumerable problems which arise in the day to day operations of a broadcast station. And Congress has wisely foreseen that this is the case. For the scheme created by the Communications Act is that the licensee shall have and exercise the responsibility for devising a program service. The source from which that responsibility is to derive content and meaning is the community in which the licensee operates and which he serves with his station. The needs and interests of that community can be readily gleaned by one whose eyes and ears are open; they can be learned by one who is in touch with public affairs and who knows the background and interests and aspirations of the various groups which compose that community. The standard of the public interest is a requirement that the licensee keep his eyes and ears open to these needs and aspirations and interests. His ears must be attuned to the beating of hearts around him as well as the tinkle of the cash register. His eyes must be able to discern the genuine joys and sorrows of the people of his community. The type of judgment which will most readily reflect his awareness cannot readily be reduced to a rule or a statute or a code. The Commission has also pointed out that to take the licensee by the hand and show him the way through every vicissitude of daily operation would serve to stifle the very responsibility which the act is designed to foster.

Those who insist that they do not know what the public interest is may well be in earnest. But unless they show that they are able to find out what the public interest is, they are not fit to be entrusted with the responsibilities of a radio station license.

And can the licensee surrender his responsibility to anyone else? To the networks? Or to the advertising agencies? Or to time brokers? Of course not. In the eyes of the law, the licensee is the master of his station and he alone is accountable for what goes out from his station. He cannot by any means wash his hands of this responsibility.

The network rules were adopted and fought through the Supreme Court in order to free him from network domination and to help him become more of a master in his own house.

In planning how he is going to weather the transition period ahead of us, the broadcaster will want to reexamine his program practices.

For example, has he made a recent survey to determine if he is truly serving local needs? Is he making an affirmative effort to find out what the community needs are and how he can best serve them? Judging from our renewal applications, some stations are operating in a paradise where there are no problems of education, racial understanding, citizenship, health, housing, or recreation. But then if it were a paradise, they would at least have some local live talent. So it must be a desert they are operating in.

About all that some of them can chalk up as local live talent is the man who reads the news from the ticker. But now we are finding out that some of these new listings are open to question because the stations don't even subscribe for a news service. And "believe it or not" we have one applicant who includes in his modest, nay, minute portion of local live programing his "sign-on" and his "sign-off."

It is praiseworthy for a broadcaster to carry on elaborate network documentary on juvenile delinquency, or on housing, or on health. But what about the broadcaster's own community? Is he indulging in escapism by ignoring conditions right in his own front yard? The recent Analysis of Station Operating Costs issued by the NAB declares:

"One cannot emphasize too strongly that good programing, per se, will not continue to satisfy sponsors. Commercial radio is founded upon programs which appeal to the listening public and which sell merchandise."

My reaction to that is this: The American system of broadcasting—which is a commercial system—is not founded simply to appeal to listeners and sell merchandise. That concept completely brushes aside the valuable, the indispensable role in a station's total programing structure of the program that may appeal only to listeners and of itself may not sell one penny's worth of merchandise.

A forum discussion on a million-dollar bond issue for a new sewerage plant—an issue which is splitting the town wide open—might not attract a sponsor but it would have almost everyone in town listening in—and would be a major contribution by the radio station.

The weekly religious hour presenting various churches, carried by many stations, is usually not sponsored and yet it is considered one of the most appealing programs on the schedule.

Do these programs have to sell merchandise to build up radio? Do a President's messages in a national emergency have to sell merchandise to make them good radio? Of course not. They play a stellar role in keeping listeners in the habit of looking to their radio set for the most significant and most vital events of the day. Sponsored programs owe as much to them as they owe to sponsored programs. And that points up why a broadcaster cannot serve the public interest unless he has at his command a reasonable amount of sustaining time to allocate to such programs.

What is the broadcaster's responsibility to the public interests in regard to such matters as poor taste on the programs going out via his station into the homes of his community? And in regard to excessive and indiscriminate crime and horror programing?

It is assumed that the average broadcaster knows what is right and proper. He knows what he would permit or resent in his own home and that he should treat his listener's home as if it were his own. However, there is a growing revulsion against lapses of good taste and against excessive and indiscriminate crime and horror programing. The complaint is that these crime programs, including the pious "crime does not pay" programs for children do not pay in terms of child welfare, do not pay in terms of what they do to promote juvenile delinquency. If that is true, then they do not pay in terms of radio's future as an institution for community betterment.

But if a broadcaster is in doubt about how his practices affect his community, how can he approach his problem in terms of the public interest? No one expects the broadcaster to be all-wise, to be infallible. But it certainly is not unreasonable to expect the broadcaster to exercise due diligence. When he is in doubt on such matters as these, he can turn to outside help for advice. I suggest that he turn for advice to, of all people, his public. By doing so he will demonstrate a sensitivity to local needs and local conditions. It might be well to remember at this point that the public, as the feminine lead in a recent play said, "the public are getting better and better known all the time."

The broadcaster can turn readily to the parent groups, to the educational institutions, to the civic organizations, to the child welfare specialists, to the courts, the penal experts and recreational leaders of his own community. They will be glad to assist him in evaluating his handling of crime programs from the child-welfare standpoint.

When we reflect what veneration we give the old principle that "a man's house is his castle," we can appreciate what a rare privilege is accorded the American broadcaster. William Pitt put it eloquently:

"The poorest man may, in his cottage, bid defiance to all the forces of the crown. It may be frail, its roof may shake; the wind may blow through it; the storm may enter—but the King of England cannot enter; all his force dares not cross the threshold of the ruined tenement."

And yet today in almost every home in America one door—the radio door—is thrown open wide to admit the radio broadcaster and all his goodly company. Such open entree to the family fireside is enjoyed by no other medium. It carries with it a high responsibility. Abuse that privilege, shirk your responsibility for supervising the programs and the talent you take into these homes and you endanger a unique and trusting hospitality.

How is the public interest to be safeguarded in the handling of controversial issues? Obviously, a licensee employing a publicly owned radio frequency—a frequency belonging to all the people—must comport himself as a trustee. He is a trustee not for one faction of the public or the other—he is a trustee for all the people with many divergent viewpoints. So the standard must be fairness to all such viewpoints.

The Commission has repeatedly held fairness to all viewpoints must be observed if the public interest is to be served. This was reemphasized in the Commission's decision of last June permitting licensees to editorialize.

In that report we spelled out the broadcaster's affirmative duty to insure fairness in his editorializing policies. We said, in short, that the broadcaster who embarks on editorializing by presenting one side of an issue does not satisfy the public interest if he merely sits in his office and waits for someone to show up and demand time to present the other side. It is up to him to pick up the telephone or to put on his hat and coat and go out and make a conscientious effort to enlist some responsible representative of the other side.

Clearly, then, the American broadcaster's responsibility to his Government is to serve with intelligence, impartiality, and a high sense of good taste and decorum as a trustee for the radio frequency which his Government licenses him to use. I am impressed by the theme of this convention—the responsibility of the broadcasters in the many fields covered by your agenda. I cannot refrain from saying that I would be more impressed if the agenda of this convention also included sessions which would permit open discussion of (1) the problems of network affiliates in relation to network programing; (2) the problem of whether or not the broadcasters have an effective code and what can be done to improve it in the light of your responsibilities and how to implement it for the benefit of the industry and the public; (3) the problems involved in determining what constitutes the public interest and how to meet those needs. I think these are problems which will become more and more serious in the transition period through which we are now passing.

I realize that up to this point I have had very little to say about television except to give you the financial data based on the 1949 financial reports received by the Commission; to compare those statistics with the same statistics for 1948; and to give you their relationship to the total broadcast revenue and income picture for those years. I know that many of you would like for me to talk about the television freeze. What you really want me to tell you is when we will get out of the freeze and when you may be expected to receive your construction permit for a television station. I suspect that there is a great deal more about television which you would like to know and which you would be glad to get from me or anyone else.

Some of you have asked me whether or not you should get into television or when did I think television would become the dominant broadcasting medium of this country. I hate to disappoint you by not talking at great length about television today. I can only say this to you on the general subject; I have avoided a television discussion because, as you know by this time, I have tried to keep to the text given me by Judge Miller, and, because of the further reason that I do not want to disillusion you about my knowledge of television. However, I suppose you might as well know the truth now as any other time. A year has gone by since I last addressed this gathering. In that year I have learned a lot about television and I am even less certain of the answers to your questions than I was a year ago. I am even less certain about the time when we will get out of the freeze. I certainly hope—and let me repeat the word "hope"—that we get out of the freeze before the end of the year. I pray that it will be earlier. I do not predict when.

I believe that the statistics which I have given you today covering the operations of aural broadcasting and television reflect the interregnum in the growth of television flowing from the freeze. I cannot prove that to you by the figures I have given you nor do I urge upon you the thought that the figures for 1949 can be accepted as an index to what the future may bring. Frankly, I still believe that television will become the dominant broadcasting medium in this country and that it will occupy that position rapidly once the Commission and the industry have reached and accepted a solution to the problems which resulted in the current freeze on the processing of television applications. I know that the economics of network television programing will change considerably when more stations are available and more markets can be covered. I hope that when that time comes the networks will not be the only beneficiaries and that the individual stations will share in the improved economic position. I hope that it will result in continuously improved programs. But if that happens, the competition between television and aural broadcasting for audience and for the advertiser's dollar will become more and more severe.

Ladies and gentlemen, this twenty-eighth annual convention of the NAB takes place at a time of an expanding economy and at a time of readjustment in our way of life. We are in a period of higher living standards. The American people generally are demanding and, for the most part getting, better homes, better clothes, better education, better recreational opportunities.

As a most important part of this pattern, this Nation will require the strongest, most flexible, and most effective system of broadcasting that we can devise. I am convinced that we will need not only a national system of television but that we will need an able system of aural broadcasting.

To bring these two systems up to their highest mark of potential development will require all the ingenuity, the imagination, the vision, the courage, and the good will that both the broadcasters and the Government can muster. It will call for the maximum cooperation and understanding.

If we meet that challenge, then we together can build up this mighty instrument of broadcasting to meet the needs of our democracy.

Looking to the international scene we must recognize that the nations of the world are living in a time of danger. Suspicion, fear, and hatred threaten this uneasy peace.

In this hazardous situation, American broadcasting has a great role to play. National security is not solely the job of the Department of Defense or the State Department. Our first line of defense is an informed people who will act instantly and unitedly in any crisis. This is particularly true in a democracy where the citizens are the source of all power and the ultimate judges of our course of action.

Who is better equipped than the broadcasters to bring directly to every citizen in his home with true vividness the leading personalities of our times and the presentation of all viewpoints on the crucial issues of the day? Who is better equipped to provide every citizen with all the significant facts so that he can make up his own mind and perform his duty as a responsible citizen in a free society?

The service that broadcasting can render has a high survival value in these troubled times.

As we face the latter half of the twentieth century, no group in our society has greater power or potentialities for building and guarding America than the American broadcasters.

National Rice Week

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. LARCADE. Mr. Speaker, I wish to call attention to the fact that the week beginning April 23 has been designated as National Rice Week. My district is one of the largest rice producing sections of the United States, and naturally, we are all interested in taking note of this week being set aside to call to the attention of the world what a fine, cheap, nutritious and palatable food can be found in this wonderful product. However, our production is nearly 50 percent more than the consumption in the United States, and we are making an effort to inform the United States that they should use this food. While rice is used in cereals and breakfast foods by our leading food manufacturers, if the people would inform themselves as to how to prepare the tasty dishes made possible by rice, I am sure that the consumption would be doubled in this country. Mr. Speaker, I would like to include the following editorials from the Opelousas Daily World and the Jennings Daily News, published in my district on the National Rice Week, as follows:

[From the Opelousas (La.) Daily World]

DOUBLY GOOD

The week beginning April 23 will be National Rice Week, a 7-day period which the rice industry devotes to a little special promotion in an effort to increase the use of its product. As we are sure all our readers know, rice is one of Louisiana's most important crops. Louisianans eat a great deal more rice per capita than is eaten in most other States, not out of patriotism but because they know more about rice and how delicious it can be when served in many different ways. We dare say National Rice Week hardly will crowd the cold war off the front pages, but if the extra advertising helps increase the consumption of rice, then all Louisiana will benefit as well as those who learn more about a very fine food.

Louisiana rice growers feel an urgent need to find a larger market in this country. They increased production, as did rice growers in other States, to meet the heavy demand in World War II when the Japanese controlled the large rice-growing areas of southeast Asia. Now these Asiatic countries have gotten back into the export market. They produce rice so cheaply that they are threatening to win back markets in Europe and even in Latin America, in spite of handling and shipping costs.

So the Louisiana growers and other American growers are hoping that Americans can be persuaded to give rice a fair try—that is all that will be necessary—and eat just a little more rice per capita. Let us all have an extra helping of rice in National Rice Week.

[From the Jennings (La.) Daily News of April 20, 1950]

RICE WEEK NEXT

Next week is Rice Week in Jennings, and, we trust, throughout the Nation.

The Jennings Association of Commerce has set aside the week and is urging rice menus on tables here and elsewhere, especially rice menus on the railroad dining cars.

It seems strange that we need to stress "Eat More Rice" in this rice bowl of America. Even in Jeff Davis Parish, which is second only to Vermillion Parish in rice acreage, we could eat more of our favorite grain.

We have seen feasts and banquets served here without a spoonful of rice. But that is beside the point. We need and must sell rice to the American housewife.

Our existence depends on it. The day is done when we could dispose of all our surplus rice to the poor nations of the world at big prices with Uncle Sam paying the bill. The poor nations which ate a lot of rice during the war, before and since, are growing their own needs and they have surplus also to sell.

That being the case, our direct attack, is an advertising campaign to make rice more popular on the American dinner tables. If cooks in the North, East and West knew how deliciously rice can be served, our troubles would be over.

But our first job is to teach Americans that rice is and can be a savory and a very delicious dish. The rice week appeal is not so pressing here where we all eat the cereal. But it is necessary that we start these weeks annually in America to popularize our rice.

They had an old saying if we could teach the Chinese to lengthen their cotten shirts an inch per person, there would be no longer a cotton surplus issue. If we could teach all Americans to eat as much as we do in Louisiana, there would be no longer any rice surplus problem.

Veto of the Natural Gas Bill

EXTENSION OF REMARKS
OF
HON. ROBERT S. KERR
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. KERR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Political Veto," published in the Chicago Daily News of April 18, 1950; an editorial entitled "Kerr Bill Veto," published in the Cleveland Plain Dealer of April 17, 1950, and a letter written by Paul G. Benedum, of Pittsburgh, to the Pittsburgh Post Gazette, and published in the April 4, 1950, issue of that newspaper.

There being no objection, the editorials and letter were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily News of April 18, 1950]

POLITICAL VETO

President Truman's veto of the Kerr natural gas bill was politically smart. It may alienate powerful leaders of his party, but they have nowhere else to go. The voters, who had been sold on the belief that the bill meant higher gas rates, would have somewhere else to go, and the Republicans clearly meant to point the way.

It is significant of the misconceptions about the measure that most of the discussion of the veto revolves around its political aspects. Any merits of the measure itself are quite generally ignored.

President Truman himself contributed to that misunderstanding in his veto message when he referred to the "record of accomplishment under the present law." It was the present law that the Kerr bill was designed to retain—with clarification.

Mr. Truman shrewdly left the impression, so widely circulated elsewhere, that the Kerr bill was designed to free the independent gas producers from rate regulation to which they are already subject. That was not the case. Recent court decisions encouraged the Federal Power Commission to seek authority over the rates of interstate suppliers, but it had never been exercised.

Hence, when Senator DOUGLAS pulled the figure out of his hat that the Kerr bill would increase gas rates by $200,000,000 to $500,000,000 it was DOUGLAS the politician, not DOUGLAS the economist, who was talking.

Mr. Truman was doubtless influenced in his veto by the message urging him to do so signed by 18 large-city mayors. It is a safe guess that their information on the subject was largely a repetition of the charge that it would boost gas rates. They are against higher gas rates, as who isn't.

It is one thing to regulate a monopoly (and gas rates from fields owned by the pipe-line companies are quite properly regulated) but quite another to ride herd on the scores of independent producers who sell to the pipe lines.

It is the old story of price control, which seems to be eminently in the interest of the consumer, until it develops that it is not generating the increased production, which is the surest way to lower prices.

We believe Mr. Truman has chosen the wrong way to insure cheap gas. If the OPA principle didn't work on meat and clothing, there is no reason to suppose that it will on fuel.

[From the Cleveland Plain Dealer of April 17, 1950]

KERR BILL VETO

It was not surprising that President Truman vetoed the Kerr bill, which was designed to prevent the Federal Power Commission from regulating the price of gas sold by independent producers to pipe-line and distributing companies.

The veto was expected because Truman long ago cast his lot with the CIO and the Socialist-Labor planners and spenders, who favor ever-increasing Government regulation over business and the lives of individual citizens.

This group had set up a howl that consumers would have to pay from $200,000,000 to $500,000,000 for gas annually if the Federal Power Commission were prevented from fixing the prices charged by the independent producers.

This charge was denied by the sponsors of the bill, who contended that freedom from Federal regulation would stimulate production, thus making gas available for consumers, and that competition would result in lower prices.

But Truman accepted the contrary view, which gave him an opportunity to pose as a friend of the consumers. This is an admirable point of view, if the veto of the Kerr bill actually will save the consumers up to half a billion dollars a year in increased gas costs at some indefinte time in the future and if it does not result in a curtailment of production and an eventual shortage of natural gas.

But if Truman really wanted to do something for consumers generally, something that would help them now and not merely avert a threatened price increase which might never materialize, he could reduce Federal taxes. Repeal of the wartime excise taxes alone would result in consumers saving more than a $1,000,000,000 a year immediately. These and other tax reductions, however, would require a reduction in Federal spending, to which the President is opposed.

The tip-off that Truman would veto the Kerr bill came last year when, after the Senate refused to confirm the reappointment of Leland Olds as chairman of the Federal Power Commission, the President appointed him to a higher-paying job which did not require Senate confirmation. Olds was one of the

leading advocates of extending the regulatory powers of the Commission, contrary to the intention of Congress when the Commission was first established.

The veto of the Kerr bill will have wide political repercussions in the Southwest. Its backers included two of Truman's most stalwart lieutenants in Congress, Senator TOM CONNALLY and Speaker of the House SAM RAYBURN, both of Texas. Both of them assured Congress the bill would not result in increased gas rates. RAYBURN, in particular, came down on the floor to tell his colleagues the bill would not raise gas rates one red cent.

Obviously the veto will not improve relations between the White House and Capitol Hill. This factor, however, probably did not enter into the President's calculations since he has long since abandoned any hope, if he ever had one, of getting his legislative program through the Eighty-first Congress.

[From the Pittsburgh Post-Gazette of April 4, 1950]

THE PEOPLE SPEAK—HITS GAS EDITORIAL

EDITOR, THE POST-GAZETTE:

Your editorial appeal to President Truman to veto the Kerr gas bill (A Victory for Monopoly, April 1) is based entirely upon a violent assumption and a wholly unwarranted implication that has no basis of fact. In stating that the Kerr bill "exempts" independent natural-gas producers from the price-fixing authority of the Federal Power Commission, you convey the distinct impression that the bill strips the Commission of powers which it has been exercising.

The fact is that the Commission never has exercised any authority, rate-fixing, or otherwise, over independent producers of natural gas. The situation insofar as exercise of governmental authority is concerned will be the same after the Kerr bill becomes law as it always has been.

Your statement that the legislation will cost natural-gas consumers between $300,000,000 and $500,000,000 a year in increased rates borders upon the reckless and irresponsible. Actually, the annual gross return to independent natural-gas producers of all their production in the United States is only $75,000,000 annually. In the last 10 years, the average price of all commodities has increased about 66 percent, but in the same period the price of natural gas to the consumer has declined. And this decline came without any regulation whatever of independent gas producers by the Federal Power Commission.

While I do not feel called upon to defend Senator KERR, who is perfectly capable of taking care of himself, I do feel that your statement that he has sponsored this legislation because of self-interest is a blow that lands below the belt. Your editorial writer should have known that Senator KERR has publicly asserted time and again that all of the natural gas which he owns has already been sold under a contract that runs for many years.

Lest the same accusation be directed at the interests which I represent, let me say that four oil and gas companies with which I am identified in an executive capacity entered into contracts last year for the sale of their natural gas at prices that are fixed for the next 20 years.

The reason for the Kerr legislation is to clarify the original Natural Gas Act of some 12 or 13 years ago, in which the Federal Power Commission was given price-fixing authority at the well-mouth on gas produced by integrated companies which have their own pipe lines to transport the gas to market. It was plainly the intent of Congress to exempt independent producers from this authority, and the members of the Federal Power Commission, including the radical Mr. Leland Olds, so construed the act.

Some 10 years later there was a decision of the Supreme Court which Mr. Olds and two of his four colleagues interpreted as giving the Commission rate-fixing power over independent producers. Since Mr. Olds' involuntary retirement from the Commission that body has been divided by a 2-to-2 vote on this question. Consequently, it has never attempted to assert this authority. The Kerr bill merely reaffirms the original intent of Congress in language that is not subject to misinterpretation.

There is also involved the broad principle of governmental control over everything and everybody with all of the attendant confusion and Gestapo tactics that accompanied the late and unlamented OPA. The chairman of the National Petroleum Council, Mr. Walter S. Hallanan, phrased this most aptly last week when he observed that whenever the turning of a valve on a well in Texas or elsewhere has to await a directive from Washington this Nation will be in its dotage.

PAUL G. BENEDUM.

PITTSBURGH.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. HARRY P. O'NEILL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. O'NEILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I am concerned about the postal order reducing service in the postal department. The House has just awarded an increase in rates to the postal department, and almost immediately a reduction in service resulted.

I suppose all of my colleagues are receiving mail in protest to that order—in volume comparable to my own mail. Such mail, in protest, comes from persons and firms in my district in all walks of life; from the employee who must be discharged to the business house that needs all the mail service that it can secure to enable it to keep going efficiently.

My district, listing 22 percent unemployed, is on the President's list for areas in distress by reason of unemployment. Those now to be discharged will but swell that list unfavorably. Most of those so affected will be veterans; many of them 10-point disabled veterans. My community, therefore, needs the best of postal service to insure to it the maximum of employment.

My community needs the best of service to make it possible to keep our business houses actively at work.

The great International Correspondence Schools' home office is in the very heart of the community and we all know that the whole of its business is by mail. Any adverse effect upon that business which might affect employment would be bitterly felt—and would seem to be illogical and contradictory. That business was created and expanded upon full reliance of the very best in postal service. Such postal service has been expanded throughout the years and the business and employment has correspondingly expanded. Now, upon almost no advance notice, that service is now curtailed and reduced.

I am fully aware that the Commission created, and acting to bring certain reorganizations and economies in the Government, has included the Post Office Department as an agency which should make certain reorganizations effective. That Commission, popularly called the Hoover Commission, in no report suggests reduction in service. If the economies so suggested must result in reduced service, then it is my position that the Hoover Commission has made a grave mistake in its recommendations with regard to the postal service, and it should be quickly noted and immediately corrected.

It appears that the personnel of that Commission has completely forgotten about the small business that most of us are trying our best to hold, protect, and advance. Our communication systems have made this a great country and the largest factor in that group of services is the postal Department. Without it and its keeping abreast of the expansion and progress of our country, we stand to lose, become dormant and even go backward.

Our reliance upon the mail, and its privacy, speed, and accuracy, has in as large a measure as in any other agency made our country a working democracy. We can notify each other promptly of the material matters of our everyday life; relying upon its movement to guide us in the matter of important personal, business, and governmental decisions daily. No person should know this better than a Congressman who is guided daily by his volume of mail which is delivered many times each day. Without such service as we have heretofore enjoyed, all of us here in this session will suffer in the efficiency of our staffs and the respect and good will of constituents.

I respectfully request the serious consideration of restoration of the former service to all of my colleagues by full cooperation to that end.

Behind It All Is Moscow

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an editorial appearing in the Washington Sunday Star of April 23, 1950, which, while carefully worded, clearly indicates, as I interpret it, that the time is rapidly approaching, if not already here, when, in our own national interest the United States should sever diplomatic relations with the Soviet Union and its satellite countries.

The editorial follows:

BEHIND IT ALL IS MOSCOW

The pattern of events in Czechoslovakia comes close to being a carbon copy of what finally led us last February to sever all diplomatic relations with Bulgaria. The Communist puppets at Prague have not yet demanded that we recall our Ambassador, but in the words of one of our Embassy spokesmen, "they are really turning on the heat against us now." In short, step by step, with obvious deliberateness, they are worsening their past bad behavior toward us in a manner that seems definitely calculated to drive us—as a self-respecting Nation—into a complete break with them, and not merely the retaliatory closing of their consular offices in Chicago.

Thus, besides ordering the expulsion of the director of the United States Information Service, they have demanded that we put an immediate end to all our USIS activities, on the ground that both the director and the service itself have been using Czech nationals for espionage purposes and as spreaders of propaganda hostile to the Prague regime. Simultaneously, our Embassy—as was the case last October, but to a lesser extent—has once again been accused of running a huge "spy ring," and six citizens of Czechoslovakia have just been "tried" for being members, two of them receiving sentences of death. In addition, a 20-year-old American student is reported to have been sentenced to 18 years in prison after having been "tried," along with 15 Czechs, on charges of spying.

All this has been accompanied by a new outpouring of anti-American propaganda. Of course, such propaganda has been fairly common in Czechoslovakia ever since the Communist coup 2 years ago, but now it has become particularly virulent, with our Embassy apparently the chief target. The situation is so reminiscent of events in Bulgaria that we may reasonably anticipate a series of additional acts directed against our representatives in flagrant violation of all the accepted standards of decent international intercourse. In the circumstances, no American should be surprised if one of these days there is a full break in our diplomatic relations with Prague. Nor should any one be surprised if much the same thing happens later on in such places as Hungary, Rumania, and Poland.

For there is every reason to feel that in Czechoslovakia—as earlier in Bulgaria—a systematic effort is being carried out to make it virtually impossible for us to maintain normal relations. There is every reason to feel, too, that the same sort of thing is likely to develop in due course among the other satellite countries. Just why this is so, just why these puppet regimes are going out of their way to alienate themselves from us, is not clear. The only thing we can be sure of is that Moscow is behind the whole ugly business. After all, the policy involved is not really that of the Czechs or the Bulgars or their fellow vassals; it is a policy laid down by the men of the Kremlin for some dark purposes of their own, perhaps to cut off every bit of contact between the free world and the oppressed or to cover up whatever new aggressive moves they may be planning behind the iron curtain.

Whatever the reason for it, however, there can be little doubt that this policy, if it continues, if it grows worse, will eventually force us to ask ourselves whether we can avoid a complete break with the Soviet Union itself. Certainly, when one considers such things as events in Czechoslovakia and incidents like the inhumane attack on our Navy plane in the Baltic, it is difficult not to suspect that the Kremlin, with malice aforethought, is doing its best to make the gulf unbridgeable between itself and us. The outlook for friendship could hardly seem bleaker.

American Society of Newspaper Editors

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, April 24 (legislative day of Wednesday, March 29), 1950

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the RECORD two addresses delivered by Secretary of State Acheson before the American Society of Newspaper Editors last week. One was on the record. The other was off the record, but it has been released for publication.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS BY THE HONORABLE DEAN ACHESON, SECRETARY OF STATE, AT A DINNER MEETING OF THE AMERICAN SOCIETY OF NEWSPAPER EDITORS, WASHINGTON, D. C., APRIL 22, 1950

Tonight I would like to discuss with you the thing that is most important to all of us: The well-being and happiness and security of the United States.

I ask you to put aside, for the moment, all considerations that are less important, to forget all differences of opinion that are less than vital, and to consider with me this most important problem of the security and well-being of our country.

We are faced with a threat—in all sober truth I say this—we are faced with a threat not only to our country but to the civilization in which we live and to the whole physical environment in which that civilization can exist. This threat is the principal problem that confronts the whole United States in the world today.

To understand this threat to our country and our civilization, we have to go back 200 years and examine the ideas on which the United States was founded. We could go back more than 2,000 years, to the very beginning of western civilization. For more than 2,000 years the ideas we inherited, and live by today, have been fought over, have been suppressed and have been reborn in the minds of men.

The adventurous people who settled the eastern shores of North America in the seventeenth and eighteenth centuries brought with them certain ideas which had come down to them through the whole stormy history of civilization. The first of those ideas was freedom—freedom of the mind and spirit, the most dynamic and adventurous idea ever to seize the mind of man. It drove men—and it continues to drive men—to inquire into the relation between man and God; to study the nature of the universe; to explore the purpose of human society.

Every thought we have in our minds, every relationship we have in our private lives, every institution under which we live, all of modern science has been molded, and in many cases created, by the exercise of the freedom of the human mind.

The second principle on which this country was built is the idea of diversity. If you have freedom of the mind, you are bound to have diversity, and you are bound to welcome it. We welcome people who think differently from ourselves. We welcome people with new ideas. We will not be chained to ideas of the past. We resist conformity. We refuse to be crammed into a single narrow pattern.

These ideas, freedom and diversity, have survived and flourished here in the United States because we accept and practice a third idea—and that is tolerance. We say and we believe "My freedom, my right to be different, depends on yours. I can be free only to the extent that you are free too."

The only limitation we put upon the exercise of freedom is that each of us must use it so that others can have the same right. I must exercise my freedom in such a way that it does not interfere with your freedom.

So it is these great concepts that have underlain the whole development of our civilization, not as mere abstract thoughts but as the very life blood, the dynamic push, which has created the civilization we know.

The threat we are facing is to these great concepts. It comes from a system which denies every premise we hold valid.

Soviet communism does not permit diversity of ideas. Freedom, this doctrine says, is an evil thing. It says that people who exercise freedom of thought, people who dare to depart from the doctrine laid down in the Kremlin in Moscow are criminals. It puts such people behind bars or it puts them to death.

Now this threat of Soviet communism would be serious enough if it were just the old idea of tyranny that was challenging our idea of freedom. It is that, but it is infinitely more than that.

This fanatical doctrine dominates one of the great states in this world, a state which, with its satellites, controls the lives of hundreds of millions of people, and which today possesses the largest military establishment in existence.

That would be serious enough. But it is even more serious than that, because those who hold and practice this doctrine pick out our country as the principal target of their attack. From their point of view they pick it out rightly. It is our country, with its belief in freedom and tolerance, its great productive power, its tremendous vitality, which stands between the Kremlin and dominion over the entire world. We must not forget that it is we, the American people, who have been picked out as the principal target of the Soviet Communists.

Added to all this is the fact that these people use the great resources of modern science, particularly those that have to do with an understanding of the human mind, to pervert the human mind. They resort to every trick, to every insidious and brutal device to destroy what we think is essential—the self-respect of the individual, the integrity of his mind and spirit.

What do we mean when we say that our country is the principal target of Soviet communism? We mean that the Soviet authorities would use, and gladly use, any means at their command to weaken and to harm us. Although they have not thought it wise to use military force against us, they are trying other methods. One method is the attempt to confuse and divide the American people.

If the United States can be confused and divided; if it can be made to doubt the desirability of helping other free nations; if it can be brought to doubt the desirability of maintaining its own defenses; if we cease to be rational and resolute; if we can be brought to doubt one another—then we will be softened up. Then we will be too weak to stand up to Communist thrusts in other parts of the world, and too divided and confused to stand up to Communist infiltration at home. To create that situation is one of the main objectives of the people in the Kremlin.

They have another objective, which is to pick off members of the free community of nations one by one. They do that partly to add to their power. But they have another important purpose and that is to build up the idea that communism is inevitable, that it is the wave of the future.

They believe that that gives other countries a sense of fright and hopelessness. They think that if they can spread this idea of a Communist world closing in on us, then

we will begin to get rattled, and some people will move in one direction and others will move in another direction, and the United States will be torn apart.

The men in the Kremlin have another clear objective, and that is to change the balance of productive power in the world. At present, that balance is very strongly against them, but that would not be so if they could get control in western Europe and in Japan.

So I say to you, make no mistake about it: we are faced with a challenge and a threat to the very basis of our civilization and to the very safety of the free world, the only kind of world in which that civilization can exist.

Now in this situation we have a great many suggestions and proposals put forward by leaders of American life, and by citizens who are concerned, and rightly concerned, about the uneasy and troubled state of our world. It is a good thing that people are thinking about these problems and suggesting ways to meet them. The only point I want to make about these proposals is that while some of them are practical and others are not, no single proposal is the whole answer to our problems. No one of them is the answer because there is no one answer. There is no one solution to the problems I have described to you. There is no quick or easy way to subdue an evil force. There is no miracle that will make it disappear from the earth.

Having recognized this truth, we need not for a moment be discouraged or downhearted. We have open to us, and we are now pursuing, many lines of action that will meet the challenge confronting us. May I mention six lines of action.

Our first line of action, and this seems to me the basis of all the others I shall discuss, is to demonstrate that our own faith in freedom is a burning and a fighting faith. We are children of freedom. We cannot be safe except in an environment of freedom. We believe in freedom as fundamentally as we believe anything in this world. We believe in it for everyone in our country. And we don't restrict this belief to freedom for ourselves. We believe that all people in the world are entitled to as much freedom, to develop in their own way, as we want ourselves.

If we are clear about this, if we are full of passion about this, then we have in our hearts and minds the most dynamic and revolutionary concept in human history, and one which properly strikes terror to every dictator, to every tyrant who would attempt to regiment and depress men anywhere.

Why do I put a strong belief in freedom first in the order of an American program of action? Because it is fundamental, because the second line of action flows from it. As the President said to you so forcefully on Thursday, the United States must, with a thousand voices and with all the resources of modern science, preach this doctrine throughout the world. The world must hear what America is about, what America believes, what freedom is, what it has done for many, what it can do for all.

We must use every means we know to communicate the value of freedom to the four corners of the earth. Our message must go out through leaflets, through our free press, radio programs and films, through exchange of students and teachers with other countries, and through a hundred other ways. And this doctrine of freedom will carry conviction because it comes not out of the Government alone, but out of the hearts and souls of the people of the United States. Because it is the authentic voice of America, freedom will ring around the world. President Truman has told you of his plans for an expanded information program—a campaign of truth. I know we can count on your help in this, because the turning point in the whole information program dates from the action of this very association just 3 years ago.

Thirdly, it is not enough that one should have a faith and should make that faith articulate. It is also essential that we, and those who think like us, should have the power to make safe the area in which we carry that faith into action. This means that we must look to our defenses. It means that we must organize our defenses wisely and prudently, with all the ingenuity and all the methods in which we are best versed to make ourselves strong.

Every element of promise is present in our situation. We have the ingenuity; we have the productive power; we have the determination; we have the resources. But this is not a subject on which I am competent to dwell at length. The President's chief advisers in this field are our Secretary of Defense and our service secretaries, in whom we can have complete faith and confidence.

Fourthly, beyond faith and preachment and defense there lies the necessity of translating all of these into terms of the daily lives of hundreds of millions of peoples who live in this free world of ours. I am talking about the effort we are now making to help create a better material life for ourselves and for other people in many parts of the world.

One part of this effort has to do with setting in operation again the great workshops of the free world. Since the end of the war we have worked steadily at this problem and we have had a vast measure of success. The chimneys of these factories are smoking again; raw materials are moving into them; finished goods are moving out. Hundreds of millions of people see the specter of insecurity in their daily lives being pushed further back.

Another part of this effort to develop the economic conditions for freedom is to help create new workshops, new crops, new wealth in places where they have not existed before. That is the purpose of the President's program of technical assistance for underdeveloped areas, now before the Congress.

As you know, there are great areas of the world where people are living in a state of extreme poverty that is almost impossible for us to imagine. Millions of these people are not content any more to accept these conditions of poverty for themselves or their children. They are looking for a way out. That is a good thing. The will to change is half the battle. But the question is whether these people will choose a way out that leads to freedom. The question is whether they will move ahead in the free world with us. If we want them to move in the direction of freedom, we must help them.

It is as simple as that—but it is tremendously important to the United States, to our security and well-being. And so we must put a great effort behind this program.

Now while we are helping to get workshops going—old and new—and to get people producing in Europe and other parts of the world, we have to do still another thing. And that is to develop a sensible system of trade to exchange the goods which are being and will be produced. This free world of ours can't operate if people are cooped up within narrow national limits, if they are not able to move about freely and exchange their goods, their services, and their ideas and knowledge. Building up an orderly and free system of exchange is what we mean when we talk about expanding world trade. To develop a sensible system of exchange, we must push ahead with such things as the International Trade Organization, and reciprocal trade agreements.

We are going to have to make a great national effort, also, to get our own trade with the rest of the world into balance, to get out of the situation where we are selling abroad much more than we are buying and making up the difference out of the pockets of American taxpayers. Nobody here or abroad wants that situation to continue indefinitely. As part of the remedy we shall have to buy more from abroad, and that will demand a concerted national effort.

The fifth line of action is in the political field. In this political field we have so far only scratched the surface of what can be done to bring the free world closer together, to make it stronger and more secure and more effective.

There are many ways of organizing the free world for common action, and many different opinions on how it should be done. But I think it is important in this hour of danger to concentrate our minds and our energies on using the machinery we have at hand, on expanding it, and making it work. When you look over the field, you will see that we now have created a great deal of good machinery.

There is the whole machinery of the United Nations which we are continually learning to use more effectively. Within the framework of the United Nations we have other machinery, like the North Atlantic Treaty and the Organization of American States.

The free nations of Europe have banded together in the Council of Europe, in the Marshall plan organization, and in a smaller group known as Western Union. We can work with all of these organizations. We can use whichever is best suited to accomplish a particular purpose. What we need to do is to expand the machinery we have, to improve it, to use it with boldness and imagination, and, where necessary, to supplement it with new machinery.

Now our program of action would not be complete if I did not go on to a sixth field, and that is the area of our relations with the Soviet Union and the countries that have fallen under Communist control. In this field, as in our relations with the free nations, we have the machinery of negotiation at hand. In the United Nations we have a dozen or more conference tables, at which our differences could be thrashed out, where unfortunately the Soviet chair stands empty at the present time. We shall go on trying to find a common ground for agreement, not perfect or eternal agreement, but at least a better arrangement for living together in greater safety.

But one thing is clear. There can be no agreement, there can be no approach to agreement unless one idea is done away with, and that is the idea of aggression. And that word "aggression" includes not only military attack, but propaganda warfare and the secret undermining of free countries from within.

We do not propose to subvert the Soviet Union. We shall not attempt to undermine Soviet independence. And we are just as determined that communism shall not by hook or crook or trickery undermine our country or any other free country that desires to maintain its freedom. That real and present threat of aggression stands in the way of every attempt at understanding with the Soviet Union. For it has been wisely said that there can be no greater disagreement than when someone wants to eliminate your existence altogether.

If, as and when that idea of aggression, by one means or another, can be ruled out of our relations with the Soviet Union, then the greatest single obstacle to agreement will be out of the way. As the results of our actions become clear and the free world becomes stronger, it will, I believe, become progressively easier to get agreements with the Soviet Union.

These men, are the main lines of action by the Government and people of the United States in dealing with their present danger. Now you may be thinking, "well, that's the

story." But that is only the beginning of the story.

On several occasions lately, I have used the phrase "total diplomacy" to describe a method of dealing with our problems. Let me explain again what I mean by total diplomacy.

I mean, first, that there is no longer any difference between foreign questions and domestic questions. They are all parts of the same questions. When we consider any matter, whether it is the size of the budget or the amount of taxes we pay, or the regulation of our commerce or the regulation of immigration or military policy or foreign aid, it is all part of the same thing.

Every one of these things is a part of the problem of our national safety and every part of the problem is serious.

All the problems of the United States are related to the problem of preserving its existence as the kind of a country which we know and love.

When we understand this fact of the wholeness of our problem, then we must go further and act on our understanding.

In the last few years the President has developed methods by which all parts of the executive branch of the Government can be pulled together on all questions in the light of this total problem. Under the President's leadership—the State Department, the Treasury Department, the Defense Establishment, Agriculture, Labor, and all the others—have been brought into focus on the great problem of our national security.

There must also be a close working together not only between the Congress and the Executive but between both parties in the Congress and the Executive.

That does not mean that a strong opposition is not essential. It is. Our two-party system is inherent in our form of government. There is plenty of room for difference of opinion as to how this or that should be done. There is room for views strongly held, and wisely debated. There is room for criticism. But there is also room for a final consensus of opinion. We must work toward consensus of opinion; we must broaden the area of agreement so that the Congress and the Executive—both parties of the Congress and the Executive—will view every problem and deal with every problem as a part of the total problem.

What makes this possible is a common loyalty to our democratic institutions. We cannot use position or influence for the purpose of getting some personal or some partisan advantage without being disloyal to the institution of democratic government.

But more than the institution of democratic government is at stake. The threat, as I have said, is to our civilization, and each of us is a bearer of that civilization. And therefore each of us has a part to play in this total diplomacy.

Today the whole United States is acting before the world as its own representative. In the old days, relations between countries were carried on by diplomats. In the old days a man who held my office used to write out in beautiful script instructions to a minister who represented the United States abroad in London or Paris or Brussels or Peking. And those instructions where put on a sailing ship and they took weeks to cross the ocean. And the American Minister who received them put on his black knee breeches and he walked to the palace or the foreign office and he read what his Secretary of State in Washington had written, and that was the United States speaking to some government in Europe or Asia.

Now all that is changed. Today we all represent the United States. Everything that happens in this country can be flashed in a second to the uttermost reaches of the world. Today in a very real sense the United States represents itself to the world. The world hears speeches which are made in the Congress. The world hears what is said over our radio. The world reads what is said in our press. If there are acts or words of violence, discrimination and irresponsibility the world sees and hears them. If there are acts or words of justice, understanding and sober determination, the world sees and hears them also.

America speaks with a thousand voices. All the views of our labor leaders, our business leaders, our church leaders, our educational leaders, our leaders of women's and men's groups and clubs—all the things they do and say flash around the world. Everything that we do or say enters into the picture of America which is seen abroad. Foreign nations are continually watching to see whether the United States is cool, whether it is determined, whether it is strong, whether it will go through with its intentions. To make up their minds they look at everything which is happening in the whole country.

What will the world see? The thought that I want to leave with you is that each of us bears a measure of responsibility for the answer. Each one of us can make our country seen as it truly is—determined to do its part to carry the free world forward to strength and security.

EXTEMPORANEOUS REMARKS BY THE HONORABLE DEAN ACHESON, SECRETARY OF STATE, FOLLOWING HIS RADIO ADDRESS AT A DINNER MEETING OF THE AMERICAN SOCIETY OF NEWSPAPER EDITORS, WASHINGTON, D. C., APRIL 22, 1950

There are several things that I should like to talk with you about. Before I get on with the matters which I think have some substantive importance, I should like to clear away some trash which has gathered about the Department of State.

Now, in doing this, I feel that I have a qualification which is so unique that it almost amounts to a disqualification. That is, that I know what I am talking about. I have given 10 years of my life to the Department of State, and before that I served in two other departments of the Government. During the course of that time I served on two commissions appointed by the President to study the operations of the Government of the United States. I have served under four Secretaries of State and under two Presidents. So I think I am entitled to say that I know something about the Department of State.

The first thing that I should like to say is in the nature of a categorical affirmation. I should like to say that never in its long and honorable history has the Department of State ever been in better shape than it is today.

The Department is manned today, as it has been manned in the past, by able, by honorable, by loyal, and by clean-living American men and women.

It is also a representative Department. People who serve in the Department are drawn from all over the United States.

There is no need for anyone to be defensive about the Department of State. What I want you to consider with me are facts.

First of all, when we are talking about this Department, let us look at its top command; let us see who the people are who are controlling and operating and directing the Department of State.

First of all, I don't have to tell you about the Under Secretary of State, Jim Webb. You know he comes from North Carolina. You know his record in the Budget Bureau and in the Treasury. You know what he did in organizing the Sperry Co. before the war, when it grew from a little place of 800 people to a great corporation of 30,000 employees. You know what he did in the Marine flying service.

But the important point that I want to bring out tonight is that I do not know any man in the entire United States, in the Government or out of the Government, who has a greater genius for organization, a genius for understanding how to take a great mass of people and bring them together; so that he pulls out of them all the knowledge and all the competence that they have; so that each person is doing what he ought to be doing; so that the whole efforts of this vast group are pulled together to get a tremendously powerful result. And that is absolutely essential in the Department of State.

When Thomas Jefferson started the State Department it had 6 employees, including himself. Today we have 19,000 employees all over the world, and all of those 19,000 are being pulled by Jim Webb into one great consolidated effort, through a top command.

The third ranking officer in the Department is George Kennan. I don't need to tell you about George Kennan. You have read what he has written. You know his record. He comes from Wisconsin.

One of the things to which I have agreed, with deep regret, is that George Kennan should have a year off. He went to work for the State Department when he was 22 years old, and he has never had any time off since. What he wants to do is go to the Institute of Advanced Studies at Princeton and have time quietly to think about things and then come back to us. I have agreed to it, reluctantly, but we shall have him again.

Then we go to another area of the top command, Assistant Secretary Jack Peurifoy of South Carolina. I don't need to tell you about him, except one thing, perhaps, and that is that in all the years that I have been in the State Department he has been with me. When he came to the State Department after he had been in West Point and had to leave on account of disease of the lungs (which, unhappily, I have come to know only too much about from one who is close to me) he very soon became my assistant. He is now the Deputy Under Secretary for Administration. He is in charge of administration. I shall come back to him again in a little while.

Then we have Jack Hickerson, of Texas, a Foreign Service officer of 25 years' experience, whom we have taken out of European affairs and put into something which we want to stress, and that is the work of the United Nations.

Then we have George McGhee, of Texas, a former oil man who worked with the Government through the war; who was in the economic part of the Government during the war, both in Washington and London, and back and forth a great deal of the time; who took charge of the administration of our Greek-Turkish aid; whom the President, at my recommendation, put in charge of our Near East and African work; and who, with incredible energy has now visited every one of the areas under his control. He has visited and talked with leading men of every country of the Middle East and has just returned from a long trip to Africa.

It would be foolish for me to tell you about Ed Barrett who came from Alabama. He belongs to your profession. You know him. You know the great job which he is doing in overseas information which the President has picked out for such vitally important concentration.

We have put into the far-eastern work Dean Rusk, of Georgia. He was our Deputy Under Secretary for Political Affairs, and we thought that the whole far-eastern matter was so critical that we would take our senior political officer and put him into that work.

Walton Butterworth, of Louisiana, who had been in that work, we put in charge particularly of working out some progress on a solution of Japanese matters, one of the most essential things that we must do. In him we have picked out an officer who has the

confidence of General MacArthur, who has worked with the Military Establishment, who is a man of superb integrity and courage.

In case you don't know as much about Walton Butterworth as you do about some of these others, I will remind you that he is the man who had charge of our economic warfare activities during the war in Spain and Portugal. It was he who was in that plane that fell into the river and broke apart at Lisbon; it was Walton who was in the sinking part of the plane in which most of the passengers were trapped; who broke the window through; who pushed his fellow passengers out of the window while the plane was filling up; who then got himself out, kept those who could not swim very well afloat, and helped them onto a wing that was floating. Finally, when the boats came out and picked them up after a very long time and Walton was taken ashore, what do you suppose he had in his hand? It was his brief case containing his secret papers. That is the type of officer we have in the State Department.

Then we have as our legal adviser, ranking with the Assistant Secretaries, Adrian Fisher, of Tennessee. And I note, as I go along here, that we seem to be loaded up with old-fashioned southern Communists—no doubt of the Cordell Hull, Walter George, Tom Connally type.

Adrian Fisher was a bomber navigator during the war; later Solicitor with the Department of Commerce; legal adviser to the Atomic Energy Commission, and now the legal adviser in the Department of State.

I suggest to people, in the interest of their own security, not to fool with Adrian Fisher. Not only was he a former bomber navigator, but he was a former captain of the Princeton football team. Charges lightly made about him might have serious personal consequences.

Eddie Miller, of New York, was born in Puerto Rico, brought up in Cuba, and then in New York. He speaks Portuguese and Spanish as easily as he speaks English. He is a former partner of Mr. Dulles. He has just returned from two trips to South America in which he has put our relations with the Southern Hemisphere on a basis on which I think they have never been before. They are on a sensible, sound basis of mutual advantage, and both they and we know that we both really mean business when we talk, and when we talk we want to talk business.

George Perkins of New York is a businessman of distinction, who had gone with Paul Hoffman and was working with him in Paris. Paul, with great generosity, let me take him to be in charge of our European affairs.

Willard Thorp of New York is in charge of economic matters. He is an economic expert; a former director of the Bureau of Foreign and Domestic Commerce in the Department of Commerce; a former partner of Dun & Bradstreet.

Jack McFall of Colorado and Indiana has charge of our relations with Congress. He has spent 15 years as the assistant clerk of the Appropriations Committee of the House. If there is anybody who understands, and really understands deeply, the necessities of close relationships between the House and the Senate and the Department of State, it is Jack McFall.

Then in charge of a very important branch of our work, dealing with the new government of Germany and German problems, we have a regular colonel from the United States Army, Colonel Henry Byroade, who was lent to us by the Army—and whom I wish I could steal permanently for the State Department.

In charge of the planning staff is Paul Nitze of Massachusetts, former partner of Dillon, Read, a man who went all through the war and was awarded the Medal of Merit for his economic-warfare work.

In charge of our press relations, we have that old friend of yours, Mike McDermott—and you know what sort of a "Communist" he is.

In charge of intelligence work is Park Armstrong of New Jersey, a man who all through the war was dealing with this incredibly important business of the evaluation of intelligence. Don't for a moment believe that the important thing to do is to send someone out with rubbers, dark glasses, and a false mustache, to try to steal some paper or find out something. The important business is the evaluation of what you get, either by secret operations or, much more importantly, the material which just pours in on you. Secret material is a dime a dozen. We had, not so long ago, a most interesting and exciting paper planted on us by one of our enthusiastic friends abroad, and it caused a little flurry. But it was Park Armstrong's cool people who discovered in a short time that it was a phony from top to bottom and saved us from the obvious purposes of their planting it on us.

In charge of the great military program for which we and the Defense Department are jointly responsible, we had in Jim Bruce of Maryland. Now that he has resigned, Jack Ohly of New York is taking it over.

Now, we have also brought in Phil Jessup, Senator Dulles, of New York, and Senator Cooper, of Kentucky. You can imagine how helpful they would be in covering up all "subversive" activities.

Here in this top command, I say to you, we have men as distinguished, as able, as powerful and as vigorous as any of my great predecessors, from John Marshall to George Marshall, ever had in the Department of State.

Furthermore, we have carried out a reorganization which is based on these men being the operators of the State Department. They are not people who sit around and argue with one another. Each one of them is responsible for carrying out a job, and the policy under which he carries it out is worked out through the planning staff, with the cooperation of all of these men. The policy is laid down and they are given their authority.

I don't sit behind them and pull their coat tails or look over their shoulders. I am kept informed, by the central secretariat, of everything that happens. I am permitted to get in, if I wish to, before something is done, but I don't wish to do that. These men are too good. They cannot hesitate. They cannot be saying, "What does the Secretary think?" They know what the policy is, and they go out and operate. Then we post-audit the operations; we change the policy if it is not working, but they are given responsibility and they are well able to carry it.

So I say to you—this is something very, very important, and I suggest that you ask your correspondents in Washington whether what I say to you is true—that today, as rarely before in the State Department, there is no backbiting, there is no jealousy, there is no undercutting. You have an organization of people which is loyal to those within it, which is loyal to the President of the United States and which is loyal to the United States of America.

Let us turn for a moment to the career service. The career service, made up of the Foreign Service and the departmental offices, is equally in good shape. This is a service of men and women who are giving their entire lives to the United States, not for a few years, not even 10 years, as I have given, but their entire lives, from the time they are young men until they retire at the end of their service. They are giving their whole lives to the United States. They are competent, they are courageous, and they are devoted.

Only this past week, two of our missions were bombed. That is not a pleasant experience. Have any of you ever had it? Have any of you ever had a bomb tossed in the window of your house and had it go off and injure people? Two of our missions have been through that this week. Fortunately, no one was killed, but many people were hurt. Do these people want to come home? Do they say, "This is too dangerous"? Not at all. This is in line of duty. They know their duty. They perform it. It is quite likely that they may be killed, but there is no squeak out of them.

We have just had an officer home who had been held by the Chinese Communists for a year, many months of which he spent in jail, under conditions of incredible hardship and torture. At the direction and request of President Truman, he is going about the United States telling people of what was done to him. Does he ask to retire? Not at all. With great difficulty, we are keeping him in the United States doing this. He wants to go back to the most difficult area that we can find for him. He is not asking to quit. He is not asking for sympathy. This is his duty. He likes it. He wants to go into it again.

We have scores of our people who are now in Chinese cities which are being bombed by the Chinese Nationalists. Are they whimpering about it? Not in the least. They were ordered home because the President decided that was the wise policy. They were perfectly willing to stay there and take whatever came to them.

We have scores of people through southeast Asia who are in areas of hot war, Indochina, the Philippines, Malaya, Indonesia. Bullets are flying all the time. It is not a cold war in those areas; it is a hot war. And these men and their wives and their children are there, and they are doing their duty. They don't ask to be transferred. They know it is their duty, and they are performing it.

And in other places, in Africa and other parts of the world, we have men with their wives and children who are in situations of the greatest danger, so far as their health is concerned. They are living under very unhealthful conditions. If they are ill, they take their chances under the most primitive medical conditions. There are no schools. There are no oculists to take care of the children's eyes. There are no doctors to give them all the inoculations which your children take. None of those things are available. They don't complain. This is their duty. This is their life. All they ask is that occasionally they be transferred to some situation which is not quite so tough.

Then there are others who are behind the iron curtain, and there they are treated as criminals. They cannot have any association with anybody. They cannot have any of the ordinary pleasant relations that all of you have. Anyone who meets them or talks with them will be in jail the next day and possibly hang the day after that. They have to live in a little circle, seeing the same few people day after day after day. But that is their duty, and they are carrying it out.

Here, again, there are no schools. And if you have a toothache and you want to go to a dentist, you don't call up a dentist; you call up the Foreign Office, and the Foreign Office calls up the secret police, and the secret policeman makes an engagement and comes and sits right beside you in the dentist chair to be absolutely sure that the dentist does not take a message out of your tooth and give it to somebody else.

Those are the circumstances under which these people live.

I don't have to defend these people. There is no reason in the world why they need any defense.

I should like to suggest to you that you would find it a very interesting exercise to

try, in your papers, an open letter to these Foreign Service officers of the United States, who are now your front line of defense, who are serving you in these dangerous and difficult parts of the world. Explain to them the attacks which are being made upon them and upon the Service of which they are just as proud as you are proud of the profession to which you belong. Explain to them, if you can, what is happening to this country behind them. Explain to them why it was that during the war we had USO's and letter-writing campaigns and everything in the world for the soldiers at the front to show them that the country was behind them and recognized the sacrifice that they were making; and try to explain what is happening now when it comes to these soldiers, these people who are in the front line of the defense of their country. Explain that to them if you can. You will find it difficult to do.

That is the Department of State as it exists today.

It is not strange that efforts should be made to penetrate this Department. Efforts of that sort have been made throughout the history of the United States, and they are being made today.

In the past, these efforts have beeen made by professionals. But with the spread of this fanatical doctrine of communism, the old profession of professional spies is under competition from amateurs.

Now, this creates difficulty. We are familiar with the method of counterespionage and the security methods which we have used in the past to protect ourselves from professional spies. In the last few years we have had a new problem to solve—and we have gone about solving it.

There is a right way to solve that problem, and there is a wrong way to solve it. The right way to solve the problem is to go at it from the point of view of meeting the evil which confronts you and preserving the institution which you are trying to protect. The wrong way is one in which you do not meet the evil that you are attempting to meet, but you destroy the institution that you are trying to protect. Not only do you destroy that, but you destroy the faith of the country in its Government and its institutions. You destroy the faith of our allies in us and you delight our enemies. Those are the right and wrong ways.

The right way was set up by General Marshall in 1947 in the State Department. It was set up under the directive of the President setting up the whole loyalty program. I have never known a man I thought had a surer judgment about people than General Marshall has.

And General Mashall picked out Jack Peurifoy to take charge of the loyalty program in the State Department. He took charge of it. He worked at it through General Marshall's administration. When I came, it seemed to me that there was absolutely nothing better than I could possibly think of to do than to confirm Jack Peurifoy in that particular job. I did, and I have never had occasion to doubt that I did the right thing.

He is not trying to do all this by himself. He has a security staff under a former FBI agent, who is recognized as one of the ablest men ever trained in the service of the FBI. He has a staff of 74 investigators who carry on our investigation work. That is not the only staff that does it. Mr. Hoover's FBI cooperates fully in the whole process. By one method or another, all people who come into the Department and all those who are in it have gone through a thorough screening process. This is a process which is not based on the idea that all these people are crooks. It is a process which is based, first, on protecting the United States but, at the same time, protecting the individuals' rights, protecting their reputations, urging and permitting them to continue to serve the United States with enthusiasm.

Searching examinations are made, so that if we find anything which causes trouble in our minds, we then put it into another level of screening. It goes to the Loyalty Board in the State Department.

General Conrad Snow is the chairman of that board. He is an old-fashioned New Hampshire Republican "Communist," a man who, incidentally, is vouched for by Senator Bridges.

That board, and the people who work on it, have gone through every single case about which any doubt has arisen.

When they get through with it, whatever recommendation is made—whether it is that the man be cleared or that he is not cleared—the whole matter goes on again to the President's Loyalty Board, headed by Seth Richardson, a former Assistant Attorney General under President Hoover, with a group of associates not one of whom works for the Government of the United States. All of these people are private citizens who are giving their time, their effort, and their devotion to the Government.

That is the right way. The wrong way is to smear everybody's reputation; to make charges on the basis that, if one is not right, you try to find another one you hope will stick; to try to destroy the confidence of people in their Foreign Office and in their Government in one of the most critical hours of this Nation's history—to do all of those things, and to make it absolutely certain, as a result, that under no circumstances could you ever possibly find a spy in the whole place. It is as though you said to yourself that the best way to find a fire is to ring every fire alarm in the city; not that you know of any fire, but if you get all the apparatus out and have it wheeling around through the city, you might find one.

But I think what is going on is much madder and much more vicious than that. It reminds me more of that horrible episode in Camden, N. J., which happened not so long ago, when a madman came out on the street in the morning with his revolver. With no purpose and with no plan, as he walked down the street, he just shot people; one was a woman coming out of a store; a man with his wife in an automobile. That automobile happened to stop because the light turned red. The car ahead of him went on. The car behind him was not where the madman was. So the madman just walked up and shot everybody in the car, without sense, without purpose, without direction.

You remember, I am sure, that poem of Browning's called Caliban Upon Setebas. Caliban is talking about this horrible amoral god of his. He says that his god operates in the way that Caliban himself does on the beach. Along comes, says Caliban, a procession of crabs going down to the sea across the sand. And he says something like this: "I stand there and I let 20 go by. The twenty-first I pick up and tear off a flipper. I let three more go by. The next one I crush in order to watch it wiggle in agony on the sand," and so on. It is that degree of vicious madness which has been going on here.

Now, I don't ask you for sympathy. I don't ask you for help. You are in a worse situation than I am. I and my associates are only the intended victims of this mad and vicious operation. But you, unhappily—you by reason of your calling—are participants. You are unwilling participants, disgusted participants, but, nevertheless, participants, and your position is far more serious than mine.

As I leave this filthy business, and I hope never to speak of it again, I should like to leave in your minds the words of John Donne in his Meditations, in which he says:

"Any man's death diminishes me, because I am involved in mankind.
And therefore do not send to know for whom the bell tolls;
It tolls for thee."

The American Way—How We May Improve It

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am pleased to include an essay written by Louise Hinders, of Celina, Ohio, entitled "The American Way—How We May Improve It."

This essay was one of 12 winners among more than 75,000 essays entered in the annual American Legion, Department of Ohio, contest for high school students of Ohio.

The Legion, every contestant, and the winners in particular are to be congratulated on the project for 1950.

The essay follows:

THE AMERICAN WAY—HOW WE MAY IMPROVE IT

(By Louise Hinders, Celina)

The house we live in—the American way of life—has been built upon the Constitution of the United States. Through all the storms of one of the most disturbed periods in human history, the free Government of the American people has rested secure on the foundation of our Constitution. However, it is also very important that we put the spirit of this document to work in our everyday lives.

Democracy is many things. It is the things we do, the words we say, and the thoughts we think. It is also the way we act toward other people. Democracy touches every aspect of the life of our communities.

A nation's strength lies in the character of its people, in their willingness to sacrifice leisure, comfort, and a share of their talents for the welfare of the community. Why have we come to believe that the American way is a free ride, without the need for earning our way?

Probably the greatest single cause for poor citizenship can be traced to our declining sense of responsibility in the home, the school, and the community in which we live. Although many try to solve the problems on the national scene, few have the humility to start where citizenship counts—in our own home town.

Because the family is the basic unit of our society, it is there that responsibility begins. The state measures its true strength by the stability of family life among its families. No nation can be greater than its families.

Good citizens must first be good persons. School courses in civics and political science, and inspirational studies of the lives and works of political leaders, meet a practical need. But these alone never make good citizens. Virtue is the basis of good citizenship. It is best developed in a good home and where God is held in reverence.

Modern living has put the emphasis on selfishness and suffocated the instincts of good citizenship at the very source. The youth of today look upon their home merely as a shelter and a meal ticket. Boys and girls in high school must realize their responsibility to others than themselves. No one can begin too early to learn genuine friendliness, understanding and respect for all other members of a group, regardless of race, creed, or social opportunity.

Our American way will be greatly improved when boys and girls are taking an active part in their town—in its community center, in

the work of its Red Cross, and in its Boy and Girl Scouts. By so doing they learn to realize the importance of the ballot. They learn to choose their own leaders, they become interested in local government. Thus they gradually learn to realize the importance of their State and Federal Governments. Voting becomes not only a privilege but a solemn duty. In this way they can learn to couple duty with vision, courage with steadfastness, and practice with principle.

Faith in our form of government, strengthened by practical experience, will set aside doubts and fears, and will guide the youth of today most surely toward the realization of their dreams for a finer America of tomorrow.

Return of the Pony Express or Horse-and-Buggy Days, With Emphasis on "Buggy"

EXTENSION OF REMARKS
OF
HON. WALTER E. BREHM
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. BREHM. Mr. Speaker, each mail coming to my office brings from 3 to 10 letters from constituents in my district stating their violent opposition to the administration's program of curtailing postal service.

The record will clearly demonstrate that I am in favor of economy and that I have so voted on each and every occasion. However, in my opinion, there are many false economy moves, and the present administrative directive wherein postal service is diminished does, in my opinion, furnish a perfect example of false economy.

In keeping with my stated intention during debate on this measure, I am including herewith the remarks referred to which in my opinion clearly demonstrate that if the present administration would accept and put into operation the recommendations of the Hoover Commission report, that this present drastic reduction in postal service would be unnecessary:

Reaction to the dramatic announcement, a few days ago, of "economy moves" ordered by the Post Office Department has been about as expected. The public is properly indignant at the reduction of residential mail deliveries from two a day to one, at the curtailment of post-office business hours, at the elimination of directory service in first-class mail and the other steps which will make the postal service less efficient. Reports from Washington say that the slash is likely to result in an increase of, perhaps, $30,000,000 in the appropriations for the Department.

The fact is that the Post Office Department's "economy move" does not remotely approach the real trouble or its causes. It chooses to attack the problem primarily through a program of inconveniences to the public which uses the mail service—and pays for it—and with the hope of doing no more than recoup some $30,000,000 of an estimated $500,000,000 deficit.

In this connection, it is informative to take a look at the findings and recommendations of the Hoover Commission with respect to the Post Office Department. The report says:

"(a) The administrative structure is obsolete and overcentralized.

"(b) A maze of outmoded laws, regulations and traditions freeze progress and stifles proper administration.

"(c) Although the Post Office is a business-type establishment, it lacks the freedom and flexibility essential to good business administration.

"(d) Rates have not kept pace with wages and other costs, and rate-making machinery is inadequate.

"(e) The service is used to hide subsidies.

"(f) Political appointments of first, second and third-class postmasters and certain other officials produces inefficiency and militates against the incentives of promotion.

"(g) Accounts are kept by the General Accounting Office outside the Department and are available to the Post Office for management purposes only after months of delay. Methods of budgeting and appropriation are entirely unsuited to a business of the size and character of the Post Office.

"(h) In recent times, except for a few years, the Post Office has operated at a loss * * * only the first-class mails, certain categories of foreign mails and the Post Office Savings System more than met their own expenses."

Some of the specific criticisms of the Post Office Department's inefficiencies (covered generally in this summary) are: (1) At this moment the Department has in service more than 10,000 vehicles the average age of which exceeds 15 years. (2) While 80 percent of the mail sorting could be done mechanically, according to the Hoover Report, this is still largely a hand operation. (3) Some of the rules governing accounting procedure go back to 1842 and others are 1840-style "modernizations" of methods set up by Alexander Hamilton in the days when men wore satin knee breeches and powdered wigs.

The clear implication of both the general and specific criticisms is that the Post Office Department is hopelessly out of date by present-day methods that could be made available under a thorough-going, nonpolitical reorganization; that the postal service could break even—or come a lot closer to doing so than at present—if the Hoover recommendations were put into effect.

As just one instance showing that the curtailment of service is not only an inadequate but also an unfair approach to the Post Office Department's problem, consider one item in the summary above—that first-class mail is the principal category which is now paying its own way at current rates.

Yet it is the users of first-class mail service who will suffer the most—by slower and less frequent pick-ups and deliveries, by less convenient office hours, by the elimination of directory service on letters which may have minor errors in address. In New York City alone 50,000 letters every day will be returned to senders or go to the dead-letter office under this ruling.

The protests from the public at the postal-service slash are justified. They ought to be bolstered by demands for a streamlining of the Post Office Department from top to bottom, in line with the Hoover Commission's findings. If this is to be done, there will be no need either to curtail postal services or to increase rates unreasonably.

A Fable About Potato Prices

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include another Dave Kirk editorial from the Spokane Chronicle.

I think this editorial points out briefly and graphically the dangers in the so-called Brannan farm plan.

At a time when tax reductions are becoming mandatory, it is well for all of us to consider what the cost of any given legislative proposal might be. The worst feature of those presently advocating the Brannan plan is the complete vagueness of either the cost to the Treasury or the increase in the presently overloaded Federal pay roll.

The editorial follows:

A FABLE ABOUT POTATO PRICES

Once upon a time there was a farmer who raised too many potatoes. People just couldn't use all of them, so, naturally, they didn't buy.

"What'll I do?" cried the farmer. "I can't get as much for my potatoes as I used to get. A lot of them will ride over to next year and the surplus will hold the price down then, too. What'll I do?"

"Oh, that's all right," quoth a Government price-fixing agent. "We'll let the price fall naturally through the operation of the law of supply and demand. That way the consumer will get a break."

"But what about me?" asked the farmer.

"Oh, the Government will pay you the difference between the low prices and what you should have," came the answer.

"But where will you get the money?" queried the farmer.

"Ah, that's easy," said the Government price-fixing agent. "I'll just make a quick change into the make-up of a tax collector and go back to the consumer for the money. He'll never realize that he's paying for potatoes!"

Veterans' Hospitals

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. WOLVERTON. Mr. Speaker, this bill providing for the construction of certain veterans' hospitals, and enlargement of others, is meritorious and deserves the support of the membership of this House.

The report of the Committee on Veterans' Affairs makes plain in its report that this bill restores to the Veterans' Administration hospital construction program the approximately 16,000 beds which were cancelled last December at the direction of the President.

All of the projects specified in this bill have previously been approved and a need has been demonstrated for the construction of these hospitals at the places indicated and for restoration of beds in the hospitals sought to be reduced in size.

The entire matter has been thoroughly considered by the Appropriations Committee of both House and Senate. The independent offices appropriation bill for the fiscal year 1950 continues the authorization of the necessary amount for the projects enumerated in this bill. The authority, however, is purely discretionary, and with the experience of

the past, there is created a doubt as to whether any action will be taken to restore these projects, unless legislation of this kind is enacted. This bill requires that the construction program shall proceed.

The need for the hospitals has been so well established that further delay is unjustified.

The American Way—How We May Improve It

EXTENSION OF REMARKS
OF
HON. CLIFF CLEVENGER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. CLEVENGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following winning essay of Robert Scheidt, of Van Wert, Ohio, in the American Legion contest:

THE AMERICAN WAY—HOW WE MAY IMPROVE IT

(By Robert Scheidt Van Wert)

This is the time for serious thinking—straight thinking. Great decisions must be made. Two contradictory forces are struggling for the minds and hearts of men. The same forces that ruined European civilization are mobilizing to repeat their work of destruction upon us. We can no longer refuse to recognize them. We must meet them and solve them in the traditionally American way.

The meaning and application we give the American way will determine our future survival and destiny among the nations of the world. The American way of living is the democratic way. It is because our Government is a democracy that we have freedom. Our freedom is largely responsible for our prosperity, and our prosperity has produced our high standard of living. We must do our share in maintaining this democracy which is the very foundation of our happiness and security. The citizen of a democracy can never rest if he wishes his country to remain free. "Eternal vigilance is the price of liberty" is an old saying which has proved itself throughout the ages.

We must dismantle the powers of those who would destroy us and set about rebuilding our own system of Government. This is necessary if we are to save the American way of life.

We must remain free to denounce and correct the present imperfections of our Government. This kind of freedom is increasingly precious in the world of today.

If liberty is to be preserved in this country, we must not become overly dependent upon the Federal Government. Such an attitude is degenerative in the moral sense, tends to destroy incentive in the economic, and is socialistic in the political.

It is utterly opposed to the traditional American principles of initiative, self-reliance, and ambition.

We must progressively reduce those taxes which hinder saving and the expansion of business. We must conserve our national resources, raise our productivity, and distribute our goods for the benefit of all. But this must not be done at the expense of our liberties. Freedom must have first place in our loyalties—then economic security. There can be no lasting security in a nation without freedom.

Each of us must be active in public service. We must get a clear understanding of political issues and elect leaders who are statesmen, not rulers. For service to others is the true essence of liberty.

Our reponsibility to the future is the correct education of our children. They must be taught the true meaning of democracy and how to make it work.

Our whole philosophy of government is based on the fundamental principle of Christianity that the individual is supreme. Our Founding Fathers had faith to believe that a government whose constitution was based on the Ten Commandments and the principles of Christ could not fail. That faith has been justified. History has confirmed that belief.

At the time our forefathers were declaring that the Creator had endowed all mankind with rights of freedom as the children of God, there was being proclaimed in Europe a philosophy of agnosticism asserting that the rights of man came from the State. The greatness of America today comes from one philosophy, the distress of Europe from the other. Let us not forget the original ideals that made America great. They were bought at a high price.

Deep reverence for the democratic way needs to be kept alive in the American people. We shall survive and history will judge us on how well we continue to fulfill this great way of life—the American way.

Conduits for Electric Voting Machines Should Be Installed This Year

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include hereunder a copy of a resolution unanimously adopted by the Philadelphia branch of the American Association of University Women. This organization has gone on record in support of the effort to prepare for the installation of an electric voting machine in the House of Representatives Chamber.

Regardless of what individual Members may think of the proposal to install such an automatic voting and recording device, the sensibleness of the proposal to install proper conduits while the Chamber is being extensively remodeled should appeal to everyone.

The text of the resolution follows:

Whereas, it is the right and obligation of each American citizen to know how each Representative has voted on vital issues; and

Whereas standing and voice voting systems used to save time required by record or roll-call votes prevent an accurate record of how legislators have voted; and

Whereas the present extensive remodeling of the Senate and House Chambers would permit easy installation of conduits for electrical vote recording apparatus; and

Whereas the extensive number of important issues before Congress necessitates the wisest use of valuable time by our legislators; and

Whereas 16 foresighted States and 2 foreign countries use electrical voting systems successfully: Be it therefore

Resolved, That the American Association of University Women, Philadelphia branch, support the bills (Senate Committee Resolution 50 and House Resolution 261) for the installation of conduits for electrical vote recording apparatus and the system of electrical voting by sending letters to the distinguished Senators from Pennsylvania, the distinguished Congressmen from the Philadelphia area, and to the sponsors of bills, Senators ESTES KEFAUVER and ALEXANDER WILEY and Congressmen CHARLES E. BENNETT and GLENN DAVIS.

Tennessee Sunday Observed at Historic Valley Forge

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. PRIEST. Mr. Speaker, on Sunday the annual Tennessee Sunday was observed at Valley Forge in the George Washington Memorial chapel.

On that occasion, my distinguished colleague, the gentleman from Tennessee [Mr. EVINS] delivered a very excellent and timely address.

Under leave granted to extend my remarks, I desire to include that address in the RECORD.

The full text of the address follows:

Ladies and gentlemen, it is indeed a delight and a privilege to be with you here today. I have enjoyed immensely the beauty of this memorial service. I consider it a distinct honor to represent my State—the great State of Tennessee—on this occasion. I accepted with pleasure the invitation of the distinguished Governor of Tennessee, the Honorable Gordon Browning, to appear here as his representative and to participate in this service which marks the Twenty-sixth Annual Tennessee State Sunday at Valley Forge. I am sure that Governor Browning joins with me in extending greetings to all Tennesseans and friends of Tennessee here today.

The Tennessee State Society of the Colonial Dames of America and the Daughters of the American Revolution of Tennessee, under whose auspices Tennessee State Sunday is sponsored, are to be commended for their patriotic endeavors and their sponsorship of this annual and beautiful memorial service.

I must admit that coupled with my pleasure at being present on this occasion, there exists, on my part—situated as we are among these historic hills and in the shadow of this magnificant memorial to our fallen forefathers—a deep sense of humility. This is a spot where all rightly should feel humble—for here we are reminded of the valor and courage and steadfastness which made our Nation. All men should feel humility in the presence of greatness and manifestations of greatness. This is indeed a sacred spot and hallowed ground—it has become thus because of the great men and unswerving patriots who struggled here and gained for us our freedom and independence and set in motion our cherished American way of life.

This magnificent memorial—the Washington Memorial—is a thing of beauty and magnificence. It is a touching memorial and—so far as it is possible—it re-creates the atmosphere of Valley Forge—an atmosphere in which we may revere and honor the past—honor our great patriot leader, George Washington, and those patriot soldiers of the Continental Army of Valley Forge.

Valley Forge—and the trials and suffering here of General Washington and his Army—will ever be the symbol of darkness and

despondency and crisis through which our country has passed.

Valley Forge is, in addition, the symbol of a crisis overcome and a glorious victory attained. It is such a symbol because of the suffering at Valley Forge here experienced—and because of the courage and devotion to duty which this suffering called forth and which have never been surpassed in our history.

Valley Forge was first and foremost a military crisis, the like of which we have never since experienced—valient men were crying from hunger and despair. They suffered from the deadly cold that benumbed their limbs and dulled the will and spirit to battle of all but the most noble and ardent. Here men wept in despair for the suffering of their families who needed them sorely—men who had only their own inner fire of zeal and patriotism to tell them that their cause was just and righteous and that their duty and allegiance to this ideal overshadowed all else.

For doing battle and offering resistance to the enemy, this band at Valley Forge had naught. They had no fit weapons of warfare—save only the extreme cruelty of the unmerciful winter which, fortuitously, restricted also the opposing force. There were no reinforcements, no relief, no arms, no supplies—nothing.

Yet these men survived and rose to greatness and to victory. They overcame the crisis and made possible our Nation and its greatness.

Valley Forge was also a great spiritual and mental trial—a testing, so to speak, and in the cruelest form, of the will to freedom and liberty of the men who fought here. It was the depth of despondency for General Washington who was tortured alike by the suffering of his men, the lack of weapons—and the indifference of many of his fellow countrymen who little cared—or so it seemed—of what transpired at Valley Forge—or, indeed, of what happened to the brave and struggling cause of liberty for the Colonies.

It was a bitter cup for General Washington—a cup compounded of the basest and most destructive of all human instincts—treason, lack of faith, the will to give up the fight. Yet these men overcame the mental and spiritual trial. They survived and rose to greatness and to liberty for us all.

Victory evolved at Valley Forge over the forces of military might from across the sea and over the forces of discontent, suspicion, weakness, and discouragement from within. Victory came under the inspired leadership of Gen. George Washington—a victory which gave to the sons and daughters of the men of the Valley Forge army the greatest, most magnificent concept of human liberty that the world has ever known.

It is not possible to dwell upon the life of General Washington without the realization that the nobility and high qualities which he possessed in such great measure are the same qualities which, it seems to me, are needed at the present critical stage of our history. Tolerance, foresightedness, honor, profound and unswerving patriotism, and belief in the ideal of democracy—all of the qualities which were the lifeblood of our first struggles as a country are needed today perhaps more than ever. They are needed lest we permit the weakening of the priceless heritage of freedom which was initially gained at Valley Forge and which has come down to us and which we today enjoy.

We are here today free men, and proof that the dark hour of Valley Forge was turned by George Washington into a brilliant victory for freedom and democracy. We are the living proof of the strength of our way of life. We are the living proof that our country can survive and has survived the greatest misfortunes that may be possible.

We look upon past events—this display of heroism, steadfastness, patriotism—to gain courage to face the day and the future. This is true not only of nations but of individuals. The sure knowledge that we, either as individuals or as a nation, have come through the worst that can be thrown at us should give us confidence and faith in the future and our ability to meet other crises.

Following the victory at Valley Forge, and even before that date, my own great State, the territory that was destined to become Tennessee, was the scene of conflict and strife, the inevitable consequence of the westward march of civilization and progress. The establishment of the colonies into an effective free government set the example and pattern for development in the West. The descendants of Valley Forge participated in that great march of progress. They came by horseback to my State, carrying, in many instances, all their worldly possessions in a kit sack. They walked, trudged through unchartered wilderness or along meager paths toward the new land of opportunity which was Tennessee. They arrived by crude flatboats to establish homes upon the beautiful bluffs and amid the rolling and magnificent hills and valleys of my State. They brought with them the highest of virtues—courage, determination, independence, spiritual steadfastness, and adventure—and set about making new homes. They brought to Tennessee the rich heritage of Valley Forge—and Tennessee nurtured and has continued to nurture through the generations this sacred heritage.

The descendants of many of these brave men at Valley Forge and others with the spirit to venture and to conquer gave to Tennessee the name of the Volunteer State—meaning that the sons of Tennessee have ever stood ready and eager to take up arms in the defense of their country and the cause of freedom and liberty.

The State of Tennessee, whose day we observe and celebrate today, has produced its quota of courageous leaders and soldiers.

If it can be said that any man of our history has been the measure of Gen. George Washington, that man would be Andrew Jackson, of Tennessee, a great general and military leader and a patriot of still another crisis in another generation. He led the American forces of his day to many great victories and to new heights in the cause of liberty, freedom, and democracy.

During the period of growth and development of the great Southwest, it was under the administration of James K. Polk, of Tennessee, President of the United States, that a great western territory—Texas—was made a part of the United States and taken in as a sister State in the Union.

In still another period of conflict and strife, when brother fought against brother and State against State, it was Andrew Johnson, Tennessean and a southerner, who remained loyal to the Union and was chosen by President Lincoln to be his aide and assistant in cementing the severed ties of union. It was under Andrew Jackson that we began to emerge from a period described in history as the tragic era. We emerged into building and making of our country a more solid and a more perfect union, based upon the principles of freedom, liberty, and democracy.

We have had many crises since George Washington at Valley Forge, but always we have survived and become stronger as a people and as a Nation.

Today America stands at the height of its power and greatness—preeminent among the nations of the world. But today, more than ever before, it seems to me, that we must remember the inscription which is emblazoned over the portals of our Archives Building in Washington: "Eternal vigilance is the price of liberty."

The poor band of patriots at Valley Forge was vigilant as their leader was vigilant. They withstood not only the great might of the enemy, but they withstood the destructive forces operating from within which would have divided them and defeated their cause.

I believe that the greatest of all temptations in time of trial is the temptation to give up the fight, to surrender the cause—to become complacent and unwatchful—and this is the most damaging and harmful force which can operate from within a nation such as ours—a Nation where liberty and personal freedom are so inherent and basic that they may be taken for granted and abused.

Liberty and freedom were bought at the price of hardship and sacrifice. They must be maintained by our citizens of today—each assuming his own responsibility. Freedom without responsibility degenerates—and may easily be lost.

America has arisen from a struggling imperfect Nation to the position of world leadership and responsibility and the test of today is whether we shall—and are willing—to arise and assume our rightful place of world leadership—to preserve our own way of life and hold out a light and a torch—an example of democracy to the peoples of other lands.

Standing here on this hallowed ground, fired with new inspiration for the future which we can properly gain from contemplation of past achievements—we may dedicate and rededicate ourselves to perfecting our future as a Nation in the family of nations, to maintaining our priceless heritage of freedom and democracy, and of insuring a continuing peace in the world based upon justice and honor.

We may remember that this great man—George Washington, and these men, his soldiers at Valley Forge—conquered because they had in them the spirit and determination for survival. They possessed the spirit that made them steadfast, not merely on an occasional great day, but day after day in the daily endeavor to do duty well.

How greatly needed today—and how necessary that we hold to the spirit of Valley Forge. And how truly wonderful that we can feel that in this new age—this age of atomic weapons—that we are still holding true to the spirit of the men of Valley Forge—men whose hands were frozen to the muskets raised in defense of their country and our national liberty. Yet, we must ever be mindful:

"That only men can make
A nation great and strong.
Men who stand for truth and honor's sake,
Stand fast and suffer long."

May the guilding hand of divine providence give to America such men in all future generations—such men as those who stood and fought at Valley Forge.

Public Purchase of the Brannan Plan

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, on at least two separate occasions, mention has been made on the floor of the House, of the meeting in St. Paul held early this month under the auspi-

cies of the Production and Marketing Administration. The story was revealed in the Senate by Senator AIKEN of Vermont.

It seems clear to me, Mr. Speaker, that section 201 of title 18 of the United States Code has been openly and flagrantly violated. Even though that be not true, no one can deny that cheap, shabby politics has been resorted to by persons in responsible Federal office.

The editor of my home town daily newspaper, K. H. Koenig, of the Waukesha Freeman has written a pointed editorial entitled "Public Funds Used to Buy Brannan Plan." The Washington Star contained an editorial on the same theme entitled "Mr. Brannan's Hired Audience." I hope the Members of the House will take time to read both of these searching editorials on this shocking, brazen demonstration of lack of public trustworthiness.

The editorials follow:

[From the Waukesha (Wis.) Freeman]

PUBLIC FUNDS USED TO BUY BRANNAN PLAN

Dispatches from Washington this week, which told of two Senators charging that the United States Department of Agriculture is using funds to hire an audience for a political speech, are evidence of the extent to which the administration is going to force the Brannan farm plan on the country. It was brought to the attention of Senators HOMER FERGUSON and GEORGE D. AIKEN that on April 3 and 4 county committeemen of the production and marketing administration for Minnesota met in St. Paul. This was an annual meeting and a perfectly proper one, called for the purpose of developing an agricultural conservation program for 1951. These programs have been generally beneficial in all of the 48 States and to the national agricultural economy. But the incident to which the Senators object and the one that casts doubt upon the activities of Secretary Charles F. Brannan in his zeal to adopt his own pet farm program is a notice which was sent to the 5,000 community committeemen. Dated March 16, at St. Paul, it read, in part:

"The decline in farm prices has placed even greater emphasis on the price-support program which we in PMA are administering. We know you realize how controversial this subject has become. We feel it is extremely important for you community committeemen who represent agriculture at the grass roots, to have this chance to hear your Secretary who is making a terrific fight to maintain some measure of economic stability for farmers.

"Our production picture has changed since the war as it pertains to basic crops such as wheat and corn. With acreage allotments come diverted acres and we want to be sure that land taken out of wheat and corn this year will be put to the best possible conservation use as far as practical. We feel sure that giving you an opportunity to hear your administrator on this subject will give you renewed enthusiasm and a broader understanding of the problems which now confront us.

". . . travel allowance is being authorized for community committeemen who attend this meeting. I suggest that you bring others with you."

We see here the offer of the payment of mileage to 5,000 community committeemen so long as they brought a carload of neighbors with them. This was intended to make sure of a large attendance, since the meeting was not restricted to committeemen alone. The question might logically be asked, what right has the Department of Agriculture to pay $8 a day and expenses to 5,000 people to listen to the Secretary of Agriculture speak on any subject? The cost of the meeting must have been somewhere between $50,000 and $100,000. It is not quite clear where this money was to come from although it is logical to suppose that it would be taken from the funds allocated to the State of Minnesota for soil-improvement work. It would, of course, be easier to condone the expenditure of such vast funds if Secretary Brannan spoke on uses for lime, superphosphate, terracing, forestry work or other soil-conservation practices in that State. But Secretary Brannan spoke of none of these things, if we are to believe the news story next day carried by the St. Paul Pioneer Press. The Press reported that Brannan spoke to a record-breaking crowd of 8,000 persons on the Truman administration's campaign for the Brannan farm plan in the national elections of 1950 and 1952. To quote further, the Press reported:

"Battling shoulder to shoulder for the plan of free farm prices and production payments to maintain farm income were Secretary of Agriculture Charles F. Brannan, daddy of the plan, and United States Senator HUBERT H. HUMPHREY, of Minnesota, its all-out supporter. Senator EDWARD J. THYE could not come and sent his greetings to the crowd.

"First Brannan and then HUMPHREY assailed the present law's system, particularly as applied to perishable products like potatoes, eggs, meat, and milk, of backing up farm prices with a system of flexible supports that are made effective through Government buying. Both also assailed President Allan B. Kline of the American Farm Bureau Federation, as defender of the present system. The flexible system is so named because as supplies pile up, price support levels are lowered."

A full-scale political address and not a treatise on soil conservation is what the record crowd of 8,000 received for the thousands of dollars in Federal funds paid out that April day to assure an audience for the Secretary of Agriculture.

That brings up an interesting question for the farmers in Wisconsin. Mr. Brannan in recent weeks made two appearances in this State—one at Juneau and another in Milwaukee. At both he plugged his pet farm plan. At both he was applauded by Democratic candidates who are seeking posts in Congress next fall so that they can help adopt the Brannan farm plan. Were these two meetings also bought and paid for with soil-conservation funds? The farmers of Wisconsin and of America had better awaken to the threat they face of being socialized and nationalized along with other key American industries.

[From the Washington Evening Star]

MR. BRANNAN'S HIRED AUDIENCE

Senator AIKEN, backed by Senator FERGUSON, seems to have a sound factual basis for his charge that the Department of Agriculture has spent money illegally on a cheap form of politicking.

The charge relates to a 2-day meeting held early this month in St. Paul by the 269 county committeemen of the Production and Marketing Administration for Minnesota. In itself, the meeting was altogether useful and proper as a get-together designed to discuss conservation problems. Apparently, however, its closing session went far beyond that. According to Mr. AIKEN, it was broadened into a kind of Democratic political rally, with the Department of Agriculture undertaking to make an unauthorized expenditure in order to recruit a big attendance.

To support his point, Mr. AIKEN has produced a letter which one of the Department's PMA officials sent to all of Minnesota's 5,000 community committeemen (as distinct from county committeemen) urging them to go to St. Paul to hear a speech by Secretary Brannan. To make the trip particularly attractive the letter declared that anybody attending would be reimbursed for travel expenses and receive per diem pay. Since a large percentage of the people invited showed up at the meeting, the cost to the Department of Agriculture, according to Mr. AIKEN's estimate, must have been somewhere between $50,000 and $100,000. Conceivably, if the gathering had been wholly nonpolitical in character, such an expenditure would have been justified, but the evidence strongly indicates that the only thing that took place was a show in which Mr. Brannan and Senator HUMPHREY ridiculed the Republicans and whooped it up for Democratic farm policies, particularly the proposed Brannan plan.

In other words, the Department's outlay of money seems to have served no other function than to insure the presence of a large hired audience before which the Secretary and Mr. HUMPHREY played politics of a sort calculated to send the committeemen back home as missionaries likely to be helpful to the Democrats in the congressional elections. If there were no Federal cash or pressure involved, this sort of thing probably would be tolerable, but the truth of the matter is, as Mr. AIKEN has said, that there appears to be no authority (certainly, there should be none) which permits the expenditure of PMA funds for the purpose of which they were used at St. Paul. If the practice which was applied in Minnesota of spending public money to pay the expenses and per diem of farmers to listen to political speeches is followed in the other States the expense can be many millions of dollars, all of which must come out of appropriations which Congress made for legitimate farm programs.

On the point of legality, Mr. FERGUSON has expressed himself even more emphatically than his Vermont colleague. He has declared flatly that the expenditure on the St. Paul meeting should be acted upon by the Attorney General as a clear violation of a Federal statute (sec. 201 of title 18 of the United States Code) forbidding the use of appropriated money to influence legislation. His view is that the Secretary of Agriculture in effect hired an audience to listen to political speeches aimed at building up pressure to make Congress enact the Brannan plan for farm production payments.

It may be, as far as the law's technicalities are concerned, that Mr. Brannan can defend himself satisfactorily. Even if he can, however, the whole business will still smack of shabby politics.

Freedom and the Welfare State

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1950

Mr. BIEMILLER. Mr. Speaker, George Meany, the secretary-treasurer of the American Federation of Labor, laid several ghosts at the recent meeting of the League for Industrial Democracy in New York.

He dismissed reports that labor unions were no longer interested in the national health program by declaring that doctors as well as patients would be better off under the administration's proposed health program.

He stressed the need for a human welfare state as a bulwark of free society and denounced those who refuse to admit that both the New Deal and Fair Deal have helped to preserve free enterprise in this country.

And he pointed to social security and rural electrification programs as the kind of human welfare measures which will broaden, rather than limit, our individual and national freedoms.

With permission to extend my remarks in the RECORD, I attach Mr. Meany's speech:

Permit me to preface my remarks on freedom and the welfare state by admitting that I believe in both. More than that, I believe that both freedom and a state of welfare can and should be enjoyed by the American people at the same time.

So, I am sure, does our special guest—Senator LEHMAN—because his whole public career has been aimed at the achievement of those goals. That is one of the chief reasons why the labor movement has always regarded him so highly.

Of course, there is no such thing as a welfare state, neither here in America nor anywhere else in the world. To liberals, the welfare state is an ideal worth working for and fighting for. To the reactionary politicians who pounced upon the phrase for propaganda purposes, the welfare state was merely something to frighten people into voting against their own interests.

Fortunately, the great majority of the American people do not get panicked that easily. When an acorn pops down on the head of Chicken-Little TAFT and he starts crying, "The sky is falling," he may get some of the Byrds and the worrying Wherrys to run with him to tell the king, but the American people generally will not follow. They have more common sense.

A free government, like ours, was established in the first place not to rule the people, but to serve them.

The Government does not deprive us of any liberties by such services as workmen's compensation, bank deposit insurance, crop insurance and social security. The only compulsion in any of these programs is the payment of taxes for the insurance provided, and taxes always have been and always will be with us.

I am convinced that the American people are willing to pay still higher taxes for more adequate protection against economic disasters and for new programs, such as health insurance.

When the welfare state slogan fell flat, the reactionaries hunted around for a new phrase and came up with the "hand-out State." All of us who pay taxes for the extremely meager economic and social insurance which our Government, as yet, affords us realize quite clearly that we are not getting any hand-outs but are paying our own way.

But, speaking of hand-outs, it is somewhat surprising to me that our reactionary friends never do refer to the very considerable hand-outs which our Government has generously awarded to big business in the past and the heavy subsidies which it is still pouring out.

Was it a "hand-out State" when the Government spent millions to help the railroads build transcontinental transportation networks?

Was it a "hand-out State" when the Government paid heavy subsidies to American shipping so that an adequate merchant marine could be maintained against foreign competition?

Is it a "hand-out State"' when the Government subsidizes the air lines through higher air-mail payments than are economically justified?

Is it a "hand-out State" when the Government deliberately takes a loss on second-class mail in order to help publications circulate more widely? Do you ever hear the newspapers and their friends in Congress complain about Government largesse when big business is the direct beneficiary?

The American Federation of Labor is, and has consistently been, a firm defender of our free-enterprise system. As a general policy, we do not believe it wise or prudent for the Government to invade the field of private business, wherever private enterprise is serving the public well. If any of the social-justice programs undertaken by the New Deal or the Fair Deal were actually damaging to private business, we would be among the first to object. But, has private business really suffered under the New Deal and the Fair Deal?

I am sure we can all remember back as far as 1933 when Franklin Roosevelt took office. Our financial structure on the brink of complete disaster; agriculture prostrate and the buying power of our people at the lowest point in 40 years; small business failures at an all-time high.

We didn't hear any arguments about statism or socialism from the great leaders of industry in those days. No; on the contrary, they flocked to Washington by the thousands with all sorts of proposals by which they hoped the new administration would save them from disaster. That they were saved by the prompt actions of that administration is a matter of history.

And how have the great captains of industry, who were the architects of our ruin back in the twenties, made out under the Fair Deal which they now so viciously condemn through their spokesmen—the Tafts, the Martins, and the Hallecks—in Congress?

I am not going to bore you with any long-winded analysis of the present position of big business. Let me simply quote from a report, just out, by the United States News, which is edited by David Lawrence. This special report appeared in the March 24 issue of that publication. Here is the quotation:

"American corporations, as a group, are rolling in money. In four postwar years they have invested $60,000,000,000 in new plant and equipment; they have increased other assets by $11,000,000,000; they have added $21,000,000,000 to reserves for depreciation, and they still have $40,000,000,000 in cash and Government bonds on hand.

"Never before was the financial position of the United States business so strong."

I think those figures tell the story. Today, the insurance companies, who so bitterly fought us every step of the way to prevent workmen's compensation and social security are making more money than they know what to do with. Today, the utility interests which tried every fair and foul means of blocking the rural electrification program are silently splitting up huge dividends from increased sales of electric power and electric appliances.

In the same way, I venture to predict, the American Medical Association, which is so frantically campaigning against health insurance, will be forced to admit, after it is enacted, that it was the best break the doctors of this country ever got, to say nothing of their patients.

This controversy over the policies of the New Deal and the Fair Deal is nothing new. It goes back to our very beginning as a nation. Simply stated, it is: Shall our political and economic policy be what the people want? Or shall it be what some superior guiding group may think is best for the people?

The present-day Bourbons of our country talk about statism, socialism, and the welfare state. To me, labels, with the exception of the union label, are more or less without meaning. I am for the greater welfare and security of all the people of this Nation. I believe that it is a proper function of a democratic government to strive for a better life for all its people, including those who work for wages. Put any label you desire on this effort for a better day—statism, New Deal, socialism, Fair Deal, or welfare state—I am still for it.

In your time and in mine, I am confident that the American people, by their own decision in free elections, will be able to achieve a greater degree of human welfare and security and will discover that their freedoms have been broadened, rather than curtailed, in the process.

Reduction in Mail Service Opposed by Congressman McDonough

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. McDONOUGH. Mr. Speaker, the proposal to reduce the postal service to one delivery a day in residential areas and proportionately in business districts will be strongly resented by the people of my district and the Nation as a whole. The delivery of mail by the postman is one of the most intimate and dependable contacts the public has with the Government. It is one of the few most appreciated and valued services which the heavy-burdened taxpayer receives for the high income tax he must pay.

Reduction in mail delivery will not only be a great inconvenience to the public; it will also create more unemployment, which is growing at an alarming rate.

The public has learned to appreciate the efficient and dependable postal service of more than one delivery each day, and they should not be made the victims of a reduction in this essential service while they are willing to pay for it.

Since the war excise tax of 25 percent on telegrams has not been repealed, the public has come to depend upon the frequent and efficient delivery of mail to serve their needs for speedy communication.

The unemployment that will result from this plan will be a severe shock to the morale of postal employees as well as to the public. Many World War II veterans will lose their jobs adding to the alarming increase in the unemployment ranks throughout the Nation.

Mr. Speaker, I resent and oppose this attempt to make the public and the postal employees the victims of this plan when at the same time we are spending billions of the taxpayers hard-earned money to rehabilitate and maintain foreign governments throughout the world where economy could be applied without reducing the essential and necessary mail delivery at home.

The reduction of mail delivery, especially in Los Angeles, will be a great inconvenience to the public because of our increase in population, and the unprecedented growth and expansion since the war.

We are proud of the fine services rendered by the Los Angeles Post Office, and we will resist and oppose any plan or attempt to reduce its efficiency, curtail its services to the public, or reduce the morale of its employees.

I have written a letter of protest to the Postmaster General which reads as follows:

APRIL 21, 1950.

Hon. JESSE M. DONALDSON,
The Postmaster General,
Post Office Department,
Washington, D. C.

DEAR MR. DONALDSON: In reference to the propcsed order to reduce mail service to one a day in residential areas and a proportionate reduction of parcel post and mail deliveries in business districts, I desire to register my opposition to this proposed change believing that it will not bring about economy commensurate with the reduction in service and convenience to the public, and that it will increase unemployment.

I am confident that the public's reaction to your new order will be strong opposition, especially in the Los Angeles area with its tremendous expansion and increase in population.

In my opinion, the mail-delivery service to the public, which has become so appreciated and so efficient, should be the last place to economize in attempting to reduce the postal deficit, making the public and the postal employees the victims. I am confident that other means can be found in the Department to bring about economy rather than reducing the service in this manner to the public.

Very truly yours,
GORDON L. MCDONOUGH,
Member of Congress, Fifteenth District, California.

The American Way—How May We Improve It?

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am inserting an essay written by Mr. Charles Philip Bolin, of Mansfield, Ohio. Mr. Bolin is one of the winners of the annual essay contest sponsored by the Department of Ohio American Legion and the Auxiliary. Approximately 75,000 essays were written and 12 winners were chosen. Philip Bolin was one of that 12.

The title, Mr. Speaker, this year was "The American Way—How May We Improve it?" The work of this young man certainly merits the time of every Member of Congress to carefully analyze his recommendations.

I am indeed very thankful, Mr. Speaker, that the American Legion and the Auxiliary sponsor such a program and I am grateful that so many young people—the youth of today and the manhood and womanhood of tomorrow—will devote many hours of time and study in preparation of an essay of this type.

Mr. Speaker, I congratulate Mr. Philip Bolin, of Mansfield, Ohio, for his endeavors and his achievement, and I am happy to submit his essay for your consideration:

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

(By Charles Philip Bolin)

After the great debate had ended and Jefferson had completed drafting the Declaration of Independence, the Members of the Continental Congress signed one of the most important documents of all times. It and the Constitution, which was drafted 12 years later, cast the mold for the American way—the way of democracy.

The foundation of democracy is this famous phrase of Jefferson's. "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

The American way can be improved by studying these words in the light of today.

I. All men are created equal.

To improve our American way, we must believe that one American is basically as good as another, regardless of race, creed, or color.

We should support the civil-rights program that both political parties are backing.

We should each individually fight intolerance. When remarks are made intending to cast suspicion on our fellow Americans, purely on the grounds of race or color or religion, we should denounce them as un-American.

II. Men are endowed by their Creator with certain unalienable rights.

Communism, nazism, and fascism all preach that the only rights the individual has are those given him by the state.

We, too, believe that if a man has rights, those rights must come from somewhere. Our forefathers taught that they come from God.

We must do a real educational job in the schools, in the churches, in our political parties and through the press and radio, as to the importance and rights of the individual. Since we believe that those rights come from God, we should strive to increase religious interest in America.

Long ago William Penn said, "Those people who are not governed by God will be ruled by tyrants." The founding fathers believed this so strongly they risked their lives to defend it. If we preach that same thought to all America we can overcome that active minority which is trying to sell communism and destroy the individual.

III. Life, liberty, and the pursuit of happiness.

To improve the American way of life we should take additional steps to protect those rights, such as:

1. Better study of the causes of crime, and combined drives by educational and religious institutions to improve morals.

2. Active interest in the civil-rights program that our Government has started.

3. Greater interest by individuals in the poor and the unfortunate, so that the whole job is not left up to public agencies.

4. A program providing greater financial incentive to teachers who, after all, must carry a part of the responsibility of teaching children about life, the importance of liberty, and the pursuit of true happiness, as against mere pleasure.

IV. Governments are instituted among men, deriving their just powers from the consent of the governed.

We believe that government is for the people. We do not believe that the child is born for the state. The individual is the important thing.

The American way of life will continue and expand only if our fellow Americans believe it as strongly as did Jefferson, Washington, Franklin, and Adams. If Hollywood and the combined radio and television networks could plan a program assuring a certain number of motion pictures and broadcasts a year featuring plays built around this fundamental idea, much could be done to stir interest and enthusiasm.

To sum up, the way to improve the American way of life is to take seriously the slogan, "Freedom is everybody's business."

A Century of Progress

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include, in part, a recent editorial from the Clinton Daily Item entitled "A Century of Progress," written by the editor, Mr. Orra L. Stone:

As we turned the calendar for March the picture was not pleasant with strikes across the country strangling production in basic industries, shackling communication and transportation, with the headlines screaming the news of trouble at the coal mines, with workers on welfare, freight cars standing idle and householders suffering from empty bins; with our gigantic steel mills notifying their customers "no coal, no steel" in the second quarter of 1950; with 10,500 dealers of one auto concern alone, employing more than 200,000 persons, idled by a strike, with more pay, less working hours, seniority, priority, slow-downs and pensions demanded; with millions of man-hours lost and billions of dollars wasting down the drain of chain-action walk-outs, coupled with delusion, confusion, personal and group hatreds, misunderstanding, political influence, bargaining and bickering, injunctions and law actions, union factual fights, referendums and negotiations, all seemingly the price of peacetime production.

And yet, at heart, the men and women who are parties to this apparently unending conflict are all good Americans—at least, almost all.

Sometimes it makes many Clintonians wonder if this is America after all, and to inquire if it is the fruit of two ghastly world wars in a single generation, or whether it is the concept our founding fathers who left us a heritage of freedom to be preserved and defended. We stop and ask are we doing justice to this land of opportunity?

The freedom of enterprise which guided Erastus Brigham Bigelow to sow the seeds of progress in our midst never visioned that his sucessors would be virtually handcuffed and victims of misapplied rights.

All of us admit that strikes are legal, but most of us question whether they are loyal to America when they throw this community and all others and the Nation's total economy out of gear. To many it seems they constitute the virus that is slowly poisoning the minds of men and women whose toil and skill are critically needed most in the struggle for world survival.

Neither this community nor the Nation at large can withstand the repeated impact

and shock of constantly recurring strikes which constitute positive proof of a crumbling strength for employer, employee, and America itself. Could it be that Moscow's fifth column is setting the United States up for that "Sunday punch"?

More and more we are awakening to the dangers of regimentation of any kind and detecting the evils of pitting one class against another and many believe it is high time that we Americans "stop, look, and listen" before our economy runs off the track and is wrecked completely.

Today employer and employee appear to be deadlocked in thousands of industries and stand impotent due to the peculiar phraseology in our laws governing labor relations and to technicalities, details, and misinterpretations of meaning.

Surely no progress can be attained without confidence between employee and employer and no pay checks, dividends, new products, or consumption of raw materials can flow steadily unless the convulsion of strikes is eliminated and employee and employer sit down to develop a set of "ground rules" for cooperatively working together.

The latest and biggest riddle seems to be the writing by Congress of the new ticket for social security, and until that eventuates no American employer knows what he faces and neither do the unions. This much appears to be certain, all of us must keep working while a better and firmer bridge of understanding is being built.

It is apparent to the man on the street that some evil influence is jeopardizing the sacred rights and privileges to earn an honest dollar by an honest day's work. It probably is of foreign origin at its root because it cannot be purebred American policy.

Great industries are imperiled, great cities are idle, purchasing power is frozen from coast to coast, with wives and children, the butcher, the baker, and the candlestick maker all feeling the pinch when the head of the household is not working.

Let's all stay on the job while employees and employers figure out a practical solution to the complicated problems of pensions and the like. Any other course spells disaster for all of us because losses now occurring will never be regained. Let's not let our Nation down.

We are advised that we are in a period of prosperity, but it seems strange that if at such a time the Government cannot live within its income, what will it do if we suffer a serious recession in business?

With a public debt of more than a quarter of a trillion dollars which is daily being added to we are informed that the interest alone on it is 5½ billions of dollars annually, a total more than all the expenses of Government in 1933.

To justify spending more than our income, some people allude to what the Government is doing for the little fellow, but it is well to look at what the Government is doing to the little fellow and to note that it is making the small man smaller. If the little fellow uses a telephone he pays a tax; if he travels by rail or bus his ticket includes a tax; if he buys gasoline for his car he pays a tax; if he goes to a baseball game he pays a tax, and if his children go to the movies they pay a tax.

If the program now proposed is adopted the average workingman will have to work 67 days each year to earn the money to pay his taxes to the Federal Government alone and that is what the Government is doing to the little fellow.

If the spenders really want to help the little fellow, they should allow him to keep more of the money he earns for his labor so that he can spend it as he pleases instead of having it taken from him and sent to Washington to allow bureaucrats to spend it as they think best.

Men intoxicated with power will never voluntarily surrender the power to spend the money of other people and the Government will not repeal a single war tax now being collected until forced to do so by public sentiment.

The Nation's plain trouble is debt and taxes and we cannot cure it by more debt and more taxes. The only way out is to cut current expenditures.

The so-called good old days were not so rough, at that. The first year Federal income taxes were slapped on the American public, in 1913, Uncle Sam snatched only $71,380,000 from our pockets and that sum is not enough to cover what the Federal Government blew in last year to support potato prices.

It is a vastly different picture that presents itself to this year's graduates of Clinton High School, and from other educational institutions as they enter upon their life work as go-getters, than that which faced the young people of this town, in 1900, when the semicentennial was observed.

That year, the Nation had a debt of $1,263,416,913 or a per capita debt for each man, woman, and child of $16.60 which was a prettier picture than that presented 30 years before, in 1870, when the national debt totaled $2,436,453,209 or $61.76 per capita.

The generation that came upon the scene between 1900 and 1930 saw its per capita share of the Nation's debt rise from $16.60 three decades previously to $315.45 but that was merely a bagatelle compared to the 1949 per capita debt borne by each of us which reached the astronomical height of $1,695.46 last year.

In 1900, Congress appropriated $698,912,982.83 to run the United States Government, but in 1949 Federal appropriations totaled $48,272,280,457.59.

The young men and women who step out of our schools, this centennial year, face a situation entirely different from that which was met by their parents and with the bleak fact before them that the United States will have no Marshall plan backed by a generous nation on either continent to help them.

They see many of the countries of western Europe and Great Britain, which have embraced socialism, unable to stand on their own financial feet with the very existence of these nations entirely dependent on the taxpayers of the United States.

The only hope seems to be that these young people will plainly discern that it will be prudent for this country to hold fast to its democratic system of government and to put our financial house in order and aid in warding off the concentration, in Washington, of the powers of local governments, including police powers and to halt the imposition of creeping but ever-advancing socialistic programs.

They must ever keep in mind that the people who came here from foreign lands in the beginning did not arrive to establish a government, but rather to escape the tyrannies of government. They did not seek security but rather an opportunity to enjoy the freedom of being let alone.

They cannot fail to sense that the spirit of self-reliance that inspired the early settlers of Clinton to exercise their initiative and develop the town, while preserving their independence, is being halted by too many persons who seek to lean on the Government and too many who are thinking more of security than they are of opportunity.

It is perfectly obvious to the generation now coming on the scene that to pay for the costly programs that have been adopted, with others planned, we shall have to borrow more money, and it is well for them to sense that if we stumble no Marshall plan aid or lend-lease will aid us, but rather we will all be on our own.

The new generation cannot but appreciate that we would not have an ever-expanding Government if the American people were conscious of the taxes they are now paying and surely they will recognize that when the Federal Government required employers to withhold income taxes from employees, the plan put the worker to sleep.

Ask any Clinton wage earner the amount of money he earns and he will tell you the sum of money he receives in his envelope or pay check and not the amount his employer actually pays for his services before Federal withholding taxes are deducted.

Excise taxes are so well hidden that their burden is not appreciated by the taxpayers and the coming generation can easily discern that the best-kept secret in the United States today is the program of excise taxes that hit every family from coast to coast every day in the year.

Such taxes, included in the price of everything you buy, exceeded $700 per family in 1948. The fact remains that only half of the Federal Government's revenues and less than 10 percent of State and local tax receipts flow from direct taxes on personal incomes.

The rest comes from taxes on business enterprises which, in turn, are passed along to the consumer in the form of higher prices. As a result, for all with annual incomes of $5,000 or less, which includes better than 9 out of every 10 persons, the hidden burden is heavier than the Federal income tax.

Taxes accumulate all along the way from the raw materials to the finished products on the store shelves and at that point many States and cities add a retail sales tax.

If you buy a pack of cigarettes you pay 11½ cents in taxes. If you purchase an auto you pay between $300 and $500 in taxes on a $2,000 car which is the big reason, according to the manufacturer, why the $1,000 auto is out of the question today.

The coming generation scarcely realizes that total tax collections in the United States today are now two and one-half billion dollars higher than in 1945 when this country was engaged in a global war and that four-fifths of the present tax collections go toward Federal spending.

The Boom Goes On

EXTENSION OF REMARKS

OF

HON. CHARLES B. DEANE

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. DEANE. Mr. Speaker, it was with a great deal of interest that I read the excellent editorial in the April 24, 1950 issue of Life Magazine. Under unanimous consent I insert this well-written editorial entitled "The Boom Goes On," as a part of my remarks, since it reflects, in my opinion, the general feeling that this great country of ours continues to move forward:

THE BOOM GOES ON—LIVING BETTER THAN EVER, THE UNITED STATES MUST NOW LEARN HOW TO LIVE

Two years ago, four years ago, the United States was hip-deep in a postwar boom—and the news today is that it is still smack in the middle of the same boom. The darned thing goes on and on and on. Mr. Sewell Avery of Montgomery Ward has been predicting the worst for years, but it is the hopeful Gen. Robert Wood of Sears, Roebuck who has made the money. Even that incredible Mr. Faint Heart of the long boom period, the stock market, has at last decided that valor may be the better part of discretion. With high boom dividends going on and on and

on, market valuations of stocks have finally returned to the originally hopeful ground of 1946, even pushing through in certain key "industrials" to the highest averages since 1930.

Even with its new high, the stock market still has a long way to go before it can pose as an accurate register of the actual physical goods-and-services boom, which has been particularly terrific for the first quarter of 1950. As the President's economic advisers have recently pointed out, the country has been on the upsurge in practically everything. Personal incomes, swelled by the veterans' insurance refunds, have been at a new peak. People have been buying furniture, refrigerators, television sets at a pace never set before. The home building rate this year has hit an all-time high; a grand total of a million or more homes are scheduled for 1950. The steel production rate hums along at 97 percent of capacity. In Detroit they are busier than ever: nearly 2,000,000 motor vehicles rolled off the production lines during the year's first quarter, and this despite the crippling Chrysler strike. The boom has developed such a solid impact on all fronts that both the Federal Reserve Board and Secretary of Commerce Charles Sawyer see it rolling at least until 1951.

The conventional editorial response to all this would be to let the story carry itself—or at most to observe, truly and tritely, that all booms end sometime. You don't look a gift horse in the mouth, and you don't usually ask "so what?" of prosperity. Nevertheless, we can think of at least three points that ought to be raised, and we herewith raise them.

Most paradoxical of the points is that the boom, big as it has been, just hasn't been big enough. It has been big in production, big in consumption, and big in earnings in relation to market valuations of stock. But with population rising, with 4,000,000 currently unemployed, with 1,700,000 job-seeking college and high-school graduates coming on the labor market this year, and with business efficiency increasing (meaning that fewer workers are needed to do a given job), new enterprises just aren't being born fast enough to soak up the available manpower. An approach to the $300,000,000,000 economy is a must if the boom is to go on. But the $300,000,000,000 economy won't come into being unless Washington makes it more rewarding for a man to risk his capital. As we have said before, one way to stimulate the creation of the necessary new enterprises would be to end the present short-sighted practice of taxing dividends twice.

Our second point has to do with the relation of the internal American boom to the opinion of the rest of the world. People of other nations have doubted that the United States has the intellectual and moral power to sustain its part internationally. They have also been looking for a big physical bust in the United States for a long time now. But the boom, which is one of solidly built Oldsmobiles and Budd trains and Allis-Chalmers tractors and Frigidaires and Zenith television sets and Westinghouse generators, multiplied endlessly for five solid years, should be sufficiently tangible to convince anybody from Batavia to Zeebrugge that the United States has the sheer physical vitality to stay the course in the push to a better world community. As a matter of fact, some of the dividends earned on United States home production must push for investment outside the country—which means that Mr. Truman's point-4 program is physically there for any nation to take advantage of the moment it makes conditions attractive to United States investors. Even if the United States lacks something in foreign-policy brains, the United States boom is for export to any country that cares to use brains on its own.

The third point which interests us centers on the relation of means to ends. Americans in recent years have had fewer worries than other people about making a living. But do they know how to live? Or what to live for? These are still big questions, and they obviously haven't been answered. In many ways the United States people are a morally restless and unsatisfied lot.

They are, however, learning something, and their behavior during the boom shows it. Making all allowance for the different circumstances of today, the negative fact that the postwar boom has not be accompanied by the suicidal stock market splash of 1929 is some indication that Americans are a wiser and steadier people now than they were then. Other things about the boom atmosphere are heartening. No one has collated the statistics relating to such diverse things as the increase in churchgoing, the sale of china-painting sets at the 15-cent stores, the growth of art museums and local symphony orchestras, the number of people reading the great books, the popularity of garden clubs, the upgrading of the type of lecturer heard at Rotary luncheons, and so on. But if someone were to do this necessary statistical investigation, it just might prove that the United States citizen is learning what prosperity is for. He is at least beginning to learn that prosperity, once the primary needs of life are cared for, is only good as underpinning for the good life.

In 1929 the United States valued prosperity as an end and it disappeared. Are the American people really coming to value prosperity as a means to the larger good? We hope so, and we propose a toast: "Here's to prosperity—and here's to keeping it in its place."

Democratic-Dominated Congress Wins Do-Nothing Prize

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. BREHM. Mr. Speaker, during the 1948 election campaign President Truman proceeded to lambaste the Eightieth Congress not only from coast to coast, but from center to circumference.

I felt, as many others did, that in his desperation for reelection he was making statements which in his more sober moments he would not have made. I felt that the heat of battle had perhaps raised his blood pressure and somewhat as a drowning man clutching for straws, that he in desperation was attempting to clutch and tear down the straw man which he was at the same time trying to build up. However, now as time has gone by and the heat of battle somewhat subsided and still Mr. Truman and some of his administration zealots continue to try and lambaste the Eightieth Congress rather than let it rest in peace, I feel perfectly justified in submitting the following article by Mr. Louis Bromfield regarding the present Eighty-first Congress:

President Truman and Democratic Chairman Boyle, both graduates of the Kansas City Pendergast machine, have been looking worried lately and they have reason to be as time and the record catches up with them.

Mr. Truman referred to the Eightieth Congress as a "do-nothing" Congress and the worst in our history. He demanded a Congress dominated by his own party and he got it. In comparison with the Democratic Eighty-first Congress, the Republican Eightieth Congress was a ball of fire. Mr. Truman's own Congress has not passed a single measure in his welfare state program and indeed nothing at all but the routine usual appropriations bills and one or two bills to take the taxes off oleo or admit some individual being held up by the immigration department.

One fact is certain—that Mr. Truman's existing Democratic Congress holds the world record for emptiness and unkept promises. The curious fact is that Mr. Truman and his Pendergast-dominated national committee have shown little inclination to get any of his emergency bills through both Houses.

Each time one comes up, the administration support of it seems to fade away and rumors follow that Mr. Truman and his friends do not really want the bill passed. They want to keep the issue open for the 1950 elections. Of course, this sort of tactic can go on forever, or until the Democratic Party is thrown out lock, stock, and barrel.

At the CIO convention in New Orleans, organized labor rose in wrath and demanded of Mr. Truman and Mr. Boyle that some of the promises which were used as Democratic campaign material in 1948 be brought before Congress and an effort made to get them passed. It may just be dawning on organized labor that Mr. Truman and his friends have been treating them as they might a local union in Kansas City, stringing them along on promises put off year after year, getting their votes and giving nothing in return.

The ugly incident of the murder of the two Kansas City bosses, Binaggio and Gargotta, who had virtually whipped the Pendergast machine in Kansas City, came at a most inopportune moment when the administration and the Democratic machine were doing their best to suppress or draw the teeth of the proposed congressional committee investigation of the Nation-wide corruption of the gangster and slot-machine mob.

The move to investigate came from one of the finest members of the Democratic Party, Senator KEFAUVER, of Tennessee; but Mr. Truman's and Mr. Boyle's cohorts have done everything to stop it or render it innocuous. Why? Some honest Democrats in Washington will tell you under cover that they are afraid of what will be revealed and the effect on the Democratic Party fortunes.

The Binaggio murder in Kansas City brings up a long-standing unsavory smell which the administration cannot shake off. It should never be forgotten that one of the first acts of Mr. Truman was to grant wholesale pardons to Pendergast stooges convicted by good American juries for criminal frauds having to do with voting.

A little later when a second investigation, deeply incriminating, came up in connection with Mr. Truman's Pendergast backing, the evidence, apparently unguarded, was stolen and destroyed and nothing came of it. The FBI was called off and the case was mysteriously hushed up. But the votes that were stolen were used to defeat Mr. Truman's own enemy, Congressman Roger Slaughter.

The situation smells and should not be tolerated either by the people of Missouri and Kansas City or by the people of the whole Nation. There is a curious parallel between Mr. Truman's loyalty to Tom Pendergast and Mr. Harding's loyalty to Harry Daugherty. Of the two, Daugherty was undoubtedly the less offensive.

In any case the whole record, as time catches up, should prove again that the greatest nation in the world cannot afford to find itself run by third- and fourth-rate men.

Teamwork in Soil Conservation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. JENSEN. Mr. Speaker, I have been very favorably impressed with the progress being made in tying down the soil and holding back the water in all 14 counties of my district.

A very interesting and informative report was sent me by my friend, Mr. Ted Turner, chairman, Adams County Soil Conservation District, which states they are now working out their program by small watersheds—each farmer working with his neighbors, taking in 9 or 10 farms at a clip, building terraces, grassed waterways, contouring, and other needed soil-conservation practices. It makes me feel good to know the farmers of my district are proud of their work. What they are doing for their land will not only give them a better living and make their farms more productive as time goes on, but this is the kind of thing that will make and keep America strong.

Turner's report tells how the State of Iowa is contributing $2,500 to assist their district in getting more soil conservation on the land. Also, it points out how the Soil Conservation Service is assisting them with guidance in planning farms and applying soil-conservation practices. Turner points out how the Extension Service and other farm agencies work smoothly with them in getting the job done.

Turner includes interviews he has had with two farmers in his district that hit the nail on the head. Not only are these farmers satisfied they are doing the right thing in conserving their soil, but they know why and they know it is money in their pockets. No one needs to worry about these fellows; they know a good thing when they see it. So that others can learn of the success in Adams County, the following is their report of progress:

CORNING, IOWA, *April 7, 1950.*

Hon. BEN F. JENSEN,
Washington, D. C.

DEAR MR. JENSEN: Enclosed is a copy of the 1949 annual report for the Adams County Soil Conservation District. I think you will find it interesting.

We will welcome any suggestions you may have that will help us get better land use in our district.

We also wish to thank you for any help which you have given us in the past and ask your continued cooperation in the future.

Very truly yours,

TED TURNER,
Chairman, Adams Soil Conservation District.

ADAMS SOIL CONSERVATION DISTRICT (IOWA)—ANNUAL REPORT FOR 1949

Nineteen hundred and forty-nine was another good year for soil conservation in the Adams Soil Conservation District. Although our growth in interest and practice of soil conservation has not been phenomenal, still it has been steady and is increasing. A review of the statistics at the end of this report will give you a fairly good picture as to just how much progress has been made. Worthy of special mention is the fact that the Soil Conservation Service personnel in our district completed more field lay-out work in April than in any previous month in the history of our district.

We were also able to establish our first watershed-control demonstration this year. Conservation plans were completed with nine farmers living in the Lincoln Center watershed of Sin Creek. All of the 1949 crops were planted on the contour and six of the nine farms completed terraces during the first year. It will be very interesting to watch the developments on this watershed.

Spray Lee, one of our assistant commissioners and at that time also the newly elected president of the Farm Bureau, attended the district commissioner's short course which was held in January at Ames. Spray came back thoroughly pepped up.. He made a full report of his schooling at a special meeting arranged for our commissioners, assistant commissioners, and their wives. In February we held a district commissioner's election in cooperation with the Extension Service at a county-wide meeting on fertilizers. I spoke a little about our district activities and Ralph Krenzin, extension specialist from the college, talked on fertilizers. Lester Watt, of Nodaway, was elected district commissioner for a 6-year term. He succeeds Paul Flowers who had so ably served the district since it's organization in 1943. Paul did not choose to run again this year.

The district continues to enjoy good working relationships with local groups and organizations. Also, the other county, State, and Federal agencies concerned with farm programs.

Educational work with schools in the district included talks on conservation and a tour of farms for the Corning eighth-grade pupils. Also, work with the vocational agriculture classes and Cub Scout packs. A plow terrace building demonstration was held for the GI farm training classes this spring.

The Corning Free Press has been very generous in their publicity on conservation projects. Conservation lost a very able and stanch supporter in the recent death of Mr. Gauthier, the local editor.

Radio Station KSIB at Creston has also been very helpful in their reports on conservation activities.

The Adams district submitted the Harry Reese, Tom Dougherty, and the Coleman-Flower farms as our entrants in the Omaha World-Herald contest. The final results showed that the Adams district ranked third in Iowa, with only 54½ points less than the winners. Our farms scored 2,836½ points out of a possible 3,000. We plan to be a winner next year.

We named Gene Schwartz, Ernest Blazek, and Kenneth Calkins to compete in the Goodyear contest. These men were honored at the Goodyear award dinner held in Des Moines.

Both of these contests showed the interest and concern for our most important resource, the soil.

Our district again cooperated with the three adjoining districts in putting on a four-county soil conservation field day and plowing contest. The program consisted of a tour over the Tom Dougherty farm, where we had our field day in 1948. This farm has made a lot of progress in 1 year's time and is an excellent example of what can be accomplished through conservation farming. The second part of the field day was the making over of the Frank Maharry farm which joins the Dougherty farm. The field day was well attended, and we feel very successful in showing how to do the job and also the results that may be expected.

L. L. Henderson held a husking bee type of field day on some of his land this fall. Six neighbors who regularly exchange work were invited in to build terraces, diversions, and waterways. There was considerable interest and we considered it a successful field day. Your district commissioners invite other neighborhoods to get together and work out their conservation construction. This system has much merit. Our technicians will be glad to work with you.

Kenneth King, working out of the Ames Soil Conservation Service office, recently assisted our district in the location of natural neighborhood groups. This proved to be very interesting. The theory is that if we can promote and develop soil conservation by working with natural neighborhoods, rather than individuals or artificial groups, we can expect to get more rapid and permanent soil conservation on the land. Mr. King demonstrated that it is possible to locate the natural neighborhoods; this we are going to try to do whenever possible. When some members of a group show interest in conservation we will promote that interest by working with the entire group.

One of the major developments in conservation during the past year was the appropriation of State funds for soil-conservation work in the district. In July our $500 and $2,000 budgets to the State committee were sent in for approval. These budgets have been approved and State money has already been used in paying for additional technical help, travel expenses of the commissioners and some of the expenses of our four-county field day. We feel that we are getting value received for this money. Our State legislature is to be commended for making this money available to soil-conservation districts and we feel a definite responsibility to you, our neighbors, to see that your money is well spent.

This year, to add a little variety to our report, I interviewed a couple of farmers to try and get their reaction to the services offered and being current given by the Adams soil-conservation district. The first interview was with Mr. Harry Reese, a master farmer, whose farm is located near Stringtown:

"TED. Harry, how long have you had your farm plan?

"HARRY. Since 1944.

"TED. What soil conservation practices are you using?

"HARRY. One very important one I use is a good rotation. This is a 4-year rotation using 1 year of corn, 1 year of oats, and 2 years of meadow.

"TED. How is this different than your previous farming?

"HARRY. Farming now seems so much easier since I have a definite guide to go by.

"TED. What happens to your rotation when the weather man causes you to lose a seeding?

"HARRY. That is no problem because when you are using a rotation with at least 2 years of meadow it is easy to hold that meadow over for another year when necessary.

"TED. Have you built any terraces or structures?

"HARRY. Yes. I have two terraces and a large pond which I built this past summer.

"TED. Harry, what are some of the benefits you have received from our Soil Conservation District?

"HARRY. They are numerous. Specifically, I have a soil map of my farm showing me just what types of soil I have and where they are located. It also shows how thick this layer of topsoil is, and what the average slope is in each field. Then I have my cropping plan which is a 5-year plan showing how I plan to operate my farm for the next 5 years. There is also space here to keep track of any special practices such as lime

and fertilizer applications. Then my fields have been rearranged so that the same types of soil are farmed together and also my fields are adjusted in size so that I have a balanced farming program giving me approximately the same acreage of crops each year. Besides this I got considerable help in my pasture improvement program.

"TED. How much better is your pasture now than before your renovation program?

"HARRY. There is no comparison. I now pasture at least three or four cattle on good pasture where before I had only one on a very mediocre pasture, mostly poverty grass.

"TED. How many head per acre now?

"HARRY. At least three head for the pasture season.

"TED. When do you turn in in the spring?

"HARRY. When the grass is 4 inches tall. This gives it a chance to get a good start.

"TED. What pasture mixture did you use?

"HARRY. Red clover, alfalfa, brome, ladino clover, and birdsfoot trefoil. Six months before seeding I put on 2 tons of lime per acre. At seeding time I put on 200 pounds of 0–20–0. The pasture had been thoroughly torn up with a spring-tooth harrow and a disc.

"TED. Would you care to make an estimate of the dollars per acre returns from this pasture in 1949?

"HARRY. A good cow will produce $50 per acre at current prices. This is much better than grain, and I'm building up my soil at the same time.

"TED. That was certainly better than trying to farm that particular field. Thank you, Harry. I'm sure hundreds of other farmers in our district could do as well with their pasture land."

Following is an interview with L. L. Henderson of Corning:

"TED. How long have you had a farm plan on your land, L. L.?

"L. L. About 4 years, I think.

"TED. What in your farm plan impressed you most?

"L. L. Knowing the different types of soil and how much of each was left on the land.

"TED. What can the average farmer hope to gain from a farm plan?

"L. L. With it he can make more efficient use of his land by knowing better just what he has to work with.

"TED. In what ways have you been benefited from our local soil-conservation district?

"L. L. In advice and technical help, always given very willingly. You've got a good bunch of fellows here. They take an interest in your farm just as if it were their own.

"TED. What would you suggest needs to be done to make our program more effective and to speed up the process of getting more conservation on the land?

"L. L. We need more educational meetings. It will take a series of meetings with the same group to get the job done.

"TED. What do you think about stewardship of the land?

"L. L. What do you mean?

"TED. I mean, do we have any obligation to preserve our farms for future generations?

"L. L. We certainly do. Just because we have a deed to our farm should not mean that we have the right to waste our precious topsoil. Unless the farmers come to realize this they will likely find themselves subject to a land-use program. Many of our other natural resources, such as oil, are already under Government restriction.

"TED. How can we get more farmers and landowners to regard their land as a trust?

"L. L. It will have to be through a process of education.

"TED. Thanks, L. L., for a splendid interview."

Apparently we have two well-satisfied customers among our district cooperators. I only hope that our district can render equally good service to all the farmers in the district.

Following is a brief report of the part taken by the agricultural extension service in soil conservation work as given me by the extension director, Mr. Homer Thiel:

"The agricultural extension service of Adams County and Iowa State College has assisted the work of the district in several ways.

"In line with common practice, the extension director has served the district as secretary, attending all meetings of the district commissioners except where other extension activities demanded his attention.

"With the beginning of consideration of new problems attending the most profitable use of the finances appropriated by the last legislature in Iowa, the extension director drove to Red Oak with the commissioners and work unit conservationist for an afternoon meeting.

"Robert Moorman, Ralph Krenzin, and Otto E. Hoffman of the State staff, appeared at the four-county field day in September, presenting information on corn-borer control, forages and weed-destroying chemicals, respectively.

"In April the extension director assisted Don Lovely, Ralph Waage, Erwin Birt, and Kingery brothers with contouring problems on their own farms, spending 2 days in all in the field with them. In all cases the men were instructed in locating contour lines. Four of the men were trained to operate and operated hand levels during the period spent with them. This assistance was given at the period of the peak load of local S. C. S. personnel.

"Assistance with publicity for the district was contributed by the extension director. Some of these releases appeared in the Adams County Free Press. Others appeared in the Farm Bureau World. Some of the features dealt with were: the structure on the Harry Reese farm, the L. L. Henderson Soil Conservation Day, the Sin Creek watershed area and other small incidental projects.

"Reports of accomplishments of the district were included in the account of agricultural activities of Adams County. This statement appeared in the annual agricultural extension report."

As previously stated, we feel that 1949 was a good year. We have every reason to believe that the year 1950 will be better.

ADAMS SOIL CONSERVATION DISTRICT,
TED TURNER,
Chairman, District Governing Body.

Our Problem—Maintaining a Stable National Economy

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, we hear much about maintaining a stable national economy, price parity, and we receive many communications criticizing the Government's policy of providing support prices for agricultural products. Many of the communications come from businessmen and commercial organizations, who apparently have forgotten the problems that arose affecting the financial security of business and the stability of our national economy during the depression years.

There has recently come to my desk a letter from the president of the Western States Meat Packers Association, together with copy of a resolution adopted by that association, which I have acknowledged with certain inquiries.

There is inserted herewith the correspondence mentioned above and the letter from the president of the Valley Packing Co., received in response to these inquiries:

APRIL 12, 1950.

Mr. E. F. FORBES,
President, Western States Meat Packers Association, Inc., San Francisco, Calif.

DEAR MR. FORBES: Thanks for your letter of April 11, with the attached resolution referring to our Government policies affecting free enterprise.

Now, just what is the purport of your letter and the resolution adopted by your association? From your letterhead, it appears that you are president of the Western States Meat Packers Association, Inc.

Does your organization include in its membership the big meat packers? Under existing conditions, how do you propose to achieve and maintain a balanced national economy and parity of prices in our price structure? By what method do you propose to eliminate unfair trade practices and unfair competition? Do you have any plan to protect and safeguard free enterprise and small business in this country? Do you sanction the present exorbitant prices the consumer has to pay for barbed wire, farm implements, and the products of our manufacturers in general? Did you observe the effect on the business in this country when credit was withdrawn from the people engaged in our basic industries, particularly agriculture, with the result that these people lost their purchasing power? Do you want that to happen again? Do you advocate the abandonment of the principles of price parity by withdrawing the price support of agricultural products?

Inasmuch as you have set out to educate the Congress of the United States, we would like to have your answer to these questions.

Sincerely yours,
COMPTON I. WHITE,
Member of Congress.

WESTERN STATES MEAT PACKING ASSOCIATION, INC.,
San Francisco, Calif., April 11, 1950.

Hon. COMPTON I. WHITE,
House Office Building,
Washington, D. C.

DEAR MR. WHITE: The most important problem facing Congress is to decide whether the tested concepts of free enterprise and individual liberty are to be discarded by our Government and replaced by socialistic measures which fallaciously purport to provide security. Even if such security could be realized it would ultimately be at the expense of regimentation, loss of freedom, and a reduction in the standard of living.

Attached is a resolution on this subject adopted by the members of the Western States Meat Packers Association at its recent annual convention in San Francisco. We trust that the Congress may make the proper decision.

We feel that the purpose of the attached resolution will have been accomplished if it serves to remind Members of Congress of the dangers that underlie the new paternalistic philosophies that have been advanced in this country in recent years. Accordingly, no reply is necessary.

Thank you for allowing us to bring this to your attention.

Very truly yours,
E. F. FORBES,
President.

RESOLUTION OF THE WESTERN STATES MEAT PACKERS ASSOCIATION, INC., SAN FRANCISCO, CALIF.

There impends today a threat to our country and the freedom of its people which so menacingly overshadows the future that we, American citizens of all shades of political belief, feel it our duty to speak out in unmistakable terms.

This threat lies in the fact that our country—without conscious choice on the part of its people—is rapidly and unmistakably drifting toward the consummation of a false concept—the socialized state.

Tokens of this danger are everywhere and undeniable. The growing power and expansion of wasteful government; the colossal public debt; the heavy burden of taxation; the malicious attempt to substitute an artificial economy for the natural economy which alone can function in freedom; the gradual assumption by the State of financial responsibility for every hazard incident to life—hazards which should be personally met and borne by every human being who has the instinctive will to survive and the inherent impulse to be free; the arraignment of economic and social groups, one against the other, and numerous other conditions and proposals similarly inspired and equally false.

Government produces nothing and has no means by which to support these false and destructive theories except by exacting from its citizens the fruits of their labors. The course the Government is now taking, unless it is promptly reversed, must inevitably lead to national bankruptcy. In a vain effort to prolong a specious sense of security, more similar expedients will be applied until we become mere numbers in a completely socialized State: Therefore be it

Resolved, That we, the members of the Western States Meat Packers Association, Inc., in convention assembled at San Francisco, Calif., February 23, 1950, reaffirm our solemn conviction that the future health, strength, and prosperity of our country depends on the reestablishment and maintenance of free and competitive enterprise and hereby pledge ourselves as individuals and as an association to work diligently and actively toward this objective and toward the defeat of the fallacious philosophies that are beguiling our country into socialism.

VALLEY PACKING CO.,
Salem, Oreg., April 20, 1950.

Hon. COMPTON I. WHITE,
House of Representatives,
Washington, D. C.

DEAR SIR: Before me lies a copy of a letter dated April 12, 1950, which you addressed to Mr. E. F. Forbes, president of the Western States Meat Packers Association. This was in reply to his letter of April 11, which accompanied a resolution adopted by the association on February 23, 1950, and Mr. Forbes sent me a copy of your reply because I happened to have the privilege of introducing this resolution to the convention.

I do not presume to speak for Mr. Forbes, nor as a member or officer of the Western States Meat Packers Association, but as a humble citizen and taxpayer I am indeed happy to make some observations in reply to your truculent letter.

First, as to the resolution—it is an exact copy of a resolution adopted by the American Cattlemen's Association at their convention held in Miami in January 1950, with the only changes being in the names of the associations, places of meeting and dates. I believe Idaho lays some claim to being quite a cattle State and I would suggest you contact some of the leading members of the A. C. A. in your State, and ask them what they meant by supporting such a resolution.

Frankly, Mr. WHITE, I cannot give the correct answers to all the weighty questions asked in the third paragraph of your letter. It is a safe assumption that the leading minds of our country are concentrated in the Congress, and even they have not come up with all the correct answers, when we face the fact that our deficit for the current fiscal year ending June 30 will surely run over $5,000,000,000. I lay no claim to being an economist, but common sense tells me that no one—whether it be an individual, a corporation or the Government—can borrow itself rich.

Now, Mr. WHITE, I do not believe the adoption of this resolution was any attempt to educate the Congress of the United States, but simply an effort to strengthen the desire of most Members of Congress to do a conscientious job for the welfare of all the people based on the fundamental principles that made this country great. Incidentally, speaking of education, have you read John T. Flynn's great book, "The Road Ahead?"

Sincerely yours,

G. F. CHAMBERS,
President, Valley Packing Co.

Ireland

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following letter addressed by Mr. William J. Conlon, one of my constituents, to the editor of the Telegram-News, of Lynn, Mass.:

EDITOR, TELEGRAM-NEWS:

SIR: I have been a reader of your paper for over 30 years. Your paper has at all times given the true facts on all questions and upheld the rights of oppressed peoples everywhere. There was an editorial in the Boston Post of March 31 on Congressman FOGARTY'S amendment in Congress recently to withhold ECA funds from England as long as the partition of Ireland by England is continued, was true to the point. Congress has intervened in Italy, France, Greece, and Turkey and several other European countries and asked for a government by the people. Can any Congressman in the House of Representatives tell the public of the United States why Ireland is not entitled to a government by her own people? I am writing this letter, Mr. Editor, at a time when the United States Government is loaning millions of dollars in Marshall-plan funds to England, and what is England doing without having the diplomatic courtesy of telling us what is going on behind the British iron curtain? England is using these Marshall-plan funds to finance the Arabs against the Jewish State of Israel, because of oil fields involved in Arab countries. She is also giving thousands of dollars to Red Godless Russia in exchange for what? She had recognized Red Godless China. And in my native city of Belfast she is financing an illegal army of occupation in the city where I was born. And who, may I ask, knows what England is doing in northern Ireland than the man who was born there? I was born on July 22, 1890, at 116 Corporation Street, Belfast, Ireland, and I can prove this with my birth certification which I have in my possession.

The Irish people in Ireland are only asking for our assistance in getting the British authorities out of Ireland, as did the Honorable Benjamin Franklin, Washington's first ambassador, when he pleaded with Henry Grattan's Parliament in 1800. The Irish Government sent shiploads of foodstuffs and rebel generals to assist the young American republic in shaking off the British yoke that bound them.

Congresmen of the United States, why don't you reciprocate and assist a small mutilated country of only 32,000 square miles total area, 300 miles long, and 200 miles wide? Two governments in a country this size is a laughing stock for the world. Congressmen, demand for us a free and untrammeled election and this will settle everything.

Sincerely yours,

WILLIAM J. CONLON.

Hall Demands Donaldson Return Postal Service to People

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

HOUSE OF REPRESENTATIVES,
Washington, D. C., April 24, 1950.

Hon. JESSE M. DONALDSON,
Postmaster General,
Washington, D. C.

DEAR MR. DONALDSON: I wish to inform you of the indignation and disgust being expressed back home over your recent order to cut the services of the Post Office Department.

As one Member of Congress who has always voted for all funds necessary for efficient running of the postal service, I cannot condone or approve your action.

If the post office needs more funds, I am ready to vote for them. The American people must have their mail go through. This is one place in our Government where false economy would be tragic.

I refuse to agree with your contention that the users of penny post cards should be taxed 100 percent. I voted against this increase and will never go along with doubling this postage.

Millions of our citizens now depend upon the penny post card to get important messages to their loved ones and to carry on their necessary business affairs.

Thousands of our worthy religious, fraternal and small enterprise groups find the penny post card a necessary part of their programs and they should not be compelled to pay any more for mail service.

I have always voted for every pay raise the postal employees have received because I feel they are underpaid for the tedious work they perform. If more money must be had to pay them, we can afford to save somewhere else.

You ask me where we are to get the funds if you are not permitted to double the penny post card. I will tell you here and now.

I find that four daily newspapers in my district shipped out more than 31,000 pounds of postage-free material during 1949. This may seem small but the taxpayers had to pay the shot.

Moreover, these newspapers are getting rich from advertising. They are also using

their columns for smearing Members of Congress which is a far cry from news gathering.

Last year, the cost of handling the country's newspapers which went postage free, was $11,173,870. Nearly $1,000,000 more would have been received by Uncle Sam if these newspapers had paid for their free-in-county mailings.

A recommendation from you to make the newspapers pay their proper cost of having Uncle Sam carry their material would probably cause Congress to raise twelve millions more dollars to make up the deficit you claim your department is carrying.

I stand ready to vote for such a revenue raising scheme and I hereby propose this to help bring the Post Office Department out of the red.

Sincerely,

EDWIN ARTHUR HALL,
Member of Congress.

The American Way—How We Can Improve It

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. WEICHEL. Mr. Speaker, the American Legion of Ohio sponsored an essay contest among the high-school students of the State of Ohio, from which 12 winning essays were selected and the winners are here in Washington this week. The essay was on The American Way—How We Can Improve It, and I want to include the essay of James Altwies, of Tiffin, Ohio, one of the winners of the American Legion Essay Contest of Ohio:

THE AMERICAN WAY—HOW WE CAN IMPROVE IT

How can we improve the American way? There are many answers to that question. The best answer seems to be action. The old saying, Action speaks louder than words is a very true one. It is a very common fault to plan certain objectives, then do nothing about them.

One of our first endeavors should be to live in peace with our neighbors, those we meet in everyday life. We should all strive to better ourselves and our Nation. If there were a bond of love and unity among all men, not just in the material sense but also in the spiritual, our Nation would operate like a well-oiled machine under a trained mechanic. As a result the country would be rid of its most menacing enemy, communism. The object of this Godless organization is to break apart and divide the whole world so its force can move in and dictate as it sees fit. It is just selfishness and greed that causes international confusion, such as coal strikes which disrupt the world. We, the people, should do something about this and prevent our enemies from undermining our Nation with alarm and confusion. Besides relying on the Government, the people should start some action. They should screen the magazines and papers they buy and investigate the movies. These channels influence public opinion, since most people use these outlets for their daily recreation. Whether we know it or not, our enemies spread propaganda if we are not alert.

Besides our interest in our neighbor and our own welfare, we should voice our opinions of all public officials and see that they really serve the country; for after all freedom of speech is one of our foremost liberties, for which many of our ancestors died.

We students in school also have the obligation to improve the American way by getting a good education while we have the opportunity. We will then have a sufficient training to help operate our country later on. Perhaps the State could offer better inducements for a better education in the form of scholarships, contests, etc., as is done for athletics. This would encourage those who have no means for higher schooling.

Of course, the very first way to improve the American way lies right in our own homes—the Nation's outpost. We should live daily lives worthy of the name America. By obeying the laws of God and country, all citizens might eradicate from the daily papers the scandals that disgrace the American system. The divorce rate, considered the greatest in the world, is the downfall of the American home. If everyone is charitable and considerate of his partner, there would be no cause for this.

These are some of the solutions to the Nation's betterment. Our way of life has always been respected and envied by nations less fortunate. By talking less and living better everyday lives we can bring honor to our country before God and man.

Partition of Ireland

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a resolution recently adopted by the Massachusetts State Boards of the Ancient Order of Hibernians and Ladies' Auxiliary:

Whereas the unjust partition of Ireland is a continuing factor of disturbance and distrust to the peace of the world; and

Whereas such partition, against the will of the people of Ireland, is also against the principles of justice expressed by the Constitution of the United States of America; and

Whereas such partition is against the best interests of the people of the United States, since Ireland, a divided nation, cannot take its proper place in the councils of the nations of the world; and

Whereas Ireland's absence from the North Atlantic Pact weakens the military defense of the United States as therein expressed and weakens the efforts of the United States to aid in the economic recovery of all Europe; and

Whereas Ireland's absence from the United Nations, to which the United States subscribes as a member, results from the veto of Soviet Russia, due to the hostility of Ireland to communism and its evils: Therefore be it

Resolved, That the State Boards of the AOH and Ladies' Auxiliary urge the Foreign Relations Committee of the House of Representatives of the Congress to report forthwith a suitable resolution expressing the sentiment of the people of the United States against the unjust partition of Ireland and demanding a plebiscite of the people of all Ireland on the matter of a united Ireland; and be it further

Resolved, That copies of this resolution be forwarded to the Foreign Relations Committee of the House of Representatives, to the President of the United States, to the Department of State, and to the members of the Massachusetts congressional delegation.

The Massachusetts State Board of the AOH and Ladies' Auxiliary: Rev. Michael J. Houlihan, Chaplain, Watertown; Paul E. Tierney, President, Somerville; Thomas C. Phillips, Secretary, Worcester; Hugh P. Caffrey, Organizer, Brockton; P. Frank Kean, Director, Brighton; William J. Ronan, New Bedford; Daniel J. Clifford, Watertown; Richard Fitzmaurice, Brockton; Mary Curran, Lynn; Mary Hurley, Belmont; Mary Kinsella, Salem; William P. Sullivan, Vice President, Holyoke; James P. McCarthy, Treasurer, Malden; Thomas H. Murray, Mission Chairman, Brighton; Thomas F. Hall, Sr., Pittsfield; Joseph P. McKenna, Methuen; Daniel F. Slattery, Norwood; Hugh A. Moriarty, Worcester; Helen Condrick, Weymouth; Kathleen Roche, New Bedford; Mary Gleason, Wellesley.

A true copy:

THOMAS C. PHILLIPS,
State Secretary.

The American Way—How We May Improve It

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. VORYS. Mr. Speaker, I wish to present to the House the prize-winning essay written by Miss Marilyn Reed, of Columbus, Ohio, on the subject The American Way—How We May Improve It? This essay was submitted in a contest sponsored annually by the American Legion, Department of Ohio. This contest stimulates patriotic thought and study by thousands of students. The 12 prize winners receive a trip to Washington. They were luncheon guests of Ohio Members of the House today in the Speaker's dining room.

Miss Marilyn Reed is an eleventh-grade student in Columbus, Ohio. Her essay contains food for thought for every one of us.

The essay follows:

THE AMERICAN WAY—HOW WE MAY IMPROVE IT

(By Marilyn Reed, Columbus, Ohio)

Our American way of life may be improved on home, community, and national fronts by a development of an enthusiastic sincere appreciation of our American heritage, its wealth of opportunity and fulfilment of ambitions. This may be accomplished by the education of our youth to the amazing advantage they inherit from their pioneer fathers, by publicity through newspaper, radio and drama, and lastly, by a country-wide revival of spiritual growth.

Too much of a "taken for granted" attitude has created a lethargy in our thinking habits. The youth of today, our citizen voters of tomorrow, should be taught thoroughly the rudiments of our Government. The construction of our Government, local, State, and national; the intricate functions of all three branches, judicial, legislative, and executive, should be as familiar to everyone as the list of last week's Hit Parade

tunes. Youth from the ages of 18 to 21 should be intensively trained to analyze the issues of the ballot, so that as they approach the day of suffrage privilege, they will enjoy the duty of voting as much as they enjoy receiving their diploma.

Our present way of life needs no radical improvement—it just needs a more thorough living of it. Americans are the best salesmen in the world. We cannot sell a product about which we know nothing; therefore, we need to gain as much knowledge of our freedoms as we possibly can, so that we can sell the idea to the world through intelligent living. Our newspapers and radio, our great outlet of the press freedom gives emphasis to the good, constructive principles of our way of life, through publicizing our agriculture, industry, trade, health programs, drama, and arts. With a little less emphasis on the sensational headlines, we can sell ourselves to the world, through knowledge of the good things of our freedoms.

Local, State, and national issues of the ballot should be the subjects of family discussions. As individual voters, we send our representatives to Congress; we are privileged to continue our contacts with them and to vigorously express our views on national and international questions on which they are required to vote. We, as men of the streets and voters, should express our views to our Congress on the crucial questions of present-day problems. Many of us neglect this privilege, yet criticize vociferously when the legislation does not please us.

Revival of spiritual growth will improve our way of life by shaping our thinking toward the original ideals of our forefathers, freedom of worship. This privilege, like the others, suffers from ennui and indifference. Beginning in the homes, spreading to communities, worship habits should be revived. Community sings, neighborhood socials, stimulated by church associations, will nurture our spiritual growth as communities. Good citizens make good communities, good communities make good nations. Closer relationship with our chosen religions will develop our sense of gratitude for our wealth of blessings in our way of life, our homes, churches, schools, farms, and industries.

In conclusion, our way of life may be improved by development of our initiative, to learn our government while young, to support it with our votes when we have gained that privilege, to teach it to those who will follow us, and to sell the whole idea to the world by exhibiting the happiness to be found in the American way of life and our freedoms.

Curtailment of Mail Deliveries

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

APRIL 24, 1950.

The Honorable JESSE M. DONALDSON,
The Postmaster General,
Post Office Department,
Washington, D. C.

DEAR MR. DONALDSON: The instructions issued by your office on April 18, curtailing mail deliveries and reducing other types of essentail postal service, can scarcely be considered as anything but a distinct disservice to the American people. I, personally, am of the opinion that you have greatly exceeded the scope of your responsibility in issuing orders that have the effect of denying equal postal facilities to all families and all segments of business in the Nation.

During the discussion of chapter IV, H. R. 7786, pertaining to the appropriation for the operation of the Post Office Department for the next fiscal year, it was pointed out on the House floor that your Department was being cut approximately 1 percent, or $28,000,000, in actual expenditures. In your opinion, does an approximate cut of 1 percent justify the sweeping reductions in your services to the general public?

My attention has been invited to a statement you made before the Subcommittee of the Committee on Appropriations of the House of Representatives on January 16, 1950. You are quoted as saying: "I consider it of paramount importance to continue to give the public good service. Any economy campaign which would go so far as to destroy the present standards would bring on reactions that not only would nullify economy, but, in the end, would result in greater costs."

Do you still hold the same opinion as expressed in the above-quoted remarks made by you? If you do, how do you reconcile the cuts in service that your instructions of April 18 order? If you have had a change of heart since your testimony of January 16, may I suggest that you inform the Congress and the American public that you no longer consider "good service" to be of "paramount importance"?

Have you or your staff given any consideration to the excessive delay in delivery that might possibly result because the bulk of mail will be beyond the ability of the carrier to deliver in a one-delivery-a-day arrangement?

Postal employees in my district have advised me that sort of delay has been not uncommon for months prior to your April 18 orders. Your instructions will compound the seriousness of that type of situation.

I will appreciate any expression you care to give to the several questions posed in this letter. Your reply will assist in serving as a basis for my own response to the many inquiries and protests received from the business firms and individuals in my district.

Sincerely yours,

ANTHONY F. TAURIELLO,
Member of Congress.

Our Election Laws

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. LANE. Mr. Speaker, I wish to include a very interesting article that appeared in the Lynn Telegram-News, Lynn, Mass., on Sunday, April 16, 1950, written by the very able and studious member of the bar of the Commonwealth of Massachusetts, Attorney Charles H. McGlue.

Mr. McGlue served for some time as the chairman of the Massachusetts State Ballot Law Commission and also as chairman of the Democratic State committee in that State. This item which deals with the system of proportional representation is one that is very close to the heart of the writer and is a subject matter with which Mr. McGlue is well acquainted. He has been an outstanding student of the primary and election laws, and the workings of that legislation in the Commonwealth of Massachusetts for a great many years. I know of no one who has a better insight on our election laws in Massachusetts than Mr. McGlue. Time and time again he has spoken and fought for legislation to improve those laws dealing with the conduct of our primaries and elections, and suffice to say he knows the weakness of some of our State laws. I submit this thoughtful article to the Members of the Congress for their study and consideration. Attorney McGlue's statement contains a great deal of material that could be effectively used to prevent the further decimation of Democratic majorities in our Democratic cities by the means of this communistic technique known as proportional representation and by the un-American system of plan E whereby minorities control majorities in cities:

DOES PROPORTIONAL REPRESENTATION PLEASE RUSSIA? IS PLAN E, PLAN EUROPEAN?

(By Charles H. McGlue)

"In all countries, even the freest, legal and peaceful in the sense that the class struggle is less acute in them, the time has fully matured when it is absolutely necessary for every Communist Party worker systematically to combine legal with illegal work.

"It is necessary immediately for all legal Communist Parties to form illegal organizations.

"The absolute necessity in principle of combining illegal with legal work is determined, not only by the sum total of the specific features of the present period, the period of the eve of proletarian dictatorship, but also by the necessity of proving to the bourgeoisie that there is not, nor can there be, a sphere or field of work that cannot be won by the Communists." (Dictator Nicolai Lenin, Communist leader, in his Thesis on the Fundamental Tasks of the Second Congress of the Communist International.)

MULLINS' RED SALAMANDER

In these days of "Reds" and "red herrings," it was rather surprising to me to find that a political writer of the supposed stature of William Mullins of the Boston Herald, would take time out from his prolific, political plottings in order to drag a "Red salamander" across the Old Bay State trail.

Of course, the politically wise realize that Bill Mullins is quite a master of creative fiction who does not hesitate to make up his own atmosphere and surroundings in order to give quasi-reality to a mere figment of his Gaelic imagination. His recent creation, the Red Salamander, in his latest interpretation work, McGlue's Blueprint of the 1951 Congressional Gerrymander, fell as flat as a flounder, if it is possible for a salamander to fall as flat as that.

"Ole Bill" was up to his old tricks of trying to scare the Republican Senators into line so that two bills most vital to the continuance of our American system of voting would meet defeat in the Massachusetts Senate.

IS MULLINS' FACE RED?

The two bills in question are house No. 2369, an act relative to the appointment of a city manager in cities having a plan E form of charter and senate No. 216, a bill repealing the laws authorizing the election of certain city and town officers by proportional representation. Both bills were awaiting action in the Massachusetts State Senate when "Ole Bill" did his stuff.

And what happened? House No. 2369, based on bill filed by the writer, House No. 1571, took its final reading in the senate by a vote of 23 yes to 16 no. Upon engrossment by the senate, it was sent over to the house of representatives for final enactment (it previously having passed successively through its three readings). It was enacted both by the house and the senate, and is now on Governor Dever's desk, where in all probability, it will receive gubernatorial signature on Monday next.

WHITTLING WITH WHITTIER

For some unknown reason, the chief opponent of this very sound and important piece of legislation was Senator Sumner Whittier of Everett. This bill (house No. 2369) removes the very unfair and un-American provision in the plan E city charters which prohibits all elected public officials in Massachusetts within 2 years of their election, from being selected for those juicy-job plums as city or town manager, ranging from $9,000 a year in Saugus to $20,000 a year in fair old Cambridge. Now, with the passage of my bill, any elected official is eligible at once for them, except a member of the city council during his term of office, or any other person who has within 2 years been elected to or served in any elective office in the city or in the county in which the city is located. So that today men like former Gov. Robert F. Bradford, former Lt. Gov. Arthur W. Coolidge, and former Governor and Mayor James M. Curley are eligible to serve as city or town managers in any city or town outside of their own county. This is democratic progress.

SENATE VOTES FOR BILL

Some idea of the effectiveness of the propaganda put forth by Bill Mullins and his Red Salamander, and Senator Sumner Whittier and his Whittling Theme (borrowed from an editorial in the Boston Herald of recent date) can be gleaned from a cursory glance at the 23 for, 16 against, roll call on this measure.

Five staunch GOP senators joined with 18 Democratic senators to give this bill an overwhelming endorsement. These five Republican stalwarts were Senator Ralph Lerche, of Northampton; Senator Ralph V. Clampit, of Springfield; Senator John D. Mackay, of Quincy; Senator Charles G. Miles, of Brockton; and Senator Charles M. Olson, of Ashland. No person can question the party regularity or patriotism of these representatives of the people.

PROPORTIONAL REPRESENTATION SHOULD BE OUTLAWED

On Monday next the Massachusetts State Senate will have up for consideration the question of passing to its third reading Senate No. 216, an act repealing the laws authorizing the election of certain city and town officers by proportional representation and preferential voting. This bill is sponsored by Senator Daniel F. O'Brien, of Cambridge; Miss Edna Lawrence Spencer, of Cambridge; and Charles H. McGlue, of Boston. This important piece of legislation has already received a majority vote in the State senate, and in all probability will be passed in the senate during this coming week and then sent to the house for action there.

PROPORTIONAL REPRESENTATION VERSUS UNITED STATES PRINCIPLES

Prof. Ferdinand A. Hermens, who is head of the department of political science at the University of Notre Dame, has made a very thorough study of the proportional representation system of voting. His analysis of its dangers and fallacies is well worth reading and is as follows:

"The system of proportional representation constitutes a denial of the very foundations on which our representative Republic is based. For the founders of this country representation meant integration; for the proponents of proportional representation it means fragmentation. The Constitution of the United States was established in the belief that it was the task of the people in elections to establish broad areas of agreement and to select the best man available to public office. Under proportional representation any coherent minority bloc of sufficient size can elect a member of a parliamentary body without attempting in the least to secure agreement with citizens belonging to other groups. For the men elected, it suffices to be the mouthpieces of such a bloc; they need not be the political leaders who can lead us all on the basis of our common devotion to the general welfare, and who, as James Madison stated in No. X of the Federalist papers, should be elected under the Constitution.

STRONG MEN OPPOSE PROPORTIONAL REPRESENTATION

"There has been no lack of men prominent in our political life who realized how deeply proportional representation threatens the very vitals of our Republic. Newton D. Baker, Woodrow Wilson's Secretary of War, belonged to them. He emphasized that 'proportional representation invites these groups (religious, racial, language, social, and other contentious minority groups) to seek to harden and intensify their difference by bringing them into political action where they are irrevelant, if not disturbing.' Senator ROBERT A. TAFT has expressed himself similarly in a talk given in 1924 while he was the Republican floor leader in the Ohio House of Representatives. He is known not to have changed his views in the matter. Senator LODGE stated on the floor of the United States Senate on January 25 of this year: 'Proportional representation is a means of reflecting every shade of popular opinion in a legislative body. It does encourage splinter parties, of course, and thus makes it more difficult for any dominant group to carry out a consistent policy. In a city council or a legislature there could be a perfect rainbow of parties. That is true in some European countries.'

"In American local government proportional representation has been an element of confusion. It has led to deadlocks in Cincinnati, in New York City, in Yonkers, in Cambridge, and in Lowell. It has, on several occasions, including the latest election in Cincinnati, had the result that more ballots were either invalid or exhausted than constitute the quota. As it was put after the latest election held in Wheeling, W. Va.: 'Old Man Invalid came out on the top of the poll.'

PROPORTIONAL REPRESENTATION HURTS MANAGER PLAN

"The city-manager plan, that splendid instrument of reform, has done magnificently in hundreds of American cities. About 900 of them now apply it. Wherever the majority system was used, the experience was, in the vast number of cases, that a satisfactory record was established, and opposition was nil. When manager plan was combined with proportional representation, there has been no end of civic dissension. After almost every election under proportional representation, dissatisfaction has manifested itself, resulting in many cases in attempts to repeal this system of voting. Millions of dollars have been spent needlessly on such controversies, which the traditional American system of voting would have avoided entirely.

"It should never be overlooked that the proponents of proportional representation in the United States propose it for local elections only in order to have it adopted later in State and national elections. This is clearly stated in the writings of the leaders in this field, such as in the concluding pages of Mrs. George H. Hallett's booklet entitled 'Proportional Representation, the Key to Democracy.' Nor have the proponents of proportional representation left us in doubt as to the consequences which might arise in our national legislative bodies as a result of the application of proportional representation. The book by Hoag and Hallett, for example, entitled "Proportional Representation," is, as shown on pages 114–117, clearly critical of the two-party system. It contemplates a situation in which Congress would be divided into minority parties, which would have to make decisions in a process of bargaining. They state: Such a situation, which might often occur under proportional representation is essentially a wholesome one. Thus, the House of Representatives would become representative in fact as well as in name. It is obvious then that representation is identified with fragmentation, which is welcomed.

PROPORTIONAL REPRESENTATION DANGEROUS DOCTRINE

"Where proportional representation leads us if applied to State and national elections can clearly be seen from its contemporary European record. The daily press has been reporting the scandals caused by Communists in the Parliaments of several European countries, in particular France and Italy, where they have produced the most shameful scenes in order to protest, among other things, against American assistance to their countries. These Communist Parties know very well that under the majority system the number of their members in National Parliaments would be reduced catastrophically, as it was reduced when in France the latest Provincial elections were held under the majority system. This gave to the Communists little more than 2 percent of the total number of seats in comparison to the nearly 30 percent which proportional representation had given them in the National Assembly. For this reason Communist Parties all over the world fight for proportional representation. If proportional representation favors Communists this is merely a logical consequence of its generally undemocratic character. It has favored Nationalists, Nazis, and Fascists in the past, and does so again at present. The small Nationalist groups which are at present causing so much turmoil in the German Federal Parliament in Bonn owe their seats to proportional representation. Without that system those parties and the new ones which have been formed or are about to be formed simply would have to be liquidated, and their voters would be induced to rally to the cause of more moderate and more responsible political parties.

"Proportional representation in Europe is, therefore, a threat to the objectives which this country pursues at the expense of billions under the Marshall plan and the military assistance program. If extended into State and national elections it would end the political stability which we have enjoyed under our two-party system. Its use in local elections is intended to pave the road to this goal. It is apt to dull our apprehensions as to the true nature of the threat to our institutions involved. It is also, as has been stated by such a prominent proponent of municipal reform as Dr. Don K. Price, one of the greatest threats to true progress in the improvement of local government in general, and to the progress of the city-manager plan in particular."

The above is the studied opinion of the world's greatest authority on this subject, Professor Hermens of Notre Dame.

FRAUD FACTOR IN PROPORTIONAL REPRESENTATION

The plan E system is a fraud on the voting public. It is based on the theory behind the European bloc system which combined with proportional representation produced Hitler in Germany and Mussolini in Italy. It is the same system that New York City repealed 2 years ago last November by a 2-to-1 vote in order to get rid of a system that elected

four avowed Communists or left-wing sympathizers to their municipal council of 23 members.

The public does not yet understand the communistic set-up of plan E and proportional representation. The fraud factor in this system has not yet been thoroughly exposed. The so-called reformers stress very much that proportional representation voting gives the voter a chance to express their choice of candidates by voting for their first choice, second choice, etc., ad infinitum et ad nauseam.

What these reformers do not stress is the fraud factor, the proportional represenation deception, that no matter how many choices a voter may make on his ballot, whether it be 2 or 86, the voter never votes for more than one councilor. He only votes once and for only one councilor. In other words, proportional representation takes away from every voter eight-ninths of his voting power and leaves him with only the right to vote for one councilor when 9 are to be elected. This is the so-called plan E and proportional representation fraud factor that relies upon religious and racial tensions to produce the results which are generally pleasing to the overlord of the Kremlin.

Plan E should be called plan European and proportional representation is a communistic device which, in reality, stands for the phrase "please Russia."

PROPORTIONAL REPRESENTATION REPEAL EDITORIALS

New York Journal-American, under date of April 3, 1947, wrote as follows:

"ABOLISH PROPORTIONAL REPRESENTATION

"The drive to abolish proportional representation as the means of electing our city councilmen should and will have the support of every fair-minded voter.

"How it got on the books in the first place is something that even the politicians are puzzling over now.

"Proportional representation has certainly proved itself the most disproportional system of representation that has yet been devised.

"It has forced down the throats of disgusted citizens two actual Communist Party members, and two more who are Communist wolves in sheep's clothing, masquerading under other party labels.

"Four out of a council of 23 members who consistently vote for governmental disruption and disharmony whenever the opportunity presents itself.

"Ninety-nine percent of New Yorkers are American voters who want no part of this wrecking crew and their foreign ideologies.

"The time has now come to rid the city government of representatives who do not represent the people.

"It won't take much of a push to put the drive over.

"So far proportional representation has cost the city $1,600,000, another factor which must not be disregarded in these years of billion dollar budgets.

"Once in a while politics and politicians can be constructive. The move to liquidate proportional representation is constructive politics."

Boston Evening Record, under date of November 7, 1947, said:

"LESSON FOR MASSACHUSETTS

"The emphatic rejection of proportional representation by New York City's voters should be a lesson for the people of Massachusetts.

"This complicated and confusing method of balloting was proven beneficial to Communists and for that reason, more than any other, it was abolished in the Nation's largest municipality after 11 years of trial.

"We do not want Communists and their ilk in our Bay State city and town governments.

"We have faith and confidence in the traditionally American two-party system.

"We therefore feel that New York City's commendable example will be generally followed."

Boston Daily Record, in its issue of November 25, 1947, stated:

"THE OUTLAWING OF PROPORTIONAL REPRESENTATION

"Several senators and representatives will ask the legislature to outlaw proportional representation and preferential voting in Massachusetts.

"These legislators are confident that this Commonwealth will be sufficiently practical and democratic to follow the good example of New York City, which repealed the proportional representation system after long and unsatisfactory experience with it."

Following the repeal, a few weeks ago, the New York Sun made this rather typical observation:

" 'The Communists and their fellow radicals lost their foothold in the city government with the defeat of proportional representation.'

"There should be no foothold for Communists and their ilk in our Massachusetts city governments."

The Boston American on March 22, 1949, asked the legislature to repeal proportional representation in the following language:

"REPEAL IT

"The Massachusetts Legislature should welcome the opportunity to repeal proportional representation which Senator Melley's popular bill presents.

"The fact that this complicated method of selecting public officials has proved beneficial to Communists in New York City and other places discredits it for all time so far as most persons in this Commonwealth are concerned.

"With a cold war embracing so much of the civilized world and a hot war threatening, we cannot afford to risk the danger of having more Communists and fellow travelers in any branch or segment of the American Government.

"The legislature made a serious mistake when it sanctioned proportional representation a few years ago.

"The only way to remedy the unfortunate situations which have resulted from that mistake is to take proportional representation off the statute books."

The Boston Daily Record in its editorial column on March 11, 1950, made the following plea:

"LET'S STAY AMERICAN

"The survival of our democratic form of government and the very existence of our Republic demand the retention of the 1949 law banning proportional representation in all cities and towns of the Commonwealth except in the few which adopted this confusing method of electing officials before the prohibition was enacted.

"And it would be a good idea to get rid of this proportional representation thing in them, too.

"Election methods ought to be so simple that they can be readily understood by all the people.

"That is an elementary requirement of good government.

"A system of voting that baffles the average citizen cannot inspire his confidence, and it is neither honest nor honorable for anybody to contend that it will do otherwise.

"Our people must have complete faith in their Government and particularly in that of the cities and towns, which is closest to them.

"Furthermore, proportional representation has enabled Communists and fellow travelers to win election in many places.

"We do not want them to repeat their successes in Massachusetts, certainly not in this period of critically cool war.

"The United States became the strongest and best Nation on earth, because it trusted majorities and allowed them to determine the results of free elections.

"Instead of relaxing the ban on proportional representation, the Massachusetts Senate, which will take up the matter Monday, should, therefore, intensify it and make it more extensive and binding.

"Persons who are dissatisfied with the traditionally American election methods which gave us our greatest statesmen, including George Washington, Abraham Lincoln, and Theodore Roosevelt, may continue to clamor for the new-look system of balloting.

"But the citizenry as a whole will applaud Senators who refuse to yield to the pressure of minorities and splinter parties with their transient fads and fancies and obvious selfishness."

WHENCE AND WHAT IS PROPORTIONAL REPRESENTATION?

Proportional representation is a system of voting and counting votes, which was invented by an English schoolmaster on the theory that it would give minority groups individual representation in government. It was never adopted in England for the English. However, to make sure the Irish would never get together, the English Parliament shrewdly incorporated proportional representation in the constitution it forced upon the Irish Free State.

HOW PROPORTIONAL REPRESENTATION HAS OPERATED

Proportional representation was introduced in Italy in 1919, and in just a little over 3 years it had so disintegrated the political life of the country that the situation was ripe for a man on horseback, and Mussolini stepped in.

Hitler's rapid rise to power, aided and abetted and financed by major industrialists and big taxpayers in Germany, was even more clearly due to proportional representation than the triumph of Mussolini.

Austria was the next victim of proportional representation.

Proportional representation worked similar havoc in Greece, Czechoslovakia, France, and in the countries of eastern Europe which abandoned democracy and are now satellites of Russia.

WHY PROPORTIONAL REPRESENTATION IS DANGEROUS

Proportional representation is dangerous because it reverses the democratic principle of representative government by the majority.

Proportional representation is dangerous because it breeds dissension, fosters racial and religious antagonism, arrays class against class.

Proportional representation is dangerous because it destroys political unity by creating a multitude of political parties, all clamoring for more power and special privilege for their respective minorities.

Proportional representation ridicules "E Pluribus Unum" and rallies to divide and conquer. (Divide et empera.)

THE PROPORTIONAL-REPRESENTATION METHOD OF VOTING

This method is a lottery system of voting which favors organized minorities seeking their own advancement to the detriment of the majority and the city. A complicated system of counting votes whereby each voter elects only one candidate although he may have voted for several. The proportional representation method of voting is based on the theory that a proportionate number of people elect each candidate as compared with the American system under which the majority of the people elect all the candidates. Under proportional representation you vote for only one candidate and it is an impossi-

bility for your ballot to count for more than one candidate.

CONCLUSION TO CONFUSION

When Gov. Paul A. Dever signs house bill No. 2369 on Monday next, and the senate votes to send along senate bill No. 216 to the house of representatives, we may truly say that the elected representatives of the people of this Commonwealth are still on guard in the preservation of the historic rights of its citizens. It has been a long hard fight but victory is in the offing.

Plan E(uropean) and the P(lease) R(ussia) style of voting are on the way out in Massachusetts.

P(arlor-Pink) R(egimentation) won't happen here!

CHARLES H. MCGLUE.

Address by the President Before the Federal Bar Association

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD the address of President Truman at the dinner of the Federal Bar Association on April 24, 1950, at the Statler Hotel, in Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, distinguished guests, members of the Federal Bar Association, I am delighted to be at this dinner tonight, and to join in commemorating the thirtieth anniversary of the founding of this fine organization of Federal lawyers.

It would be hard for me to deny that I am friendly to lawyers. The record would speak against me if I did.

Six of the nine members of my Cabinet are lawyers. So are quite a few other top officials of the executive branch.

When you couple this with the fact that over half of the House of Representatives and about two-thirds of the Senate are lawyers, as well as all our Federal judges, of course, you can see that—so far as the Government of the United States is concerned—the legal profession is not just a passing fancy. It is probably here to stay.

Our lawyers have a primary responsibility in the maintenance of justice. This is particularly true of the Government lawyer, whose first devotion must be to the public interest. The public interest does not mean only the interest of the Government. It means also the protection of the rights of individual citizens.

Our concept of justice represents a basic difference between our system of government and that of the totalitarian states. Justice is the foundation of true democracy. Our system of justice preserves the freedom and dignity of the individual, and his right to think and speak as he feels and to worship as he pleases. It protects him in the assertion of his rights even against his own government. It makes certain that his assertion of those rights will be fairly considered and justly decided.

But there is in the world today a tyrannical force which does not recognize justice as we know it. It is a force which crushes the minds and bodies of those under its control, and seeks to enlarge itself by aggression and by false promises of freedom and economic security.

Wherever this force extends, there is no freedom of speech, no freedom of religion, no freedom even of opinion. The state is the all-powerful arbiter of men's words and acts. Human dignity and human freedom are meaningless.

Against this tyrannical force, which we know as communism, the United States stands as the great champion of freedom. Against this force, the United States has developed and put into effect a positive program to strengthen freedom and democracy. Our program is shaped to strengthen the United States and to help other free nations protect themselves against aggression and subversion.

Since the end of the war we have taken far-seeing steps, unprecedented in the history of the world, to help other free nations rebuild from the destruction of war and strengthen their democratic institutions. Our programs of foreign aid have made it possible for these free nations to resist Communist aggression.

The Greek-Turkish aid program, the Marshall plan, the North Atlantic Treaty, the military assistance program, and our support of the United Nations are major elements in our central policy to work for a peaceful and prosperous world. We have taken the leadership in aiding underdeveloped areas, and in reducing trade barriers between nations. We are keeping our military forces strong and alert, and we are giving meaning and strength to our joint defense arrangements with other countries.

We have done all this because it represents enlightened self-interest. We know that the greatest threat to us does not come from the Communists in this country, where they are a noisy but small and universally despised group. The greatest threat comes from Communist imperialism abroad, where the center of its military and economic strength lies. The real danger is that communism might overrun other free nations and thus strengthen itself for an ultimate attack against us.

But although communism is not a major force in this country, we are taking no chances on its becoming strong here. On the one hand, we are working to create conditions in the United States in which communism cannot possibly thrive. On the other, we are striking hard blows at Communist subversion wherever it is found.

We are vigorously pressing domestic programs to improve the standard of living of our people, to assure equal opportunity for all, and to promote their health and education, and their security and freedom. These programs were not specifically designed as anti-Communist measures. We would have had them even if there were not a single Communist in the world. Nevertheless, they are among the strongest anti-Communist weapons in our whole arsenal.

Communism has little appeal for people who are healthy, well-educated, prosperous, and free. Moreover, there are few things that will do more to prevent the Communists from winning followers in other lands than a demonstration by the United States that democracy truly means a better, freer life for everyone.

While we have been working to improve our democracy, we have been fully aware of the threat of Communist subversion within our own borders. Through the Federal Bureau of Investigation and our other security forces, through prosecutions in the courts by the Department of Justice, through our Federal employee loyalty program, and in many other ways, we have vigorously attacked Communists wherever their activities became a threat to our liberties.

There has been so much confusion recently about who is doing what to defeat communism in this country, that I think the record should be set straight.

This administration has fought communism with action and not just with words. We have carried on this fight with every law on the statute books, and we have recommended new laws when we found they were necessary and could be framed without impairing the very freedoms we are seeking to protect.

No known instance of Communist subversion, or any other kind of subversion, has gone uninvestigated.

No case where the facts warranted has gone unprosecuted.

We have prosecuted and obtained conviction of 11 top-ranking members of the Communist Party in this country. We have successfully prosecuted many other persons for crimes related to communism. We have also prosecuted and obtained conviction of a large number of alleged Communists on charges of contempt for refusing to testify before Federal grand juries or congressional committees.

We now have under investigation the cases of over 1,000 citizens to determine whether steps should be taken to revoke their citizenship on grounds involving subversive activities. One hundred and thirty-eight persons are under orders of deportation on grounds involving communism.

There is no area of American life in which the Communist Party is making headway. The Communists have done their best to penetrate labor unions and the Government, but they are being successfully fought on both fronts. Labor has been doing a splendid job of cleaning its house. In the Federal Government, the Employee Loyalty program has been an outstanding success, and Government lawyers have contributed greatly to that result.

I set up the employee loyalty program 3 years ago with two objectives in mind.

I was determined, as far as it was humanly possible, to see that no disloyal person should be employed by our Government, whether he was a Communist or a native American Fascist of the Silver Shirt or Ku Klux Klan variety. I was equally determined that loyal Government employees should be protected against accusations which were false, malicious, or ill-founded.

The loyalty program was drafted by able and experienced people to protect the security of the Government and to safeguard the rights of its employees. It is the first time in the history of this country that we have had such a program. The Communists and their friends, as well as some sincere idealists, say that it is too drastic. The false patriots and even some honest reactionaries say that it is entirely too mild. They want us to dismiss employees on the basis of unsupported charges. They actually resent the democratic safeguards of the loyalty program. All this confirms me in the conviction that it is a sound and effective program conceived and carried out in the American tradition.

The FBI, the agency loyalty boards, and the Loyalty Review Board have quietly and effectively carried out their job of protecting the integrity and security of our Government. The Loyalty Review Board is the central organization which directs the whole program. It is divided about half and half between Democrats and Republicans and is headed by a distinguished Republican lawyer, Mr. Seth Richardson, who served as Assistant Attorney General of the United States under President Hoover.

Under the supervision of this Board the loyalty program has rid the Government of all employees who were found to be disloyal—and they were only a tiny fraction of 1 percent.

Not a single person who has been adjudged to be a Communist or otherwise disloyal remains on the Government pay roll today.

The able men charged with carrying out the loyalty program know that keeping disloyal persons out of the Government is a business which must be done carefully and objectively. They know that the job cannot be done by publicly denouncing men as Communists without having evidence to support such charges, or by blackening the character of persons because their views are different from those of the accuser, or by hurling sensational accusations based on gossip, hearsay, or hunch. They know that no one whose principal concern was the security of this country would try to do it that way. They know that anyone who had information about Communist activity, and who placed the security of this country above selfish or partisan considerations, would turn that information over to the FBI, so that it could be properly investigated and the necessary action taken.

I have been surprised to see how much ignorance and misunderstanding there is about the loyalty program—even on the part of people who should know better. It has occurred to me that perhaps they do know better—that perhaps there is some element of politics in their accusations.

A large part of the hue and cry about the loyalty program has centered on my refusal to turn over to a congressional committee confidential loyalty files concerning individual employees. I have already stated several times the reasons why these files must not be disclosed. I want to restate them briefly now.

The preservation of the strictest confidence with respect to loyalty files is the single most important element in operating a loyalty program which provides effective security for the Government and justice for the individual employee.

The disclosure of these files would not only destroy the whole loyalty program but would seriously damage the future usefulness of the FBI. Information is given to the FBI in confidence, which the FBI has sworn to protect. Breaking the confidence would not only greatly embarrass and even endanger the informants involved but would gravely impair the FBI's ability to get future information from other confidential sources.

Opening these files would reveal FBI procedures and methods. It might reveal highly secret information vital to our national security and of great value to foreign nations.

Disclosure of the files would result in serious injustice to the reputation of many innocent persons. This is true because the FBI investigative files do not contain proven information only. They include unverified charges and statements, as well as mere suspicions, which, upon investigation, are found to be untrue.

If I should now open these files, I would create a precedent for future cases in which access to these files is demanded—and there would be many of them. This would completely destroy the loyalty program, since, as experience shows, it would mean an attempt to try all loyalty cases over again in newspaper headlines, although they had already been carefully considered and fairly decided by a bipartisan board of loyal and distinguished Americans.

This question of maintaining the confidential character of information which the President determines it would not be in the public interest to disclose is not new. It goes back to the beginnings of our Government. Washington, Monroe, Jackson, Cleveland, and Theodore Roosevelt are only a few of the Presidents who have taken the same position which I am taking.

Despite the historic precedents, with which I was thoroughly familiar, I gave the most careful consideration to the recent request of a Senate committee for access to the loyalty files. I obtained the views of Attorney General McGrath, Loyalty Review Board Chairman Richardson, and FBI Director Hoover before I reached my decision to deny this request. All three were unanimous in recommending to me in the strongest possible terms that I refuse to make the files available. The decision was mine and I made it. I am confident that no President, whatever his party, would have acted otherwise.

The Federal employee loyalty program has demonstrated that the United States has the most loyal civil service in the world. It is a splendid organization which I am proud to head.

Of course, in an organization as large as the United States Government it is always possible, despite the greatest precautions, that there may be a few bad individuals. We shall not for one minute relax our vigilant efforts to protect the security of the Government.

The present Attorney General and his predecessor have repeatedly asked that if any person has any information about the presence of any Communist in the Government it be furnished to them.

I now repeat that request.

If any citizen knows of the presence of a single Communist or other subversive person in any Federal job, let him furnish that information, and the evidence which supports his belief, to the Attorney General or to the FBI. Any information that may be furnished in response to this request will be promptly investigated and will be acted upon if the allegations are found to be true.

The fact of the matter is—because of the measures we are taking—the internal security of the United States is not seriously threatened by the Communists in this country. There are proportionately fewer Communists in this country than in any other large country on earth. They are noisy and they are troublesome, but they are not a major threat.

Moreover, they have been steadily losing ground since their peak in 1932, at the depth of our greatest depression, when they polled the largest number of votes in their history.

There is a right way and a wrong way to fight communism. This administration is doing it the right way, the sensible way.

Our attack on communism is embodied in a positive, threefold program:

One, we are strengthening our own defenses and aiding free nations in other parts of the world so that we and they can effectively resist Communist aggression.

Two, we are working to improve our democracy so as to give further proof, both to our own citizens and to people in other parts of the world, that democracy is the best system of government that men have yet devised.

Three, we are working quietly but effectively, without headlines or hysteria, against Communist subversion in this country whereever it appears, and we are doing this within the framework of the democratic liberties we cherish.

That is the way this administration is fighting communism. That is the way it is going to continue to fight communism.

Now I am going to tell you how we are not going to fight communism. We are not going to transform our fine FBI into a Gestapo-like secret police. We are not going to try to control what our people read and say and think. We are not going to turn the United States into a right-wing totalitarian country in order to deal with a left-wing totalitarian threat.

In short, we are not going to end democracy. We are going to keep the Bill of Rights on the books. We are going to keep those ancient, hard-earned liberties which you lawyers have done so much to preserve and protect.

If we all work together to maintain and strengthen our democratic ideals, communism will never be a serious threat to our American way of life. The example we set for freemen everywhere will help to roll back the tide of Communist imperialism in other parts of the world.

I have outlined for you my program against communism.

That is the way I have worked against it.

That is the way I shall continue to work against it.

I call on all fair-minded men and women to join in this good fight.

The Preservation of Private Enterprise

EXTENSION OF REMARKS
OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address entitled "The Preservation of Private Enterprise," which I delivered at the annual coal convention of the American Mining Congress, in Cincinnati, Ohio, on Monday, April 24, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE PRESERVATION OF PRIVATE ENTERPRISE

To live in these midyears of the twentieth century is to be aware that civilization is passing through one of the great critical periods of history. The present epoch has, indeed, few parallels in the past. Today, under the pressure of dramatic and far-reaching changes in the technical, cultural, political, and economic dimensions of existence, men are conscious that the fundamental structure of society, the most profound bases of government and personal life are at issue. Confronted by challenges of such immense scope and gravity it becomes necessary to see clearly and steadfastly the aims and principles which underlie free economy and free government.

The anti-God ideology of communism now dominates the lives of 200,000,000 people in the Soviet Union, 100,000,000 people in the so-called satellite countries of western Europe, and 400,000,000 people in China. Leaders of the Soviet Union are applying constant pressure both in western Europe and in the Orient to expand their area of influence, with total world domination their ultimate goal. In that struggle a free and economically sound America is the hope of humanity.

The principal difficulty of democratic leaders in trying to reach an agreement with Soviet leaders to end the cold war stems from the fact that there is no fundamental premise of human rights and ethical conduct upon which the conflicting interests can agree.

Fortunately, there are certain fundamental premises which if not overlooked may readily be accepted by thinking and patriotic American citizens. Such a list would include the following:

1. Our conception of human rights and ethical principles is based upon the teachings of the Bible and the teachings held in

common by all the great religions of mankind.

2. The American system of competitive enterprise is unique in the world.

3. Private but properly regulated enterprise in a capitalistic system and personal freedom in a representative democracy are handmaidens, and if one be lost the other is doomed.

In selecting my topic today, the preservation of the American system of private enterprise, I had in mind the 8,000-mile trip I took last fall through 14 countries in western Europe, from Oslo on the north to Athens on the south, where on every hand I saw the debilitating effect of that misnomer called democratic socialism. I likewise had in mind the numerous measures presented to the Congress during the past 3 years whose ultimate effect would be to substitute the same type of socialism for American constitutional freedom and the American system of private enterprise.

The methods, the objectives, and the conditions necessary for the functioning of political freedom depend in their essence upon economic freedom. To recognize that the present era contains dangers which can jeopardize the framework of a free society is to realize that, in fact, there can be no genuine political freedom which is not sustained and nourished by the strength, the flexibility, and—most important—the legal institutions and practices of an economy of free, private, competitive enterprise.

The whole history of the last two centuries demonstrates with a certainty beyond cavil that where economic opportunity for initiative is blocked, where competition is stifled or suppressed by monopoly or governments, where the right to choose a trade or profession, or to move from one field of endeavor to another is nullified, the loss of political liberties becomes an immediate threat, and in time a most probable, even inescapable consequence. In the stark contrasts between the experience of this country and much of the rest of the world it is sharply apparent that many of the peoples who have lost their liberties already, or are struggling against odds to retain them, have been misled into a fateful error—the belief that it is possible to maintain political democracy and representative government in full vigor while yielding freedom of enterprise, and with it the power of control over their economic destinies. It is not possible for this to be done. Political and economic freedom are root and branch of the same tree.

How did freedom of enterprise originate, but as the mainspring of the struggle for liberty? Our American system of government, unique in that our Declaration of Independence said for the first time in recorded history that government derives its just powers from the consent of the governed and unique in the possession of a written Constitution in which without spelling it out the principle of private enterprise is firmly embedded, has some roots in the ancient culture of the Jewish people through whom the Ten Commandments and the principles of the Sermon on the Mount were handed down to us. He does not know his American history who does not know that our founding fathers were deeply religious, asking the Father of Light to illuminate their understanding and firmly believing that if a sparrow cannot fall to the ground without His notice a new and enduring republic could not rise without His aid. It has roots in the Greek system from which the name "democracy" was borrowed. It has roots in the culture of Rome which brought system and order into the realm of law and it sprang directly from the experience of the British people who had constantly enlarged the area of rights assured to the common man by Magna Carta.

But our American constitutional Government cannot be said to be the same as the governments from which it drew inspiration any more than the atomic bomb can be said to be the same as the various incendiary, fragmentation, or penetration bombs which were in use before it was developed.

Something akin to nuclear fission occurred during our struggle for freedom from the ancient doctrine of the divine right of kings. The ideal of liberty, of economic and political rights guarded by law, transformed a colony of empire into a citadel of democracy for the world.

The trigger which set off the chain reaction may be found in the words of Thomas Jefferson who wrote, in the Declaration of Independence:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness."

The preamble to the Constitution started with the significant words "we the people." There were some patriots, including Patrick Henry, who feared those words indicated too strong a central government but in spite of their protests a document whose drafting was guided by the hand of destiny was ratified. Ratification came, however, only after James Madison and others had promised that amendments would be offered which would perpetually prevent the Government from following the historical pattern of usurping the rights of the people.

In keeping with this promise, when the first Congress met in 1789 it approved 10 amendments which were adopted the following year. These amendments, which we know as the Bill of Rights, set the boundaries beyond which the Federal Government must not go in interfering with individual liberties and property rights. They mentioned certain rights specifically but concluded with the flat assertion that the enumeration of these rights "shall not be construed to deny or disparage others retained by the people," and the added statement that "the powers not delegated to the United States by the Constitution, nor prohibited to it by the States, are reserved to the States respectively, or to the people."

From the hurried survey which I have just given of the basis of our Government the fundamental truth stands forth that where, as in Europe, freedom of enterprise never achieved its full stature, political freedom has been correspondingly warped and inhibited. Even in Britain, where Adam Smith became the greatest spokesman for the "simple and natural system of economic liberty," the conditions of free competition were always circumscribed. As Lionel Robbins, the British economist, has said with reference to English experience, "Liberalism—is not a plan that has been tried and failed. It is a plan that has never yet had a full chance."

It may be said, indeed, that only in the United States at the time of its establishment was there a profound comprehension of the significance, even the identity, of freedom of enterprise with free political institutions. In this respect, the Government and Constitution formed by men with wide perspective and realistic vision were unique, and produced a society uniquely free, uniquely capable of growth, and now, almost the sole example of a nation able to meet its problems and master them with the strength of democracy and the support of a free economy.

Many eminent authorities agree that it is this quality of the work of those who brought a new nation into being which has been the major factor responsible for America's economic development. What is more, there is almost complete accord of opinion that it is the striking differences between this setting of American industry, with its free and competitive basis, and that of shackeled European industry, which have meant the great disparity between ways of doing business here and abroad. Moreover, these differences have spelled the perpetuation and increase of opportunity and constantly rising standards of living for the American people, and a tragic spectacle of bitterness, class conflict, deprivation of liberty, and the ultimate drift away from all freedom for the populations of Europe.

It is well to understand that the system of free enterprise and representative government have the same historic sources, and that in many basic respects American free enterprise represents as much of a contribution to the growth of civilization as does the American form of government. Thus, for example, a former Assistant Attorney General, a recognized student of the question, has said:

"The convictions which form the framework of the American economy rank high among the social inventions of modern history. It is no accident that the idea of free enterprise emerged from the age of reason. The same period which conceived and established political democracy was logically compelled to foster enterprise as the indispensable economic cornerstone of a free society. Before that time there had been neither political nor economic freedom for the great majority of mankind. Status, privilege, and power governed both the political and economic destinies of the ordinary man. To displace this feudal order and to construct the foundations of a democratic society required the determined efforts of several generations during the industrial revolution.

"At the outset it was realized that representative government in order to survive must rest upon the bedrock of political freedom, the ethical and legal equality of all citizens, and the integrity of a public interest which embraced every member of society. It was appreciated that the economic life of democracy must be rooted in the fertile ground of initiative, of equal opportunity, the right of choice in occupation, the guarantee that no artifice of exclusion would control the market, and the assurance that the economic interests of the public would not be narrowed by privilege.

"The essence of political democracy is the free election. The essence of economic liberalism is the free market. These freedoms are both the products of reason. Both are systems of liberty under law."

It is necessary to distinguish carefully both the economic and legal concepts involved in the relationships between Government and enterprise under the American Constitution and, in contrast, under the British and European types of government. It is possible, perhaps, to crystallize these facets of the problem by summarizing certain considerations:

First, there is a distinction between certain interpretations of laissez-faire and the freedom of enterprise as an organizing principle of economic activity.

Second, there is a distinction in theory and in fact between regulation and planning of economic activity.

Third, the American Constitution, as a system of checks and balances, contains safeguards against the loss of the right of enterprise which are not present in other constitutional systems, such as that of Great Britain.

Fourth, the principal characteristics of American industrial enterprise, both in its relation to governments and its functioning in practice are inherently, as well as historically, different from European industry.

Fifth, the approaches made toward problems arising from industrial change and industrial behavior must necessarily be distinct in the United States from the theories and assumptions derived mainly from European experience.

Sixth, both economically and politically, the American form of government and the American economy possess basic techniques and conceptions, grounded in tradition, law, and practice for the correction of undesirable effects or mistakes which are not present in European countries or in Britain, in fullest measure.

There is, it may be observed, a broad and mobile area produced by these premises of action which makes possible an adaptive adjustment, a moving balance in the relationships of government, industry, and labor under a free enterprise system which reciprocally strengthens and is dependent upon representative democracy. American industry as a whole is dynamic, the most highly advanced as it is generally the quickest to change where there are no barriers to innovation, of any comparable industrial complex in the world. This genuine spirit of achievement is reflected in the confidence with which American industry undertakes long-range and short-range improvement programs, from the development of a matchless machine-tool industry or the perfection of a new household appliance to the manufacture of the innumerable gadgets which change with every fancy of the consuming public. No other economy endeavors as does American enterprise to discover the desires and needs of consumers and to satisfy them. There is a respect for the individual, for the human personality, which permeates the free enterprise system to a degree not equaled by any other economy of the past or present.

American industry is always responsible and responsive, necessarily, both to law and opinion of the public. This point and counterpoint of incentive and reward for the assumption of risk, the acceptance of occasional loss, the impetus toward beneficial improvements and high standards of efficiency, behavior, and service, all subject to the legal and social scrutiny of conduct, are essential attributes of the free enterprise system. They are so central to its meaning that they can be said to converge with the meaning of free government. The loss of either one would signalize the loss of both.

At the outset of my remarks I referred to the spread of socialism in western Europe which is sapping the vitality of industry and gradually impinging upon the liberties of the people. I am convinced that western Europe could not have stemmed the tide of communism without the ECA aid and I am not convinced, notwithstanding marked progress in production, that western Europe will be self-supporting when our aid ends in 1952 in the absence of economic integration, which means the creation of a freer system of trade.

When the nations of western Europe and notably Great Britain to whom we are indebted for our first conceptions of the fundamental rights of man, chose to go down the road to socialism by nationalizing basic industries, there was nothing in the structure of their governments to prevent such action. Magna Carta does not say that the government shall not take over the railroads. The Statutes of Praemunire offer no court remedy to the owner of a steel mill who is reluctant to give it up to the government. The whole body of the common law contains nothing to prohibit nationalization of coal mines.

On the other hand, the Constitution of the United States does not authorize such actions and the Bill of Rights prohibits the assumption by the Federal Government of powers not delegated to it. The founding fathers had listened to the words of Thomas Jefferson who said: "In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of the Constitution." They framed a government designed to protect individual enterprise as well as personal liberties.

Certain concessions have been made in time of war on the theory that the Government can assume certain additional functions to provide for the common defense. But in time of peace the boundary protecting private enterprise has up to now been clearly, marked. Thus, when the Federal Government wanted to build roads, it was allowed to do so only on the theory that this was a reasonable extension of the constitutional function of providing for delivery of the mails. And, although action of the Government in building a steam power generating plant was upheld by the courts, this was done on the theory that it was to be used as an adjunct to the development of natural water resources and was not an independent business enterprise.

Today, however, we see constant efforts to push back the boundary line between government and business and we need to recognize that these efforts may constitute a creeping socialism, which can undermine the Constitution and do by indirection what cannot be done directly.

We are asked to approve a social security system which cannot be self-supporting and which ultimately would make all of our aged, disabled, and unemployed wards of the Federal Government.

We are urged to approve a system of Federal aid to education which would lead ultimately to Federal control over our school systems.

We are confronted with proposals for compulsory health insurance which would result in the medical profession receiving most of its compensation from the hands of the Government and which would rapidly lead to socialized medicine as it is practiced in Great Britain.

Under the deceptive label of civil rights, we are placed under pressure to approve a program which would permit Federal officials to supervise local elections and to pass on the competency of local law-enforcement officers and punish those whose actions were not approved. This program also would set up a bureaucracy which could intervene in the relations of employers and employees and which would deprive individuals generally of one of the most basic of their inalienable rights—the right to pick their personal associates. In fact, this proposed FEPC, to which I am now referring, would specifically violate at least half of the Bill of Rights amendments to our Constitution.

Such legislative proposals as I have mentioned constitute only one attack on our system of private enterprise. They would enable the Central Government to assume powers exercised by those earlier governments which we drew from but did not copy.

Another line of attack consists of the efforts of those who would invade the rights of the individual to obtain special privileges for certain groups or segments of our society. Sometimes this effort involves dependence on active protection by the Government and at other times it is based on the assumption that the Government simply will not interfere to prevent abuses.

For example, the Congress is asked to approve lending or other aid programs for housing which will make it possible for a small segment of our population to obtain shelter with less effort on their own part than is required of all the rest of the population.

We are asked to give exemption to labor groups from laws which have been established to prevent exploitation of the public by abuse of monopoly powers, regardless of the fact that when a Government permits a labor monopoly to abuse its powers one of two things necessarily results—the Government must then either permit industry to counter the labor monopoly force with an industrial monopoly force or nationalize the industry.

To be specific about that last point: Last summer the Senate Banking and Currency Committee authorized me to conduct an inquiry into the effects of economic power of labor organizations upon small business and consumers. Our inquiry was a general one but we gave particular attention to the problem as it was exemplified in the coal industry. The conclusion which we reached, and embodied in our committee report, was that the United Mine Workers, under the direction of John L. Lewis, were using their power in an attempt to control prices and production and that if this usurpation and abuse was tolerated, its unbridled use would spread from union to union and industry to industry and that Congress would never regain its narrowly circumscribed power to guide the economy consistently with the Constitution of the United States.

Studying the evidence given at this hearing, which amounted to approximately 1,000 printed pages, I concluded that the trouble came from the fact that a 1941 court decision had upset the balance between antitrust laws originally enacted for the protection of all the people and the Norris-LaGuardia Act which was designed to protect the struggling labor movement against improper use of injunctive powers by powerful corporations. I therefore introduced in the Senate my bill, S. 2912, which would not interfere in any way with legitimate collective bargaining but which simply said that when labor organizations made unreasonable use of their monopoly powers—which they still would retain—and in doing it restrained trade or commerce essential to the national economy, health, or safety, they could not hide from prosecution behind a court interpretation of the Norris-LaGuardia Act which was contrary to all previous decisions and contrary to the clear intention of the Congress.

I was told by many of those with whom I consulted before drafting this bill that it was too mild and would not adequately protect the public. I agreed that a prohibition against industry-wide bargaining would be more effective but said I wanted to try something which would at least offer some hope of protecting our private-enterprise system together with some chance of favorable congressional action. When hearings were held on my bill, however, it was denounced by labor leaders as a lynch-labor law—a shibboleth on a par with (or slightly below) a slave-labor law.

In view of this, I think I am justified in saying that in addition to being threatened today by big government and by big business, our individual enterprise system is threatened by the short-sighted policies of big labor. I say that as one who always has favored fair and generous treatment of labor but also as one who recognized the necessity of retaining the delicate balance on which our constitutional Government rests.

We need today to recall the words of Benjamin Franklin, who said: "They that give up essential liberty to obtain a little temporary safety deserve neither liberty nor safety," and the words of Daniel Webster, who said: "God grants liberty only to those who love it, and are always willing to guard and defend it."

Such a program involves a periodic review of the history of our own Government, a comparison of it with foreign governments that have failed, and a frequent recurrence to fundamental principles.

As a descendant of a Virginia family that furnished one signer to Jefferson's Declaration of Independence and three members of the Virginia Convention that ratified the Philadelphia Constitution I take a pardonable pride in the contribution made by colonial Virginia to the birth of a Nation. I want to see passed on to generations yet unborn those precious principles of political and economic freedom that were born of the brain and purchased by the blood of our founding fathers. But down through the ages comes the warning of the Hebrew patriarch Job, "Remove not the ancient landmark, which thy fathers have set." May that motto be inscribed upon the heart of every lover of American constitutional liberty.

Spreading Socialism

EXTENSION OF REMARKS
OF
HON. GEORGE A. DONDERO
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I include therein an editorial which appeared in the March 30, 1950, issue of the Chickasha Star, published in Chickasha, Okla.

It will be noticed that a representative of the Department of the Interior has stated that within 10 years the Federal Government will operate a power system stretching from New Orleans to Seattle. This indicates the widespread encroachment of socialism in competition with private investment and private enterprise.

It is worthy of note also to point out that this statement is printed in a newspaper located in an area where public power apparently has the upper hand.

This editorial should be read by every Member of Congress. If public ownership is so desirable in one field, perhaps it can be justified in all others. The end of the trail, however, is the Russian philosophy of government and not the American.

The editorial follows:

THE TAIL WAGS THE DOG

A press dispatch quotes a Department of the Interior expert to the effect that within 10 years the Federal Government will be in a position to operate a power system stretching from New Orleans to Seattle. After that, the expert continued, it would be comparatively simple to tie in the Tennessee Valley Authority, and make the Federal system stretch from coast to coast. "All that's needed," he declared, "is congressional authority and money to build tie-lines should we need them." The irony and political duplicity behind this short press dispatch is beyond the comprehension of a lot of plain American citizens.

In 10 years, if the planners have their way, a basic industry will be nationalized and the Nation will be irrevocably advanced on the road to state socialism, despite the fact that there is no announced public policy sanctioning the program. On the contrary, available evidence indicates that the people in this country are opposed to it. Where they have had an opportunity to express an opinion they have indicated that ownership and operation of industry should stay right where it is—in the hands of private citizens.

But the day may not be too far distant when the private citizen will be forced to step aside—while countless do-good alphabetical Federal agencies harden into an interlocking administrative dictatorship. That is what has been happening in the case of the electric industry. At first there was the alleged "yardstick" of the Tennessee Valley Authority to measure the efficiency of the investor owned electric companies; then their evolved a conglomeration of schemes such as REA's BPA's, and SPA's. And now these scattered Federal projects are beginning to "cooperate" with each other to circumvent safeguards and restrictions imposed by Congress and to drive out of business the heavily taxed and regulated private companies.

As far as the electric industry is concerned, unless the "experts" timetable is upset, another 10 years will see the firm establishment of an unbreakable Government monopoly in this vital service. After the electric industry there would be other industries. That is the pattern. It is being carried forward under a false label without the express consent of the people.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

BINGHAMTON, N. Y., *April 20, 1950.*
Hon. EDWIN ARTHUR HALL,
New House Office Building,
Washington, D. C.

DEAR ED: Probably no governmental function has become so essential over the years to the growth of our country and has contributed more to ease and facility of communication than our Post Office Department. It has become a symbol in our minds of utter reliability.

Wise as it is to encourage economy in governmental functions to work toward a drastic reduction in our present excessively high tax rates, it does not necessarily follow that the first drastic cut in expenditures should take place in so essential a governmental service as the post office.

Some of us wonder if the decision to curtail service in the Department came after every other avenue of economy had been explored, such as the high subsidies the Department makes to air and rail lines and (in many cases) the out-of-line high rents paid for working space and storage facilities. If this is not the case, then we can only assume that the order to cut services is a form of political pressure, and if that is the case everyone has a right to insist that the post office is one department that has been and should remain free of any taint of politics or political pressure. It is too vital a service to tamper with politically.

Even before this latest development, there seems to have been a gradual break-down of post-office service. We have had more smashed parcel post this year than ever before, the more noticeable since our volume has been less than for the same period 1 year ago.

There is one more item of importance I want to mention in this letter: the matter of employee morale. When morale is high our shipments are handled better. This is so true of any group of workingmen that I need not elaborate. The present curtailment order is going to lower the morale of postal employees when they compare the rigid conditions imposed on them in comparison to others in boondoggling Government bureaus. We all of us want and pray for economy but not at the expense of our most vital governmental department.

With kindest personal regards, and hoping to see you soon,

Very truly yours,

BURT
(Burton T. Wilson).

Selection of Unknown Soldier of World War II

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. ANDERSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I am enclosing a self-explanatory and somewhat shocking editorial which recently appeared in the Santa Cruz Sentinel-News.

The policy of designating the Unknown Soldier of World War II is arousing a storm of protest throughout the country. I trust that my colleagues will give attention to the editorial and the newspaper article entitled "The Anonymous 8,000" and join me in an effort to change the announced policy of the Department of the Army with reference to the Unknown Soldier.

The editorial and article follow:

[From the Santa Cruz Sentinel-News of April 16, 1950]

DIGNITY IS LOST

In simplicity lies dignity.

The dignity of man should be preserved even in death.

Press dispatches from Washington last week described the process by which the Unknown Soldier of World War II will be selected. It becomes so complicated as to border on the ghoulish.

When the Unknown Soldier of World War I was selected, a body of an unidentified war veteran was disinterred in October 1921, from each of the four United States Army cemeteries in France. The caskets were taken to Chalons-sur-Marne, where a wounded and decorated veteran, Sergeant Edward F. Younger, selected one casket by placing on it a spray of white roses. The casket then was shipped to Washington to lie in state in the Capitol and then to be buried at Arlington National Cemetery November 11, 1921.

The unknown soldier of World War II will be chosen in historic Independence Hall at Philadelphia May 26, 1951, as a climax to the long-drawn-out process which will begin October 1, 1950.

There are 8,000 unidentified Americans who lost their lives abroad during the last war. Code numbers representing them will be placed in capsules on containers designated for each of the 16 permanent United States cemeteries and national cemeteries overseas. Six capsules will be drawn from each container. The first will be that of the "principal unknown" in a given cemetery, the remaining five will be listed as "alternate unknowns" in that cemetery in the order drawn.

Then from these will be selected six bodies to represent the Alaskan command and five

overseas theaters—Europe, the Mediterranean, Africa-Middle East, West Pacific, and Mid-Pacific.

The bodies drawn as "principal unknowns" will be exhumed and examined to make certain that there is no possibility of identifying them. Records available in each theater will be studied for evidence on the same point.

If the remains of the "principal unknown" in a cemetery fail to meet these tasks, they will be reburied. Remains of alternates will then be examined until one is found which meets all requirements.

The six unidentified dead representing the different areas will be taken to Philadelphia. There someone, as yet not designated, will select the Unknown Soldier of World War II, to lie in state in the Capitol and on Memorial Day in 1951 be entombed at Arlington.

The five unknowns who are taken to Philadelphia but not chosen will be returned to cemeteries overseas for reburial.

The process could mear the exhumation of at least 36 bodies, which already have been listed as unidentified and reexamination of which would benefit no one, least of all the memory of the man who gave his life for his country or the feelings of the families of the 8,000 unknowns.

As for the so-called requirements, surely all 8,000 have met all the requirements of God and man.

There must be a simpler, more dignified way to select one of the 8,000 to receive the country's greatest memorial honors.

Why not conduct the entire selection by the capsule method and exhume only the final designate?

Let the other 7,999 rest in peace.

[From the Santa Cruz Sentinel-News of April 20, 1950]

THE ANONYMOUS 8,000

(By W. F. Alder)

On October 1 of this current year will begin a labored process of selecting an Unknown Soldier of World War II for final interment in Arlington National Cemetery.

As now planned, this selection is to be a complicated procedure involving the exhuming of at least 36 of our unidentified war dead. Of these, six are to be selected and brought home. From that number, 1 will finally be chosen to represent or symbolize all of the 8,000 who now lie buried in overseas war theaters. The remaining five are to be returned to their overseas resting places and reburied there.

It is difficult to understand the ghoulish and devious thinking of those responsible for this involved plan.

Were all to be exhumed and brought home, here to be interred at our national shrine, it would be quite a different matter. But under this plan we propose to disturb the last resting places of 36 of our dead and go through a specious mummery over 6 men whose only sin was that of the supreme sacrifice of life and identity as well, in the service of their country.

Bring back 1 anonymous representative of the 8,000 by all means. But select him by drawing one numbered capsule from 8,000 identical in appearance and leave the remaining 7,999 in undisturbed slumber.

Spare this Nation the macabre spectacle of rejecting any one of them. What is this to be—a contest of elimination with homecoming as the grand prize? Staged with a showman's idea of stark drama and Gold Star Mother's suspense.

This is too sacred a service for theatricals.

As the Sentinel-News has already pointed out in a thought-compelling editorial—there is dignity in simplicity. And the graves of our dead must not be profaned.

The Unknown Soldier is a symbol of all 8,000. How better it would be to make his homeland shrine an all-embracing one. How better it would be to make it a factual composite of them all by bringing back from each of the 8,000 graves a cubic inch of the coverlet of earth spread over these nameless dead in one bronze urn filled with the grains of sacred soil reverently lifted from each grave and thereafter enshrined in a columbarium within the monument to memory raised at Arlington by a grateful people.

Unknown, the one is a symbol of them all. They served and died together in a common cause. Let us now bring their graves together, in reverent symbolism, to Arlington in hallowed rendezvous that we and our children's children may stand, conscious of their sacrifice, in silent, critical self-appraisal before them all.

Address by the Attorney General Before the Federal Bar Association

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD the able and informative address delivered by the Attorney General, Hon. J. Howard McGrath, before the Federal Bar Association, on April 24, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, Mr. Chairman, distinguished guests, members of the Federal Bar Association, ladies and gentlemen, I deem it a high honor and a distinct privilege to be here this evening and to welcome you, Mr. President, in behalf of all gathered here and those whom the delegates to this national convention represent.

As you know, Mr. President, the membership of the Federal Bar Association is composed of men and women who are employed in the service of the United States and who are performing the work of a legislator, judge, lawyer, or member of a quasi-judicial body or commission; in short, all lawyers who participate in the business of Government.

Accordingly, the men and women who constitute this association are necessarily your coworkers and assistants in the important and significant task of governing the people of our country. And no segment of our citizenry is more conscious of your immeasurable burden than are the members of this association.

You are manifestly familiar with the contribution that the members of this association are making in that task. May I say in their behalf and as a member of their national council, that under your able leadership we pledge to increase our efforts and dedicate ourselves to the greatest extent possible to see to it that our democratic institutions, as they have been preserved to date, remain ever potent so that we may retain for all people those rights and privileges, opportunities, and benefits which make our country the greatest and most powerful on earth.

The role of the lawyer in Government service is significant. The lawyer plays a decisive part in almost every function which constitutes the Government of our United States. The service rendered by the lawyer to the Government reaches every branch of governmental activity. As in the past, the lawyer in the Government service provides the catalytic service which makes our democracy one where the rule of law is basic.

Many parts of the world today are in the throes of chaos and confusion. Fear fills the hearts of many in those areas. There no one dares prophesy the events of the morrow. Science and mechanical progress have narrowed the areas of the world. Men have been brought closer to each other. The changes in our social and economic life have added many difficulties to our problems.

It is recognized, however, that there can be no end to this tension until we learn the art of human relationship—the art of getting along with one another. We must adjust amicably the relations of mankind, their order, and their conduct in a world in which the goods of existence, the scope for free activity, and the objects on which to exert free activity are limited, and the demands upon those goods and those objects are infinite.

Today the whole mechanics of human government is undergoing a reexamination. Thoughtful people everywhere wonder whether democracy can bring peace and security to a troubled and distressed world. There are some who believe that democracy is decadent. Our vibrant, virile, and workable democracy is proof of the fallacy of this assertion. The most essential function of any government in the long run is the maintenance of law and order; the principal duty of any government is the protection of its citizens in the orderly conduct of their lives; and any government that is derelict in that respect is doomed. The government lawyer, as a member of the bench or as the ordinary attorney, is the guarantor of that security and can be truly said to be the maintainer of law and order.

We are now going through a transitory period of social and economic change. Human relationships have become more complex than ever. It is justice properly administered which will bring about a moral regeneration, which the world needs to achieve a lasting peace. The dislocations caused by the last war in our social and economic life, the tensions created in our foreign relations since the end of the war have brought a challenge to our genius and to our loyalty to the principles enunciated by our fathers who framed the Constitution: "To form a more perfect union, establish justice, and insure domestic tranquility."

There are many political philosophies today; there are many schemes for the regeneration of society; panaceas and paradises of all dimensions are urged upon a worried humanity; but I submit to you that none will work unless equal justice and the majesty of the law is provided in that form of government. Our common-law doctrine of the supremacy of law and our insistence on the security of individual rights against any official unauthorized action is a gospel which we must preach to all and practice with sincerity and effectiveness.

There are systems of government in this world where the power of the state is supreme. We do not adhere, and never shall adhere to any theory of that sort. The greatest contribution that America has made to the science of government has been to provide a system which guarantees to every individual his rights not only against the executive, but against the entire state. There can be no democracy where the state is all powerful and the individual is of no account. This concept of the rights of the individual is challenged today as it has not been at any time in our history. It is not only threatened by foreign dictators, but by false philosophies and enemies from within.

The government lawyer has the responsibility and the duty of taking an effective and leading part in upholding and safeguarding the rights and liberties of individuals and

defending the majesty of the law. The government lawyer guides, counsels, and helps in the drafting of legislation so that the activities of men in their endeavor to get their demands is so ordered as to enable satisfaction of as much of the whole scheme of demands with the least friction and waste.

The wills of freemen in action are reconciled by a universal law giving a maximum scope for free activity to each, reconciling instincts in action, bringing about a maximum of happiness, satisfying the wants of each other so far as compatible with satisfying the wants of all. This is what the lawyer, and the government lawyer especially, must continue to do. The lawyer, as well as the judge, must serve as an agent of organized social control. The law has done much in the past for the science of society. It must continue to do so. History of civilization has demonstrated how law has operated to maintain and further civilization, how it has grown out of civilization, how it has adapted itself to new types of civilization; it must continue to do so.

The Federal Government in recent years has been given many new responsibilities involving the enactment of a great mass of legislation of far-reaching importance. Accordingly, the burden of law enforcement upon our Federal Government has increased tremendously. We, as Government lawyers and public officials, must be more alert today as to our responsibilities and opportunities than ever before. The great mechanism called the machinery of justice must be made to function more successfully. It must be made to serve an ever wider and in a more intimate fashion the needs of an influential and growing country like ours.

The world looks upon this country as the leader in the pursuit of a justice that will bring peace, tranquillity, and security. We, as law officers of the executive branch of the Government, by reason of our general experience at the bar and through our daily systematic appraisal of legal problems, can do considerable to promote the general efficiency of the application of our laws. In this manner we are fulfilling our responsibility, not only as lawyers, but as citizens of this great Republic.

Lawyers have always made tremendous contributions to the development of our country, spiritually, economically, culturally, not only in the domestic field, but also in the realm of international relations. Our task today is far more trying. It calls for more extensive knowledge, skill, vision, and effort. We have a great heritage as lawyers. Let us prove worthy of it and let us preserve it. The American system which has as its foundation the liberty of the individual and the equal opportunity to every man to enjoy rights and privileges with his fellow man, can be perpetuated only through our efforts. In this manner, Mr. President, can your watchword be fulfilled—the admonition of Thomas Jefferson when he said:

"That the flames of freedom kindled in 1776 and spread over the globe shall never be extinguished by engines of despotism."

With God's help and with the full cooperation of all citizens and with the sincere and renewed efforts of all those in Government service, we of the democratic world will see a new day when ancient bitterness and wrongs will be purged. We feel that humanity, conscious of its unity and strength, will march forward to a new opportunity. Out of the welter of blood, tears, and sweat now sweeping parts of the world, mankind with God's help will set foot on a brighter future and bring a better life. Our own country, by a strict adherence to its fundamental laws of fairness and justice, will serve the cause of universal peace. We must all have faith that things can be arranged on this earth to form a reasonable society.

There is yet love in this world. There is yet a sense of justice among men. There is a desire to render mutual aid. There is stored in mankind a reservoir of good intentions and pure thoughts. All that is required is the mechanism with which to effectuate these ideas. That is the hope of all peoples all over the world, and if we but keep our faith in the Lord and in His goodness to mankind, we shall be worthy of this blessing.

Ladies and gentlemen, I know of no one who has dedicated himself with greater zeal and effort toward the achievement of the ideals I have just described than your guest of honor this evening. I am delighted and privileged to welcome the President of the United States.

Our Far Eastern Policy

EXTENSION OF REMARKS
OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech on our far eastern policy, which I made yesterday noon before the Chicago Council of Foreign Relations, at Chicago, Ill.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, fellow Americans, in this day of the airplane and the atom, we must face the fact that both peace and war are global in character. If we are to help maintain a free world of free men, we cannot achieve our objective by closing the door to Communist aggression in Europe while the door is left wide open in Asia.

The families of American fighting men who died at Pearl Harbor on December 7, 1941, or at Iwo Jima and Okinawa, almost 4 years later, must wonder how it came to pass that the Soviet Union, in the Pacific war for less than a week against an enemy already defeated and asking for peace, could take our old-time friend and ally China, with its 450,000,000 people, into the Communist orbit.

The United States was catapulted into World War II because we would not allow the domination of China by Japan. Yet as we meet here today the Soviet Union has a vast new satellite with more population and natural resources than the satellites of eastern Europe put together and is on a springboard from which communism can overwhelm southeast Asia and endanger the Philippine Republic, Japan, India, and Pakistan. Can this Nation afford a diplomacy that loses that which our fighting men have won? Coalition with communism is no more workable in China or Korea than it is in Poland, Hungary, Czechoslovakia, Bulgaria, or Rumania. Communism is destructive of human liberty everywhere in the world. Last November in Chungking a Chinese official clearly put it to me in this way: "Senator, there can be no coalition with a tiger unless you are inside the beast."

Our Government has had ample evidence of the aims of international communism in China as far back as 1928. It was made clear in the meeting of the Sixth International that China and the Far East was to be given a high priority. I quote from the theses and resolutions of the Sixth World Congress of the Comunist International published under date of December 12, 1928:

"33. In China, the future growth of the revolution will place before the party as an immediate practical task the preparation for any carrying through of armed insurrection as the sole path to the completion of the bourgeois-democratic revolution and to the overthrow of the power of the imperialists, landlords, and national bourgeoisie—the power of the Kuomintang."

On January 7, 1947, Gen. George C. Marshall issued a statement relative to China which includes the following:

"In the first place, the greatest obstacle to peace has been the complete, almost overwhelming suspicion with which the Chinese Communist Party and the Kuomintang regard each other.

"On the one hand, the leaders of the Government are strongly opposed to a communistic form of government. On the other, the Communists frankly state that they are Marxists and intend to work toward establishing a communistic form of government in China, though first advancing through the medium of a democratic form of government of the American or British type."

Between these two dates and up to the present time there has been an abundance of evidence that the Chinese Communists were closely allied with the Soviet Union and with international communism. Despite this fact a vast amount of propaganda was directed at the American people by those holding positions in and out of government to the effect that Chinese Communists were in fact only "agrarian liberals."

The official position of the State Department and the Government was that we should wait for the dust to settle. It has now settled sufficiently so that the American people can clearly see the debacle that has taken place which jeopardizes the peace of the world and the security of the United States.

The Far Eastern Division and those who advised them from the outside or supported them from the inside have a great responsibility to the people of the United States and to more than 400,000,000 Chinese, living and dead, who are now behind the iron curtain.

To paraphrase Mr. Churchill: "Never have so few contributed so much to destroy the liberty of so many."

During the 5 years I have been a Member of the United States Senate I have supported our foreign policy in Europe and been critical of it in the Far East.

The general objectives of our foreign policy have been clear to the American people and to the Congress. We have sought to establish a system of international law and order so that the peace of the world will be secure for this and future generations. Yet with this worth-while objective in mind we were not so naive as to believe that all nations would forego the use of military power to enforce their will on others.

The United Nations, it was hoped, would not only be a world forum for discussion but would also be an effective instrument for collective security.

It has not yet been put to the test of acting against an overt aggression of armed troops of one nation crossing the borders of another. That test may come this year or next in Yugoslavia, Iran, Viet Nam or Burma.

We do know that the Soviet Union, by its abuse of the veto in the Security Council, has put the world on notice that there will be no hesitation in blocking effective United Nations collective security action against aggression by another veto.

It was for this reason that our Government and those of western Europe clearly recognized that Marshall plan economic aid to help rehabilitate war-torn Europe was not sufficient in and of itself. The fear of aggression restricted the recovery so necessary if

the free way of life was to have a fair chance for survival against totalitarian pressures.

Within the United Nations charter the Atlantic Pact came into being. By its terms an attack against one of the North Atlantic nations would be recognized as an attack against all of them.

Outside of the North Atlantic Pact, by resolute action, Greece was saved from being engulfed by communism; Turkey, Iran, and Korea were given the tools with which their independence might be preserved.

In China our post World War II policy has contributed to the debacle in that area of the world. For more than half a century our historic policy had been to encourage and support a free and independent China. Today's realities clearly mean that this must also be a non-Communist China.

Yet at Yalta in 1945, without consulting China our wartime ally and friend, we gave the Soviet Union a stranglehold on Manchuria. It was done without consultation with the American Congress or the American people. Playing a prominent part as an advisor to the American delegation at Yalta was Alger Hiss.

Our State Department urged a coalition with the Communists. The Government of the Republic of China quite properly refused. The United States placed an embargo against the shipment of arms and ammunition to the legal Government of China while at the same time the Soviet Army of occupation in Manchuria was turning over captured Japanese stocks of arms and ammunition to the Chinese Communist forces.

In July 1947 Gen. Albert C. Wedemeyer was sent out to China on a mission. He wrote a significant report dated September 19, 1947, which contained a constructive program to save China from communism. That report containing information of great import, was suppressed for 2 years, and access to it was denied to Members of Congress.

Until quite recently some of those who helped shape our China policy were speaking of Mao Tse-Tung's followers as agrarian liberals. It makes little difference whether this fatal miscalculation was because of design or ignorance. The end result is no less damaging to the future peace of the world and the security of this country.

Our China policy has helped to undermine the Republic of China. While that government was with its back to the wall the State Department issued the China white paper. Never before had we struck such an almost fatal blow at an historic friend during its darkest hour.

During the last 2 years a substantial part of the help that the Congress voted as aid to the Republic of China has been delayed or nullified. This can be and has been amply documented. Even purchases, military and civilian, with Chinese funds have been obstructed.

On January 5 of this year the President announced that no further military assistance would be given to the Republic of China. We now know that this had been preceded on December 23, 1949, by a State Department memo to its officials overseas stating that the island of Formosa had no strategic value.

The interesting thing about that memo is that the State Department had no such advice from the Joint Chiefs of Staff, from Admiral Radford, commander in chief of our naval forces in the Pacific, or from Gen. Douglas MacArthur, our supreme commander in the Far East.

In fact, the statement ran directly counter to a State Department bulletin of June 3, 1945, which stated with reference to Formosa that "with the exception of Singapore, no location in the Far East occupies such a controlling position."

The difficulty with the State Department is that they have been more interested in China in saving face than saving freedom.

However, I do not want to spend too much time on the past.

Where do we go from here?

In California recently Secretary of State Dean Acheson made two significant speeches. If implemented, they furnish the basis of having a policy in Asia that will be consistent with our policy in Europe.

While the door to negotiation is left open, the Soviet Union must reestablish its diplomatic credit standing. There are too many pieces of paper floating around to warrant reliance on a new one until the others have been redeemed.

It is clearly underscored that aggression in Asia is of no less concern to the law-abiding nations of the world than it is in Europe or the Middle East.

The nations of Asia are given hope that those who are willing to help themselves to maintain their freedom will be eligible to apply for and receive various types of assistance from us.

Standing by itself, the speech of Secretary Marshall at Harvard on June 5, 1947, without congressional implementation (bipartisan in character), would not have bolstered for long a single tottering, war-weary government of Europe.

Nor will Secretary Acheson's speeches be more than a temporary whiff of oxygen until and unless implemented by the Congress.

Up to now there has not been the consultation with the majority and minority parties on far-eastern policy that there has been in recent years on our European policy. There has never been a bipartisan far-eastern or China policy during this administration.

As has been pointed out before such consultations must be on the "take off" and not merely on the "crash landings."

There is one great void in the speech of the Secretary of State dealing with our Asia policy. He treats the islands of Formosa, Hainan, Kinmen, Chosun and the Pescadores with their 8,000,000 people under the jurisdiction of the legal Government of the Republic of China as though they were ships which had been sunk beneath the waves of the China Sea and the Pacific.

Since Formosa alone has more population than either Australia or Greece, this is hardly realistic. Formosa is closer to the Philippines than the island of Luzon is to the island of Mindanao. It is hardly conceivable that this Government can now view with unconcern the moving of international communism off the Asiatic land mass on its first major island-hopping venture at Hainan.

An American missionary with years of experience in China recently said to me: "Senator, I cannot understand how Chiang Kai-shek can be the No. 1 target in the Far East of international communism and at the same time be the No. 1 target of the Far Eastern Division of our own State Department."

In China free people are staking their lives on keeping what is left of their country out of the Communist orbit. With some moral support and a limited amount of arms and ammunition they will be able to prevent international communism from moving off the Asiatic land mass out onto the strategic island of Formosa.

There has been a lot of misinformation relative to the amount of postwar assistance given by this Government to the Republic of China. The facts of the matter are that China, our wartime ally and long-time friend, has had less material assistance than any of the three wartime Axis partners—Japan, Germany, and Italy. Out of this lesser amount must be deducted a charge of approximately $600,000,000 for the transportation of their troops by American planes and ships subsequent to VJ-day. My authority for these statements comes from official Government reports which can be checked by any person having the desire for facts rather than for propaganda.

On December 18, 1946 President Truman issued a statement on United States policy toward China. As of that date this is what he had to say relative to the postwar period: "From VJ-day to the end of February, shortly after General Marshall's arrival the total was approximately $600,000,000—mostly in transportation costs. Thereafter, the program was reduced to the fulfillment of outstanding commitments, much of which was later suspended."

A great deal is made in some quarters of the vast quantities of military assistance which had been furnished to China in the postwar period through the war surplus sales to the Chinese Government. In this connection it is interesting to quote from the same statement of the President:

"It was imperative that this matter be concluded in the Pacific as had already been done in Europe, especially in view of the rapid deterioration of the material in open storage under tropical conditions."

A little further along in his statement the President has this to say:

"Aircraft, all nondemilitarized material, and fixed installations outside of China were excluded. Thus, no weapons which could be used in fighting a civil war were made available through this agreement."

The fact of the matter is that the help the Republic of China received in the postwar period was largely out of title four of the 1948 ECA Act passed by the Eightieth Congress. Of the total amount made available $125,000,000 was for military assistance. This particular provision was approved in April of 1948 and the first shipments did not arrive in China until October of that year after some of the crucial battles of North China and Manchuria had been fought. It is largely this equipment which is today making possible the defense of Formosa, Kinmen and Chosun Islands.

Out of this one-hundred-and-twenty-five-million appropriation provided by the Eightieth Congress, China received less military equipment than an equal sum of money provided out of larger Greek and Turkish aid funds. This is because the Chinese Government was put on a lower priority and had to pay replacement costs for their equipment while the same items were sent to Greece and Turkey at a fraction of their cost.

In the letter from Secretary of State Acheson to the President, dated July 30, 1949, transmitting the China white paper, Secretary Acheson has this to say in attempting to excuse our conduct at Yalta: "At Yalta, Marshal Stalin not only agreed to attack Japan within 2 or 3 months after VE-day but limited his price with reference to Manchuria substantially to the position which Russia had occupied prior to 1904. We, for our part, in order to obtain this commitment and thus to bring the war to a close with a consequent saving of American, Chinese, and other allied lives were prepared to and did pay the requisite price."

I wish to emphasize that this price we paid at the expense of China was done without her knowledge or consent and without the knowledge or consent of the American Congress or the American people.

Contrast this doctrine of expediency rather than principle with the statement contained in General Wedemeyer's report of September 19, 1947, which was not made available to the American Congress or the American people until the publication of the China white paper on August 5, 1949. In this report General Wedemeyer said: "The Nationalist government has consistently since 1927, opposed communism. * * * Today the same political leader and same civilian and military officials are determined to prevent their country from becoming a Communist-dominated state or Soviet satellite.

"Although the Japanese offered increasingly favorable surrender terms during the course of the war, China elected to remain

steadfast with her allies. If China had accepted surrender terms, approximately 1,000,000 Japanese would have been released for employment against American forces in the Pacific."

I cannot believe that history will be kind to those responsible for the betrayal of an ally at Yalta when contrasting it to a steadfast devotion to loyalties and principles shown by Chiang Kai-shek.

The imperative need of the moment is to determine whether a policy can be developed in the Far East which will save that whole area from falling into the orbit of international communism. No one should underestimate the complexities of the situation. Nor would it be realistic to ignore the fact that whatever action we take involves calculated risks. In my opinion, however, the risk of taking affirmative action to prevent the further spread of communism in Asia is far less than the risk of waiting for the dust to settle, revealing a billion and a quarter people and the vast resources of Asia allied with Soviet Russia against us and the free world.

There were risks involved in the Berlin airlift, there were risks involved in our aid to Greece and Turkey. Had we not taken those risks it is not unlikely that most of western Europe and the Middle East would today be under Soviet domination.

In China the Benedict Arnolds, the quislings, and the fair-weather friends have long since departed. The new cabinet of President Chiang Kai-shek contains many young and able administrators who are men of integrity.

The civilian governor of Formosa is K. C. Wu, graduate of Princeton with an outstanding record as wartime mayor of Chungking. The premier is Chen Cheng, a man of lifelong integrity and one regarding whom most Americans, including the late General Stilwell, have spoken most highly. The commander of the ground forces is General Sun Leh-jen, graduate of the Virginia Military Institute and a fighting soldier of the first rank.

Time does not permit me to name them all but I can assure you that they are as determined to maintain a China outside of the Communist orbit as we are to maintain our own freedom.

In developing a program for the economic and military assistance to the free nations of Asia, the non-Communist Republic of China should not and must not be overlooked.

To permit our tried and true friends of more than 50 years standing to go down the drain of communism while we concentrate on new Asiatic continental countries that have many more internal problems than free China has today, can hardly be the basis of a policy warranting the support of the Congress and the Nation.

It is not realistic to ignore the fact that the Republic of China has approximately 500,000 men under arms, 300,000 of whom are excellent soldiers. This total number is greater than the combined troop strength of Korea, the Philippine Republic, the United States of Indonesia, Siam, Viet Nam, Burma, Australia, New Zealand, Hong Kong, and the United States forces in Japan.

The island of Formosa is not needed by the United States as either an air or naval base. In the friendly hands of the Republic of China, it presents no problem to our own defenses.

In the hands of international communism the many Japanese-built air strips and the excellent harbors would drive a wedge into our Pacific defense line that runs from Japan through Okinawa to the Philippines. In unfriendly hands it would be a strategic loss that no competent military, naval, or air commander would or has overlooked.

We need a policy in the Far East and in China. We need it now, not a year from now, when we can do nothing but look back on what might have been done. When the China white paper was issued in August 1949, the Chinese were north of the Yangtze River and the Republic of China still embraced more than half of China's land area and almost two-thirds of that Nation's population. Many of us were urging a policy then that was consistent with our policy in Europe. We pointed out that while blocking the expansion of communism in western Europe our policy, or lack of it, in China was accelerating the spread of communism in that area of the world.

As far as the State Department was concerned, our voices were but cries in the wilderness. But slowly and relentlessly the American people have come to realize that after the great sacrifices of manpower and material wealth to win the war in the Pacific, our diplomats have lost the peace in that vast area of the world.

Once again I urge an affirmative policy. I sincerely hope that this recent talk of bipartisan consultation is not merely window dressing to quiet congressional criticism until adjournment.

Prior to the development of substantial criticism in Congress the Far Eastern division of the State Department was steering our China policy toward ultimate recognition of the Communist regime and its admission into the United Nations.

It is time we developed some new diplomatic techniques to combat the international conspiracy aimed at the destruction of human liberty throughout the world. The recognition of the Communist regime in China or its admission into the United Nations as a result of Soviet pressure would be as great a blow to free institutions and the ultimate peace of the world as was the pact of Munich.

Why am I so concerned? There has just recently come to my attention the text of a speech by Ambassador Loy W. Henderson at New Delhi, India, on March 27 (less than a month ago). He was officially speaking for this Government on far-eastern affairs. With reference to recognition of the Communist regime in China he said that it was our desire to wait "until that Government has given a clear indication of its intention to live up to its international obligations and to treat American diplomatic and consular representatives and other American nationals in a manner prescribed by international custom * * *."

What would such assurances be worth, if given? Have the Soviet satellites in eastern Europe treated either our diplomats or citizens with respect? Are our memories so short that we have forgotten the Angus Ward case? Why should we even consider recognition until the Communist regime has waited at least the same 2-year period that an American sailor and marine have been held in jail though their only crime was flying a mission for the Navy and being forced by engine trouble to crash land in the Communist area. Why should we contemplate at this time the opening up of the Chinese Embassy and consulates to additional Communist espionage and fifth column activity?

This Government should make it clear now that: (1) We have no intention of recognizing the Communist regime in China or in any other area of the world where such a regime takes over by force of arms unless the people themselves have a chance to select their own government under elections supervised by the United Nations. (2) We will actively oppose the replacement of the Republic of China by the Communist regime until the will of the people of that country can be adequately determined. Many who favorably contemplated communism as a theory now know that its practice of brutal destruction of human dignity, freedom of religion, speech, and press, and its undermining of the family institution and its obvious subservience to Moscow has destroyed any broad basis of support among the people of that country. (3) We should give the same kind of supervised aid to the Republic of China that we gave to Greece. The legal Government of China has requested such assistance and desperately needs it now. Are we to quiver and shake and continue to "fiddle and faddle" because the satellite Mao-tse or Stalin, the master, are displeased? The Kremlin was displeased at the Marshall plan, the Berlin airlift, the North Atlantic Pact, the arms implementation bill, and MacArthur's administration in Japan. (4) Our Government should serve notice on the Communist regime in China that until and unless they release W. C. Smith, chief machinist mate, United States Navy, and Elmer Bender, sergeant, United States Marine Corps, who have been held prisoners by the Communists for 18 months, until all of our diplomatic personnel are allowed to leave the mainland of China, unless all of our other citizens in China who desire to leave are allowed to do so, that we will enforce a naval blockade of the China coast to see to it that until and unless our American citizens get out that nothing that would contribute to the military or economic development of Red China gets in by sea from the United States, Great Britain, the Soviet Union, or any other nation.

Our secret weapon against any aggressor is not the plutonium or the hydrogen bomb whose secrets can be stolen from us by a Dr. Fuchs. Our real strength is that which Communists dare not steal to take to the Soviet Union or its European or Asiatic satellites. I refer to the liberty and the determination of a self-reliant people to be informed, make their own judgments, choose their own leaders, and having the ability to rally overnight if their free institutions are threatened from within or without.

This priceless ingredient, which we possess, the dictators understand less than they do the intricate blueprints of a superweapon. In itself our free way of life is a time bomb which will destroy any dictatorship once their people know the truth. This may explain the frantic lowering and sealing of the iron curtain. It should renew our determination to penetrate the darkness and bring renewed hope to millions who love freedom, yet find themselves temporarily behind the iron curtain, from the Elbe to the China Sea. Let us help freedom to become a dynamic force in the lives of men and women everywhere, not excluding those in the Soviet Union or any of its satellites.

If we show the same courage and common sense that motivated the men who sat in constitutional convention at Philadelphia and who traveled across the continent to settle in the West, there is no domestic problem that we cannot solve and there is no foreign foe that we need fear.

Foreign Relations and Domestic Politics

EXTENSION OF REMARKS

OF

HON. EDWARD L. LEAHY

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. LEAHY. Mr. President, I ask unanimous consent to have printed in the RECORD an address by my colleague the senior Senator from Rhode Island [Mr. GREEN], delivered at Providence,

R. I., on April 21, 1950, before the Brown University chapter of Students for Democratic Action, on Foreign Relations and Domestic Politics.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN RELATIONS AND DOMESTIC POLITICS

Fellow Brown men and women, officers and members of the Brown University Chapter of Students for Democratic Action, I thank you for the opportunity you give me to address you. It is always a source of great satisfaction to me to have a part in any Brown function anywhere—but especially on the campus. This has been so ever since I came here as a callow freshman 67 years ago. It will be so till the end.

You have kindly let me choose my subject and I am choosing "Foreign Relations and Domestic Politics." This is a subject which has been forced on me during the last month and a half, because I am a member of a Senate committee of five appointed as a subcommittee of the Foreign Relations Committee. This appointment was made in accordance with a special resolution of the Senate. This resolution directed the committee "to conduct a full and complete study and investigation as to whether persons who are disloyal to the United States are or have been employed by the Department of State." I shall not discuss the charges made, nor the witnesses who have testified, nor draw any conclusions as to the final result of the Committee's work, since its work is not completed. I may, however, with propriety draw your attention to some aspects of the investigation so far as it has gone.

I hope I will be forgiven if I begin by something so unpopular and so old-fashioned these days as an understatement. It is this:

These are not ordinary times.

The times are witnessing a struggle between the free nations and peoples of the world and the forces of Communist totalitarianism. That struggle touches almost every area of the globe and also every area of the human mind. Free nations, free institutions, and free minds are under attack by a Soviet imperialism which would subject them all to its control and regimentation. In that effort at domination, every weapon of subversion, exploitation, and coercion is used—on nations and on individuals. These weapons are used ruthlessly, flexibly, cynically, and wih great skill.

The free nations, whose ideology is based on their view of the individual as an end in himself, must oppose this assault. They must prevent the principles and values that make them free nations from being eroded by the inner frictions that this outside struggle produces. This must be done because the strength of action and the strength of ideas on which our victory depends must come from our continuing dedication to the ideals of freedom. That dedication cannot in these times be limited to the form of oratorical Fourth of July affirmations. We must exercise that freedom—constructively and responsibly, as a member of the community of free nations. As individuals we must endeavor to safeguard our liberties without impairing them.

All this means that we in the United States today bear an enormous double responsibility. One aspect of that responsibility comes from the fact that our position of power and influence in the world today has conferred on us the leadership in the struggle against Soviet-led totalitarianism. The other aspect comes from the nature of that struggle—we must continue to preserve and to generate the values that will make for a victory of freedom.

What we as people think and say, decide and do has a new and profound importance in the world, and it has inescapable consequences. These consequences will affect the lives of human beings all over the globe—in the present and in the future. The issues we confront, and the decisions we must make, are very grave. And they are not simple.

The issues of the day demand and merit great debate. They require cool and close attention. They require hard thought. They require a whole-hearted effort to inform one's judgment before judging. They require honesty of mind and purpose.

The last few weeks have produced a spectacle strangely and frighteningly different from the orderly debate and responsible deliberation which the times demand and which the American people have a right to expect. The Department of State and the Secretary of State—and, by innuendo, the President of the country—have been made the subject of a virulent campaign designed to cast doubt on their devotion to American and democratic principles, to question both their integrity and their capacity, and to suggest that they have a hidden affinity for a cause that is repugnant to the entire free world. Outbursts of name-calling, partly under the cloak of senatorial immunity, unsubstantiated accusations, irresponsible and sensational charges have wrought untold harm to the international position of the United States and to the cause of democratic freedom. We must have today a calm, serious-minded, and stable public opinion if foreign policy is to be responsibly formulated and firmly carried out. We have unfortunately seen the attempt to substitute in its stead government by hullabaloo. We must renew the attempt to create honest public understanding of what is at issue in foreign affairs today.

Responsible elements in what is sometimes called the loyal opposition have recognized that no narrow temporary advantage which might accrue to them from the distraction can outweigh the damage done, and have protested or stood uneasily apart from this performance. It would in itself be a sufficient alarming spectacle to see even a small element in the opposition party so little aware of the large responsibilities of the representatives of the people of a great democracy. How does all this look abroad? How does it look to our enemies? How does it look to our friends?

It may suffice to read one quotation from the report to his paper by a British correspondent in the United States:

"Thus we have the spectacle of a great Nation come to unique world power commendably telling itself that it must act with a new maturity and responsibility but in fact regressing with shocking speed into the duplicity, the phony toughness, the tattletaling, and the brutality of childhood without showing any of its compensating charm, directness, or naïveté."

I am not suggesting that we conduct our domestic arguments in hushed, prim tones for fear of what the neighbors will think. I am not suggesting that we relax the unending vigilance which the maintenance of our internal security demands. Serious charges must continue to be seriously and fully investigated. I am suggesting, however, that the world which looks to us for leadership, and the American people, have a right to expect that public concerns will not be exploited for private or partisan ends.

We all have a right to expect that the integrity and good sense of our public servants will not be called deliberately into question by politicians who seek publicity on false issues at whatever cost to the general good. We have a right to expect that no destructive attempt to discredit and confuse the conduct of foreign affairs will be made deliberately by those whose own views on foreign affairs have been rejected by the people at large.

These wanton efforts to besmirch, to confuse, these deliberate efforts to sow doubt about our Nation's leaders, make our world leadership a far more difficult thing. It is not easy at best. Even when viewed sympathetically by our friends abroad, these charges make us seem silly. At worst, these charges, and the heat with which they are pressed, the broad inferences with which they are coupled, suggest that our national leadership, and foreign policies do not command the confidence of the American people. They may suggest that our people are divided and confused; that our public understanding and public opinion is ill-informed, easily panicked, easily frightened. They may even suggest that democratic representative government, at moments when it faces its highest tests, can be easily deflected from the important tasks at hand by irresponsible outcries for purges and partisan causes.

Those nations who have not yet definitely alined themselves with the west, but who have looked to us for aid and comfort in their struggle against Communist domination, will see us now through clouds of suspicion and mistrust. If our plans for world peace and stability are to be effective, we must have their trust and their confidence. If our sincerity and capacity are called into question, which way can they turn?

The Communist world, we can be sure, will exploit the situation to the full. The Soviet radio and controlled press will diligently seek to create the impression that their system and philosophy is able to attract the loyalty of men in the high positions of their greatest antagonist—and that we have not the wit or the techniques to detect them effectively or keep them out.

The customary Soviet practice, when it plans an attack hot or cold on another government, is in advance to break down confidence in the established government. No Soviet agent could do more along this Communist line than is being done by those who claim they are acting from patriotic motives in making charges directly against our State Department and indirectly against our President.

The charges of disloyalty and the accompanying campaign to discredit our foreign policy are best refuted by examining our conduct of world affairs. What are the facts? What does the record tell us?

Recently as a member of a Senate appropriations subcommittee I revisited a number of countries in the Middle East and Far East to learn at first hand of conditions there—economic, social, and political.

Let's turn to the Middle East. Here is a strategic crossroads—here three continents join. The Soviet Union would control that vital area today if it had not been for the quick and vigorous action of the United States in giving economic and military assistance to Turkey and to Greece. The United States recognized the threat presented to all the free nations by the Communist drive to seize Greece. A plan of action was adopted based on the principle that has become known as the Truman doctrine. The State Department planned and carried out that program, in the early and uncertain days, when the outcome was dubious and the risks seemed very great. In many quarters that program was opposed not only because it was expensive, not only because it was a calculated risk—but also because in those days it seemed too anti-Communist.

The administration is responsible for the success of that program. And it has made a vast difference in the struggle between freedom and totalitarian communism. If Greece had fallen, Soviet communism would now front on the Aegean Sea. An outflanked Turkey would have had to surrender to Soviet control that dearly sought prize, the Turkish Straits. How far beyond that, into Iran, into militarily weak countries of the Middle East, would Soviet power now extend? But

the peoples of Greece and Turkey are still independent today; the eastern Mediterranean is open; the middle eastern countries still control their own destinies. This hardly seems the work of an administration riddled and dominated by Communists.

Some of us are worried now about Indochina. But do not forget that 2 years ago we were equally worried that communism would take over France and Italy. In western Europe, immediately following the war, there was chaos and depression of spirit. The Communist parties flourished in an atmosphere of despair. They worked eagerly to carry out Moscow's orders. We should not now be in any doubt about what those orders were. They were aimed at Communist control of western Europe. Freedom and democracy were in acute danger of being wiped out in western Europe—of being overthrown from within. Those who are entrusted with the conduct of our foreign relations saw the danger. And they saw what was required. The Marshall plan stands as a tribute to the foresight, the intelligence, and the devotion of the men who conduct our foreign relations. We are familiar with the results. The countries of western Europe, with our aid, have taken great strides toward recovery, toward security, toward confidence. They not only survive as free peoples; the membership of Communist parties has dwindled, and the aims of Communist parties have been exposed as the clear aims of Moscow. This hardly seems the work of an administration riddled and dominated by Communists.

When European economic recovery was threatened by fear of aggression, by the insecurity bred out of the sense that western Europe stood defenseless before Soviet Russia's military forces, we joined with 10 western European nations and Canada in a combined, integrated defense system for democracy on both sides of the Atlantic. In this development of our foreign policy the State Department was again the leader. And again, I find it very difficult to see in this evidence that it was animated by Communist sympathies.

And now let us turn to China—a subject which is closely related to the charges of disloyalty, and counter charges that the former are partly instigated by a Nationalist China lobby.

What is the record of the Department there? No one can deny that the Communist triumph in China represents a serious setback for the forces of freedom. The critics of our China policy claim that the outcome would have been different if our policy had been different. But none of these critics have been able to suggest now, and none did at the time, how we could have persuaded, or forced, the Chinese Nationalists to use wisely the large-scale assistance we gave them, or to accept the best advice we could proffer, or to institute the reforms that alone would have insured continued support for the Nationalist Government by the Chinese people. General Marshall's diagnosis has been proved correct; the remedies the United States offered were not accepted; if the mainland of China today is in the hands of Communists, it is because of the actions of Chinese Nationalists and of Chinese Communists and not of American Communists in our Government.

Our foreign policy has a consistent record of support for freedom and democracy. It has strengthened free nations against aggression and subversion. It has consistently sought to generate throughout the world the conditions in which communism cannot thrive. We have made continuing efforts to carry out constructive and creative policies such as our programs to expand world trade, to share the world's advanced technology, and to ensure freedom of information. These are potent proofs that our foreign policy deserves the support of the American people.

In the tremendous expansion of our foreign responsibilities since the Second World War began, those who conduct our foreign relations have had unprecedented demands laid upon them. We have needed as never in our history men of experience, men of intellect, men of imagination, men of courage, integrity, and the broadest human sympathy. The American people have been fortunate that men with these qualities have been forthcoming. We are especially fortunate that a public servant who possesses these qualities has been since 1941 almost uninterruptedly in a position of responsibility in the conduct of our foreign affairs, and that he is now Secretary of State. In the development of our foreign policies in these crucial times Dean Acheson has been a fellow traveler with such men as Mr. Hull and Mr. Stettinius, Mr. Byrnes and General Marshall. He must be charged with the guilt of association with them.

I think no man has brought to that position in recent years a richer background of training and experience in international affairs. He is a man who speaks his mind with conviction and clarity. He has shown that he understands in their widest scope the great issues of our day, and has the courage, the energy, and the wisdom to join in what must be the long, hard efforts of the American people to create a free and peaceful international order. I feel sure that under his leadership the Department of State is not merely free of Communist penetration; it is strong and competent to fight it.

There seems to be a general lack of appreciation of what has been done, and of what continues to be done, to insure loyalty on the part of the Department's employees. There has been, and there continues to function there a comprehensive, thorough-going machinery for discovering and eliminating security risks and disloyal employees, and to screen such persons from the ranks of applicants for positions. This procedure was instituted, under General Marshall, and has been vigorous and thorough, fair and just. When there is any doubt, that doubt is resolved in favor of the Government. Every employee is checked for security by the Department's own highly trained Investigation Branch, which has 20 regional offices throughout the country. Where a doubt of loyalty is involved, the case is referred to the Federal Bureau of Investigation, commonly known as Hoover's FBI for a full field investigation. The results of investigation are reviewed and evaluated by the Departmental Loyalty and Security Board (whose chairman by the way is a Republican). In accordance with the President's loyalty program requirements, the cases warranting a field investigation are post-audited by the Civil Service Loyalty Review Board. Any citizen who suspects any officeholder of being disloyal should inform the FBI of that suspicion and the facts on which it is based.

I think that the Department of State's record, its security procedures, and its leadership should convince us that the conduct of our foreign relations is not being sabotaged or subverted. I think we can regain the public confidence and public clarity that has been lost in recent weeks through shrill and reckless attacks on the security of our Government and the integrity of our public servants. And I think we may even learn some useful lessons from recent events, because similar tactics have been used in the past, and we should be on our guard against them in the future. We must learn that when someone cries "Smoke" we ought not necessarily to yell "Fire" and have a panic. It may be only a smoke screen, or even a fog. And we must learn that cold feet are less valuable than cool heads in fighting a cold war.

Decline in American Shipping

EXTENSION OF REMARKS
OF

HON. HERBERT R. O'CONOR

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. O'CONOR. Mr. President, one of the major industries of the great port of Baltimore is shipbuilding and ship repair, and one of the major concerns in this field is the Maryland Drydock Co., of which Mr. George H. French, an outstanding leader of the industry, is president.

In view of the concern which I have frequently expressed here on the Senate floor and elsewhere regarding the low estate to which the United States merchant marine has fallen, it is worthy of note that in his annual report to the stockholders of the Maryland Drydock Co., Mr. French calls attention to the fact that the number of American ships actively in service was only 13 percent of the world total in June 1949. This was little more than one-third of the 36 percent of world shipping which had been represented by the United States merchant marine 3 years earlier.

As a result of the decline in American shipping, Mr. French's report further disclosed, there has been a sharp drop in volume of work done throughout the year. He noted the fact that the Federal Government "has no adequate policy concerning the merchant marine and its supporting industries," and he advocated a long-range program to rehabilitate the country's shipping and ship-construction industry.

I ask unanimous consent that the article appearing in the Baltimore Sunday Sun of April 23, 1950, concerning the Maryland Drydock Co. report, be inserted in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOTES DECLINE IN UNITED STATES SHIPS—FRENCH, DRYDOCK COMPANY HEAD, DEPLORES SHRINKAGE

(By J. S. Armstrong)

Steady shrinkage of the American merchant marine and its adverse effect on the domestic shipbuilding and ship-repairing industry received the attention of George H. French, president of the Maryland Drydock Co., in his annual report to stockholders.

Mr. French noted that the number of active American ships had declined to only 13 percent of the world's total in June 1949 from 36 percent 3 years earlier.

This continuous decline in the American merchant fleet, he said, means that there has been insufficient shipbuilding and repairing to maintain the industry at anything like the level said by the President's Advisory Committee on Merchant Marine to represent the minimum required for the national security.

LITTLE ON FOREIGN SHIPS

Strict dollar controls imposed on foreign ship operators by their governments have resulted in relatively little business being available on foreign ships, Mr. French also stated.

Devaluation of foreign currencies has aggravated this condition by making it advantageous for the operators of foreign ships to repair in foreign yards.

Our National Government, he further asserted, has no adequate policy concerning the merchant marine and its supporting industries. The most elementary appreciation of the logistics of modern warfare, including warfare in the atomic era, make it perfectly obvious that this Nation could not mount a successful offense against an aggressor without a merchant marine, a shipbuilding industry, and a ship-repairing industry, Mr. French said.

He referred to legislation known as the long-range shipping program, introduced in Washington by Senators O'CONOR, of Maryland, and MAGNUSON, of Washington.

SAYS IT WOULD HELP

If enacted into law, he said, this legislation will do much to provide the country with an effective maritime policy that should go far to remedy what is now a deplorable and dangerous situation.

As a result of the recently completed engineering survey, Mr. French expressed confidence that a long-range program would be put into effect designed to keep the port of Baltimore in a strong competitive position.

Attention was called to the enlarged ore-handling facilities which are either in the course of construction or definitely under contract.

Increased ore imports from Liberia and Venezuela over the next several years should result in greater port activity and additional ship-repair work, Mr. French said.

He said that Maryland Drydock, despite a sharp drop in business volume and sales last year, is in the best financial condition in its history. The company's balance sheet showed current assets on December 31 of $8,636,661, including $1,102,119 in cash and $2,500,000 in Treasury notes. This compared with current liabilities of $1,163,891.

Address by Hon. Herbert H. Lehman, of New York, at Democratic State Committee Dinner

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last Wednesday, April 19, at a dinner at the Waldorf-Astoria, sponsored by the New York State Democratic Committee, I made some brief remarks concerning the function and role of the Democratic Party. I ask the unanimous consent of the Senate to insert those remarks in the Appendix of the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am delighted to be at this gathering of the faithful. I hail all my fellow veterans of political battles, past and present.

I greet also my distinguished colleagues from Congress. They honor us by their presence tonight, just as they have honored their party and their country by their consistent efforts in behalf of liberalism and democracy all these years.

But I address myself chiefly to the Democratic Party leaders and workers assembled here tonight. My message is mainly for you.

You men and women have helped make it possible for this Nation to be governed by and for the people during the past 20 years. You helped elect Al Smith as Governor of this State. You helped send Bob Wagner to the United States Senate. You helped give Franklin Roosevelt to his State, to the Nation, and to history.

I am happy to see among us many who were too young to vote for Al Smith and some who were even too young to vote for Franklin D. Roosevelt, either as governor or President.

A recent poll showed that of all voters coming of age since 1948, twice as many became Democrats as became Republicans. Of course, I will not vouch for the accuracy of any poll. But I think that this one reflects a significant truth. Let the day never come when this trend is halted. When our party—the Democratic Party—stops attracting the youth of this Nation, when the Democratic Party ceases to have the spirit of boldness and adventure which has characterized it for the past three-quarters of a century, then we will have reason to doubt ourselves and our party.

We claim to be, and we are, the party of the people. We are the party that represents the will of the people. We are the party which tries to translate the will of the people into the law of the land.

We can never fulfill our political mission by being reactionary. We can never fulfill our political mission by being timid and fearful. We will not fulfill our mission if we lose touch with the people—the plain people of the shops, offices, farms, factories, and small businesses who comprise the great majority of the body politic.

We represent labor. We represent independent business. We represent the farmers. But we are not a party of these interests alone. We are a party of all the people who desire progress in America, who want this country, and the whole world, to move forward, in an orderly manner, under God, to bring the greatest good to the greatest number of men and women, regardless of social position, of race, of religion, of color, or of creed.

We are a party of performance and of service. We do not merely run on our platform. We stand on it. The Democratic Party must continue to serve the people, on the national, State, and local levels, or our party will not survive the test of the polls. The Democratic Party is not an end in itself. It is the means by which the public will is translated into programs and into action. Should we ever forget this simple truth, we will cease to know the sweet taste of victory at election time. We will have forfeited our right to leadership.

In the sometimes artificial atmosphere of Washington these simple facts are sometimes forgotten. As I recall, this happens in Albany, too. But the people do not forget. The people know. They may be fooled for a time. But their judgment is sure in the long run. This is my faith and my creed. It is the faith and creed of the Democratic Party. I hope it will always be so.

The reactionaries and enemies of progress somtimes win temporary victories. But no party which loses its integrity, which forgets its responsibilities and which fails to recognize that the welfare of the people, and thus of the country, is its first concern, stays long in power, or deserves to.

The Democratic Party, under the leadership of that indomitable figure, Harry S. Truman, is in power in Washington today because of certain pledges made to the American voters 2 years ago. There was a question of interpretation of some of those pledges, in regard to something called the welfare state. Only 6 months ago the people of New York returned their verdict on this subject, too.

Today we are fighting for the laws and programs which we promised to the people. We are finding obstacles and difficulties in our way. On some fronts our progress is less than spectacular.

But the obstacles, however great, will not be able to stay the surging tide of the popular will. Neither the hysterical cries of the witch hunters at home nor the intrigues and designs of the Communists here or abroad will succeed in turning the American people and the American Nation from the course of progress, peace, and justice.

Our objectives are really simple. We seek to have our Government function in behalf of the people, to protect the weak against the tyranny of the strong, but to encourage the strong to utilize their strength in the public interest. We seek to give every man equal opportunity, but to leave the field open for each to have free play for his talents, and his thoughts.

This is my understanding of the welfare state. It is also the people's understanding. They will not willingly turn back to that state to which our Republican friends would like to return—the jungle state—that state in which the only law is that of the tooth and the fang, where the primitive code of the strong and the powerful prevails.

Just as surely as the sun sets over the Hudson, we will gain the goals we have set. We will carry out our pledges. We will provide those services which are needed and which the people cannot provide for themselves. We will provide expanded health services. We will provide adequate housing for persons of middle income. We will repeal the Taft-Hartley Act. We will assure the equality of rights of all American citizens, regardless of race, creed, or color. We will do that and much more too.

We may not wholly succeed this year. But in a few months the people will have a chance to speak again. If the Democratic Party continues to play its historic role—and I have every confidence that it will—the Eighty-second Congress will be a better Congress than the Eighty-first. And there will be changes in Albany, too.

We must have faith and patience. But above all we must have vision and courage. Holding fast to those qualities, we cannot fail.

Multiple-Purpose Project Data

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. POULSON. Mr. Speaker, in the Public Lands Committee we have before us an authorization bill for a fantastic program in central Arizona. While this bill calls for approximately $700,000,000 and all reports state that this will not be a completed project but will need additional reservoirs above to prevent Bridge Canyon Dam from silting up, it is estimated that the costs will be still greater.

The figures which I am submitting are merely to show that on the basis of record the final costs on projects greatly exceed the original estimates made by the Bureau of Reclamation.

U. S. Bureau of Reclamation—Multiple-purpose project data

Project and State	Original estimated cost	Present estimated cost [1]	Date of first construction appropriation	Total power capacity (kilowatts)	Date power available		Project completion date
					First	Final	
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Boulder Canyon, Ariz.-Nev.[2]	$126, 500, 000	$173, 900, 000	1930	1, 332, 300	October 1936	May 1954	June 1955.
Davis Dam, Ariz.-Nev.[2]	41, 200, 000	114, 438, 000	1942	225, 000	November 1950	April 1951	June 1954.
Central Valley, Calif	170, 000, 000	581, 886, 000	1936	815, 000	June 1944	After 1956	After 1956.
Colorado-Big Thompson, Colo	44, 000, 000	150, 503, 000	1935	177, 400	May 1943	April 1953	June 1953.[3]
Fort Peck, Mont.[2]	5, 732, 554	16, 250, 000	1943				After 1956.
Hungry Horse, Mont.[2]	36, 648, 000	108, 800, 000	1946	285, 000	October 1952	October 1953	June 1954.
Columbia Basin, Wash	393, 000, 000	773, 339, 000	1934	1, 974, 000	April 1942	October 1951	After 1956.
Kendrick, Wyo	20, 000, 000	25, 000, 000	1934	32, 400	August 1939	August 1939	June 1955.
Riverton, Wyo	9, 500, 000	21, 813, 403	1921	1, 600	June 1925	November 1925	June 1954.
Shoshone, Wyo	8, 851, 360	16, 851, 705	1904	10, 600	April 1922	December 1948	June 1956.
Missouri River Basin—various	529, 152, 800	2, 834, 427, 848	1946	1, 130, 200	May 1950	After 1956	After 1956.
Total	1, 386, 584, 714	4, 817, 208, 956		5, 983, 500			

[1] Differences between original and present estimated costs are due to the approved changes in project programs and changes in price levels.
[2] Projects for which irrigation is not directly involved.
[3] Project to be complete except for additional transmission facilities at present in a deferred status.

From p. 662 pt. 4 hearings before House Subcommittee, Interior Department Appropriations for 1951.

Licensing of Motion-Picture Industry

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a newspaper article entitled "How Now, Senator?" written by Oscar Davis, and published in the Washington Daily News on Monday, April 24, 1950, in which a question is asked of me. In that connection I also ask unanimous consent to insert in the Appendix of the RECORD my reply to the question in the form of a letter to my colleague, the senior Senator from Wisconsin [Mr. WILEY].

There being no objection, the article and the letter were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of April 24, 1950]

HOW NOW, SENATOR?

(By Oscar Davis)

I note with considerable glee that Senator ALEXANDER WILEY, Republican, of Wisconsin, had at Senator EDWIN C. JOHNSON, Democrat, of Colorado, last Thursday concerning the Colorado Senator's proposal to license the motion-picture industry. Senator WILEY, ranking Republican of the Senate Judiciary Committee, minced no words in describing the brain storm of his Democratic colleague.

He warned that the proposed legislation was completely unconstitutional and could properly be described as a police-state monster. He emphasized his speech with the charge that JOHNSON'S plan is a gestapo idea.

This isn't the first time that Senator JOHNSON has been smote in his own bailiwick. The two-time Governor of Colorado has come up with some statements that first amazed, then ired his fellow members. In March of 1944 he denounced the fourth-term campaign of President Roosevelt, saying, "History will name the fourth term, if it ever materializes, as the term of defeat and frustration."

In 1945, the Senator took a dim view of the Navy due to the development of the atom bomb. Every surface ship in the Navy became obsolete with the advent of the atomic bomb, he reportedly gloomily. Late in the same year he proposed that a loan to Britain be financed by a special bond issue which would pay off only if Britain repaid its obligation.

FAMILIAR PATTERN

Such bumbling has repeatedly marked the career of the Colorado ex-railroad section hand, whose personal background belies his political fumbles.

His life story has a trace of the Horatio Alger myth. Born in Kansas in 1884, Senator JOHNSON roamed across the Midwest—living for a time in Nebraska—eventually settling in Colorado when he was victimized by tuberculosis.

Always a scrapper—right or wrong—the Senator whipped this illness with the tenacity he had previously exhibited in performing such chores as baggage handler, telegrapher, train dispatcher, cowpuncher, school teacher, and manager of a milling cooperative.

He broke into politics in 1922 when he was elected to the Colorado statehouse. Never defeated, he served successively as lieutenant-governor, governor, and finally Senator.

However, in tangling with Senator WILEY and Hollywood the Senator from the Rocky Mountain State may have grabbed the tail of a tiger too unmanageable even for a husky Coloradan who is tall, raw-boned and as rugged as the mountains of his home State.

COMMON GROUND

Strangely enough the two senatorial combatants have a common background, both are of Scandinavian extraction, both are of Lutheran faith, both attend the generally unpublicized Wednesday morning breakfasts which are held in the Senate's private dining room, breakfasts which are devoted to a spiritual consideration of the problems of the day. Their main difference, apparently, is the definition of the word, morality. For reasons best known to himself, Senator JOHNSON has decided that Hollywood is immoral. His bill is scheduled for a hearing May 20. I'm willing to stick out this vulnerable neck and prophesy that even though the bill gets a committee hearing (and I doubt that) it will never come to a vote in Senate or House.

The more I attack this Colorado Senator, the better I like him. And I wish sincerely that he'd turn his apparently inexhaustible energy to problems which would better benefit this brave new land.

Hollywood is an easy and provocative target, a sitting duck, if you please. Senator JOHNSON'S background indicates that he is not one to sling a load of buckshot at a cripple.

Let us hope that he holds his fire herein.

APRIL 24, 1950.

Hon. ALEXANDER WILEY,
United States Senate,
Washington, D. C.

MY DEAR SENATOR WILEY: I have read with mingled curiosity and surprise your statement in the Appendix of the CONGRESSIONAL RECORD on April 20, 1950, with respect to S. 3237, a bill introduced by me dealing with the misconduct of performers in the motion-picture industry. Previously I had noted your insertion on March 15 on this same subject. Also I have studied your memorandum and legal analysis of the bill. These data clearly indicate your great concern lest the motion-picture industry be confronted by Congress with any question involving their transgressions. Since apparently you have elected yourself to be their defender our committee will welcome your appearance as a witness when the hearings open on May 15. Please consider this a formal invitation to be our initial witness.

You ask, with righteous indignation, "Why use a 100-barrel shotgun where a flit gun would do?" Since I have never hunted tigers with a fly swatter I cannot answer that primary inquiry. You go on to say, "If there was anything objectionable to it (Stromboli) the reel could never have entered our country, because the United States Treasury Department through its customs offices possesses powers to ban admission of morally objectionable items." Obviously, you miss entirely the dangers to American youth inherent in this film.

No film can be wholesome if the artists appearing therein have rotten and notorious private lives which have become public scandals. Read the display ads exploiting Stromboli. Nothing is said about the plot but everything emphasizes the leading lady and her director. All the advertising is built around them. They are the heroes and the pin-up idols for the youth of America and they are the models which shape the lives of America. This is the pattern used in motion-picture advertising.

I have before me an actual photograph of the billing of a motion-picture house in Colorado coaxing in customers to see Stromboli with huge banners reading: "Raging passion," "The star Bergman," "The inspired Rossellini," "The great lover," "Senators say it is red-hot lurid sex," "Rossellini says it's wonderful." This same type of inciting advertising appeared in nationally circulated magazines which go into millions of American homes. That sort of misrepresentation and repulsive exploitation by the motion-picture industry of the misconduct of its performers sounds like the come-on ballyhoo

of a cheap burlesque house. Has the motion-picture industry, second only to our churches and schools as educational influences, sunk to this low level with your warm approval?

No church would permit such inspired hopheads as Rossellini and Mitchum to occupy its pulpit; parents would be outraged if Lila Leeds and Ingrid Bergman were employed as teachers in our schools. But the motion-picture industry gives these derelicts the opportunity to teach and preach to millions. Glamorizing immorality cannot be defended. Bergman, thanks to the motion-picture industry, influences millions of lives where the ordinary teacher or preacher is limited to hundreds.

You say with great feeling, "Let there be a spontaneous moral crusade among our people led by our great churches, assisted by all devout people in the cinema themselves, and let this voluntary crusade be the answer to the problem of immorality in Hollywood or anywhere else." Such a crusade would be just dandy, but I don't hear the rumblings of one getting under way. Society would need no laws or regulations if crusades could save us.

Your noble solution would evoke only sneers from the cocaine sniffer Rossellini, the brazen Bergman, the marihuana jailbird Mitchum, and the extortionist Lila Leeds, all of whom the motion-picture industry extols and exploits. This industry has made it possible for these rotters to contribute to American juvenile delinquency. I am amazed that a statesman of your wide experience, wholesome attitude toward spiritual values, and great legislative capacity has no remedy against the exploitation of these notorious characters other than a "flit gun." Words alone will cure nothing. Furthermore, freedom of the box office to corrupt highly impressionable youth does not appeal to me.

I do agree with you, however, that Federal censorship is not the most desirable answer. No one in this Senate is more opposed to regimentation than I. However, the virtue of S. 3237 is that it presents the most drastic solution of the problem and permits full exploration of the legal and public interest questions involved. That is the underlying purpose of the Senate hearing set for May 15. Frankly, I have under consideration two other approaches which I am assured by able constitutional lawyers are not only sound legally but may prove more effective and would avoid obnoxious Federal censorship which is so repugnant to Americans. It would be so much better if the industry itself would recognize its own tremendous responsibilities to the people of America and do its own policing.

You suggest the motion-picture industry be given the opportunity to work out its own solution to this problem on a voluntary basis. I am all for that and the hearing which I am planning will make that its primary objective. Why, then, are you demanding that this hearing shall not take place? I cannot understand why a legislator should seek to cover up this stench. I am curious to learn why you are so worried and concerned over a Senate hearing on this subject. What disclosures do you fear? I have always believed that by bringing public welfare problems out into the sunlight of sober analysis a solution may be found.

Comforting as it might be to Rossellini, Hayworth, Bergman, Mitchum, Lila Leeds, et al., and their defenders, a learned dissertation on the constitutionality of Federal censorship will not be pertinent to the issue. Other legislative approaches not involving the constitutional questions you raise will be before us. We hope, therefore, you will devote your great talents to the problem of the exploitation of the immorality of private lives by the motion-picture industry for cash on the barrel head. This aspect of the problem is the root of the evil and should be faced squarely.

With great respect for your profound grasp of legalistic procedures, your evangelistic opposition to sin, and with gratitude for your interest and concern over the future of the motion-picture industry, I ask to remain

Faithfully yours,

ED C. JOHNSON.

Advertising of Liquor, Beer, and Wine

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Mrs. R. H. Sorensen, of Palo Alto, Calif., regarding ban on advertising of liquor, beer, and wine, together with an article on the same subject.

There being no objection, the letter and article were ordered to be printed in the RECORD, as follows:

Senator LANGER,

Senate Office Building,

Washington, D. C.

DEAR SENATOR LANGER: I recently read about your measure to ban advertising of liquor, beer, and wine. I think it is a very timely measure and should be given all the support possible to enable it going through Congress.

I, for one, am so tired of hearing the liquor shorts on the radio. These stations of the San Francisco Bay area seem to put the shorts between programs that the children are going to listen to and I resent that very much. Children shouldn't have liquor blasted to them every day over the radio. What is the country thinking of when they permit such a thing to be?

I also resent all the billboards along the roads the liquor companies place there.

I don't drink anything along that subject, however, I will grant the people that do, the privilege if they won't blast it at me and criticize me for not so doing.

I am tired of the worry every time we go out on the highway on the chance a drunken driver will run into us.

I sincerely hope that your measure will be adopted, especially where the radio is concerned.

Sincerely,

MRS. R. H. SORENSEN.

LIQUOR CALLED BIG FACTOR IN MOST CRASHES

Liquor or intoxicants were contributing factors in 11,336 motor vehicle accidents—513 of them fatal—in California last year, according to a statistical summary disclosed today by the California highway patrol.

The summary was broken down further to show that drivers obviously drunk were involved in 161 fatal accidents and 3,709 nonfatal mishaps. The classification, "had been drinking," revealed 352 fatal accidents and 7,114 nonfatal accidents charged against those drivers.

In the general classification, "condition of driver contributing to accident," intoxicants were far ahead. Runners-up—but far to the rear—were drivers apparently asleep. They were involved in 67 fatal accidents and 1,004 nonfatal ones. Drivers fatigued or sleepy accounted for 37 fatal and 820 nonfatal accidents.

The figures are part of an over-all report of motor vehicle accidents in California in preparation by the statistical section of the highway patrol.

Problems of Social Legislation

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on April 15, I was present at the forty-fifth anniversary luncheon of the League for Industrial Democracy in New York City. One of the speakers on that fine occasion was Federal Security Administrator Oscar R. Ewing, who delivered a very powerful and stimulating address on problems of social legislation. I ask the unanimous consent of the Senate to insert Mr. Ewing's speech into the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am glad to join with you in celebrating the forty-fifth anniversary of the League for Industrial Democracy. I am here, not only in my own behalf, but as the representative of the President of the United States. President Truman has asked me to bring you his personal greetings and good wishes, and to express his congratulations on your forty-fifth birthday.

The President was especially happy to know that Senator LEHMAN is receiving your citation for his public services in behalf of democracy here and abroad. No one could deserve it more. HERBERT LEHMAN is a great statesman and you honor yourselves in honoring him. The people of New York know and honor him—as Mr. Dewey found out back in 1938, and as one of Mr. Dewey's friends discovered only last fall.

And the secret of HERBERT LEHMAN'S statesmanship is not that he has been a politician but that he has been a Democrat—Democrat with a large D and democrat with a small d.

I have known Senator LEHMAN for a long time. I remember him back in the days of the First World War. I had gone into the Army and wound up as a junior officer in our infant Air Force. Not everybody, of course, was glamorous in the Air Force. Some were. They went over to France and piloted those little crates that were held together with baling wire. But there were less exciting assignments, too, and I found myself in Washington working on contracts for the Air Force. During those hectic months, I met a young man who had already made a healthy reputation as a businessman. He was a captain or a major, I believe, when I first met him, and he was on the General Staff as assistant director of purchase, storage, and traffic in the War Department, winding up as a full colonel. I don't know how well Colonel LEHMAN remembers captain Ewing, but I can assure you that Captain Ewing remembers Colonel LEHMAN very well. I remember his resonant voice, his unfailing courtesy, his ability to combine attention to detail with a rounded view of major problems, the strength that was concealed under his tact, his good humor, and his simple human grace. Colonel LEHMAN received the Distinguished Service Medal for his services in World War I, and it was as well deserved as the citation you have awarded Senator LEHMAN today for his outstanding achievements in the broad field of public service.

You have heard much about the public career of this great American. I think it may be useful to put this career in its proper perspective—as the historians will see it. During the past 30 years, four leaders

were primarily responsible for liberal legislation in New York State. You know the four men I mean—Alfred E. Smith, Robert F. Wagner, Franklin D. Roosevelt, and Herbert H. Lehman. They transformed the politics of the Empire State. They brought democracy to life and made it work—the democracy of both the small and the large D. We in New York are not so self-conscious about native sons as people in some other States, but I think every New Yorker is proud of that foursome—Smith, Wagner, Roosevelt, and Lehman.

Today, HERBERT LEHMAN, alone of the four, carries on their tradition. He is bringing to Washington the sum of his wisdom, his judgment, and his statesmanship. God knows we have needed him in Washington. When I look at the sorry Senators of the irresponsible right—the McCarthys, the Wherrys, the Hickenloopers, and their ilk—I say, thank God for Senator LEHMAN.

We need him. We need him today for the short term in the Senate—and we need him even more tomorrow for the long term.

We need him because he is a man who is able to drive to the heart of the problems that confront our country. He is not terrified by the shrieks and slogans of the irresponsible right. When he was accused of favoring the welfare state, he acknowledged it with pride.

Back in the days of the Revolution, the British had a term of contempt for the colonial Americans who presumed to set up their own independent Nation. But the colonial Americans took the name to themselves. Sure they were Yankee Doodles, and they were dandy. I can remember, not so many months ago, when the Republicans were flinging the phrase "welfare state" at us as though it were an epithet of reproach. It has backfired in the same way that Yankee Doodle backfired on the British. Sure, we Democrats are for the welfare state—if by welfare state you mean better health for the American people, more education, greater social security, good jobs at good wages, protection against the hazards of unemployment and depression, civil rights, good housing at reasonable cost, and the whole broad program of President Truman's Fair Deal. If that is the welfare state, then we are for it, and proud of it. The American people are for it, and proud of it. And the Republicans have dropped the subject, so that today it becomes the theme, not of a Republican box lunch wake, but of a serious, dignified, important gathering such as ours today.

So the Republicans have now gone back to worrying about socialism. A few weeks ago they told that liberty versus socialism was the No. 1 issue before the country. Since nobody paid much attention, they have dropped its popularity to No. 10 on their latest list of abbreviated slogans. If it goes down any further, it will fall out of their 10-point platform entirely.

The cry of socialism is always a sign of the bankruptcy of conservatism in the United States. I am sorry the Republicans have sunk so low, because in our political system we must always preserve a strong two-party system—and that means we should encourage a healthy conservative minority.

But a conservative party is not healthy when it yells "socialism." It is very sick—made sick, perhaps, by the logic of history. A hundred years ago, those who opposed establishment of free public schools called them socialism. That was not conservatism; it was stupidity. In 1887, when Congress set up the Interstate Commerce Commission, the railroads all shouted "socialism." That was no conservatism; it was selfish stupidity. In 1913 the Nation's bankers let out the same cry when the Federal Reserve Act became law. And remember how the Wall Street brokers bemoaned the end of free government when the Securities Act of 1933 was passed, and how insurance companies howled "socialism" when the Social Security Act was passed. They were not being conservative; they were being stupid.

As you know very well, socialism means nationalization of production. Neither I nor anyone else in President Truman's Administration has the remotest desire to nationalize anything. On that, I can agree with the most reactionary member of the National Association of Manufacturers or of the American Medical Association. I believe with all my heart that our American system is the best that man has so far devised. But that does not mean it is perfect. That does not mean it has no defects which we are seeking to correct. And we want to correct them with the least possible disturbance to our society and our economy.

The conservatives may yell socialism at any suggestion for improvement. They may feel the hot breath of revolution with every proposal for change. But the most dangerous enemies we have to our American way of life are those very people whose emblem is not the eagle but the ostrich who refuse to recognize the defects that exist and who resist all efforts to take up these defects one by one and try to cure them. The surest way I know to encourage forms of government we do not like is to refuse to recognize and cure the imperfections in what we have.

What does this mean if practiced? For one thing, it means that we have the obligation to ourselves to expand our social-security program so that it covers the greater portion of our population, and to increase the benefits so that they are more in line with the cost of living in this year 1950. I am confident that the Congress will make such amendments in the Social Security Act during the present session, and I think this will mark a great step forward. I do not have to explain the philosophy of social insurance to this audience. You understand the principle as well as I do, and you recognize it as the only way in which our complex society can manage to build a floor on which people can stand when old age or death comes.

We have as a nation accepted this principle of social insurance in one field. We have yet to accept it in another—the critical field of insuring ourselves against the costs of medical and hospital care. Too many Americans are compelled to worry about the costs of such care when illness strikes. Too many Americans cannot afford to pay for the care they need. The only way to remove such worries is by adopting President Truman's program for a Nation-wide insurance system in which employers and employees would contribute to a fund out of which doctors and hospitals would be paid for the service they render.

We have as a nation accepted the principle that education should be free, universal, and supported out of tax funds. Since we have, as we should have, a decentralized educational system, operated by the State, this has thrown a heavy burden on the poorer parts of the country; and we must somehow work out a way of mobilizing the resources of the Nation to build and modernize schoolhouses, to increase the number of teachers as well as increase the salaries of teachers and to raise the level of our educational standards.

In every field—housing, labor legislation, conservation, utilization of great new sources of energy—we must build strongly for the future. We must have the positive approach.

It is good to see that a valiant champion of this positive approach, a man without venom but with a full heart and a courageous mind, is recognized for his public service. Senator LEHMAN, and all of you who are here today, agree on the goal that lies before us—the goal of a better, a safer, a happier America in a better, a safer, a happier world—a well-faring world, if you want to call it so. Our paths toward that goal may vary. But all who seek it are joined in the common cause and it is the cause that counts.

Orr Oil Well

EXTENSION OF REMARKS
OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Wood County Democrat, of Quitman, Tex., dated April 20, 1950, which has to do with an oil well in that area. I call it to the attention of my fellow Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ORR WELL FLOWS 223 BARRELS DAILY; YEAR'S MOST IMPORTANT STRIKE

(By Jacob E. Shoaf)

Unless the attitude of Washington politicians and officials change—the wildcatting spirit that caused affable Buster Orr to drill the new Pine Mills discovery well might well be broken.

Washington big wigs, who not only fail to condemn, but ofttimes go out of their way to encourage the importation of foreign oil, are slowly but surely breaking the back of the small independent operator. The independent operators are the ones that do the majority of the wildcatting. Not only is Washington failing to stop the encroachment of foreign oil into the domestic market—they are trying to take away the last incentive of the wildcatter—his depletion allowance. This little item is what many independent producers operate on—it allows them 27½ percent exemption on their income from oil and gas. When you take away the incentives of an athletic team to win there's hardly any use for them to play the game—likewise, when you take away the incentive of the wildcatter to spend his money on wildcat tests—you have to a large extent destroyed the independent oil operator.

Unless the incentive had been there it stands to reason that Mr. Orr would not have ventured into an area that had been condemned by most geologists. He was alone in the venture. Oil companies with acreage in the area refused to lend any assistance. He was wildcatting in the purest sense of the word.

Wood County friends of the Longview operator are preparing to urge the railroad commission to name the new discovery field "Orr Field" in honor of the wildcatter who risked money in the face of such tremendous odds. The fact that he won is encouraging—and all of Wood County is happy—but what is more important is the fact that this important development should be a signal for us to protect the things that made him have the incentive to go into the venture—that was the fact that he felt he could market the oil in a domestic market if it should produce and he stood a chance to make enough money out of it to search for bigger and better fields in the days that lie ahead—this is the dream and goal of every true wildcatter.

Communists in Government Service

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, last Sunday's edition of the Washington Post carried in its editorial section a very interesting article by a very fine writer and reporter named Alfred Friendly. This article discussed an individual who has been very much in the public eye recently, Mr. Alfred Kohlberg, whose activities are said to have had a powerful bearing on the present controversy in Congress concerning American policy toward China. Mr. Friendly's article presents a series of arresting facts concerning Mr. Kohlberg's activities, although the article, itself, is a very objective one. I ask the unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN BEHIND THE MAN WHO IS ACCUSING

(By Alfred Friendly)

One man's campaign—rejected and languishing—obtains a new lease on life and gets front-page play in the Nation's newspapers for 6 weeks running.

One man's accusations—thrown out 3 years ago by a jury of experts as irresponsible and not to be proved—becomes a central political issue in a national election campaign.

One man's views on foreign policy in the Far East—utterly at variance with those of four successive Secretaries of State—becomes the canon of orthodoxy for a large segment of a major political party.

One man—a private citizen, relatively obscure, and by his own admission without pretensions to being a scholar or (until recently) a statesman—finds Senators fighting his battles and a prestige-laden Senate subcommittee devoting most of its time for a month or more delving into his imputations, the most grevious political charges one man can make against another.

M'CARTHY'S KEY CASE

How come? How does it happen that Alfred Kohlberg, a successful New York merchant, but by no means an industrial giant or tycoon, could build up his charges to make them form almost the entirety of Senator MCCARTHY's key case against Owen Lattimore?

Except for the testimony last Thursday of former Communist Louis F. Budenz, alleging that Lattimore was a Communist, the evidence presented by MCCARTHY was almost fully laid out years earlier by Kohlberg.

How did Kohlberg push his other charges, similarly rejected by the authorities in the field concerned, until they came to constitute a large part of the rest of MCCARTHY's case? How did the whole come to win the support of the dominant TAFT-BRIDGES-WHERRY wing of the Republican Party?

Political historians of the future may provide the answers. For the present, though, the most that can be done is to recount some of the facts.

It is well known that, with the exception of Budenz's evidence just put on the record, Kohlberg provided MCCARTHY with the material for the case on which the Wisconsin Republican says he will stand or fall.

Less well known is that that material is, almost in toto, old stuff, dating from 1944–47. And almost entirely overlooked is the fact that the Kohlberg material has been thoroughly investigated and found wanting in proof.

The body that investigated and discredited those charges comprised more than 1,200 of the 1,600 members of America's most esteemed and scholarly research organizations on far-eastern affairs, the American Council of the Institute of Pacific Relations.

They voted, 1,163 to 66, that Kohlberg was talking through his hat. The precise words were that his charges were inaccurate and irresponsible.

The investigators were singularly authoritative. The IPR membership is in itself a roster of most of the outstanding Americans with the greatest knowledge and direct concern in far-eastern matters. They are university scholars, editors, writers, merchants, attorneys, industrialists, and bankers with immediate interest and operations in the Orient.

OTHER CASES COVERED

A look at the documentation in the long fight of Kohlberg with the IPR shows that it covered almost the identical ground that MCCARTHY is now replowing.

It included not merely the key case of Lattimore, but also almost all the information that MCCARTHY and his group have used to attack Ambassador-at-Large Philip C. Jessup.

Furthermore, in his fight in the IPR, through circular letters, pamphlets, and articles in magazines and papers, Kohlberg presented most of the data MCCARTHY has since used to attack State Department official, John S. Service.

Finally, there are indications that MCCARTHY's attack against a fourth man on his list, State Department officer, Haldore E. Hansen, also came originally from Kohlberg material.

In the light of all this, it becomes worth while to inquire into the activities of Kohlberg and to look into the history and origin of the charges which, warmed over but unchanged in any essential, have become a new "topic A" in American conversation.

Who is Kohlberg and why did he undertake a burning crusade into which he has poured enormous energy and substantial sums of money? And what is he doing now?

Alfred Kohlberg, short, bald, and energetic, is a prosperous importer, much traveled in China. He deals in handkerchiefs, linens, and gloves. For many years he has conducted a large business—by his own figures, it grossed $1,500,000 a year—of farming out handkerchiefs and the like to cottage or home industry workers in China to be embroidered.

In his travels he has been a guest of Generalissimo and Mme. Chiang Kai-shek.

As early as 1943 he took up his cudgel against the IPR, of which he was a member. The fight became most intense in about 1945 and 1946 and reached its climax in April 1947, when his charges were overwhelmingly rejected.

His complaint was that the IPR, through the publications of its international body and those of its American Council, was aiding and abetting the Communists in China and undercutting Chiang and his Nationalist Government. He held that the IPR staff was heavily weighted with Communist writers, that they became dominant, and that they used the IPR to peddle the party line.

Budenz now says the same thing.

Kohlberg fought this campaign ever harder, and is still fighting it.

MAGAZINE WAS WEAPON

He put out circular letters in enormous volume. He wrote extensively for the magazine, China Monthly. He appears to have played a substantial part in organizing and supporting different Chinese research and study and publicity groups in this country.

He founded, in October 1946, the magazine, Plain Talk. It was primarily dedicated to an attack on communism in all its forms, but a heavy load of its articles was devoted to China policy.

It served, in fact, as Kohlberg's principal vehicle for his running fight in behalf of the Nationalist Government and in bitter denunciation of the State Department position on China.

He fought the IPR through his articles, his magazine, his letters. Finally, he went to court, engaged in a proxy battle and prepared a monumental document to support his accusations.

When he lost his fight in the IPR, he founded a rival organization of his own, the American China Policy Association.

By general report, right or wrong, he became a leading figure of the so-called China lobby. He had close association with prominent Nationalist figures in this country. Energetically, he brought his case to many Members of Congress.

His pamphlets began to be circulated by William J. Goodwin, until a few days ago the registered lobbyist for the Chinese Nationalists, and himself a man with unsavory past connections, especially with the Christian-front and pro-German movements.

Kohlberg donated $1,000 on one occasion to the campaign of Senator BRIDGES, Republican, of New Hampshire. BRIDGES has been one of the loudest congressional drumbeaters in the cause of Chiang Kai-shek.

In 1949, BRIDGES distributed from his office a report on China prepared at his request by Kohlberg.

Other Members of Congress seem to have made a habit of inserting various Kohlberg articles into the CONGRESSIONAL RECORD. Some, in speeches on the floor, made addresses remarkably reminiscent of the line that Kohlberg plugs in his articles and associations.

Thus one finds former Representative Busbey, Republican, of Illinois, a great fellow for inserting Kohlberg and Plain Talk articles in the RECORD, making the first congressional attack on Haldore Hansen, in May 1947. The material seems to have been drawn from, or at least first brought to light in, Kohlberg material in his fight with the IPR.

Similarly, Representative LATHAM, Republican, of New York, started off an attack on Jessup in January 1948 with data that would point to Kohlberg as the source. In August 1949 Representative SMITH, Republican, of Wisconsin, inserted in the RECORD a Kohlberg letter bitterly attacking Jessup, and containing much the same material MCCARTHY used 8 months later.

Why Kohlberg's burning passion and unremitting fight?

The New York importer declined to give this reporter an interview last week (his stated reason was that the Washington Post had unfairly and inaccurately attacked him editorially), so his own explanation is not available.

To suggest that he is motivated by a desire to save his big business in China seems, to this reporter, to underestimate Kohlberg's character. His crusade must have cost him immense time that he might have otherwise have given his business, and it has clearly cost him large amounts of money.

Rather, it would seem that he has embraced a cause from reasons of principle and that his dedication is sincere.

ELEMENTARY LOGIC

From the accounts of people who have watched him, and, more demonstrably, from a reading of his articles, Kohlberg's point of view about China is simple—oversimple.

He seems to take the line that anyone who criticizes any aspect of Chiang Kai-shek's operations is thereby giving aid and comfort to the Communists. Anyone who

gives them aid and comfort must be following the party line. Anyone following that line is thereby an enemy of the United States.

Also, he seems now to be acting on the converse of that proposition: Anyone who fights the Communists must be, by that very act, a fine fellow.

Kohlberg, like McCARTHY, who has parroted his charges, has been a vigorous practitioner of the theory of guilt by association. He and McCARTHY insist a man can be judged by his associates. When that test is applied to Kohlberg himself, he does not fare very well. He is now in curious company.

Last October, he was guest at a dinner sponsored by the National Economic Council, an organization run by Merwin K. Hart, pro-Franco apologist in this country and known as anti-Semitic.

The guest list included many upstanding and a few outstanding Americans. But it also included, as might be expected, the elite of American Fascists, led off by Lawrence Dennis.

Kohlberg appears again on a list that included Hart and the notorious Joseph P. Kamp, head of the Constitutional Educational League, and who was convicted of contempt of Congress. His publications were recommended and sold by at least 10 of the defendants in the wartime sedition trial. Kohlberg's association was in connection with an affair for Theodore Aubert's International Anti-Communist Entente. This organization, founded before the war with Swiss headquarters, enjoyed the support of Hitler.

LETTERS TO TABLET

Last June, Kohlberg was vice chairman (and, from his letters, apparently a prime organizer) of a dinner for Paul Yu-pin, the Archbishop of Nanking.

Again, many good and distinguished people attended. The speakers were Gen. Pat Hurley and Senator McCARRAN (Democrat, Nevada). But the treasurer for the dinner was Robert M. Harriss, once indicted as an unregistered lobbyist and former financial adviser to Father Coughlin in his famous silver deals.

One of the sponsors of the dinner was Patrick Scanlon, managing editor of the Brooklyn Tablet, the Coughlinite paper which still remains faithful to the radio priest's line, which printed his blasts and which gives aid and comfort to the most intemperately reactionary elements on the American political scene.

For a man active in Jewish organizations and generous in Jewish charities, it is somewhat incongruous to find that Kohlberg has had published at least 10 letters to the editor of the Tablet, and has repeatedly received favorable mention in it.

OFFERED SERVICES

But incongruity (and false modesty) do not seem to bother Kohlberg. This most persistent and intransigent critic of American foreign policy wrote President Truman less than 3 weeks ago, nominating himself for the position of Ambassador at Large.

He said he thought it was time that the President give him the job to advise State Department people who lost the fight in China and were about to lose it in the rest of the world.

Kohlberg has admitted supplying McCARTHY material on Lattimore and Jessup. The admission was somewhat superfluous, since the previously available circumstantial evidence was convincing.

Lattimore's lawyers produced, when Lattimore testified before a Senate subcommittee in his own behalf, a double-column document showing that almost every one of McCARTHY's major specific charges against Lattimore and Jessup were previously stated by Kohlberg in one or another of his publications.

In many cases the language, and even the metaphors, were identical. McCARTHY had not chosen, apparently, to tamper with Kohlberg's distinctive prose style.

Even some of the witnesses McCARTHY has said he will produce against Lattimore seem to have been uncovered, or pointed to, in Kohlberg's earlier material.

DRESS REHEARSAL

But more important, and as mentioned above, all this material entered into the fight between Kohlberg and the IPR. The documentation connected with that battle reads like a dress rehearsal of the McCARTHY allegations.

Everything is there: Lattimore's associations and organizations; his writings and editing of the magazine Pacific Affairs, allegedly in a manner right down the Commie line; Jessup's alleged leading of the IPR in a campaign to smear Chiang and extoll the Chinese Communists; the asserted pro-Communist cabal in the State Department that forced the resignation of Ambassador Grew, that sold Chiang down the river, that deceived Stillwell and forced him to oppose Chiang, that set the stage for insinuating the Communists into the Government—all the charges and the line of argument used by McCARTHY in two major speeches and two major presentations to the subcommittee.

There is little point in going into details of the fight Kohlberg had with the IPR. He prepared a huge, 88-page document to back his case—using tactics of ripping passages out of context and of ignoring contradictory evidence that remind one precisely of McCARTHY's technique.

He claimed that the IPR slavishly followed, in its publications, the alternating honeymoon and hate attitudes of the Kremlin toward Chiang. To prove it, he quoted from less than 2 percent of the articles published in IPR during the period and less than .002 percent of the books it put out.

JESSUP AMONG FOES

The IPR made a devasting reply in a document that it circulated to its members. It showed that Kohlberg had simply ignored the overwhelming number of facts that did not support his argument.

The group that took Kohlberg on to answer his charge that the IPR was Communist-dominated was about as conservative as one could imagine, including a Wall Street lawyer from a high-collar firm, and a group of major American industrialists. But one of the group was Jessup, and apparently Kohlberg never forgave him.

The IPR is supported almost entirely by "fat cat" money—from the Rockefeller and Carnegie Foundations, and from large banking and industrial concerns. Kohlberg made much of the fact that $3,500 came from the Communist Frederick V. Field, and so has McCARTHY.

But to suppose that the IPR was bought by a sum of Communist money amounting to less than 2 percent of its budget, as against 98 percent coming from conservative sources, is as ridiculous as to suppose that an organization of the IPR's standing was bought by any money, regardless of the source.

AWARDED NAVY E

The IPR had and has the highest reputation for objective research. Its job is to provide a forum for views from all quarters about the Far East, and to conduct honest research.

The testimonials it has, in the form of doubled grants from the Chase and National City Banks, in the form of a Navy E award for its contribution to the war effort, in the form of its characterization by the Rockefeller Foundation as "the most important single source of independent studies" on far eastern problems and in the form of an 1163 to 66 vote, would seem to be answer enough to the accusations Kohlberg brought against it and such of its principals as Lattimore and Jessup.

Meeting of Americans and Russians at the Elbe

EXTENSION OF REMARKS
OF
HON. PAUL H. DOUGLAS
OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an eloquent statement by Mr. Joseph P. Polowsky, of Chicago, Ill., entitled "The Oath at the Elbe," recounting the meeting of American and Russian soldiers 5 years ago today, and recommending action by the United Nations, which first met on the same day, to commemorate these efforts for world peace. I also ask unanimous consent that a brief statement of my own be printed by way of introduction.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

STATEMENT BY HON. PAUL H. DOUGLAS, OF ILLINOIS

It was just 5 years ago today that the United Nations first convened at San Francisco. People of all lands, sick of the horrors of war, turned to it with new hope for justice and peace. While the years which followed have brought repeated and tragic disappointments of these great hopes, it is, nevertheless, fitting on this fifth anniversary that we recall them and renew our determination to make them realities.

On the same day, in 1945, soldiers of the America Army under Lieutenant Kotzebue made contact at the Elbe with the advance patrols of the Russian Army. One of the infantrymen in this group, Joseph P. Polowsky, of Chicago, Ill., has told in the brief but moving account which follows about the dramatic details of that meeting. As they viewed the human destruction of war, he recalls that the Russian and American soldiers took an oath "that they would do everything in their power to prevent such things from ever happening again—that the nations would and must live at peace." And Mr. Polowsky urges that the General Assembly of the United Nations recommend that April 25 be set aside as a day of commemoration for a peaceful world.

The statement by Mr. Polowsky represents the desire of the American people for peace, today as then. There are almost no Americans who want either war or aggression. It is probable that if the Russian infantrymen were free to speak, they would also join in this plea for peace. But whereas Mr. Polowsky and his fellow Americans have the freedom to speak, the Russian people do not. Therein lies one of the roots of our difficulty. The will of the people for peace cannot be expressed or made effective behind the iron curtain. It is, therefore, difficult almost to the point of impossibility to persuade the Russian rulers to act for peace.

We know now that it is no simple or easy task to realize the hopes of 1945 or to keep the pledge of the soldiers who met at the Elbe. Repeated vetos, boycotts, obstinate refusals of reasonable disarmament agreements, the aggressive extension of tyranny over one free nation after another, and continued violations of treaty pledges by the Communist leaders of Russia have destroyed the freedom of millions and threatened the world with another war. Despite all that, the United Nations has made some memorable gains, through its conciliators in India,

Indonesia, and the Middle East; through its trusteeship department for colonial peoples; through its specialized agencies on economic, social, educational, scentific, health, refugee, and judicial problems; and through the forum provided in the General Assembly for discussing conflicts in interest and creating world opinion.

Our national policy to strengthen the United Nations is clear. Our determination to hold fast in the cold war against aggressive tyranny is equally firm. To do this, we realize we must continue to be strong. No weak appeasement of the Communist tyranny will buy peace or freedom, and I know that is not what Mr. Polowsky is urging upon us. Existing programs of foreign economic and military assistance must be renewed. Point 4 and other new programs for the welfare and security of underprivileged peoples must be developed. We must within and alongside the United Nations develop those effective, supplemental agreements which will help to deter any aggressor by the clear promise of widespread, international resistance to any forces that move out to destroy free nations. And we must steadily seek to appeal to the Russian people for cooperation in our actions for peace, just as the soldiers at the Elbe 5 years ago joined in their oath that it should be done.

That it will take steady nerves, stout hearts, and our most highly trained intelligence is obvious. Every reasonable avenue for reaching agreements without appeasement must be explored. But the strength and integrity of the free nations must be maintained.

President Truman, on the occasion of the meeting at the Elbe, declared: "Nations which can plan and fight together shoulder to shoulder in the face of such obstacles of distance and of language as we have overcome, can live together and can work together in the common labor of the organization of the world for peace." And to the conferees at San Francisco he said: "We must build a new world—a far better world—one in which the eternal dignity of man is respected."

As we strive anew to attain these worthy objectives, I hope that the accompanying statement by Infantryman Polowsky will serve as an inspiration to all who read it and that his suggestion for the establishment of April 25 as a day of commemoration for international amity may have the fullest consideration as one means of enabling the people of every nation to speak out for peace.

THE OATH AT THE ELBE

(Statement by Joseph P. Polowsky, of Chicago, Ill.)

Five years ago today, on April 25, 1945—the day of the birth of the United Nations in San Francisco—six American soldiers crossed the Elbe River in a small boat, uniting on a common meeting ground the wartime Allied Armies of the east and the west.

The crossing of the Elbe River by the American Infantry patrol, led by Lt. Albert L. Kotzebue, joined together the United States First Army and the First Ukrainian Army of the Soviet Union, consummating a great Allied military endeavor. As the Allied Armies met at the Elbe River, the Allied Governments met at San Francisco to give birth to the United Nations.

On April 25, 1945, that majestic day of world history of the meeting of the nations as friends and brothers opening up a peaceful world, mankind, with its soldiers at the Elbe River, with its statesmen at San Francisco, showed itself in supreme dignity and devotion to purpose.

On the meeting ground at the Elbe River Maj. Anaphim Larianov and Capt. Vassili Medov of the Soviet First Ukrainian Army expressed the hope that April 25 be each year commemorated by the nations. April 25, 1949, on the fourth anniversary of the United Nations, the fourth anniversary of the meeting of the Allied Armies at the Elbe River, Ambassador Warren R. Austin, United States representative to the United Nations, wrote on behalf of the United States Government: "It seems to me important that we remember these two historic occasions, both of which should serve to inspire unceasing and successful striving for the maintenance of peace. * * * I wish to affirm my desire that appropriate means be found for its (April 25) being brought to the attention of the world each year." Ambassador Jacob A. Malik, representative of the Soviet Union to the United Nations, expressed similar sentiments on behalf of the Soviet Government. And the past and the present President of the General Assembly of the United Nations, Dr. Herbert V. Evatt and Gen. Carlos P. Romulo, have publicly endorsed the establishment of April 25 as a day of commemoration.

Five years ago today the soldiers of the world handed the oath of dedication and friendship, sworn in blood, on to the statesmen of the world met together at San Francisco. The United Nations has been entrusted with the obligation of taking the initiative in carrying forward every means of bringing us closer to a peaceful world. It must be the fervent hope of the nations of the world that the General Assembly of the United Nations, as it reconvenes in session, will approve a resolution to the effect that:

"The General Assembly recommends that each year on April 25 the United States and the Soviet Union commemorate, with appropriate ceremonies, the anniversary of April 25, 1945, when their armies at the Elbe River and their governments at San Francisco met as friends to help open up a peaceful world; recommends that other states members of the United Nations join in the commemorative ceremonies."

On April 25, 1945, addressing the delegates meeting at the birth of the United Nations in San Francisco, the chairman of the opening session said: "We approach our task humbly, but with united resolution. The prayers of the people of the world are with us. They are spoken in many tongues and in the words of many creeds. But they are as one voice, rising from the tragedy and suffering of war, in prayer for lasting peace. Thus fortified, and with the guidance of Almighty God, we must and shall fulfill the purpose for which we have come together."

Approaching their task humbly, but with united resolution, the soldiers grouped at the Elbe River on April 25, 1945, were also attempting to fulfill the purpose for which they had come together.

On the evening of April 22, 1945, an enemy engineer platoon, retreating westward, had blown the bridge over the Elbe at Strehla. A half hour later a civilian wagon train of some 200 old men, women, and children, streaming westward, and stopped by the blown bridge, had encamped for the night, huddled in a semicircle about the bridgehead. At 1 in the morning, April 23, 1945, the advancing Russians saw lights flickering at the bridgehead from a distance. Believing enemy military units were engaged for a stand, they bombarded the bridgehead with artillery.

At 11:30 in the morning, April 25, 1945—2 days later—Lieutenant Kotzebue's patrol reached the west bank of the Elbe at Strehla. Upon being recognized by the Russians on the east bank, the Americans prepared for a crossing. The only means available for the crossing was an old wooden boat moored to the shore. The Elbe, flooded by spring rains, was a swift running river. To avoid being swept downstream when making their crossing, the Americans moved the boat upstream in order to be swept by the river into a 50-yard remnant of the bridge jutting out from the east bank of the Elbe. Achieving their objective, the six American infantrymen raced over the remains of the span jutting out from the east bank, crossed the Elbe River at noon and were greeted by the Russians.

The greetings took place in the midst of some two hundred corpses of old men, women, and children. After the preliminary greetings, the Americans and Russians looked down at the bodies, and fragments of bodies—especially the body of a child with blue eyes and long brown hair clutching crayons in one hand and a doll in the other.

At this historic moment of the meeting of the nations, all of the soldiers present—Americans and Russians—swore that they would do everything in their power to prevent such things from ever happening again, swore that the nations would and must live at peace.

The time has come for the nations to reaffirm that solemn oath at the Elbe.

As one of the six American infantrymen to make the boat crossing over the Elbe 5 years ago, as one of the American and Russian soldiers to take the oath at the Elbe, I believe I voice something of the thoughts and feelings of all of us on this fifth anniversary.

I therefore join in calling upon the nations for a new birth of conciliation and friendship, that the oath sworn on the blood-soaked historic ground at the Elbe River shall not have been taken in vain.

The Owen Lattimore Case

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial from the Rapid City Journal entitled "Not Disloyalty, Just American Tragedy." The editorial discusses a phase of the Lattimore situation which has not been as well publicized as some of the other features.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT DISLOYAL, JUST AMERICAN TRAGEDY

What is the difference, in the end, to his country, whether a man betrays it, or by his teachings leads it to great disaster?

The former is the more heinous, but the latter, to the country, may be a greater calamity.

Owen Lattimore was not a top agent for Soviet Russia, as charged by Senator McCARTHY, but he was the author of 12 books, whose teaching helped the Communists to win China, perhaps all Asia. So thinks Time magazine.

Lattimore, says Time, paid "lip service" against appeasement of Communists in Asia, but his argument "was in effect a detailed program for appeasement."

The writings of Lattimore, according to Time in its issue of April 17, urged the United States to—

"1. Pull out of Korea.

"2. Forget Japan as a potential ally in Asia.

"3. Hurry up recognition and trade with Communist China.

"4. Divorce itself from America's European allies in the Far East, i. e., Britain, France, the Netherlands.

"5. Avoid local entanglements—meaning, presumably, military assistance to non-Communist nations—that might annoy Russia if and when the United States negotiates an over-all deal with Joseph Stalin."

This program sounds dangerously close to the Kremlin line.

Time does not say so, but the program probably looks to the average American like a proposal that the United States get out of China and let Russia do its worst.

"These ideas," thinks the magazine, "do not constitute a crime, and they do not constitute disloyalty. But it was nevertheless a tragedy that United States complacency about Asia allowed the ideas of Lattimore & Co. to have as much effect as they did."

Mental and moral poison is not so readily identified as the physical article, but it is often even more deadly.

Tribute to Thomas Jefferson by Harry H. Schlacht

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I believe that there are few, if any, Members of the United States Senate who have not become familiar with and devoted admirers of the patriotic editorials authored by Mr. Harry H. Schlacht, in the Hearst newspapers throught the Nation. These editorials are printed in the Milwaukee Sentinel in my own State, and in the newspapers of Mr. William Randolph Hearst throughout the Nation, where they have become hallmarks of great patriotic endeavor. These are not mere editorials in prose, because I think that they are more akin to the Psalmist songs of old—hymns of devotion to great ideals, hymns whose music sings in our ears and which are a delight to our eyes.

I have one such poem-hymn in my hands now. It was published in my own State and elsewhere throughout the Nation in tribute to the two hundred and seventh anniversary of the birth of the great American, Thomas Jefferson, a man of whom Abe Lincoln wrote:

> The principles of Jefferson are the definitions and axioms of free society.

It was Woodrow Wilson who said of Jefferson:

> The immortality of Jefferson does not lie in any one of his achievements, but in his attitude toward mankind.

And a great Member of the Congress, a great son of the South, Henry Clay, stated:

> The name of Jefferson will be hailed with gratitude, his memory honored and cherished as the second founder of the liberties of the people.

Mr. President, I am proud to call attention to this beautiful editorial tribute paid by Harry H. Schlacht to Tom Jefferson—an editorial parallel to these quotations which I have just read.

In these days, when so many so-called sophisticated folks think that patriotism is old-fashioned, that love of the flag, love of the Constitution, reverence of great heroes of the past—that these aspects of devotion—are old-fashioned, I am glad that there are voices speaking out proudly like those of Harry Schlacht, and I am glad that they are published in so tremendous a medium, read by so many millions of devoted readers—the Hearst newspapers of the United States.

It may seem odd that a Republican should call attention to an editorial in praise of Tom Jefferson, who has been adopted in a certain sense by the Democrats as their particular hero, but, Mr. President, Tom Jefferson is a name and a symbol common to all Americans.

I ask unanimous consent, therefore, that the text of this lovely editorial be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THOMAS JEFFERSON: HIS INSPIRATION IS OUR BATTLE CRY

(By Harry H. Schlacht)

Stanch friend of Liberty,
In every American home
Thy memory is blessed.

Today we celebrate the two hundred and seventh anniversary of the birth of Thomas Jefferson.

His name is written on every heart. His name springs instinctively to every tongue.

Jefferson was the third President of the United States. He was the author of the Declaration of Independence. He was the author of the Virginia Statute of Religious Liberty. He was the father of the University of Virginia.

He opened the window into the soul of the multitude. He declared that "the same God that gave us liberty gave us life."

He was the father of our democracy.

He was one of the great humanitarians of his century. He was one of the foremost liberators of the human spirit. He was one of the outstanding exponents of Americanism. He was one of the principal architects of our Republic.

He gave liberty and its heroes the noblest document that ever came from mortal pen—the "Bible" of American freedom—the Declaration of Independence.

In the Declaration of Independence he wrote the words which became the bulwark of freedom; he wrote the words which set forth the fundamental truth that governments derive their just powers from the consent of the governed; he wrote the undying expression that in a free society every citizen is entitled to the inalienable rights of life, liberty, and the pursuit of happiness.

The immortal words "All men are created equal" will yet find expression throughout the world.

These truths are the foundation stones of free government. These truths are the words of the apostle of man.

Behold our modern Moloch across the sea who seeks to destroy our democracy.

It was for democracy that humanity fought. Humanity will continue to fight until democracy holds sway.

Peace will not be attained until democracy begins her rightful reign o'er the world.

We have fought on many war fronts. We have given of our best blood. We have given of our hardest toil. We have given of our enormous wealth.

We did not receive or ask for one square foot of soil. We did not receive or ask for a single material gain.

We have a right to demand that for which we alone have made such a tremendous sacrifice—liberty for oppressed humans.

Let us all pray that humanity may march onward and upward; may attain to that highest goal—where all men shall recognize the brotherhood of man, where all men shall recognize the Fatherhood of God.

The wreaths on other brows may fall away, leaf after leaf, withered and faded, but time will add a greener freshness to the everlasting verdure of Jefferson's laurels.

To us he has passed the torch. It is our trust to keep it bright.

His inspiration is our battle cry.

Imports of Russian Furs, Nuts, and Crabmeat Protested

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent article by Victor Riesel who points out that American workers are being forced to compete with forced Soviet labor. Imports of Russian furs, crabmeat, and nuts are threatening three great Pacific Northwest industries. The facts set forth in Mr. Riesel's article, which appeared in 154 of the country's largest newspapers, have already been called to the attention of Secretary of the Treasury John Snyder, who has the authority under a 1930 law to prohibit the importation of goods made by forced labor.

The article follows:

INSIDE LABOR

(By Victor Riesel)

If all the American dollars the Russians have were laid end to end today, they'd reach from some of our fancy fur shops, gourmet haunts and fashionable shoe salons to a Siberian slave camp cluster in Novosibirsk.

Sound bitter? All right, I'm bitter, though they tell me bitterness at dead line means ulcers inside the waistline. But this story that Soviet slave labor is killing United States jobs because a handful of American traders want to make a fast buck, is going to be told as swiftly as the information can be whisked into the country and authenticated. There are many of us who are sensitive over slavery and horrified that some United States merchants are buying stuff made by the living dead—only slightly removed from those human slag heaps our GI's found in Nazi camps at the war's end.

I find, for example, that the Director of United Nations Purchasing Department, which spends several million dollars a year, is now in Europe, bound sooner or later for Czechoslovakia and Russia. He's going to see how their prices stack up against those of our free European friends and the quotations of United States businessmen.

The UN director, World Brother Fred A. Mapes, is looking for floor coverings, radio

equipment, broadcasting apparatus, carpeting, office machinery, and furniture supplies—to equip that new, starkly utilitarian UN headquarters, a few streets from here on Manhattan's East River Drive. Mr. Mapes needn't worry about low prices in Soviet-land—the MVD can cut labor costs at any one of the 64 political prison labor camps which process lumber, or in the Morvda region wood-finishing plants, inside the barbed wire at Potma and Yavas. Furniture and floor coverings might not come so cheaply from free lands, but a lot of us would feel better if we sat on chairs in UN headquarters that didn't have blood mixed in the furniture stain. And, incidentally, the United States and free Europe could use the jobs those millions of dollars' worth of UN purchasing would create.

This next bit hurts to report, because the ladies in mink and silver fox are so lovely these early spring days. But they should know that some $55,666,000 worth of Soviet furs are being pumped into this country each year—skins of lovely little beasts who made the sad Soviet error of mooching in too close to the special slave hunting camps at Novoya Zemlya and the Island of Vaigach. So the political prisoners shot them, skinned them and thus set them free of MVD.

Once the liberated skins hit this country they did two things: They put United States fur breeders out of business. And they so undercut fur prices offered by other friendly and democratic nations that they hurt the economy of these free lands, which have depended on our market for the sale of their furs for years (at normal competitive prices). Result: Only a few years ago in Washington, there were more than 200 fox farmers doing a thriving business. Today—only three are left. And the 400 mink farmers (who breed the soft little animals) report, through their Congressman, that they "are still in business but how long (they) will be able to compete with these foreign importations is problematical."

Hardly a pleasant thought at a moment when jobs in the soft industries are disappearing.

Recently I reported that Soviet crabmeat was coming in directly from Siberian slave fishing camps. Now I'm informed that the Russians are offering United States importers an additional $20,000,000 worth of the delicacy at a price which no American canner can meet.

Result: One cannery in Bellingham, Washington, already has announced it will close in the face of Soviet competition—and the fishing industry, especially crab fishing, in New England (already depressed in spots by vanishing textile jobs), Maryland and the Pacific coast, is threatened by this slave labor competition.

Recently I reported that the Russians are shipping over huge quantities of walnuts, direct from Sovietized Manchuria. Now comes word that the USSR, selling the nuts at 42 cents a pound compared with the 62 cents American pickers get, is threatening to depress the entire nut market, which will be forced to compete with low-priced walnuts. Sound funny? Not to those who grow them or pick them for a living.

But all this at least is on the open market. Now the iron curtain sharpies are developing a new technique to nip us. Czechoslovakian shoe manufacturers turn out the footwear without any identification marks, ship them here, throw them into American boxes and sell them as American shoes. Result: Ask the skilled but jobless shoe workers.

I don't like to be technical. But all this is against the law: Right in Section 1307 of the Tariff Act of 1930 it says so.

"All goods * * * mined, produced, or manufactured wholly or in part in any foreign country by convict labor and/or forced labor shall not be entitled to entry at any ports of the United States."

Doesn't anybody care?

The Truman Program to Date

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House I insert in the CONGRESSIONAL RECORD the attached editorial from the New York Times, dated Wednesday, April 12, 1950, entitled "The Truman Program to Date":

THE TRUMAN PROGRAM TO DATE

Yesterday was the President's first full day back at his White House desk after a month of vacationing in Florida. Also, it was just about the halfway mark in this, the first session of the Eighty-first Congress. Quite logically, therefore, Mr. Truman made it his first business to review with his Congressional lieutenants the legislative developments of the last 3 months and to evaluate the prospects for the 3 months or thereabout that lie ahead before the session's adjournment.

Senator LUCAS of Illinois reported at the end of the White House conference that the President was pretty well satisfied with the progress of his program. Before Congress goes home for the summer, Senator LUCAS expects that it will pass the foreign economic and arms aid programs, increase social security benefits, reduce some excise taxes, extend rent control, and increase the borrowing power of the Commodity Credit Corporation. He believes, he told newsmen, that the President will get about 90 percent of his 21 government reorganization plans, and that Democratic leaders will make a determined effort to obtain action on a fair-employment-practices bill.

Even if these objectives are realized the administration would be settling for half a loaf, compared with the comprehensive program set forth by the President in his state of the Union message in January. Senator LUCAS apparently holds little hope of getting any action on such administration issues as the Brannan farm plan, health insurance, tax legislation, expansion of unemployment coverage and the ITO (International Trade Organization). As for repeal of the Taft-Hartley Act, that is admittedly further away than ever. "Everyone knows," said Mr. LUCAS, "that we are not even considering taking that up again this year. There is no point in going through the same debate we had last year. It would come out the same way."

On the basis of the record of the past 3 months, even the half a loaf would appear at this juncture to be a rather dubious possibility. Between January 3 and last Friday, when Congress recessed for Easter, 2,354 bills and resolutions had been introduced in the two Houses, of which 31 had become law or were awaiting the signature of the President. But of these 31 only 4 could be said to represent either important or controversial legislation. There were (1) the repeal of all Federal taxes on oleomargarine; (2) aid to Korea; (3) changes in farm acreage allotments for cotton and peanuts, and (4) revision of controls on natural gas. (An important bill liberalizing the Displaced Persons Act was awaiting reconciliation in conference.) Thus, with half the session gone, the administration has yet to achieve its first major legislative victory. On the other hand, some of its favorite proposals have been badly manhandled. Both the Senate and House voted to knock out of the housing bill the proposal to subsidize cooperative residential building schemes for persons in the middle-income brackets. The House produced an FEPC bill which was completely without teeth, while the Senate has thus far succeeded in avoiding a showdown on this issue.

These developments should not come as too great a surprise, however, the circumstances being what they are. In the first place, this is a congressional election year, which traditionally means a minimum of controversial or unpopular legislation. In the second place, the program of must legislation presented to Congress in January was far too inclusive for anyone seriously to hope that it could, or should, all be enacted at the present session. There has, as a matter of fact, been altogether too much inclination in the past 2 or 3 years to identify the volume of legislative production with the success of a given session. It is high time for de-emphasis of this concept. We welcome yesterday's statement by Senator LUCAS, therefore, that the Senate plans to confine itself to consideration of only about 8 of the administration's major legislative proposals between now and the end of the session. There is such a thing as trying to do so many things in a limited time that none of them is really done well.

Communists in Government

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Mundt-Ferguson Bill," from the Aberdeen American News, of Aberdeen, S. Dak., recommending the early passage of the so-called Mundt-Ferguson-Johnson bill, dealing with the thought that it is time to do something besides talk about Communists in Government.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MUNDT-FERGUSON BILL

Senator KARL MUNDT, Republican, of South Dakota, who scored a victory in his long anti-Communist campaign when Alger Hiss was convicted, is finding satisfaction these days in explaining the objectives of his bill designed to curb subversive activities in the United States.

Interest in the Mundt-Ferguson bill has increased with the attention directed upon communistic influences by the charges Senator MCCARTHY, Republican, of Wisconsin, has made.

Senator MUNDT had a Nation-wide audience for his explanation of the bill Friday night when he was interviewed by newsmen on a radio network program.

The bill undertakes to do four things:

To make unlawful a conspiracy to perform any act which would substantially contribute to the establishment within the United States of a totalitarian dictatorship under foreign control.

To require the Communist movement in the United States, in view of its foreign-directed character, to operate in the open rather than underground.

To cut the threads which bind the international Communist conspiracy together by restricting international travel of members

of the American section of the world Communist movement.

To protect the integrity of our Government by denying Government employment to members of the American section of the world Communist movement and by protecting the security secrets of the United States against agents of a foreign government or the Communist movement.

In an interesting comment on the Mundt-Ferguson bill the Washington Evening Star called attention to these questions:

Is the Communist conspiracy real enough to justify the enactment of such a measure?

Will the Constitution permit its enforcement if enacted?

The Washington newspaper offered its own answers which should be satisfactory to Senator MUNDT and fellow supporters of the bill. It concluded:

"The reality of the conspiracy is attested by the fact that we are spending more than $20,000,000,000 a year to defend ourselves against the Communists and to check their encroachments abroad. In that setting, it would be an absurdity not to do all that can be done to curb the Communists and their sympathizers in this country. Will the Constitution permit this? If not, then it follows that that document denies to Congress the power to adopt laws to protect the Nation against those who would use our constitutional liberties to destroy us. It is hard to believe that this is the case.

"It seems to the Star that Congress should make all possible improvements in the bill, and then pass it. After that, it can be tested in the courts. But it should not be permitted to die simply because some people think it is unconstitutional and because some others pretend to think so."

A Letter From Charlie Moore, a Real American, Former Governor of Idaho and Commissioner of the General Land Office

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, there is inserted herewith a letter recently received from the former Governor of Idaho expressing his views on national policies and present-day trends, for the consideration of my colleagues:

APRIL 20, 1950.

Hon. HENRY C. DWORSHAK,
United States Senate,
Hon. JOHN SANBORN,
House of Representatives,
Hon. COMPTON I. WHITE,
House of Representatives,
Washington, D. C.

HONORABLE SIRS: For some time I have been contemplating writing each of you, but I realize your heavy duties and the memory of my own official life both in Idaho and in Washington, D. C., when I received so many letters and so many suggestions that I now hesitate to even write a friendly letter, much less make suggestions. However, neither age nor retirement from activity prevent me from keeping posted as well as possible—I read most everything worth reading—and as an American citizen I am still keenly interested.

For some years I have spent considerable time down here with my son who has been long an invalid from arthritis, and added to that this year I, myself, had to again submit to operations and was hospitalized for some time. I should be home in Idaho this time of year, but it will probably be at least a couple of more months before I can go.

Some of the things that run through my mind are so-called displaced persons. The records so far are a disgrace; I am wondering how long and to what extent this policy is to be continued. I am also wondering how long and to what extent we as a Nation propose to support the rest of the world. I know the general answer or what the excuse is; that it is necessary to keep the world from going communistic. What a fallacy. I can remember when as a small boy and more than 75 years ago, when assisting my father, a stranger came to our Missouri home and insisted that father attend a meeting in the cause of humanity and for the collection of moneys to educate the heathen Chinese. My father's reply was: "The Chinese are a much older nation than we; their ideas of religion, of living, and of their form of life was such that any contribution or suggestions from other sources would have little or no effect upon the life of the Chinese." How true this statement was, and more emphatic today than ever. I still remember Washington's advice in his Farewell Address: To beware of foreign entanglements.

Economically our great questions seem finance—debt, support of the world. How long can we carry the burden? England, France, and other nations have made it decidedly plain to us that regardless of how much money we spend on them they will pursue their usual way of life, and even if war comes with Russia that they will not decisively join us. I have no objections to France's system of high living, or to England's socialistic and communistic form of government, but I think it a shame for United States taxpayers to continue to even attempt to foot their bills.

Respectfully yours,

C. C. MOORE.

"Fancy Dan" Economics

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the CONGRESSIONAL RECORD the attached editorial entitled "'Fancy Dan' Economics" taken from the Daily Times, published in Mamaroneck, N. Y., Wednesday, April 12, 1950:

"FANCY DAN" ECONOMICS

Uncle Sam now has nearly a million pounds of butter in his refrigerator. He plans to buy more—many millions of pounds more. That is necessary to keep prices up.

A new law was adopted to cover cotton and peanuts. Already there are huge surpluses in each commodity. Now under the new law we shall have even larger surpluses, since this act authorizes planting of more acreage.

These are only three items in our national economy. But they are significant and, combined, they will extract hundreds of millions of dollars from the pockets of taxpayers and from the budget of housewives.

Because, the policy is in direct defiance of the law of supply and demand. It is a policy born of partisan politics, deliberately designed to rivet to the Truman administration the farmers' vote this fall. The taxpayers and consumers who foot the bill to pay for these votes are expected to forget, for such "Fancy-Dan" economics are difficult of layman comprehension, these politicians believe.

November will show if they are right in that belief.

Let's Have the Truth

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. VELDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Star, April 22, 1950, entitled "Let's Have the Truth":

LET'S HAVE THE TRUTH

Many Americans are engaged in the dubious practice of deciding the guilt or innocence of principal figures in the present State Department investigation. The interests of the Nation would be better served if public judgment were withheld, at least until all the evidence is in. Unfortunately, persons in high positions in Washington have been doing everything possible to sway public opinion one way or another before the evidence was heard.

One of the first noticeable results of Senator MCCARTHY's charges against Owen Lattimore was Secretary Acheson's nervousness. He was quick to disclaim all possible connection of the State Department with Lattimore. He admitted that Lattimore had been consulted on Far East policy, but did not want the public to think that Lattimore was an employee of the State Department or that he was the architect of Far East policy.

That was one of the first positive signs, to close observers of the Washington scene, that Senator MCCARTHY had something substantial and that the administration knew it.

The next sign was the obvious campaign, on a Nation-wide scale, to discredit Senator MCCARTHY by attacks upon his reputation. If the Senator had not had in his possession some important and damaging information, he would not have been made the object of such an intensive smear campaign.

We are not going to say or even hint at this time that Lattimore is guilty of the charges brought against him by Senator MCCARTHY, but we think it is not unfair to point out that Lattimore is receiving about the same frantic support that Alger Hiss received from the administration when he was accused of aiding Communist spies. We expect John Stewart Service also to be given administration protection. The pattern has been so well established that certain events can be predicted with almost certainty.

The testimony of Louis F. Budenz, once editor of the Communist paper, the Daily Worker, seems to have made Senator MCCARTHY top man in the Washington picture. Budenz named Lattimore as a former member of a Soviet spy cell and a person under Communist Party discipline. Since Budenz was the Government's star witness in the trial of 11 American Communist leaders, his testimony carries much weight.

But again we observe the irrational response to damaging testimony. Instead of accepting it as evidence to be weighed, Lattimore's friends immediately started trying to counteract it and discredit Budenz. These

things all too plainly indicate that in high places in Washington the primary goal is not to learn the truth about Lattimore but to save him.

The people, at least in this part of the country, want the truth, we think. And they are going to see glimpses of it, no matter what efforts are made to conceal it.

The Federal Dispensary

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. GAMBLE. Mr. Speaker, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD an editorial which appeared in the New York Herald Tribune for Sunday, April 9, 1950, titled "The Federal Dispensary":

THE FEDERAL DISPENSARY

The President wants to raise the level of unemployment-insurance benefits throughout the country. He wants all States to pay the same rates. At the present time each State determines the size and duration of payments but must meet certain Federal standards in order to participate in the tax-kitty which Washington disburses according to its idea of what each State needs for proper enforcement. The States may have different views, but they depend willy-nilly upon the largess distributed by the Federal authorities. Thus New York which pays a very high amount of the total tax collected for the Federal fund has consistently complained that it did not get enough back for proper investigation against fraudulent claims. The country spends approximately $70,000,000 just to administer unemployment insurance compensation in the States. A large part of the administrative expense is due to the difficulty of checking against fraudulent claims. There are apparently a number of people to whom present benefits are sufficiently attractive to cause them to evade work by one device or another.

Perhaps in some States the amount and duration of benefits is too low. In other States they may be too high. In some States the tax paid by employers has snowballed into such large reserve funds that the States have felt warranted in transferring from these funds to start disability insurance systems. The differences in economic conditions within the various States have been reflected in the benefits enacted into State laws. Certainly it is clear that a State whose economy is largely agrarian has a different problem from a State that is largely industrial. To take from the States the power to deal realistically on their intimate knowledge of their own unemployment problem is very dangerous.

The President's program will put all States on a common national schedule of benefits. In States where the real value of a dollar is relatively high, this national schedule will enormously increase the invitation to cheat, and hence the difficulty and expense of sound administration in the public interest. Even though the President at the same time urged that Federal laws concerning fraud and disqualifications should be strengthened, a uniform national standard approximately 20 percent higher than the present standards invites the very abuses of which he is apparently cognizant. But of even more serious import is the principle of the Federal Government determining a fixed standard for every State in the Union regardless of their economic differences and their local problems—a standard which the people affected will recognize as coming from the Federal Government. If the President's program is adopted we will have taken another long step toward making our people look to Washington as the dispenser of all social benefits. This is repugnant to the American tradition of individual and State responsibility.

The United States Treasury Has the Idle Money Metal Bought and Paid for if We Will Use It To Lighten the Excise Tax Load—Statement of Congressman White Before the Committee on Ways and Means

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 22, 1950

Mr. WHITE of Idaho. Mr. Speaker, the war is over and has been for 4 years, but the American people are still forced to pay burdensome excise taxes on many of the everyday necessities of life.

While the people have been paying these excise taxes to support their Government, we have had a huge pile of money metal bought and paid for, sterilized and lying idle in the Treasury. The Treasury now has 167,376,637 ounces of sterilized and idle silver which can be turned into silver certificates amounting to $216,538,785 overnight and put into circulation in paying Government expense. Instead of using this idle money, we are required to pay excise taxes on such things as baby oil, talcum powder, telegraph and telephone tolls, and transportation charges.

Back in 1942, before the Treasury began to scatter our store of sterilized money metal by lease-lend gifts to foreign nations for their use as money, we had on hand in the Treasury 1,361,222,166.7 ounces of sterilized silver which could have been put in circulation as silver certificates and used in paying Government expenses amounting to $1,759,964,011.34; 410,814,344 ounces of this silver has been given to foreign countries to be used by them as money. These governments are pledged to return every ounce of this silver. With the idle money metal we have and the silver that will be returned to us now overdue, which can readily be converted into silver certificates—legal tender paper currency redeemable in silver dollars, why should we continue to carry this heavy load of excise taxes?

Following is the statement I made before the Committee on Ways and Means:

STATEMENT OF HON. COMPTON I. WHITE, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF IDAHO

Mr. WHITE. Mr. Chairman and members of the committee, I am Congressman COMPTON I. WHITE, of the First District of Idaho.

Before proceeding I want to take this occasion to thank the members of this committee for their courtesy in prolonging the hearings so as to give me a cchance to appear before the committee, now I feel as if I belonged.

The CHAIRMAN. Mr. WHITE informed the chairman and perhaps other members of the committee that he had some suggestions along the line of monetary reform that he thinks would help us in solving our complex fiscal problems.

Mr. WHITE. Further along in my discussion I want to answer very definitely the question raised by Mr. SIMPSON of Pennsylvania. If you repeal the excise taxes, where are you going to get the money to make up the loss in revenue?

I come before you in support of the plan to repeal or reduce the wartime excise tax. We have to differentiate between these excise taxes that support our Government, liquor, cigarettes, things of that kind and I suppose they will not be disturbed. But the wartime taxes are working a hardship on our people and we have a lot of letters and telegrams from all over our State suggesting that now that the war is over these taxes be repealed.

I am going to read a short letter from a lady from Idaho Falls, as follows:

"We are in favor of repeal of excise taxes in their entirety on transportation, telephone, telegram, and teletype machines. Taxes on these services constitute undue hardship upon the produce handlers all over the country as they are the tools of our trade.

"Your favorable vote on the repeal of these taxes will be appreciated."

That is signed Rosa Cowlan. I just want to read two or three of these letters because I think they make a point. Here is another letter from Miss Myrtle Ayers, of Mullan, Idaho, which reads:

"As a citizen of the State of Idaho, I would solicit your help in repealing the excise tax.

"The reason I think it should be repealed is that this is a wartime tax and since we are no longer at war, there is no need for this tax.

"This tax is also discriminatory to business, and it is a drain on the poor people. They cannot afford to pay this tax for the articles they need.

"Cosmetics are no longer a luxury, they are a necessity for a woman. Baby powder and baby oils are not a luxury, therefore they should not be taxed. Most of the articles taxed now are necessities.

"I would greatly appreciate your help in trying to repeal this tax if it is at all possible."

Here is another letter from A. G. Stanger, of Idaho Falls, which reads:

"It looks as if there is a possibility, if an effort is put forth, to get these notions taxes eliminated, and certainly the time is long past due and these taxes should be done away with.

"If there is any reason in the world why we should pay a 25-percent tax on telephone tolls, Western Union charges on teletype messages, together with the nuisance taxes on such items as baby talc, and so forth, it is a mystery to the writer. These penalties that are being paid 5 years after the war is over are hindering us from doing business in a sane and sensible manner.

"We certainly urge you to exert every effort possible to see that these taxes are eliminated so that we can again operate on a basis that has a semblance of normalcy.

"Your efforts will be greatly appreciated by everyone in business from the State you are representing."

Now, answering the question of the gentleman from Pennsylvania. We have over in the Treasury 167,376,637 ounces of money metals, silver sterilized and set aside that is not being used in any way, that could be turned into $216,538,785 in silver certificates, good currency, the kind you are getting paid when you get paid for your services as a Congressman, silver certificates, getting $1, $5, and $10 denominations.

Only a part of this money metal over in the Treasury is sterilized, it's laying there idle while a large part of the silver bought under the same program is used in circulating silver certificates.

Mr. DINGELL. I agree with you on that.

Mr. WHITE. Sterilized money metal that is of no use. You have $2,000,000,000, do not forget that, in silver metal, or money metal, now in use every day in the form of silver certificates. There is not a man anywhere in the United States that gets a $1 bill and is not using $1 of silver because this bill is redeemable in silver money. It is good money and the United States dollar all over the world is good and we might just as well put that idle money metal in the Treasury, and the silver that will come back from Europe and put it to work as money in the form of silver certificates and do away with these excise taxes.

Why penalize the mother that uses talcum powder and baby oils in dressing her baby? Why penalize the girls and housewives that use toilet preparations? Why penalize the farmers and businessmen that use the telephone and telegraph services as their tools in conducting their everyday business and increase the cost of living by putting an excise tax on the movement of freight to raise tax money—while we are keeping $216,000,000 in money metal, that has been bought and paid for, idle in the Treasury?

It is unthinkable that we should tax talcum powder and baby oil. I do not think there is a man in this room but when he made his advent into the world his parents used talcum powder on his skin. Why should that tax be made when we have almost $1,000,000,000 over in the Treasury that has been laying there idle; it is not used to back silver certificates, just held there. Let us put it to work and that is the solution of this excise tax I am making to the committee. If we will take that 1,000,000,000 idle dollars we have in the Treasury and use it, we will be doing a thorough, business-like job.

I want to read into the record some information, as to what we have done with some of this silver. It is good enough to use as money over in Europe and good enough over in Asia but it is not good enough for us. The total amount of silver lend-leased to foreign governments, by countries, is as follows: Australia, 11,773,093 ounces; Belgium, 261,333 ounces; Ethiopia, 5,425,000 ounces; Fiji Islands, 196,364 ounces; Great Britain, 88,073,878 ounces.

I was just told by the Treasury that they put it in circulation not as $1.29 an ounce, which is the value of our dollar, but at $2 an ounce. Now they are gradually retiring this silver money and putting out paper substitutes but it was good enough to tide them over during the war in the emergency.

Next we have India with 225,999,904 ounces; Netherlands, 56,737,341 ounces; and Saudi Arabia, 22,347,431 ounces.

In all, gentlemen, 410,814,344 ounces of our money that is capable of being put into circulation in the form of these silver certificates, 1-, 5-, and 10-dollar bills, and that is what you get handed to you for your pay when you go to the Sergeant at Arms. That amount of silver is equivalent of $531,153,899 that could be put into circulation and take off these objectionable taxes.

All the silver that has been returned under lend-lease agreements amounts to 261,333 fine ounces, received from Belgium. Of all that list of countries that have our silver and circulated as money, only one country, Belgium, is returning it, and this comes to you from the Treasury Department, and I will be pleased to file it for the record. This is under date of January 18, 1950.

That is not all of the silver. Sales of Treasury silver under the Green Act at 71 cents per fine ounce, during the period from July 1943 through December 1945 amounted to 167,380,241 fine ounces. Sales of silver under the act of July 31, 1946, at 90.5 cents per fine ounce for the period August 1947 through December 1949 amount to 10,997 fine ounces.

The largest amount of silver loaned to Defense Plants Corporation, silver for nonconsumptive purposes during the war period amounted to 902,622,273 fine ounces. As of December 31, 1949, a total of 499,101,737 fine ounces have been returned to the Treasury.

I might say that about half of that silver is still out, money metal, if you please, that is good money in any nation in the world. There is a clamor for American dollars. They will take our silver certificates at full face anywhere, and we are not using this sterilized silver that is just as good as any of the silver we are using for money.

I just want to take a minute to correct one impression. Every Member of this Congress can have the Treasury bulletin that comes out monthly. Do you know what the Government has made on the silver-purchase program since 1934 when I was a member and helped pass that act? Do you know how much money the Government has actually made in profit? Talk about a subsidy to the miners.

Here is a table right here on page 51 and it comes under the date of January 1950. I am just going to read you the total of silver that has been put out, bought as metal, revalued in coin. You have made $833,600,000. In computing the silver, there are a lot of categories, but in dollars you have made since 1934, $833,000,000.

Mr. REED. Might I ask a question at this point?

Mr. WHITE. I will be free to answer questions but just let me finish.

Mr. REED. All right.

Mr. WHITE. The total that has been made in actual profit to the Government, is $1,098,100,000. Had they coined all the silver that I am talking about, lying idle, sterilized in the Treasury and the silver that is coming back from foreign countries, they agreed that every ounce of this silver loaned foreign countries is to be returned. If we had used all that silver as money, the potential before we commenced to send that away is $1,048,200,000 as shown on page 51 of the United States Treasury Bulletin for February. The figure I read you is in 1943. After we began the lend-lease they must not have expected to get it back because the table began to drop and today it shows only $124,300,000, a drop from $1,000,000,000. That is the record of the operation of your Treasury and our money system.

Remember the silver program and the Silver Purchase Act are the only monetary programs on which the Treasury makes a profit.

Mr. DINGELL. You mean it makes a profit on silver?

Mr. WHITE. Certainly

Mr. DINGELL. When the world price is 32 cents an ounce, and we are paying 97 cents and 92 cents, yet we are making money?

Mr. WHITE. Yes.

Mr. DINGELL. I would not pay 92 cents for something worth 32 cents on the open market.

Mr. SIMPSON. From whom did we make the profit?

Mr. WHITE. The miners who mined the silver.

Mr. SIMPSON. You said we made a profit?

Mr. WHITE. It costs 1 penny to make a $100 bill or $1,000 bill or $1 bill. You have the cost of the paper, ink, silk, and all that; that cost is 1 cent. You are going to tell me that when the Government prints that money for 1 cent and puts it out as $100 that that is not a profit?

Mr. SIMPSON. You were talking about a profit and I asked you from whom we made the profit.

Mr. WHITE. It is like anything else. If you raise onions or raise a cow and sell it for $100, the difference betwen the cost of producing and the selling price is the profit. If a miner brings silver out of the ground and sells it to the mint, the diffeernce between the price the miner receives for his silver and the value of the coin is the profit.

In the old days the handling of our money system, since 1792, when the first money law was enacted, we did not set any price on silver, we did not set any price on gold. We simply provided by law that when a man brought in his gold it was refined and the copper alloy was added and they did not even charge him for refining it, or adding the alloy. It was his gold and we stamped it indicating its weight and genuineness. In the case of silver when we had free coinage, taking it theoretically, we had scale balance at the mint and the miner when he came in put pure metal on one side of the balance and the people in the mint went to the bins and put standard silver dollars in the other side of the balance until the scales balanced. The miner took his silver dollars in payment for the silver and went about his business and the money was put in circulation.

The mint took its pure silver, added 10 percent copper and minted it and made the difference between the price of a dollar received by the miner for his pure silver as contrasted with the silver contents of the coined dollar and that in the aggregate totaled a large volume of profit.

Mr. REED. One question.

Mr. WHITE. I will be pleased to answer any questions.

Mr. REED. This is for information only; I am not familiar with this subject. When the Treasury buys the raw silver now, what form of money do they use in paying for that silver?

Mr. WHITE. It is in the law. The man simply brings in the pure silver and weighs in at the mint. The mint takes 30 percent today of that silver and gives him back 70 percent in dollars.

Mr. REED. That is the answer to my question. It was paid for with a bill from the printing press?

Mr. WHITE. You get paid with a check.

Mr. REED. What I am getting at is whether they pay you by check or with the bill? What you receive is the printed bill. The printing press does the business.

Mr. WHITE. Yes. We are always dealing with gold and silver which is money in itself and used all over the world. We simply use a paper credit token and you can issue a man an I O U and if he accepts it for its face, it is still a credit token.

Mr. REED. The foreigner can use the gold—our gold—which is good over there, but it is against the law for us to use here.

Mr. WHITE. It is against the law; yes.

This is the Silver Purchase Act of 1934. It was this committee right here, this chairman, who handled the Silver Purchase Act, because there was a tax feature in the silver bill. It went to this committee because it was a tax measure. Here is what it says:

"The Director of the Mint, with the consent of the owner, shall deduct and retain of such silver so received 45 percent as the seigniorage for services performed by the Government of the United States relative to the coinage and delivery of silver dollars. The balance of such silver so used, that is 55 percent, shall be coined into standard silver dollars at the same or any equal number of any other standard silver dollars shall be delivered to the owner or depositor of such silver, and no provision of law taxing such transfer of silver shall extend or apply to any delivery of silver to a United States mint under this section. The 45 percent of such silver deducted shall be retained as bullion of the Treasury or coined into standard silver dollars and held or disposed of in the same manner as other bullion or silver dollars held in or belonging to the Treasury."

There, gentlemen, is the essence of the whole act.

Mr. EBERHARTER. Mr. DINGELL mentioned that silver is worth 30 cents. Where do you get that other idea?

Mr. WHITE. If the Government restriction on the movement and the price of silver were removed, price of silver would be higher than the coinage value of our dollar. With all the restrictions placed on silver by governments the world price is around 70 cents per ounce.

Mr. EBERHARTER. Did he mean that we could buy this silver in other countries for 30 cents an ounce?

Mr. WHITE. I think it is 70 cents on today's market.

Mr. DINGELL. I do not know the exact price.

Mr. EBERHARTER. As I understand your statement, if the United States Government should print $2,000,000,000 worth of paper money, there would be a profit of $1,000,000,000?

Mr. WHITE. Yes; if it printed certificates redeemable in silver dollars.

Mr. COOPER. We wish to thank you, Mr. WHITE, for the appearance and information you have given to the committee.

Mr. WHITE. I would like to say that I am not in favor of the reduction in mine percentage depletion and I would like to file these letters with the committee. I think that as long as this committee had the silver bill and put a transaction tax on silver I am asking that that be repealed. I think if you take off that little provision in the law silver will find its price level like any other commodity.

Mr. COOPER. We thank you for your appearance. You may turn in any letters that you want to file with the clerk.

Our next witness is Hon. FRANK A. BARRETT.

Congress in 1950

EXTENSION OF REMARKS
OF
HON. RALPH A. GAMBLE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. GAMBLE. Mr. Speaker, under unanimous consent of the House, I insert in the CONGRESSIONAL RECORD the attached editorial from the Daily Times, published in Mamaroneck, N. Y., Monday, April 10, 1950, entitled "Congress in 1950."

CONGRESS IN 1950

Just what, prior to the Easter recess, has Congress accomplished this year?

The displaced-persons bill, subject to reconciliation of minor differences between House and Senate, versions, has been passed.

The Federal taxes on oleomargarine have been repealed.

In agriculture, a half-baked plan for aid to "hardship" cases in cotton and peanuts had been adopted.

On housing, agreement has been reached between the two Houses on a measure which will expand the program but is without aid recommended for middle-class families.

And in foreign policy there is reason to expect agreement on European aid with only a moderate cut in administration requests. As for rearmament of our European friends, the outlook is favorable.

But in other fields, congressional accomplishments are meager. There is no taxation bill yet reported. The Truman civil rights program is apparently bogged deep. Federal aid to education seems roadblocked in the House. Rent control extension is not anticipated. Liberalization of social security is stalled in the Senate. Nothing is expected of the Truman appeal for compulsory health insurance. Selective service has not been extended.

Altogether, Congress in its 1950 session has passed little of what Mr. Truman promised. By contrast, the Eightieth Congress, which he called "do-nothing," was a beehive.

Clinton Centennial

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to insert an editorial from the Clinton Daily Item:

Of course there are some people who believe that we must support a certain number of people in the Federal Government because there are not enough jobs to go around, but a vast amount of the hidden-tax money the Government is now spending could easily be spent by the very people from whom it is taken—by lower-income groups for milk, meat, and clothing; by middle-income groups for homes, furnishings, insurance, or college education; by higher-income groups for investments in new tools for industry.

Such money spent by individuals would create productive jobs for those now carried on the Government pay rolls.

No kind of spending benefits the Nation more than that used in increasing the productive capacity of the Nation.

Failing to realize that the people are paying the taxes many are easily led into clamoring for more Federal aids and into considering the United States Treasury as a Christmas tree. Lacking the adoption of any of the new programs urged by those in power, it is conservatively estimated that during the fiscal year ending June 30, next, the United States will spend between five and seven billion dollars more than the Nation's income.

If Congress adopts the new programs no man can prophecy how much the country will have to borrow, but all of us know that the next generation must pay it and that our greed for welfare and security will deny to our children the opportunities we enjoy and that they will have to pay for the folly of their fathers.

While it is true that the major part of our current increased expenditures go for national defense and foreign aid, this alone is not a satisfactory explanation of the vastly increased expenditures of the immediate past and the present because authentic figures show that in a single year we are spending $15,000,000,000 for the civilian domestic functions of the Federal Government which is making direct payments to 17,000,000 persons—one out of every nine of the population.

During World War II the military establishments employed one civilian to every five men in uniform but today they employ one person for every two in uniform.

The Federal Government is operating more than 50 corporations with assets exceeding $20,000,000,000, a group 10 times as large as the country's largest industrial corporation.

The coming generation now stepping on the scene cannot fail to realize that big government is growing bigger and that big government is more dangerous than big business.

Little governments can regulate big business and the United States Government can punish all who violate the laws against monopoly, but it is difficult to regulate big government.

Every true American hopes the coming generation, now facing the most critical financial condition in the history of this Nation may give us men who can find a solution to our dilemma other than to delegate more power in a central Government and one that will provide a turn to the right and end the appalling spectacle we now face in regimenting every individual.

Unless such a condition is solved the Communists may well say that they are the only ones who are really providing world leadership, that we are following in their wake and that they are riding the wave of the future.

The danger that faces the generation that will pour out of our local and national educational institutions, next June, is a disease that has proved fatal to many empires and great nations in the past.

It is the creeping paralysis that sets in with the inevitability of a law of nature when a government, however benevolent or well intentioned, embarks on a course of solving the individual's problem for him, of replacing individual Clinton in its infancy by state planning and state decree.

This kind of experiment has never succeeded and in all instances where it has been tried it has led, in the end, to moral, political and economic weakening, decay, and downfall.

Today it is a tragic irony that many men in high positions are advocating here these policies of statism which this country is fighting abroad, at enormous cost in money and effort.

We have accepted the responsibility of organizing the western world against communism which never reared its head in Washington until 1933, but which has grown like a fatal cancer in the intervening years until its sinister tentacles have fastened themselves on many of the leading departments of Government.

May the coming generation set the example here at home that we understand what that responsibility entails and that it has the strength and honesty to practice what we preach.

May our local citizens of tomorrow heed the words of former Postmaster General James A. Farley, who, only last month, soberly said that the present tax burden of the American people is about all they can stand and that unless we can find some way to check the enormous increase in the cost of government "we shall find ourselves living under a form of government which is utterly different from that in which we were born and under which our forefathers built a great country.

"We cannot, if we expect to remain a great and growing Nation indulge in an extension of the practice of deficit spending in times of prosperity such as these. An increase in our income taxes would probably yield less rather than more revenues. We must reduce our cost of Government and we must reduce it even if some people get hurt in the process.

"If we take the cost of Government in 1900," Mr. Farley said, "and compare it with the cost of Government for 1950 and then figure the same rate of increase for the next 50 years, our Government would cost six trillion dollars, or six times as much as the whole national income.

On that basis we would also have working for the Federal Government alone 20,000,000 men and women. The lesson of these simple figures is that, unless we find ways of reducing the cost of Government, it will soon grow so great as to consume not only everything that we have all saved, but everything that we call property, which is owned

by all of us. This is a very sobering situation.

In urging a decrease in Federal grants to States, Mr. Farley added: "The national Government took five times as much out of the State of New York in taxes as it returned and this is true of other States. If this trend of grants to States, now approaching $2,000,000,000 annually, continues, the States would gradually give up all of their responsibilities and the Federal Government would absorb them."

Every true American of today should ponder these warning words from so clear-headed a leader as Mr. Farley.

The only hope for the future of our Government, as many students and economists see it, lies in a return to sanity, with bluff and coercion given the gate.

The sands of emotionalism and hysteria seem to have pretty well run their course and that the era of one-man government which began March 4, 1933, and which in reality has been a dictatorship almost as definite in effect as that of an absolute monarchy, may result in a rebellion by overtaxed Americans, with class hatred and class consciousness lessened and the threat to the security of every man, woman, and child as represented by our unprecedented national debt now affecting the savings of all types from ownership of property to life insurance, ultimately averted to be supplanted by thrift and economy which previously made this Nation great and with the assurance that unconstitutional measures which are both uneconomic and antisocial at once abrogated.

The vast majority of Americans are united in the thought that they do not want to see the Constitution under which they have lived junked and it is evident that the time has arrived to turn back to it and to the concepts of the average citizen.

It is apparent that American taxpayers are doing some basic thinking these days, uncluttered by figures and political arguments, on the financial crisis of the United States Government. They know that government is primarily a spender and not a producer and that every dollar spent is wrung from taxpayers who, too long, have been supine and have withstood the ever-increasing waste of money which has been and is being contributed by the producers of real wealth.

Of course, government is charged with the performance of public services all of which cost money and which should be paid for by the people. There is no argument there, but from that solid ground it has been the immemorial habit of government to be lured into strange and sinister departures of thought and action.

Like any person who spends but does not produce and who has acquired the habit of meeting his bills by merely asking for more money, government invariably launches on an upward spiral of spend and tax, spend and tax more and more, to a vanishing point limited only by the ability or willingness of the people to pay.

The running faucet of extravagance is allowed to flow unchecked and instead of turning it off government then starts to mop up the floor in the hope of getting still more money to pour into the drain. The castigation by any government official of the taxpayer who legally and properly manages to avoid exorbitant and confiscatory taxes is merely a variation of the mopping technique and evades the fundamental question whether government is not obliged to manage well and thriftly, rather than to seek out new sources of income to sustain its prodigality.

It is infinitely easier to take in more money than to control habits of thriftlessness. Unlike the citizen who must make money before he can spend it, all government has to do is to squeeze the taxpayer harder and, failing, that, to create more money by debasing its value.

This plan has been routine for the past 17 years in Washington, but, like the citizen who spends more than he earns, Government can and does go bankrupt, dragging with it the taxpayer who thoughtlessly went along with the shadowy and impossible promises of spendthrift policies.

Never before in our history was it so timely or necessary to recognize these simple and obvious facts. Never before has it been so obvious that Government should recognize them and act upon them.

We face a type of freedom that, in the guise of humanitarianism, chokes the broad, vigorous private initiative that made this Nation great. It is a soft freedom, protected and cherished and is dangerous.

This precious democracy of ours, the greatest remaining citadel of individual independence, is being more easily undermined than many people realize.

May Clinton continue in its next 100 years to maintain its place in the sun as—

"A bright, cozy town of valleys and hills,
All thriving with schoolhouses, churches, and mills;
Where green drooping branches all arch over the street
And industry shines on the faces you meet,
Where houses are homes, where childhood is gay,
And order and honesty ever hold sway."

Home Builders Shatter All Monthly Records in March

EXTENSION OF REMARKS

OF

HON. RALPH A. GAMBLE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. GAMBLE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement issued by the Bureau of Labor Statistics in the United States Department of Labor titled: "Home Builders Shatter All Monthly Records in March—110,000 New Dwelling Units Started:"

HOME BUILDERS SHATTER ALL MONTHLY RECORDS IN MARCH—110,000 NEW DWELLING UNITS STARTED

March 1950 was the best home-building month in history, according to preliminary estimates of the United States Labor Department's Bureau of Labor Statistics. Builders started 110,000 new nonfarm dwelling units during the month, an increase of 30,000 (38 percent) over February and 40,600 (59 percent) over March 1949.

Well over a quarter of a million new dwelling units were put under construction during the first 3 months of this year. January, February, and March housing starts totaled 270,000 greater by 59 percent than the first-quarter volume for 1949. For the past 9 months, home builders have surpassed by an ever-widening margin, their volume for the same month in the previous year.

Home-building activity for the first half of 1949 was 6 percent under that for 1948, as measured by new dwelling units started. But the 100,000-a-month rate for the third quarter of 1949 brought the new housing volume up 13 percent above that for the same period in 1948, and by the fourth quarter it was 46 percent greater.

Final 1949 reports show a total of 1,025,100 new dwelling units started. Of that year's total, 4 percent of the new housing was publicly owned, compared with 2 percent in 1948.

The increased interest in apartment-house construction in 1949 was reflected by the proportion of units started in multifamily buildings. Units in two-or-more family structures comprised 23 percent of the entire total for 1949, compared with 18 percent in 1948. In the two other postwar years, 1946 and 1947, apartments accounted for about 12 percent of the yearly total.

There has been little change in the past 3 years in the proportion of new nonfarm housing begun in rural and urban areas, about 57 percent being started in urban places.

Of the houses started by private builders last year, 7 out of 10 were within metropolitan districts—that is, within the economic and social orbit of a central city or cities. In 1948 about two out of every three dwelling units started were in metropolitan districts.

Telegraphic reports of local building permits issued for new housing during March in principal cities of the country show an increase for all regions. All but a few of the cities showed increases in building-permit volume, with the greatest occurring in Los Angeles, Calif.; Boston, Mass.; Detroit, Mich.; St. Louis, Mo.; New York, N. Y.; Philadelphia and Pittsburgh, Pa.; Dallas, Houston, and Fort Worth Tex.; and in Milwaukee, Wis.

TABLE 1.—*Number of new nonfarm units started—1948, 1949, and 1950*

1948	931,300
January	53,500
February	50,100
March	76,400
April	99,500
May	100,300
June	97,800
July	95,000
August	86,600
September	82,200
October	73,400
November	63,600
December	52,900
1949	[1] 1,025,100
January	50,000
February	50,400
March	69,400
April	83,300
May	95,400
June	95,500
July	96,100
August	99,000
September	102,900
October	104,300
November	95,500
December	[1] 78,300
1950:	
January	[2] 80,000
February	[2] 80,000
March	[2] 110,000

[1] Revised.
[2] Preliminary.

The housing industry is continuing to make an ever-expanding record in the construction of new housing units both for sale and for rent, the latter on an increasing scale. Both will break the back of the housing shortage.

Now Is the Time To Find a Cure for Cancer and Heart Disease

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by Dr. Floyd M. Green, medical director of the Columbus Mutual Life Insurance Co., of Columbus, Ohio. His comments are quite apropos on the very day when the House has been devoting most of its time to debate and action on the appropriations for health and research projects.

NOW IS THE TIME TO FIND A CURE FOR CANCER AND HEART DISEASE

(By Dr. Floyd M. Green)

The next time you get together with five men in a card game—it's a safe bet that cancer or heart disease will kill one of them. The next time your wife entertains the bridge club, take a look at the ladies there for two of the persons at each bridge table is "vulnerable" to heart disease or cancer.

It seems foolish doesn't it, that knowing it to be a dead certainty that out of every five people we meet or know three will fall victim to heart disease or cancer, we are still so complacent? Don't forget, however, that the "one" may well be you—or a loved one—the odds are not great—at the greatest three to five. That thought may cause you to say, "Well, can't something be done about it?" The answer is a positive "yes" if you and your family, your city or town and your State want to—enough.

One hundred years ago very little was known about scientific medicine. Research was almost unheard of. We have progressed very rapidly in our knowledge of diagnosis and therapeutics. The art of curing disease has taken great strides in the past decade. It is very certain. It is very gratifying to the physician to know there are drugs today that are nearly specific for a number of diseases, especially the infectious ones. The layman perhaps doesn't realize that these newly discovered drugs will, through their assistance, go a long way toward preventing the physician's hair from becoming prematurely gray. The basic factor of all this ingenuity is research. We all know from past experience that research is slow and painstaking.

Everyone has been extremely benefited by past medical research, especially research in the acute infectious diseases. The annual mortality rate in the United States has decreased 36 percent since the beginning of this century. Eighty-one percent of this decline can be accounted for by the decrease in the combined death rates for the diseases listed in the following table:

Cause of death	Rate per 100,000 estimated population		Percent
	1900	1943	
All causes	1,719.1	1,089.5	36
Typhoid and paratyphoid fever	31.3	.5	98
Measles, scarlet fever, whooping cough, and diphtheria	76.4	4.7	94
Diarrhea and enteritis	139.9	9.5	93
Tuberculosis (all forms)	194.4	42.6	79
Influenza and pneumonia	202.2	67.3	67

This table taken from 1946 annual report of the Life Insurance Medical Research Fund.

Please keep in mind we were unsuccessful in our attempts to control these infectious diseases until we determined the causative agents and their actions on body tissue and by proper therapeutic measures.

Research in bacteriology should be given credit for most of our success in resisting these infectious diseases. They are all produced by a specific organism.

Nevertheless should we be satisfied with the progress of speed of research today? For one, I am not. I am impatient, I believe. Research needs a shot in the arm. Why am I so intolerant of delay? I am impatient because 180,000 of your friends and my friends are dying each year from cancer. I am impatient because 500,000 of my friends and your friends are dying of cardiovascular disease (disease of the heart and blood vessels) each year. I am impatient because there are at present 7,000,000 cripples without crutches in the United States who are cripples because of heart trouble.

Are there more, less, or the same number of deaths from these two maladies than there were 15 years ago? Read your daily papers—look around among your friends and business associates. The answer is there for you to see.

Do not condemn or rebuke the researcher for this condition. Research men are performing wonders—almost miracles. I marvel at the extraordinary progress they are making with such limited facilities and finances. The research group of men and women have in common certain psychological characteristics not possessed by most of us. They have the knowledge, ingenuity, originality, and technical ability by which progress can be made if they are supported financially.

You do not see the researcher concentrating on the stock market, hoping to invest a few dollars and become wealthy in a short time. You do not see him spending hours studying real-estate values so that he can "get rich quick." On the contrary your researchers are a select group of individuals with one object in view and that is to discover something that will aid the suffering and alleviate physical distress.

Unfortunately most research men do not have the opportunity to put in full time on research. For example, Dr. Fleming noted 30 years ago that certain organisms would not grow in the presence of a certain type of mould and it has just been recently, within the past few years, that the real value of penicillin has been determined. No doubt the lack of funds for research permitted this wonderful discovery to be delayed 30 years.

Most of the grants-in-aid and fellowships are supported by endowments from philanthropic associations such as the Rockefeller Foundation, the Commonwealth Fund, the Carnegie Institute, the John and Mary Markel Foundation, and the Josiah Macy, Jr., Foundation. The grants from these foundations are a great help but are tremendously inadequate.

Most medical research problems today are conducted mainly by professors and teachers in medical colleges, teaching one-half the time and attacking research problems the other half. This is no fault of the researcher. He has himself and family to secure. Actually with most scientists medical research is an avocation.

It is not my intention to be critical, but, to me, there is one big factor which is hindering rapid progress in medical research. Research units are too widespread. We need concentration and we need full-time research men. For example, $588,127 was subscribed by 148 life insurance companies for research in cardiovascular disease. Grants have been placed in 43 medical centers, spotted through 21 States in our country, and a few in Canada. No doubt all insurance companies and the public will benefit greatly from this research, but it is safe to say far greater and quicker results could be obtained if these research men from 43 isolated medical centers in 21 States and in Canada could work together full time as one complete unit.

I realize this is the most that can be accomplished under the present circumstances. We should at once attempt to formulate some method of unification, if we expect to realize quick results. We should, if possible, solve these problems not in 20 years but in the next 5 years. Each year's delay means 180,000 deaths from cancer and a half million deaths from cardiovascular disease and several thousand more will become cripples without crutches.

Here is a plan that may be impractical and erroneous, but if it could be put into effect at once thousands that are living today will not die in 1951. Why not make this another Manhattan project, or, better still, a life-saving project? Convince our Government that this is an emergency, and a large appropriation is needed immediately for a new Manhattan project. If they will appropriate $1,000,000,000, which is just one-half of the amount expended in the development and perfecting of the atomic bomb, we will determine the etiology of cancer and cardiovascular disease and their cure in 4 years, which was the time required on the first Manhattan project.

Let's review the Government's action when they decided they needed a weapon to end the war in a few hours. They selected 96,000 acres of land at Oak Ridge, Tenn. They enclosed these acres with a high, impregnable, wire fense, and made it virtually an Alcatraz. Then they conscripted the majority of the world's leading scientists, among which were physicists, chemists, metallurgists, geologists, and about every type of "ist" known. They practically imprisoned these scientists and ordered immediate results. These were not part-time scientists. They were under pressure 24 hours a day. Never in the history of the world was such concentrated effort expended as on the Manhattan project. Considering that we know more about cancer and cardiovascular disease today than the fission experts knew about the bomb at its beginning, can you conceive what results would be obtained in determining the cause and cure of these diseases, if this kind of concentration and effort was applied to our problem?

It would certainly be wonderfully humane to eliminate enemies, Nos. I and II. You may well gasp at the cost. One billion dollars sounds like a staggering sum, and it is. However, let us break it down to the standpoint of Mr. Average Citizen. As of July 1, 1946, the United States Bureau of Census tells us that there were 91,634,472 potential voters in these United States and their possessions. I am recommending the expenditure of $1,000,000,000, just one-half of what was required for the development of the atomic bomb. If you think one billion is too much stop reading at this point.

Simple computation reveals that each voter would be taxed $10. This amount distributed over a period of 4 years would be about $2.50 per year.

Is there a voter living under the protection of the Stars and Stripes who has witnessed death of a near relative or friend from cancer or cardiovascular disease who would object to having his taxes increased $2.50 for 4 years, if he knew that as a result of this taxation the cure of cancer and circulatory disease could practically be guaranteed in that length of time? If so, I would be compelled to classify that voter as a selfish criminal and a traitor to his fellow men.

Some more computations which we can well afford to consider: Assume it would be possible to secure 500 properly selected research men. We must make our researchers an attractive, remunerative offer for their services and as a further inducement they

should be secured for the remainder of their lives. For example, if they were to be given a salary of $20,000 per year until the problem was solved completely, a matter of 4 years, then $10,000 per year for the remainder of their days, that would involve an amount of $40,000,000. If the average age of the researcher were 35 years, their expectancy would be 35 years, this security price of $10,000 per year would amount to $155,000,000. These payments would total $195,000,000 over a period of not less than 35 years, or an average of only $5,571,000 per year. It is my opinion, the average age of the researcher would be nearer 45 years of age. With the same computation at an expectancy of 25 years, the outlay would be $145,000,000. We started out to spend $1,000,000,000. We have $855,000,000 left. We must have housing and laboratory facilities, also equipment. My observation and information leads me to believe the Government has building centers constructed during the war which could be used for this purpose. I am wondering if all the buildings at Oak Ridge are being occupied. Would it not be a contrast if the Oak Ridge buildings could be used in aiding us to find a cure for cancer and cardiovascular disease, thereby preventing 750,000 deaths annually? It was here a weapon was developed and perfected to destroy lives at the rate of 300,000 in 5 seconds. What a contrast. It was here that the bomb was developed that according to military strategists saved the lives of 1,000,000 American boys, by eliminating the necessity of invading Japan. These 1,000,000 lives were saved at a cost of $2,000,000,000—$2,000 per life. The plan I advocate will save lives at a cost of $10 per voter.

Are you willing to enter into this humane project heart and soul by contacting by letter or word your Senators and Representatives and prevail upon them to see that the money is appropriated for this work?

We have two major problems confronting us. It is our first duty to take care of the patient who has been so unfortunate as to have contracted cancer or circulatory disease. We must attempt to cure or make comfortable these unfortunates and prolong their lives. Our second duty is to determine as soon as possible the etiology of cancer and cardiovascular disease and how to prevent them. We will never be successful in curing cancer and cardiovascular disease until we have determined the cause.

Personal knowledge is needed of all diseases pertaining to all ages. Our knowledge is just as good as our information and our information must come from one source and that is medical research. Therefore, medical research should receive substantial financial support not alone from philanthropic associations and life-insurance companies, but from our Federal Government.

Our problem with tuberculosis several years ago was a serious one and we were not successful in coping with tuberculosis until we found that a small germ-tubercular bacillus—was causing the trouble. Rapid and successful results were secured, once the cause was known.

The research which has been the basis of this improvement began 50 years ago. Are we to continue in a state of expectancy for 50 years before we arrive at a definite solution to the problem being discussed? Not if concerted action is taken and proper methods of combat are established.

When we think of cancer and coronary disease we picture someone belonging to the geriatric age. However, this is not true. Cancer and coronary disease are very prevalent in ages over 45, but they do occur in the young more frequently than we might suspect. As an indication of the truth, we will turn to a partial report of the Army Pathological Institute. One thousand post mortems were made on 1,000 young men apparently in excellent health between the ages of 18 and 45 who died very suddenly. The most common cause was coronary thrombosis. Several died of intracranial hemorrhage from congenital aneurysm. Why should young adults between the ages of 18 and 45 years of age develop coronary in such great numbers. I don't know—neither do you, nor anyone else—but, let's find the solution as soon as possible.

We quite often read in our magazines and daily papers of some very substantial donations given for the purpose of taking care of the ill and for research. This leaves a false impression with us. Medical research does not receive substantial financial support. In 1944, it was estimated that the public spent $3,000,000,000 for medical care. I have made an extensive search to see if I could determine the amount of money that would be available for medical research in 1947. My information shows it will be less than $5,000,000. We might compare this small sum with what was spent for liquor in the United States in the year 1946. The colossal sum of $8,000,000,000 was spent for alcoholic liquors. This means approximately $150 per person, over 21 years of age, was spent for alcoholic liquors in 1946. On the other hand, cancer and cardiovascular disease can be cured in 4 years at a cost of $10 per voter. Save a hang-over and save a life.

I feel somewhat chagrined when I think of the people in my home State spending one hundred and forty millions for alcoholic liquors and only donating a very few thousand for medical research.

We have just completed a national cancer campaign for the purpose of raising twelve millions for the alleviation of the cancer subjects and for the cure of cancer. The donors and everyone who aided in this campaign should be complimented. It is a great and worthy undertaking. The campaign in 1946 yielded ten millions. Sixty percent of this money remains locally. Forty percent is given to the national organization. Seventy-five percent of these donations is for the treatment of those who are afflicted with cancer and for the early diagnosis; 25 percent for research. The percentage that is allocated for research is very inadequate. With all our efforts, cancer and cardiovascular disease are on the increase. We must find the cause—not within 10 or 20 years—but in 4 years. I am optimistic enough to believe it can be accomplished, if we establish the proper methods. Let's do it and save thousands of lives.

Sixty percent of all deaths reported by insurance companies in the United States and Canada were due to cancer and cardiovascular disease. The total amount of these death claims was $816,000,000. In 4 years this would total $3,272,000,000. If, taking a pessimistic view this research project cut deaths from cancer and cardiovascular disease only one-third, this would cut the net cost of life insurance to the policy holder tremendously. Is that good business?

Let's pool all available moneys, organize and cure these enemies in 4 years—not 20 years. I know the philanthropic societies still want to take part. Insurance companies, I feel sure, will donate their share. Personal subscriptions no doubt are available.

The American Way—How May We Improve It?

EXTENSION OF REMARKS

OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. WEICHEL. Mr. Speaker, the American Legion essay contest of Ohio had three winners in the Eighth Congressional District, and on behalf of Congressman SMITH, of that district, who is ill, I want to include in the RECORD the winning essays of Carol Schnarenberger, of Chatfield, Ohio; Louis Corwin, of Galion, Ohio; and Marilyn Bachman, of Marion, Ohio:

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

(By Carol Schnarenberger, Chatfield, Ohio)

Our American way is the best way to live, and we as good Americans should know and appreciate it. Our standard of living is higher than that of any other country, and we want it to stay that way. Everything is better here. But we must realize that there is always room for improvement, and some improvements are needed.

Communists, strikes, labor violence, crime and juvenile delinquency currently are of national concern. We cannot let more and more of our citizens become Communists, or whole cities be tied up by a strike, or homes and streets become no longer safe. These are only a few examples of some of America's problems.

The hope for improvement lies in the future citizens of America—the youth of today. If every child could grow up in a decent home, have plenty to eat and wear, use adequate recreational facilities, and receive wise education on how to live with others, we would not have to worry so much about crime, communism, and intolerance.

Slum clearance should be one of the first steps. We cannot expect those who are forced to live in overcrowded, dirty, insanitary, rat-infested tenements to become the best citizens. They've been given a bad start in life to have to live this way, and may naturally resent those who have had a better chance.

Another important procedure is to provide recreation for the youth. Parks, playgrounds, canteens, and clubs keep the future citizen off the streets, occupied with something worth while, instead of out getting into trouble.

Perhaps our greatest chance for improvement is through education—education for the youth, and for the older citizen. We cannot sit by and watch our liberties slip away from us through too many restrictions and rules. Too many people do not realize that this might be happening. Every person should be familiar with and know something about our Constitution, the Bill of Rights, and the "four freedoms." They should be taught how and why the American way came into being, and why it is best. They should know how to be a good citizen. Children should learn about our system of democracy through Government courses. There at school they should learn also to live peaceably with children of other races and creeds. The citizen should be continually reminded of his freedom through the use of newspapers, magazines, radio, television, and movies. If more people really understood just how fortunate they are to be American citizens, they would take more interest in their Government and in their part in improvement of the American way. Communism would lose its foothold, as people would realize how much better their own way is.

It is a high goal, and one every good citizen should strive for to keep our American way the greatest and best in all the world.

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

(By Louis Corwin, Galion, Ohio)

America is not just a country, but the people living in it, and the American way is the way of these people. Thus we can improve the American way by improving the people. For if we improve the people we improve the Government which is the

people; we better the way of living; we improve the way of thinking and in improving these we improve the American way.

The improvement, that is to say, enlightment, is education for them. If they are educated and given the power of thought and then are set to thinking they surely will find the answers. But can we honestly say that we are getting an education today? With crowded conditions and few teachers to teach all these pupils are we really getting an education besides the A B C's. Are we being taught to think and are we given self-reliance. Self-reliance itself is as important as thinking. As Emerson said: "To believe your own thought, to believe that what is true for your own private heart is true for all men—that is genius." We must rely on ourselves and our thoughts to improve ourselves and others for we are the American people and the American way is our way.

To solve the problems of others and of America a man must first know the facts and he must think about them. He can solve his problems and the problems of others not by what he has read, nor heard, nor what has been written by others but by what he thinks.

It is the opinion of many that too much emphasis is put on textbook knowledge. Many students today are at a loss when they graduate because they know only dates and names but they don't know enough about current controversial issues. The question then arises—should more emphasis be placed on controversial subjects. Controversial subjects are to form inquiring attitudes and to force the student to think independently. The student should have a factual background but he should go further in research before being able to make judgments and before forming any opinions. Before reaching a conclusion he should weigh the evidence. All this would be his own work and more knowledge would be gained by this type of education. Some of the controversial issues could be the press and the question of its printed truth, religious education in public schools or science such as the atomic problem, evolution, and interplanetary studies.

All this could improve education which in turn would improve the students who are future Americans. These students shall then be molded into the people who will shape America. What they accomplish and the way they accomplish it will be the American way.

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

(By Marilyn Bachman, Marion, Ohio)

Since 1789 the United States has had a democratic government under our great Constitution of the United States. Our democracy and our way of life have been defined as our respect for personality, our faith in education, our capitalistic system of business, our civil liberty, the personal freedoms and equality of status that we enjoy, our democratic institutions, and, best of all, the political democracy of our government.

Our country has learned because of its faith in education, that it can be an important factor in keeping a country democratic. Our schools, colleges, and universities through their American Government and political-science departments have taught young Americans to appreciate their Government and take an active interest in keeping it democratic.

Our capitalistic business system has no equal in the world today. The one way we can keep this great system is to promote good, clean, honest competition and free enterprise.

In no other country in the world do people enjoy as much personal freedom and equality of the masses as in the United States of America. We have been and will only be able to keep this freedom by respecting our Government and its laws and by not infringing upon the rights of our neighbors. All the people in this country stand on the same level while in some countries, India, for example, a caste system is still in practice although the government is trying to destroy it.

One of the keys to the understanding of democracy is found in our great respect for the human personality. This respect is dated from the Declaration of Independence which states "that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." We have extended this respect to every member of this democratic society of ours without regard to his birth, wealth, or social position.

Our civil liberties—freedom of religious worship, speech, assembly, press, and the right of petition—have been guaranteed to all. It is not only our privilege but our duty to exercise these rights to the fullest degree. A well-informed citizenry should be encouraged because our method of democracy depends on this very thing. It has been said by the late Justice Holmes that "the best test of truth is its ability to gain acceptance in the market place of ideas.

"The government of a democracy is at the same time the servant of the people, the guarantor of their liberties, and the agency for the advancement of public ends." Democratic control in the United States is exercised through universal suffrage and the active participation in the government of those who are being governed. Some of the political instruments used in our country are: The Constitution, regular elections, the secret ballot, proportional representation, the "check and balance" system, and many others.

I think that we can improve our democracy by exercising our privilege of voting, having a better informed public, promoting honest competition and free enterprise, by removing the racial discrimination in this country, and by improving our educational system constantly.

Israel's Second Anniversary of Independence

REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, the State of Israel is now celebrating the festival of the second year of its independence. Those of us in the United States who have helped the Jewish cause in Palestine before the Jewish state came into being and also during the 2 years of its existence, are very happy on this aniversary of the rebirth of Israel.

Israel is still beset by many and difficult problems and still faces a long and hard road ahead. There are problems in absorbing and integrating the new immigrants which have been coming into Israel at the rate of about 200,000 per year. There are problems in connection with the economy of the country and standard of living of its people.

The most important problems however, at the moment, are the peace and security of the new Jewish state in the Middle East. Because of the intransigence of certain Arab leaders, Israel feels that its independence and its very existence is now being threatened. These Arab leaders have for some time been issuing threatening statements calling for a war of revenge against the State of Israel. When one of the Arab countries, Israel's immediate neighbor to the east, Jordan, recently entered into negotiations with Israel for a permanent peace settlement, the Arab League adopted a resolution forbidding its members to conduct individual peace negotiations with Israel.

While these threats on the part of the Arabs and their success in breaking up the peace efforts in the Middle East continue, Great Britain has been shipping large supplies of arms to Egypt and other Arab countries in recent months. According to the British, such heavy arms as jet planes, Sherman tanks, and heavy artillery are needed for maintaining internal order in the Arab countries.

When the attention of our State Department was drawn to the fact that large-scale shipments of heavy arms are going from Britain to the Arab countries, we were given the assurance that these arms are not intended for a renewal of hostilities against Israel. It is difficult to understand the reasoning in this case by our officials when we note how reluctant the Arab states are to discuss peace with Israel and how threatening their general attitude has become of late.

Arming the Arab States is not the way toward peace in the Middle East—and peace is what the United States desires most in that area at this crucial hour in world affairs. It should be the policy of our country to make clear to Great Britain and to the Arab countries that we cannot afford new bloodshed and turmoil in the Middle East, and that we cannot tolerate any aggressive acts against any country in the Middle East.

By so doing we shall, at the same time, assure Israel's independence and future existence. I am happy to extend my good wishes and felicitations to the people of Israel on their anniversary and to the Jews of America who join them in this celebration.

Declaration of the Israel Government on Second Anniversary of Israel's Independence

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of the House the following declaration of the

Israel Government on the second anniversary of its independence:

DECLARATION OF THE ISRAEL GOVERNMENT ON SECOND ANNIVERSARY OF ISRAEL'S INDEPENDENCE

A year of war, heroism, and victory during which the young Israel Defense Army withstood and overcame the armies of the Arab States—such was our first year of freedom. In the second year we were faced with the first phase of the realization of the ingathering of the exiles and the building and development of enterprises on a scale at a rate far greater than anything we had previously experienced since the beginning of our resettlement 75 years ago.

Nearly 400,000 immigrants have arrived in Israel since the establishment of the state.

In the past year the last Jew stepped out of the Nazi hell camps and the majority of Jewish refugees from the displaced persons camps in Germany, Austria, and Italy were absorbed in the homeland. The remnants of the dispersion in some European countries where our people were threatened with national extinction have been liquidated. The most ancient, oppressed of the Diasporas in the Arab world, Yemen, is in the process of liquidation.

More than 130 new settlements were established this year throughout the length and breadth of the state. More than 30,000 immigrants from many countries rooted themselves in the soil in various forms of agricultural settlements. An additional 50,000 children entered educational institutions in the state. More than 25,000 housing units for immigrants were built in all parts of the country.

During the year energetic measures were taken for strengthening our security and our defense forces; for the development of the state's democratic institutions and the realization of civic equality without discrimination against community or race; for the continual reduction of the cost of living; expansion of markets; increased labor proficiency; improvements in the quality of our products; full employment; increased industrial production; development of workshops and handicrafts; maintenance of an appropriate standard of living.

Israel was accepted by the United Nations organization during the year as a sovereign state with equal rights and duties in the family of nations; in the concert of nations, Israel's independent voice was heard for the first time in our history, speaking for the safeguarding of peace and the extension of justice throughout the world.

However, the road ahead is still long and hard.

Our enemies and opponents continue to threaten us, our very existence, our independence, and the borders of our state. The fate of world peace still hangs in the balance. The great majority of our people are still on foreign soil, many of them subject to racial hatred and spiritual extinction. Ninety thousand immigrants still live in camps in the homeland itself, not yet integrated into the framework of the productivity and national economy of our state. Our liberated homeland remains largely barren and wasteland, our national economy unstable, the volume of our imports greatly outweighing exports, and we are dependent on foreign currency products. We are still being weakened and divided by tendencies of lawlessness and division, fruits of dispersion and lack of independence.

But the toil of three pioneering generations was not in vain and we are privileged to witness the beginnings of deliverance. Let us rejoice in our festival of independence and let us gather our strength to realize fully and completely the vision of our deliverance.

Address by Hon. James M. Mead

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by the Honorable James M. Mead delivered to the Harvard Club, Washington, D. C., at the Army-Navy Club of Washington, on April 15, 1950, with an introduction by President John H. Pratt, of the Washington, D. C., Harvard Club:

INTRODUCTION BY JOHN H. PRATT

Gentleman of the Harvard Club of Washington and guests, this will be the last meeting of our club until the beginning of the fall season which we will inaugurate either during the latter part of September or the first part of October.

It is always proper and fitting that our sessions should end on a very high note. We have had many able and distinguished speakers who have addressed us each Saturday for the last few months, and now we have saved for the last one of our very best speakers.

Our guest today has had a long and distinguished career. He has served his State and Nation faithfully and well. He began his active life in the railroad service and there he learned to fully appreciate and evaluate the problems which beset those who toil. As a result, throughout his entire political career he has always been a champion of the rights of the common man, as distinguished from those who have received or desire special privileges.

He served for a number of years in the Congress of the United States as Representative from the Buffalo, N. Y., district.

Then he became a member of the United States Senate from the State of New York, and as such, was a member of the so-called Truman committee which investigated war frauds. Upon the elevation of President Truman to the Vice Presidency of the United States, our speaker succeeded him as chairman of that most important committee. The work which he did in this position was most outstanding. Due to the irrefutable evidence which his committee unearthed, men in high places were convicted of fraud; furthermore, millions of dollars were saved our Government by the tireless efforts of our speaker and his committee.

Our speaker is now a member of the Federal Trade Commission and, although he has held this position but a short time, his indefatigable efforts, keen insight into the problem before the Commission, and his balanced judgment have made him a most valuable member to this great governmental agency.

It is with much pleasure and honor that I present to you the Honorable James M. Mead, of the Federal Trade Commission, who will speak to us on the Federal Trade Commission and the prevention of unfair business practices.

ADDRESS BY HON. JAMES M. MEAD

THE FEDERAL TRADE COMMISSION AND THE PREVENTION OF UNFAIR BUSINESS PRACTICES

Mr. President and members of the Harvard Club of Washington, there is an old proverb to the effect that an ounce of prevention is worth a pound of cure. I shall talk to you today for a few minutes on the ways and means the Federal Trade Commission uses its ounce of prevention in the protection of free and fair competition in these United States. I think that the subject is important because the continued existence of civilization, as we know it, depends upon the strength of our domestic economy. The measure of the vigor of our economy is the extent of the freedom from unfair restraints enjoyed by the competitive forces of such economy. The prevention of such unfair restraints is the business of the Federal Trade Commission.

President Woodrow Wilson is one of the great statesmen and political philosophers of the twentieth century. After World War I it was his firm conviction that an effective league of nations would prevent future wars and permit the nations of the world to live at peace with their neighbors. It was his thought that when men of good will meet at the conference table and discuss their problems the result will be peace, and understanding. That dream would be true today if the representatives of the nations that sit at the international conference table were all men of good will.

The League of Nations was Woodrow Wilson's dream for the prevention of war. President Wilson had another dream and that was the prevention of monopoly, restraints of trade and the other unfair business practices which disrupt our domestic economy as wars disrupt the international economy. In 1913, President Wilson recommended to Congress that an Interstate Trade Commission be established. He stated in part in that message and I quote:

"The opinion of the country would instantly approve of such a Commission. It would not wish to see it empowered to make terms with monopoly or in any sort to assume control of business, as if the Government made itself responsible. It demands such a Commission only as an indispensable instrument of information and publicity, as a clearing house for the facts by which both the public mind and the managers of great business undertakings shall be guided, and as an instrumentality for doing justice to business where the processes of the courts or the natural forces of correction outside the courts are inadequate to adjust the remedy to the wrong in a way that will meet all the equities and circumstances of the case."

I should like to emphasize the President's words when he said that the Commission should be a "clearing house for the facts by which both the public mind and the managers of great business undertakings shall be guided." In 1914, Congress delegated to the Federal Trade Commission the authority in the field of unfair trade practices in interstate commerce to procure the facts and to keep the Congress, business, and the people advised so that disruptive influences of unfair restraints on commerce may whenever practicable be prevented.

In connection with the power of the Commission to make investigations and procure factual data Mr. Justice Jackson in an opinion recently delivered in *U. S.* v. *Morton Salt Company*, stated in reference to the investigatory powers of the Commission as follows:

"The only power that is involved here is the power to get information from those who best can give it and who are most interested in not doing so. Because judicial power is reluctant if not unable to summon evidence until it is shown to be relevant to issues in litigation, it does not follow that an administrative agency charged with seeing that the laws are enforced may not have and exercise powers of original inquiry. It has a power of inquisition, if one chooses to call it that, which is not derived from the judicial function. It is more analogous to the grand jury, which does not depend on a case or controversy for power to get evidence but can investigate merely on suspicion that the law is being violated, or even

just because it wants assurance that it is not. When investigative and accusatory duties are delegated by statute to an administrative body, it, too, may take steps to inform itself as to whether there is probable violation of the law."

When Mr. Justice Jackson compared the Commission to a grand jury he was speaking of the grand jury's power to investigate. In that field I believe the Commission has a great opportunity in this changing world. In the past it was an investigation made by the Commission of the meat packing industry and the report to Congress thereon that was largely responsible for the enactment by Congress of the Packers and Stock Yards Act. The utility investigation by the Commission and the report to Congress thereon was greatly responsible for the enactment of the Securities and Exchange Commission Act. These are preventive measures, that is, they prevent unfair restraints on our commerce rather than attempt to cure a disease.

Someone has said, "Preventives of evil are far better than remedies; cheaper and easier of application, and sure in result."

Mr. Justice Brandeis in a Commission case (*FTC* v. *Gratz* (253 U. S. 241)) decided in 1920, said that the Federal Trade Commission Act "undertook to preserve competition" and "the task of the Commission was to protect competitive business from further inroads by monopoly." He further stated that the Commission's "purpose in respect to restraints of trade was prevention of diseased business conditions, not cure."

The preventive measures of the Commission can be divided into general classifications, (1) the formal litigated cases; and (2) the informal cooperative proceedings and the economic reports.

The litigated cases are those instances in which the Commission, after the issuance of a complaint and subsequent hearings, issues its order requiring the party or parties to cease and desist from particular illegal practices. This is a very important part of the Commisson's work and is essential to balanced law enforcement. There always have been and perhaps always will be those who must be ordered to comply with the law and there must be sanctions to back up those orders. The Congress recently amended the Federal Trade Commission Act so as to make violations of Commission orders to cease and desist issued pursuant to such act subject to a civil penalty of $5,000 for each day of violation which continues over a period of time. This amendment puts more effective teeth into our legal, formal preventive machinery.

However, I want to emphasize our cooperative, informative, preventive procedures. Briefly, in addition to the economic reports which I have mentioned, these are the trade practice conference rules and the informal stipulations to cease and desist.

The trade practice conference procedure is unique in the history of law enforcement and has been developed by the Commission as a result of its many years of experience. Pursuant to this procedure members of an entire industry meet in conference under the supervision of the Commission for the purpose of drafting rules for the prevention of unfair practices by a whole industry and by the individual members as well. This concept is based on the same general theory as President Wilson's League of Nations and the present United Nations, and that is, when men of good will meet under proper guidance to discuss their problems, the result will be good for themselves and good for all of the people.

The possibilities of education and information in the use of these trade practice rules are great. The large corporations employ skilled attorneys to keep them abreast of the laws and decisions relative to unfair trade practices. The small-business man cannot afford this expense. Many of these small-business men have only a vague idea as to the functions and decisions of the Federal Trade Commission. The trade practice conference rules, however, expressed in terms of the nomenclature and the particular problems of the small-business man's industry supplies these individuals with valuable guides as to their own future practices. The effect of these rules in informing the businessmen and as a result in preventing unfair practices is immeasurable.

The rules are particularly valuable in establishing standards of nomenclature in an industry. To use a simple illustration, you have frequently seen shock-resistant watches advertised. Have you ever stopped to think what is the test of whether or not a watch is shock-resistant? Many honest manufacturers differed. The Commission held a trade-practice conference for the watchcase industry and among other problems this question of shock-resistant was settled. You will be interested in the result. Obviously in this industry the term "shock resistant" was not being used in an absolute sense. A watch suitable for ordinary uses would not withstand the shock of being dropped from the top of the Washington Monument. A shock-resistant watch however should withstand the shock of ordinary accidents, such as being dropped from a table. The ordinary table or desk is 3 feet high. So the test now used by the watch industry as to whether or not a watch is shock-resistant is: Will it withstand the shock of being dropped 3 feet from the top of the ordinary desk or table. The trade-practices rules so provided. It sounds very simple but it also makes common sense. It also settled a very troublesome question in the watchcase industry and gives the consumer deserved protection.

Another very useful procedure used by the Commission in preventing unfair practices is the acceptance of informal stipulation agreements from advertisers. In these informal stipulations the advertiser agrees to discontinue using certain false or deceptive advertisements. The lifeblood of our complex economy is advertising. With it we are informed of the wares of manufacturers in the 48 States and throughout the world. Without it our knowledge of commodities would be drastically limited to word-of-mouth information and would result in a much lower standard of living. To be socially and economically useful, advertising must be truthful. The Commission strives to keep it so.

Disraeli, the great English statesman, said that "Justice is truth in action." In the fields of law and economics, truth is facts, properly evaluated.

The basic concept of the Federal Trade Commission Act is that by the use of economic and legal procedures the Commission could gather, properly evaluate, and put facts into action and thereby prevent unfair restraints on our domestic economy. The Commission believes that we are fulfilling this concept, and as a result are serving the ends of justice.

With varied forms of socialism in recent years supplanting much of the system of private enterprise in the free nations of the Old World as well as in the lands down under—with the economic system of all the nations behind the iron curtain yielding rapidly to the Marxian philosophy of totalitarian rule, we must put our own economic house in order—keep it in order—and hasten the day when our economic and our political systems will prevail throughout the world and men everywhere will be free.

The UN After 5 Years

EXTENSION OF REMARKS
OF
HON. JAY LeFEVRE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. LEFEVRE. Mr. Speaker, under leave to extend by remarks in the RECORD, I include an article by John G. Rogers which appeared in Sunday's New York Herald Tribune.

Mr. Speaker, I think it is timely that we take inventory on what has been accomplished by the United Nations. When forming this organization 5 years ago, it was the hope of the American people that the United Nations would be the medium through which we would obtain universal and enduring peace. I think the average man is beginning to wonder whether this organization is effective and whether it will ever be able to accomplish the real purpose for which it was set up. Surely we all want universal peace and if the United Nations, because of the veto power, cannot function to this end, we should either make an effort to reorganize the UN or make a fresh start with a new workable set of rules.

The editorial follows:

THE UN AFTER 5 YEARS—CONFLICT OF RUSSIA AND WEST CONFRONTS WORLD AGENCY WITH LIFE-OR-DEATH CRISIS

(By John G. Rogers)

LAKE SUCCESS.—On April 25, 1945, the San Francisco Conference of 50 countries opened to give birth to the United Nations. Today, 5 years later, many a dream that soared at San Francisco has been roughly shattered and the UN is sprinkled with empty chairs—symbols of the Soviet walk-outs and the world's big political trouble, the Russian-Western split.

Today, 5 years later, Secretary General Trygve Lie is en route to Europe, and probably to Moscow, and the obsession of his mind is how to revitalize or save the UN. Today, 5 years later, even thoughtful and conservative UN delegates sometimes discuss the possibility that they are now witnessing the last days of the UN as it originally was meant to be.

How did it all happen?

The West says that Russian imperialism and refusal to be a friendly member of the world family is almost the entire cause. The Soviet Union says the cause is American imperialism and determination to use the UN only for its own purposes.

What can be done about it?

The UN itself probably can't do anything directly, or immediately, because the UN is no longer the big show in the political field. The big show is the one that has Washington and Moscow in the leading roles, one as hero and the other as villain, depending on how you look at it. In this imagery, the UN has the role of mutual friend, trying somewhat desperately to bring the hero and the villain into calm negotiation before a final curtain drops.

The converted Sperry gyroscope factory at Lake Success is the home of this mutual friend. The fact that this home exists as a possible place to bring the hero and the villain into negotiations is the UN's principal importance today with regard to the world's biggest political trouble.

Against this background, Secretary-General Lie is an interesting figure these days. The big, broad Norwegian, who used to be a labor lawyer, has leaped abruptly out of the role of mere administrator, to which he has more or less confined himself since 1946, and is attempting to use whatever influence he has directly in the political field to promote Russian-western negotiations.

He is now on the high seas headed for Europe. Just before he sailed, he went to Washington and told President Truman exactly how he thought things stand today, and then he undoubtedly asked the President for a similar estimate. Soon Mr. Lie will conduct the same business with Great Britain's Prime Minister Clement R. Attlee and French Premier Georges Bidault.

Then, he will decide while in Europe whether to go on to Moscow and go through the same routine with Soviet Foreign Minister Andrei Y. Vishinsky and perhaps Marshal Josef Stalin, if he is available.

Mr. Lie says that if he does accomplish anything, the results won't become apparent immediately. By this he means that the very most he can hope for at the moment is to establish some groundwork, to plant some seeds that may flower into negotiations later.

When he returns, in mid-May or later, Lake Success will be able to make a fresh appraisal of the chances of diminishing the cold war. Mr. Lie usually keeps his own counsel on details of his conversations with governments, but he has no poker face and is always ready to tell truthfully whether his spirits are up or down. In this, he is a sort of human barometer of the world political outlook at any given time.

On any issue subject to the Russian-western controversy, there is not much to cheer about in the UN record of the last 5 years. Stalemate or walk-out or boycott or propaganda ad nauseum runs through this part of the record like muddy feet on a clean floor.

But you don't have to be a blind worshiper of the UN to find elsewhere in the record a good deal to cheer about. The UN stopped a war in Kashmir, between India and Pakistan, and has now persuaded the two to accept new mediation in the matter. The UN helped to goad the Dutch into an Indonesian settlement, and it was a referee that contained the Palestine war and then negotiated an armistice. UN pressure or surveillance probably helped to head off Communist grabs in Iran, Greece, and Korea.

On the social and economic side, the UN and its specialized agencies have scored big specific victories as well as done slow, plodding work with results to show clearly in years ahead. Mass feeding of children around the world, and mass care for Arab refugees made homeless in the Palestine war—these UN charities used some $200,000,000. A cholera plague was killed in Egypt. Fellowship exchanges are training new experts for a score of countries. Farmers get better seeds through the UN.

More than 725,000 European displaced persons got new homes overseas through UN efforts. Ecuador's earthquake area received emergency UN aid. The UN saves millions of cattle through inoculation for disease. Long-term projects are teaching backward countries how to develop their own resources. Two former Italian colonies in Africa are on the road to independence, and the UN is studying the future of a third. Nine new countries have joined the UN since San Francisco. Fourteen more are beating on the door, hoping the Russian western split will abate and let them in.

The UN trusteeship system keeps a sharp eye on the welfare of millions of persons living in non-self-governing areas.

The UN is justified in being proud of all of this. Taking the story back to the political field, this correspondent knows a man with faith in the UN who tells the following story:

A vaudeville performer was auditioning for a bored theatrical agent. The performer began by taking off from the stage and flying all around the theater and finally gliding back to a perfect landing on the stage. The bored agent said, "O. K., so you imitate birds. What else can you do?"

Too many people, according to the man telling this story, say coldly to the UN, "O. K., so you can stop little wars. What else can you do?"

Regulation of the Motion-Picture Industry

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me regarding an invitation by the senior Senator from Colorado [Mr. JOHNSON], chairman of the Senate Committee on Interstate and Foreign Commerce, to appear before the committee and testify.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

A RESPONSE TO SENATOR JOHNSON'S ILLUMINATING LETTER: ACCEPTANCE OF INVITATION TO TESTIFY BEFORE SENATE COMMERCE COMMITTEE

It is always a pleasure to hear from the distinguished senior Senator from Colorado [Mr. JOHNSON], the able chairman of the Senate Interstate Commerce Committee. In the case of his "love note" of April 24, I found his comments more entertaining than quite a few motion pictures. He has a wonderful sense of humor, and I wish he would use it in approaching this problem.

Let me make the following points:

I SHALL BE HAPPY TO TESTIFY FOR FREEDOM

1. I shall be happy to testify before the Senate Interstate Commerce Committee, accepting his invitation to be the initial witness in defense of the freedom, not just of the motion picture industry, but the freedom of America's press against any gestapo or OGPU police-state system that anybody anywhere ever proposes.

2. I am delighted to see that Senator JOHNSON recognizes that "Federal censorship is not the most desirable answer." That is however, the most gigantic understatement I have read in a long time. Federal censorship is not only not the most desirable answer; it is no American answer whatsoever. Coloradans whom Senator JOHNSON so well represents prize their freedom as much or more than any other Americans, and the good people of Colorado (or for that matter, Wisconsin) do not need any gestapo censorship over what they read, what they see, what they hear.

WILL JOHNSON'S ALTERNATIVES BE CONSTITUTIONAL?

3. I hope that Senator JOHNSON'S alternative suggestions will indeed fulfill his statement as to legality and constitutionality—not infringing the freedoms guaranteed by the Constitution and the Bill of Rights.

4. As a United States Senator, I say and I think the American people will agree, that as former chairman of the Senate Judiciary Committee, and now its ranking Republican member, I have a particularly strong responsibility to speak out against unconstitutional, illegal methods which would violate the Constitution and the Bill of Rights. I have a right to fight Senator JOHNSON'S cure-all, which is worse than the disease.

Immorality in motion-picture actors or anyone else is, of course, a shocking matter; it is no laughing matter. So Senator JOHNSON'S ideas have on their face a valid objective. In other words, the objective of promoting the highest possible morality, curbing juvenile delinquency, etc., is one that I completely share. As conveyed in my two statements in the CONGRESSIONAL RECORD, I do not condone for 1 second immoral conduct, the breaking of the laws of God and man, or the commercialization of sin by disgusting, suggestive advertising.

However, I do not believe in anyone's misleading the American public into believing that there is allegedly nothing but sin in Hollywood. I will fight such a misleading propaganda drive just as for 12 years I have fought the phony notion that there is nothing but sin in Washington. Within the past several years a couple of Members of Congress have been convicted of illegal actions. But that is no reason why 531 Congressmen and Senators should be licensed, any more than movie actors should be licensed because of the sin of one or two disgraceful members of their profession. A United States Army general was convicted of breaking the law, but shall we therefore license every Army officer? Of course not.

5. My major aim has been to have the Congress concentrate on two great objectives in these challenging times:

CONGRESS SHOULD NOT PIDDLE ITS ENERGIES ON TANGENTS

(a) Preservation of America's internal and external security. The Constitution has given us the responsibility of promoting the national defense and it seems to me that any side excursions on all sorts of miscellaneous tangents at this time—tangents which can be best handled by the good sense of the American people and the able leadership of our churches—these legislative excursions are taking our eye off the main issue of our times.

We are in a cold war throughout the world, and unless we win it, we may be in a hot war; God forbid. Why then should we piddle our energies away on matters which can best be handled by private American citizens and their church leaders with the cooperation of such great voluntary organizations as the Legion of Decency?

(b) Our second great objective is to maintain America's checks and balances in Government and its freedom against every form of "ism." The lights of freedom are going out all over the world. As I proved in the legal brief placed in the CONGRESSIONAL RECORD on April 20, the licensing bill which Senator JOHNSON unfortunately introduced does the following:

HOW JOHNSON BILL VIOLATES UNITED STATES TRADITION

1. It would violate the first amendment to the Constitution.

2. It would violate the fifth amendment to the Constitution.

3. It would violate the sixth amendment to the Constitution.

4. It would constitute a bill of attainder because it is directed against a specific profession by requiring licensing of actors and producers. If Senator JOHNSON will look at the Bill of Rights, he will note that bills of attainder were prohibited by our founding fathers.

5. It constitutes an ex post facto law—another specific prohibition of the Constitution because it makes folks susceptible to an extra punishment which was not on the statute books at the time of the alleged commission of their misdeeds.

I am sure that our newspapers in particular, will not agree in this instance with

the distinguished Senator from Colorado because no American journalist would want to see any element of freedom of the press adversely affected. As pointed out in my legal brief, the Supreme Court in 1946 held:

"We have no doubt that motion pictures like newspapers and radios are included in the press, whose freedom is guaranteed by the first amendment."

UNCLE JOE STALIN RUBS HIS HANDS IN GLEE

Not only, therefore, does a gestapo licensing system violate the very freedoms which 440,000 Americans died in two world wars to preserve, but such licensing would cripple the very industry on whom we are placing a heavy reliance to win the cold war. Uncle Joe Stalin must be rubbing his hands with glee at the prospect that we in Congress might conceivably shackle the very industry that he fears most.

American motion pictures have brilliantly shown the world that we have shoes on our feet, autos in our garages, warm clothes on our backs, decent homes in which to live, wholesome food to eat, churches to worship in free, newspapers to read, radios to listen to, and freedom to grow.

The Protestant, Catholic, and Jewish churches of America prize the dignity of the individual—his freedom to grow. Let not the Congress take any action which threatens man's dignity and freedom under any guise.

Soil Conservation Districts Are Democracy at Grass Roots

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the April 21 issue of the San Marcos Record.

This editorial was published in central Texas, in an area that is ably served in its conservation work by the Guadalupe-Blanco River Authority. It applies equally, however, to the same important work being done throughout Texas, calling attention to an effective and efficient operation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOIL CONSERVATION DISTRICTS ARE DEMOCRACY AT GRASS ROOTS

Soil conservation districts are democracy at the grass roots. That is why so many Texans are becoming more and more interested in them.

In these days of increasing governmental regulations, it is important for everyone—farmers, ranchers, and businessmen—to understand what districts are, who runs them, and what they do. It is easy to confuse them with one of the other agencies of the Department of Agriculture.

Under Texas law, soil conservation districts were organized by vote of the local landowning farmers and ranchers. They are run by their supervisors, who must be local, resident landowning farmers and ranchers elected to office by their neighbors. With no powers of taxation nor eminent domain, the supervisors' responsibility is to coordinate all efforts, public and private, to the soil conservation task. This coordinated effort is first developed on a district-wide basis by the local people themselves.

In every one of Texas' now 156 districts, covering nearly 90 percent of the State, there are programs and plans of work, developed and written by the home folks. They serve as a guide to each district's operation.

With its program and plan of work as a basis for action, the district's board of supervisors is ready to go to work. As a rule, all State and Federal agricultural agencies pledge their cooperation to the supervisors. The extension service and the department of vocational agriculture have a big educational job. PMA payments help landowners pay part of the costs of soil conservation. The technicians of the United States Soil Conservation Service, cooperating with the supervisors, make detailed farm and ranch conservation plans with the local operators on farms and ranches as directed by the district supervisors.

These farm and ranch conservation plans are the key to what many call the new agriculture. They are developed with the owner to suit his operating needs as well as those of the land. When all the planning is over, the results are put on paper, with a map, and all details are then agreed to by the owner and the board of supervisors.

Operating in accordance with these plans, farmers and ranchers are discovering that it pays to treat the land according to its needs and use it according to its capabilities. Production per acre rises and unit production costs are lower. Owners find, too, that crops are higher in quality.

These are things that consumers in general and all businessmen can understand.

Soil Conservation District Week—May 15 to 21—will give all Texans an opportunity to learn about this program of grass roots democracy that is going on in their midst.

Doff Your Hat to the Commies

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. SADLAK. Mr. Speaker, whether we like it or not, the fact of the matter is that we are literally taking our hats off to the Communists in this bloodless phase of the realistically cold contest of ideologies or what have you, and we are losing our shirts in the process.

With seemingly complete unconcern the administration travels its self-prescribed road of giving the jobs of American workers to slave labor corralled behind the impenetrable wall of Russian domination. The lower-tariff policy to which the administration is so rabidly addicted is gradually, but thoroughly, snuffing out our industries while helping to build those of an avowed and relentless enemy of the good old American system.

Has all semblance of sanity left the administration policy makers or is it just the endless chain of a program initiated by New Dealers to continue all possible assistance to Russia and her satellites without regard to the price being paid by American workers and the Nation as a whole? The powers in the majority are inclined to dismiss lightly this far-reaching and all-inclusive impact upon the Nation. They do not seem to grasp the meaning of the predicament in which they have placed both the American industry and its greatest mainstay—the American worker. Upon the manufacturer there has been placed the ever-present and ominous burden of bankruptcy; upon the worker the cruel and inevitable dislodgment from employment which is in turn followed by needless hardship for the family that he is so earnestly trying to bring up in the tradition of the American way.

The proponents of "gimme and give away" are guilty of a shameless take-away that is robbing our workers of their jobs.

In reply to the rising tide of protests against the current tariff policy which is killing the workers' opportunity to earn their bread, the administration is saying, in effect, "let 'em eat cake"—subsidized cake, that is, in the form of larger and more extensive unemployment compensation benefits. A more clearly obvious cover up could scarcely be imagined.

Each passing day sees newer signs of awakening by all segments of the populace to the folly indulged in by the administration in connection with its foreign trade hodgepodge.

Under leave to extend my remarks I should like to have included in the RECORD an editorial from the columns of the Catholic Transcript, Connecticut, of April 20, 1950, which sets forth some vital thoughts on this subject and certainly warrants wide and attentive perusal:

ABSURD AND INTOLERABLE

On Sunday the New York Herald Tribune publicized a situation which for some time has puzzled and troubled citizens of Connecticut. The metropolitan paper took a look at the city of Danbury, so many of whose people depend for their livelihood on the hat-making business. That business is not flourishing just now, with the result that large numbers of Danbury residents are either wholly unemployed or employed but part time. The effect of this condition is felt by the entire community and indeed has State and national repercussions, so close-knit is our economy.

One of the most frequently cited and strongly stressed causes of the unemployment in Danbury is unfair competition from hats made in Communist-run Czechoslovakia. These are brought into the United States in great quantity and undersell the domestic products. Where Danbury-made hats are priced to New York milliners at $25 to $30 a dozen, hats from Czechoslovakia are available to these milliners at $15 to $20 a dozen. And where hat imports from Czechoslovakia were in the amount of almost $41,000 in 1946, they jumped to the amount of almost $1,200,000 in 1949—an astronomical increase.

It is notorious that, wherever the Communists are in control, slave labor is the rule. This has been proved beyond the possibility of refutation: That slave labor is a fundamental and permanent feature of Communist economy, the very basis of that economy. The hats from Czechoslovakia can be sold for so little because made by captive and exploited labor. It is equally notorious that the warfare to the death which the Kremlin, with mastery over Czechoslovakia, is waging against the west and principally against the United States as the mainstay of the west, is ruthlessly fought with every

sort of weapon, the economic no less than the military and the political. It should, then, be just as notorious that the hats dumped into our market by Communist-run Czechoslovakia are a potent weapon for the Kremlin.

How? For one thing, the sharp decline in employment in Danbury means a sharp decline in taxes collected by the Federal Government; for example, income taxes. Taxes, that is, which are urgently required to finance the expensive programs both for national defense and for economic and arms assistance to the European nations on which we depend for containment of the Communist tide. Cudgel our brains though we will, we cannot see the tiniest grain of common sense in taking bread and butter out of the mouths of Americans and drying up a source of much needed Federal revenue, in order to give dollars to a member of the iron curtain bloc which aims at our defeat and extinction. This strikes us as a roaring absurdity.

For another thing, it is the dearest wish of the Kremlin that there be depression and discontent in the United States. Some measure of the first can already be seen in Danbury. The second is not yet noticeable on any big scale. But it could easily and quickly develop. Why anything of the sort should be tolerated when it stems from a readily curable condition of benefit only to the Kremlin, we cannot make out. It is a baffling mystery.

Danbury's troubles may not be exclusively attributable to the importing of hats from a Communist-run country, which is in effect an enemy country in the cold war, but they are unquestionably in part attributable to it. Sanity requires that this condition be righted, and at once.

The Guatemala Problem

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 16, 1950:

THE GUATEMALA PROBLEM

Guatemala, one of the three problem children of the Caribbean who are already under formal reproof by the Council of the Organization of American States, has chosen to call attention to its backward political affairs in a curiously (and one would suppose unnecessarily) dramatic way. The American Ambassador, Mr. Richard C. Patterson, Jr., arrived in Washington at the end of March for a medical examination. It then appeared that some days before Guatemala had asked for his recall; the request had been an oral one, delivered through the Guatemalan Ambassador in Washington, without bill of particulars, and in what has been described as a friendly manner. But it was surrounded with rumor and allegation—that Ambassador Patterson's life was in danger, that he was interfering in domestic politics, that he was conducting a defamatory campaign against Guatemalan institutions, and so on—all seemingly generated out of the hot politics of Guatemala's current presidential maneuverings.

The State Department has properly and gravely rejected these unsustained oral representations; the Embassy at Guatemala City remains in the hands of a competent chargé and Ambassador Patterson remains, ostensibly at least, in the hands of the doctors. But American opinion, meanwhile, may well have been stirred to take a look at the Guatemalan institutions which the Ambassador is said to have attacked. It may, for example, look up the recent series of articles in which Mr. Fitzhugh Turner, a correspondent for this newspaper, described what is actually going on there. It was a reasonably complete and convincing picture of a small and potentially enormously wealthy country in the hands of a group of Leftist politicians, who have allowed their ranks to be heavily infiltrated by Communist sloganeers if not actually Moscow Communists, working up a fine little dictatorship of the officeholders on the well-tried basic recipe of battling Yanqui imperialism.

Along with this there goes an amount of assassination, filibustering and armed revolution which one once associated only with "banana republics" and which would seem to return Guatemala to that invidious and elsewhere forgotten classification. The United States could, of course, react against the insults which President Arevalo's regime, adopting the manners and the vocabulary of the Kremlin, has been flinging in this direction. We could dismiss the Guatemalan Ambassador, close our embassy in Guatemala City, remove the numerous missions which are trying to bring economic and educational progress to the little country, and so on. It is doubtful whether the situation either calls for or would be served by such a course. The Guatemalan regime is convicting itself sufficiently of backwardness and rudeness; and it is hardly necessary for the United States to provide its politicians with the electoral issues for which they seem so eager. The Organization of American States is certainly competent to deal with any practical issues that may arise. If the Guatemalan politicians meanwhile want to conduct themselves like a "banana republic" then a "banana republic" is what their country will become.

Regulatory Madness

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, during the recent debate in the Senate on amendments to the Natural Gas Act, much was said about the role New England will play in the future of the growing natural gas industry.

Recently the Boston Herald, one of the outstanding newspapers of New England, published a very persuasive editorial discussing the fate of the Kerr bill. I ask unanimous consent that this editorial be included in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REGULATORY MADNESS

President Truman by his veto of the Kerr bill declares for price control of natural gas. We shall soon have price control of coal. But while gas is to be controlled down, coal is to be controlled up. The Kilgore bill would prop prices for soft coal. The Kerr bill veto will permit the Federal Power Commission to hold down the price of gas. Two competing fuels, one regulated up and the other down.

Has Mr. Truman taken the right road to cheaper natural gas by his veto? Has he frustrated the wild plans of Oklahoma and Texas multimillionaires to live off 12,000,000 housewives with scanty pocketbooks, as the "liberal" Senator DOUGLAS contends?

We cannot believe anyone who says he certainly has or he certainly hasn't, for the economics are not that simple. But here are a few facts that make Mr. Truman's position seem more glittering than sound.

The price of natural gas, like oil and coal, is now unregulated. The FPC regulates the pipe lines that carry the gas and also the companies that both produce gas and operate the lines. But the 86 percent of the gas that is produced by the independent companies has been unregulated, and the Kerr bill would have insured that it remained so, against an evident intention of the FPC to take over control. So, if Congress sustains the veto, as seems likely, we shall have all gas going into interstate commerce regulated.

Mr. Truman fears a monopoly because once a pipe-line company builds to a gas field it has to take the prices set by the owner of that field, since pipe lines can't be shifted easily. Result, he implies, would be rocketing prices.

But someone didn't fully inform the President. No company spends millions building a pipe line to a gas field without making certain that the price of gas won't get out of hand. They aren't that simple in the industry. They make long-term-price contracts, and most gas today is already under 25-year agreements. The President is naive in thinking otherwise.

Competition is further limited, the President says, by the concentration of ownership of gas. It happens that 35 companies control 70 percent of the known reserves, and that among them are those horrible aggregations of capital—Standard Oil and Phillips Petroleum. (Horrible to the liberals.) But even if a single corporation held 70 percent of the reserves, it would still have to set a price that would lure consumers from the fuels they now use. It is like the monopoly of the railroads that no longer exists.

In fact, Mr. Truman's veto may have exactly the opposite effect he intends. It takes heavy capital to find productive gas fields, risk capital, for the danger of loss is great. Risk capital is scarce today, and the standard 6-percent return that regulatory agencies usually allow isn't enough to attract very much.

We now have known gas reserves for 30 years at the present rate of consumption. In 1955 the increased consumption will reduce those reserves to 9 years' supply—unless a sufficient incentive exists to expand exploration and production programs. The oil industry, without price control, has kept about 13 years' supplies in sight for the last 20 years, due to the operation of economic laws Mr. Truman would repeal. Control in gas is likely to mean less gas and higher prices. Less gas, incidentally, for national defense.

But whatever will happen by the President's veto, this passion for regulation is driving us into a kind of economic madness. If we keep coal prices up and gas prices down, what shall we do with oil? Already some of the oil companies with byproduct gas to sell scent a move in their direction, and they may deem it cheaper to burn their gas off than sell into regulation. If the gas price is kept down, the sick coal industry will have to turn up its toes, for price minimums won't save it.

We may as well make our choice now, either we stop our drift into regulation or we must just give up and regulate everything there is.

This Nation Should Honor Lieb for His Crusade That Saved the Government Over $36,000,000,000

EXTENSION OF REMARKS
OF

HON. W. KINGSLAND MACY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. MACY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following remarks of Mr. Jack Hunter, a comember of Amvet Post No. 19 in Washington with Joseph Lieb, and also pertinent articles which appeared in previous pages of the CONGRESSIONAL RECORD. It is unbelievable that this great Nation has done nothing officially to honor a young man whose efforts brought about measures that saved the American taxpayers an estimated $36,000,000,000.

It is a story that every citizen should know, but, unfortunately, because of greediness and jealousy the incidents behind this narration have never been fully or properly publicized.

On April 12, 1945, the Washington Star carried an Associated Press dispatch stating that the War Department had officially reported to Congress that because of the Renegotiation Act the Government had saved over $36,000,000,000 in rebates of excessive war-contract profits.

Here are some interesting facts behind this untold story:

Late in December 1940, Ray Henle, ace radio commentator, while he was the Washington correspondent for the Pittsburgh Post-Gazette, sent a telegram to his editors regarding a certain sensational war-fraud case.

Mr. Henle sent this telegram after he had a discussion with Joseph Lieb, freelance writer, in Washington, D. C.

With the assistance of Sam O'Neal, who at that time was the Washington correspondent for the St. Louis Star-Times, later publicity director of the Democratic National Committee, the matter was brought to the attention of the Department of Justice.

On January 4, 1941, they made their first call upon the Attorney General, Robert Jackson, now a member of the Supreme Court; Wendell Berge, then Assistant Attorney General; and other Department officials.

This was followed up with other calls to the Department on January 9, 14, 15, 16, and 23, 1941. Nevertheless, the Justice Department refused to take any action on the case at that time.

When these negotiations proved fruitless Lieb sent the following letter to every Member of the United States Senate in the hope of bringing the case out into the open. The message read:

JANUARY 6, 1941.

MY DEAR MEMBER OF CONGRESS: Several days ago I conferred with Department of Justice officials relative to profiteering and frauds in defense and war contracts. The Washington correspondent of the St. Louis Star-Times assisted me in presenting amazing evidence in connection with this matter.

It is becoming increasingly evident that the Congress should set up an investigating committee to watch over possible frauds against the Government, and I trust that you will give this suggestion your careful consideration and attention.

Should you care for further information, please advise. With many thanks.

Very truly yours,

JOSEPH LIEB.

Then Lieb followed this letter up with personal calls upon a number of Senators, including Harry S. Truman, now President of the United States.

Five weeks later—and this is important—on February 13, 1941, Senator Truman introduced his resolution calling for the creation of a defense investigating committee. This measure was approved by the Senate on April 1, 1941. Mr. Truman immediately became chairman of the committee that was soon to skyrocket him into national fame—into the Vice Presidency and then into the White House itself.

With fear that the statute of limitations would run out on war frauds, Lieb got a bill introduced, H. R. 4916, Seventy-seventh Congress, first session, which called for the suspension during time of war or national emergency the running of any Statute of Limitations on prosecutions for Federal offenses. This bill was introduced on May 29, 1941.

He pleaded with several Members of the House Judiciary Committee, and finally on November 26, 1941, the long delayed hearing was held. The only witnesses were Congresswoman Jeannette Rankin, who introduced the bill, Mr. Lieb, and Mr. Alexander Holtzoff, Special Assistant Attorney General. The Justice Department opposed this piece of legislation complaining that it was too broad, but on January 28, 1942, after much agitation they submitted to Congress, H. R. 6484, applicable only to certain offenses. It became law on August 24, 1942, with the able assistance of Walker Stone, chief editorial writer for the Scripps-Howard newspapers.

Anticipating the passage of the bill the Department of Justice created a war-fraud unit and Federal grand juries began holding hearings.

Mr. Lieb continued his campaign demanding review of war contracts. The exposure of a number of cases caused the Congress to insert a clause in the supplemental national defense appropriation bill of April 4, 1942 permitting the renegotiation of war contracts.

Thus, came the savings of billions of dollars on taxpayers money.

[From the CONGRESSIONAL RECORD of May 10, 1943]

JOSEPH LIEB

(Extension of remarks of Hon. STYLES BRIDGES, of New Hampshire, in the Senate of the United States, Monday, May 10 (legislative day of Monday, May 3), 1943)

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD, a statement regarding the activities of Joseph Lieb which have contributed to the war effort.

Among Joseph Lieb's contributions to the war are work on four important and significant pieces of legislation, now enacted into law.

1. His work in connection with legislation dealing with war profiteering and fraud. On January 4, 1941, accompanied by a St. Louis newspaperman, he called upon Attorney General Robert Jackson, Wendell Berge, Assistant Attorney General and other Justice Department officials relative to the prosecution of a certain highly connected war profiteer. Other calls to the Department were made on January 9, 14, 15, 16, and 23. The story and background of this case has never been told and must remain anonymous until after the war. But it was this episode that inspired Leib to carry on a zealous campaign against war profiteering and fraud. Because of this case he urged the necessity for the suspension of the statutes of limitations covering such matters.

Over a period of time Lieb demanded the appointment of a congressional defense investigation committee.

On February 13, 1941, Senator Truman introduced a resolution to set up a defense investigating committee. This measure was approved on April 1.

On March 31, 1941, Representatives May and VINSON introduced their joint resolutions setting up a committee to investigate war profiteers. This resolution has a direct bearing to the previous mentioned Justice Department interviews. This is all that can be said at this time.

It was the sensational disclosures brought out by the House investigating committees that brought on the demand for the renegotiation of war contracts. But renegotiation action did not come until April 4, 1942, when a clause permitting such action was inserted in the supplemental national defense appropriation bill of that year.

Unfortunately, none of these committees possessed punitive power other than to expose and publicly reprimand. They held no other authority. Prior to the introduction of these committee resolutions Lieb pleaded for the suspension of the fraud statutes. In correspondence with many public officials he pointed out the fact that these statutes must be suspended to protect the Government's interest in the prosecution of war frauds. When the Truman and House investigating committees were set up he reminded Members of Congress that these committees were in many instances operating to the disadvantage of the Government insofar as the time elements of the statutes were concerned.

Several months later, on May 26, 1941, a bill was introduced to suspend the statutes. Because of this the Justice Department on February 5, 1942, created a special frauds unit, and Federal grand juries began hearings on July 15, 1942.

Approximately $3,000,000,000 have been saved because of this action. (Part of this story was related in the CONGRESSIONAL RECORD on November 12, 1942.)

[From the CONGRESSIONAL RECORD of January 27, 1947]

ORIGIN OF THE TRUMAN COMMITTEE

(Extension of remarks of Hon. Raymond S. Springer, of Indiana, in the House of Representatives, Monday, January 27, 1947)

Mr. SPRINGER. Mr. Speaker, last week the upper Chamber of Congress debated at great length the question of whether or not the famous Senate War Investigating Committee should be continued. After the debate came to a close, the Senate deemed it advisable to grant this committee an additional year in order to complete its investigation of the war period.

This committee has been in the public eye for several years, yet very few people know of the incidents that occurred behind the scene to inspire its creation.

It was this committee originally headed by Harry S. Truman that sent him skyrocketing into the Vice Presidency of the United States and then into the White House itself.

In this connection, it would seem apropos to state for the first time the genesis of this committee.

The story dates back to late in December 1940, when sensational information concerning a highly placed defense-contract profiteer came to the attention of Joseph Lieb, free-lance writer of Washington, D. C.

Lieb took this matter up with Sam O'Neal, who was at that time Washington correspondent of the St. Louis Star-Times—now publicity director of the Democratic National Committee—and they decided to bring the information to the attention of the Department of Justice. On January 4, 1941, they made their first call upon the then Attorney General Robert Jackson, Wendell Berge, Assistant Attorney General, and other officials. They made other calls on January 9, 14, 15, 16, and 23, 1941. However, the Justice Department refused to take action on this case.

Nevertheless, Lieb sent the following letter to every Member of the Senate in the hope of bringing the case out into the open. The message read:

JANUARY 6, 1941.

MY DEAR MEMBER OF CONGRESS: Several days ago I confered with Department of Justice officials relative to profiteering and frauds in defense and war contracts. The Washington correspondent of the St. Louis Star-Times assisted me in presenting amazing evidence in connection with this matter.

It is becoming increasingly evident that the Congress should set up an investigating committee to watch over possible frauds against the Government and I trust that you will give this suggestion your careful consideration and attention.

Should you care for further information, please advise. With many thanks.

Very truly yours,

JOSEPH LIEB.

This letter was followed up with personal calls upon a number of Senators, including Mr. Truman.

Then, on February 13, 1941, Senator Truman introduced his resolution calling for the creation of a defense investigating committee, and the measure was officially approved on April 1, 1941. Senator Truman immediately became chairman of the committee.

Fearing that the statute of limitations would run on the above-mentioned case, Lieb got a bill introduced, H. R. 4916, Seventy-seventh Congress, first session, which demanded the suspending during time of war or national emergency the running of any statute of limitations on prosecutions for Federal offenses. This measure was introduced on May 29, 1941.

Finally on November 26, 1941, a long-delayed hearing was held by the House Judiciary Subcommittee and the only witnesses were Congresswoman Jeannette Rankin, who introduced the bill, Mr. Lieb, and Mr. Alexander Holtzoff, Special Assistant Attorney General. The Justice Department opposed this piece of legislation because it was too broad, but on January 28, 1942, after much agitation they sent to the Congress H. R. 6188, a bill to suspend during the present war the running of statutes of limitations applicable to certain offenses. This became law on August 24, 1942, and it was during this period that the Justice Department set up a war-fraud unit. From the exposure of a number of war contracts came the demand for the Renegotiation Act and the subsequent saving of untold billions of dollars.

Nashville Sermon Said Lacking in Political, Religious Realities

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. LANHAM. Mr. Speaker, under leave to insert my own remarks in the RECORD, I am including an editorial by Hodding Carter which appeared in the Delta Democrat-Times of Greenville, Miss., the Atlanta Journal, and other newspapers. The editorial is entitled "Nashville Sermon Said Lacking in Political, Religious Realities."

Recently I introduced into the RECORD an editorial from the Chattanooga Times which referred to this editorial by Hodding Carter. I am introducing this column by Mr. Carter with my full approval. It follows:

NASHVILLE SERMON SAID LACKING IN POLITICAL, RELIGIOUS REALITIES

(By Hodding Carter, editor, Delta Democrat-Times, Greenville, Miss.)

By unhappy coincidence I have read during Easter week a widely publicized sermon which in a good many respects strays as far from the philosophy of the Man whose resurrection the Christian world celebrates today as it does from the political and economic realities of our harassed world.

This sermon was preached last February by a Nashville minister. Many thousands of copies have been printed and distributed throughout the South. It is titled after, and is a sort of digest of the digest of John Flynn's best-selling book, The Road Ahead, which warns of catastrophic end results of the social welfare state.

FLYNN'S BOOK ONE-SIDED

I am not concerned here primarily with Mr. Flynn's book. There is value in it, though its usefulness is impaired by his personal hatreds, the one-sidedness of his attack upon England and his lumping together of good Americans of different opinions than his own into one over-all inimical category. Certainly all of us should be alert to the implications of the insensate welfare state. Certainly a minister has as much right as anyone to warn against national and world trends toward undue centralization of government and the dwarfing of individual rights and individual responsibilities.

But the case is not nearly so black and white as the Nashville minister makes it, nor is he fair in designating his scapegoats.

I am appalled by many of his charges and conclusions. For instance, in telling of the rise of socialism in England after the birth of the Fabian Society, a Socialist group, he enumerates the results of the first Liberal-Social coalition way back in 1905.

"This is when the New Deal struck England," he says warningly. "Out of Parliament came the 8-hour day, workmen's compensation, pensions, government housing projects, public payment of election expenses. Labor was delighted * * * the camel's head was now inside the free enterprise, democratic tent."

If the minister means that these long-ago English achievements were dangerous and undemocratic, he is talking poppycock. To the contrary, each of them when achieved strengthened rather than weakened democracy's hand, whether in England or in the United States.

Asserting that the Americans for Democratic Action "is about as democratic as Stalin," he bases the libelous charge on the fact that its membership includes men like David Dubinsky of the A. F. of L., Walter Reuther and James B. Carey from the CIO, Elmer Davis, Leon Henderson, Justice Douglas and Senator Frank Graham, the notable former president of the University of North Carolina.

And more poppycock. "A social planner in Washington differs not at all from one in Moscow or London," he proclaims. "They are all Socialists and therefore enemies of the basic liberties of men."

What he is saying, in effect, is that the courageous, freemen of the Socialist countries of Europe who live defiantly under the very guns of Soviet Russia are no better than the Red enemy against whom they stand allied with us. Were the Socialist Norwegians enemies of the liberties of men, those Scandinavian fighters who died while we in America prattled? Are the Socialist Swedes such enemies? And are social planners as such, enemies of the people simply because they dream of directed progress? Thomas Jefferson had a plan. So did Abraham Lincoln and Woodrow Wilson. Social planning does not necessarily mean socialism, and socialism, freely and democratically entered upon, does not spell communism.

DEATH BY THE H-BOMB

And one incredible sentence: "I would personally rather see my nation die cleanly under the H-bomb than rot away under socialism." This statement may make a big hit in some quarters, but not among people who have seen nations almost die under bombs; whether H or A, or just plain bombs; not among those who have seen war-crushed nations struggle to rise again in the only way they could—through government-directed action for which no private alternative existed. God grant that we never have to so rebuild; for if that dreadful day ever comes, there will no longer be anywhere else a more fortunate people, like ourselves today, who from a place of privilege and security can sneer at such collective effort as being socialistic.

It is sad that such words should be spoken upon a Sabbath or on any other day. It is sadder and more dangerous to American solidarity that its devisive message should gain such wide distribution. And it is saddist of all to recall how long ago it was that a Man moaned a broken-hearted prayer from a cross, asking His Father to forgive those who knew not what they did.

Congress Should Set the Example

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. HOFFMAN of Michigan. Mr. Speaker, for most of the time during the past 2 weeks the House has been debating the one-package appropriation bill which calls for a total of $38,859,000,000 to operate the Government during the coming fiscal year.

War with Russia is threatened. It is extremely difficult, if not impossible, for a bankrupt nation, a nation with unsound financial policies, to win a war, but there seems little disposition on the part

of the administration, or of the Congress, to put our financial house in order.

That the people want less Federal spending, that they want greater efficiency from those who hold public office, has been shown by the public support of the recommendations of the Hoover Commission.

That very few, individually, are willing to economize or to do more work for the same amount of money is shown by the opposition to practically every plan submitted to the Congress which promises either greater efficiency or economy but which adversely affects the individual.

Unfortunately the President, taking advantage of the present situation and of the demand for less Federal spending and a little more efficient service by Federal employees, has sent to the Congress some 21 reorganization plans.

Taking advantage of this situation, the Hoover label has been pinned on all of these reorganization plans, although some of them do not even promise either efficiency or economy.

The reorganization plans submitted by the President have been sent to the Committee on Expenditures in Executive Departments, on which I am the ranking minority member and of which, during the Eightieth Congress, I was chairman.

So far, whenever any of these plans which would give us a cut in personnel, require more work or a cut in compensation of Federal employees, has been presented, there has been vigorous and sometimes bitter opposition. Usually, the group appearing in opposition to any particular plan advocates the adoption of reorganization which will give economy and efficiency in the other departments but argues that reorganization in connection with the agency in which the witness is interested would be bad.

Recently, information was given the Congress that, during the current fiscal year—and the current year is classed as a prosperous year—we will be spending at least five, some say almost seven, billion dollars more than the Government takes in.

That situation is not only an absurd, but it is a dangerous condition. Especially is this true when some in authority are following a course which may involve us in a war before the year is over.

Remembering how we got into the last two wars, what war costs, not only in dollars and natural resources but in suffering and in death, and in justifiable payments to veterans, it would seem as though those in authority who are directing our foreign policy, would have the good sense to follow a course which would keep us out of war. That, lacking that good sense, judgment, and determination, they would, at the very least, set our financial house in order, cut out the unnecessary expenditure of every dollar; make every possible saving in order to strengthen our defense program.

Long ago someone said that charity should begin at home. Inasmuch as this Nation must economize if it is to avoid disaster, it is my opinion that the people's Representatives should set the example by the adoption of an economy program which would affect all Federal employees and office holders. Then they can rightfully and with good grace ask that others do likewise, take less instead of asking for more, work longer, work more efficiently, instead of demanding higher compensation, then loafing on the job.

A nation which continues wasteful and unnecessary spending, lowers the standard of production, permits a few individuals to paralyze essential industries and, on occasion, by strikes threaten the health, safety, and welfare of the whole nation, cannot hope either to win world war III, or, even if there be no war, continue prosperous and secure.

Port and Playground of the Southwest

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, April 25 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from an article entitled "Port and Playground of the Southwest" which appeared in the April 12 edition of the Houston Chronicle.

This article, written by Mr. Don Hinga, gives an account of one of the most historic and colorful spots in Texas, Galveston Island, and of the people who figure largely in Galveston's place in the Southwest. I recommend it as a subject for enjoyable reading.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

PORT AND PLAYGROUND OF SOUTHWEST

(By Don Hinga, Chronicle roving editor)

GALVESTON, April 12.—Steeped in history, with an impressive list of firsts, an island of gracious living and mighty industry, Galveston proclaims to the world that it is the "Port and playground of the Southwest."

There is no better way to sum up Galveston than that phrase.

You hear a lot of talk about the free State of Galveston, because its people have a knack of living and let live that makes the typical Galvestonion feel that there is no better place on earth to reside.

Drive around its oleander-bordered streets and you find plenty of evidence of this graciousness in the many beautiful old homes built during the past century.

Take a tour in the older section of downtown Galveston and you notice fine carvings on the doors and windows of old business establishments that further carry out this idea of beauty.

POPULATION GAINS

The city of Galveston covers 7.8 square miles and its population of approximately 80,000 shows a gain of 20,000 over the 1940 census count of 60,682.

Backbone of the industry that flourishes here is the sprawling waterfront whose 37 piers afford space for handling 45 Liberty-type vessels. Its 35 warehouses have over 5,000,000 square feet of floor space and its three giant grain elevators can store 7,500,000 bushels of grain.

The port of Galveston is the largest sulfur shipping port, in addition to handling vast quantitites of cotton, rice, raw sugar, ores, and concentrates and other products.

To give an idea of the teeming wharves, Galveston during the year ending December 31, 1949, shipped more grain than all the Gulf of Mexico ports combined, a total of 110,218,041 bushels. Its total vessel traffic was in excess of 6,000,000 tons each for the years 1947–49.

THORNTON RUNS DOCKS

Two years ago, the city of Galveston took over the wharves, which are operated by E. H. Thornton, as vice president and general manager. Thornton began his career with the Southern Pacific Railway in Houston.

A picturesque part of the water front that draws thousands of vacationists is the mosquito fleet of shrimp and fishing boats that take off with the dawn, to return heavily laden. Galveston offers the sports fisherman 51 types of edible salt-water fish.

Largest private industry in Galveston is the American National Insurance Co., largest in the South, with some $300,000,000 in insurance on its books.

Today, it is presided over by W. L. Moody, Jr., now in his eighties, who has spread an industrial and financial empire from Galveston Island until it reaches over the Nation, embracing banks, the national hotels, lands, and other properties.

MOODY IS RICH MAN

Moody is said to be one of the 10 richest men in Texas, but still keeps a tight hand on the reins of his business empire.

From his office in the American National Building, whose walls bear a large copy of the famed painting, the Gay Philosopher, Moody tells an interesting but brief story of how he got into the insurance business.

"How does a man get started in such a vast business?" he was asked.

With a wave of his hand and a twinkle in his eye, Moody replied:

"I was standing on a corner on Strand Street many years ago and two friends came up and asked me if I wanted to make some money.

"They had an idea of going into the insurance business and I said that I always liked to make money and so I did."

The growth and building of Galveston is tied up with the growth and expanding enterprises of several Galvestonians in addition to the Moodys.

FOUR KEMPNER BROTHERS

They are the Kempners, the Sealeys, the Hutchings and others who pyramided profits from warehouses and compresses and other water-front firms into empires that reach out over the United States.

The four Kempner brothers, Stanley, R. L., D. W., and I. H., have contributed mightily to the building of Texas as well as their native Galveston.

Their father, Harris Kempner, a Polish immigrant, worked as a day laborer to get together his railroad fare to Texas, opened a store in Cold Springs, fought in the Confederate Army and moved to Galveston following the Civil War.

When he died in 1894 he had put together "The House of Kempner," with interests in all parts of the State. So diversified was his career that the Kempners either bought, built, or operated eight Texas railroads, started irrigation projects all over Texas, organized banks in a dozen Texas towns.

BUILT HOTEL GALVEZ

The first rice for commercial purposes was planted on a Fort Bend County plantation of

the family, they built the Galvez Hotel, own the Sugarland Industries outright and seven-eights of the stock in the Imperial Sugar Co. Their compress and warehouse properties in Galveston comprise 8½ city blocks.

The eight members of the House of Kempner, four brothers and four sisters, Mrs. Henry Oppenheimer, San Antonio; Mrs. L. A. Adouex, and Miss Gladys Kempner, of Galveston, and Mrs. D. F. Weston of Cincinnati, have made no partition of the family's wealth down through the years, except division of profits from the many enterprises.

All differences of opinion have been settled by majority rule.

Their business activity has been matched through the years by a contribution to civic affairs.

I. H. IS ELDER STATESMAN

I. H. Kempner, the elder statesman of the clan, served as commissioner and mayor of Galveston and is credited with pulling the city out of the financial crisis that followed the 1900 storm when 7,500 persons lost their lives in hurricane winds and tidal waves.

In fact, I. H. Kempner and Rabbi Emeritus Henry Cohen are the only two surviving members of the storm relief commission.

The saintly Rabbi Cohen and the late Bishop Christopher Byrne have been the spiritual inspiration for the city for many years.

Throughout a life of selfless service, Rabbi Cohen has attained many honors. President Woodrow Wilson called him Texas' greatest citizen and the late Dr. Stephen Wise described him as one of the 10 outstanding religious leaders of the Nation.

RABBI IS SCHOLAR

A scholar who reads Hebrew and Arabic, French and German and Spanish, the rabbi has a simple philosophy.

"From the best in religions I try to take my philosophy of life," he says. "I would as soon preach on a text from Confucius as the Talmud if the truth is there."

Last September, when the rabbi retired after 61 years in the rabbinate, Bishop Byrne said:

"My old friend, Rabbi Cohen, is the best example of real humanitarianism I have ever seen. I have seen him in every room and at every bed in our hospitals. He brought messages of cheer and hope to all, regardless of race, color, and creed. He never asked who it was, but whether there was a need to fill."

The late Bishop Byrne, who administered the affairs of the Galveston Catholic Diocese in some 30-odd Texas counties, had a ready wit and an Irish brogue that was the delight of his thousands of friends.

AN AULD BARRACKS

A few days before his death, I talked with him about the Bishop's palace, one of the finest homes in Galveston, built by Col. Walter Gresham, lawyer and Congressman over half a century ago, at Fourteenth and Broadway.

"It's an auld barracks," the Bishop said with a twinkle in his eye and then proceeded to linger lovingly over the details of the three-story mansion.

He told of the five kinds of stone and marble that went into the home, of the carved lilies and birds on the doors and windows, the three different dates that are carved into the marble, of the griffon motif found through the house.

On the first floor there are five different kinds of wood in five rooms, oak, walnut, red and white mahogany, and pine, and how the work was so thoroughly done that there is not a crack in the lining up of the woodwork.

ARTIST OF NOTE

Mrs. Gresham was an artist of note and painted murals on the dining-room ceiling, tacked canvas on the walls of other rooms and adorned them with paintings, and in the basement covered the walls with marine scenes and marine-life pictures.

The home was a long time in being built for Gresham, as the bishop said, would have a flash of beauty in the day or night and tear out parts of the house and build them anew.

Another famous old home in Galveston is the home of El Mina Temple of the Shrine at 2328 Broadway. Built by Capt. J. M. Brown, a brick mason by trade who amassed a fortune in cotton, shipping, and other interests and put a fortune into his home, a show place for almost a century and the oldest brick home in Texas.

CARVED IN PARIS

Walnut in the valance crowning the windows was carved in Paris, and French artisons came to adorn the ceilings with friezes and panels in gold leaf.

His daughter, Miss Betty Brown, was also an artist and in the parlor there still hang tapestries she executed of statuesque ladies in flowing robes.

When Galveston surrendered to Gen. Gordon Granger and his Northern troops on June 18, 1865, the Confederate commanders laid their sheathed swords on a table in the gilded parlor and the trans-Mississippi Department of the Confederacy was at an end.

The Sealy home at Twenty-fifth and Broadway was designed by the celebrated architect, Stanford White, later killed by Harry K. Thaw in New York. It is another showplace, rich in history and beauty.

DAY OF ELEGANCE

All over Galveston you can find homes that have a touch of old New Orleans designs, grilled ironwork and cornices and cupolas of a bygone day of elegance.

One of the outstanding institutions in Galveston is the University of Texas Medical School, with an able faculty headed by Dr. Chauncey Leake, nationally known pharmacologist, the John Sealy Hospital, one of the best in the South, is another example of philanthropy of the builders of Galveston, the Sealy family.

Henry Rosenberg, another pioneer and early day mayor, has left his imprint on Galveston with the 150,000-volume Rosenberg Library and monument to the Texas heroes of the Revolution, a church, orphans' home, home for aged ladies, and a YMCA building.

WATER FOUNTAIN

He also installed water fountains and troughs throughout the city, where thirsty humans and animals could slake their thirst.

Rosenberg was president during the construction of the Gulf, Colorado & Santa Fe Railway, one of the most potent sources of revenue to Galveston through its $4,000,000 annual pay roll to the 1,000 Santa Fe workers in Galveston.

Others who took part in organization of the railway, which operates over 4,000 miles of trackage in Texas, included John Sealy and nephew George, Leon and H. Blum, W. L. Moody, J. H. Hutchings, R. S. and P. J. Willis, to name a few.

Galvestonians have been getting the news of the world from the same source for over a hundred years. The Galveston News, known as "The Old Lady of Mechanic Street," is the oldest newspaper in Texas, having been founded in 1842. It is ably managed today by David Leavell, also president of the Galveston Chamber of Commerce.

Every year about this time, the Greater Galveston Beach Association starts beating the tom-toms for its Splash Day, heralding the opening of the summer swim season. This year it will be held on May 7 and Drum Beater Christy Mitchell is telling all and sundry of the Texas Fiddler's Association annual meeting, which will be held on Splash Day, the hill billy jam season from noon to midnight, the coronation of King Neptune and his bathing beauties from all over the Southwest, 5-mile swim race in the Gulf, giant air show and a lot of other attractions.

GAY PLAYGROUND

Then it is that Galvestonians go all out to welcome the vanguard of the thousands who will dot the smooth white beaches with gay umbrellas, put up tents to stay overnight, crowd the midway attractions, kids will dig in the sand, and the old island that was once the headquarters of Pirate Jean Lafitte gets its gay title of "Playground of the Southwest."

Governors Speak Up on United States Taxes

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include an exceedingly interesting article published in the New York Herald Tribune on April 23 and 24. On March 29, 1950, I introduced H. R. 7904, for the purpose of establishing a commission to "investigate and make recommendations with respect to the distribution of governmental functions and sources of revenue within the framework of our Federal, State, and local systems of government." Following the introduction of this resolution the New York Herald Tribune undertook a survey of the opinion of governors on this subject. This article is the result. The views expressed by the governors should alone be sufficient to persuade any doubting Member of this House of the importance of instituting such a tax survey as is proposed without further delay.

GOVERNORS SPEAK UP ON UNITED STATES TAXES—CALL FOR STUDY OF OVERLAPPING REVENUE FIELDS

(By Robert S. Bird)

(This is the first of two articles based on a poll of governors on current issues involving taxation and other relations between the Federal and State Governments.)

Most State Governors replying to a New York Herald Tribune poll believe that the growing conflict of responsibility between the Federal and State Governments urgently calls for high-level study on a nonpartisan basis. Some governors are worried about vast sums of money they say are being wasted now. Others see the entire Federal system as imperiled by the Federal invasion in State government.

They want Congress to act forthwith on proposals before it to set up an inquiring body composed of Senators, Representatives, and governors of both major parties. This group would analyze the whole tangle of divided functions in National and State housekeeping and find ways for ending the evils.

Many of the governors especially deplore the overlapping of taxation that compels citizens in some places to pay duplicate and even

triplicate levies on everyday goods and services. These governors demand a broad revamping of the tax structure—even to dividing up between the two kinds of government exclusive rights to collect different taxes.

Some governors put the blame on the Federal grants-in-aid system, a comparatively new development in American Government. This is the device whereby the National Government collects enormous sums in taxes in the 48 States and redistributes part of it through some 25 major public services such as aid to education and health, old-age and unemployment benefits. The Federal Government sets up its own standards and administrative requirements for these and usually makes the States match the Federal funds with an equal amount of their own money.

A few of the governors defended this aid system as a boon to State government, but others vigorously denounced it as a bureaucratic swindle, robbing the States both of their money and their right to self-government.

Twenty-nine governors replied to the Herald-Tribune poll. This asked, first, if they believed their States were getting a fair share of the Federal tax money collected from them; second, if they felt a segregation of tax sources was needed, and if so, how it should be made, and third, they were asked to make any other suggestions on the subject.

Nineteen governors said either that a thoroughgoing study of Federal-State relations was needed, or that they awaited such a study before forming an opinion. Thirteen said that a segregation of tax sources should be made, so that the Federal Government could have certain taxes exclusively for itself in return for keeping hands off other taxes that would be reserved exclusively to the States.

Seven governors said their States are not getting a fair share of the Federal money collected from them. Four said they were satisfied with the return. Seven offered no comment, sending word that they were not prepared, or too busy, or absent from their capitols.

In general, the replies dealt with two intertwined aspects of the problem—one, the waste, unfairness, or fairness of the tax mechanisms; the other, the pros and cons of grants-in-aid and its effect on State government. The divided opinions cross party lines to a greater degree than sectional lines.

Taking up the grants-in-aid aspect first, a majority opinion was expressed in the reply of Gov. William Preston Lane, of Maryland, a Democrat, and chairman of the National Governors' Conference. He presented the conference's view to the last session of Congress.

He said the first large-scale grants-in-aid program was started in 1914, with the agricultural extension act, and they have since increased until today a third of the total cost of local government is borne by the States, and about 20 percent of the cost of State government is paid by the Federal Government. Federal grants to States have jumped from $5,000,000 in 1910 to more than $2,000,000,000 today.

"This method, in operation, has extended public services throughout the country * * * has been responsible for establishing certain minimum standards of service * * * has raised standards of administration in many public services, and it has provided for some redistribution of resources from the States that have superior means to those that lack them," Governor Lane said.

"On the other hand * * * grants-in-aid has removed large areas of discretionary power from the localities and transferred them to the States, and from the States to the National Government."

Gov. Alfred E. Driscoll, Republican, of New Jersey, replied: "We are losing self-government in America and destroying our Federal system by the continued expansion of a pernicious system of so-called grants-in-aid."

Saying there is no question that all Americans want the best in public services, he asserted that "the question before the Nation is whether we are to have one or more agencies of government responsible for these services—each with a different administrative staff, each levying taxes for the purposes of supporting the services, divided responsibilities, and the inevitable conflicts that arise from divided responsibilities."

Gov. Thomas E. Dewey said that the amount of taxes taken from New York State by the Federal Government "has increased more than five times over and is currently more than eight times as great as the total of State taxes." "This," he warned, "is a very effective way for the Federal Government to impair the sovereignty of a State and deprive it of the finances with which to meet its own responsibilities."

The more conservative view was given by Gov. Adlai E. Stevenson, Democrat, of Illinois.

"All of us have profited from the Federal aid programs, but we all know that there must be some limits to extension of Federal aid," he said. "Those limits may well be determined by the taxpayers' pocketbooks more effectively than by frightened proclamations of States' rights."

Gov. Chester Bowles, Democrat, of Connecticut, defended the Federal aid program while agreeing a thorough review of tax relations is needed.

"The Federal Government exercises many of its present powers (and levies taxes to pay for them) simply because the States in general are unable or unwilling to provide basic services which a majority of the people believe are essential to their welfare," he said.

GOVERNORS CHARGE UNITED STATES TAX GRAB TO FINANCE WIDENING FUNCTIONS—SEE STATES AND CITIES IN SCRAMBLE FOR WHAT'S LEFT—SOME WOULD TRADE FEDERAL AID FOR CERTAIN LEVIES

(By Robert S. Bird)

(This is the second of two articles based on a Herald Tribune poll of governors on current issues involving taxation and other relations between the Federal and State Governments.)

The biggest complaint by State governors in their current fears over Federal encroachment on State government centers around the Federal grab for taxes, a New York Herald Tribune poll shows.

Taxes are caught in an ever-expanding vicious circle. The Federal Government is steadily widening its tax base year by year to finance its always extending functions, and the States and localities are left to elbow each other in a race for what's left.

Most of the governors who replied to the Herald Tribune poll on Federal-State relations said the time has come for the National and State Governments to stake out agreed and exclusive areas of tax sources.

WOULD TRADE AID FOR TAXES

A number of governors said their States would gladly forego a good measure of Federal aid if they could have certain taxes—say gasoline, amusements, or excises—all to themselves, without Federal interference. Then they would handle their own aid programs, they said.

No State in the Union is getting back in the form of Federal aid the equivalent of the Federal taxes collected within its borders. Some less-wealthy States are getting proportionately greater benefits than the prosperous States, but these complain just as loudly as the others.

In the South, Gov. J. Strom Thurmond, Democrat, of South Carolina, said "the tax system is a hodgepodge of overlapping duplication and injustices," and asserted that "if the usurpation of tax fields by the Federal Government continues unchecked it will inevitably turn our States into mere subdivisions or departments of the Central Government." He demanded a return to the States, exclusively, of all automotive transport tax sources, including gasoline, oil, tires, and tubes, together with the admission taxes.

Gov. Herman E. Talmadge, Democrat, of Georgia, said the Federal Government should leave to the States the excise and license taxes, and he attacked the Federal requirement of States to match Federal funds for grants-in-aid. "Grants-in-aid should be based on the need of the individual State rather than its economic ability to match available Federal funds," he said.

"My answer is 'No'," Gov. James E. Folsom, Democrat, of Alabama, said to a question whether Alabama was getting a fair share of Federal taxes.

SEES GOOD GOVERNMENT GAIN

Gov. John S. Battle of Virginia, another Democrat, said "the cause of good government would be benefited by the Federal Government's withdrawal from many fields of activity, leaving these to the States, which could more properly and efficiently administer them."

In New England, Gov. Sherman Adams, Republican, of New Hampshire, said his State's share of the Federal tax return seemed to be "unfair in certain instances such as education, river and harbor development, flood-control, and public-power projects," and he advocated giving excise taxes to the States in return for letting the Federal Government have the income tax.

In the Middle West, Gov. Frank J. Lausche, Democrat, of Ohio, complained that the National Government "has preempted most of the fields" and said Ohio is paying $27,000,000 in gasoline taxes alone to the Federal Government but is getting back only $18,000,000.

"Iowa is not receiving its share of Federal aid," Gov. William S. Beardsley, Republican, reported. He said "the field of gasoline taxation should be preempted to the State" for road-building purposes.

Concurring in this view, Gov. Oscar Rennebohm, Republican, of Wisconsin, also said the National Government should yield to the States, at least in part, the tobacco and amusement taxes and keep for itself the automobile excises. He pointed out that Federal taxes in Wisconsin have increased by 1,600 percent over 1928, compared to a State-tax increase of 400 percent and a locality-tax jump of only 50 percent.

URGES TAX-SOURCE SEGREGATION

Speaking for the Northwest, Gov. Douglas McKay, Republican, of Oregon, also demanded the gasoline and admission taxes for the States, and in neighboring Idaho, Gov. C. A. Robins, Republican, said segregation of tax sources and "revision in all areas are necessary."

Gov. J. Bracken Lee, Republican, of Utah, found "there is no fair share left after the Federal Government gets through paying its army of employees who administer these (Federal aid) funds."

Acknowledging that South Dakota is receiving a fair share of Federal tax money, Governor George T. Mickelson, Republican, complained that "too much of every Federal tax dollar, regardless of its source, is used in Federal administrative expense; we send in a dollar and it comes back sixty-odd cents." He suggested this as a solution:

"Generally speaking, to every extent possible and feasible, the area of government which renders the service should levy the tax and collect the revenue to provide for it."

Gov. Lee Knous, Democrat, of Colorado, said: "The solution is most difficult because

of the diversity of the types of taxes upon which the various States rely for basic revenue."

"The principal source in some may be the income tax; in others, sales taxes; and in others, ad valorem taxes. Each of these systems has a historical background which has developed a delicate adjustment between the State and its local governments and subdivisions, and which cannot be abruptly disturbed."

GASOLINE TAX FOR STATES

But he advocated generally leaving gasoline taxes to the States, and possibly estate and gift taxes and luxury and admission taxes.

Governors of two desert States expressed concern over the Federal highway program. Gov. Vail Pittman, Democrat, of Nevada, said that while some fields of taxation should be left exclusively to the States, he believes "that Federal taxes on gasoline should not be repealed if the Federal aid-to-highways program would be endangered." And Gov. Thomas J. Mabry, Democrat, of New Mexico, added that "the sparsely settled States of the West must have Federal aid in road building if our road program is to be advanced in the interest of national travel."

Both houses of Congress have before them proposals for studying the question. Senator HUBERT H. HUMPHREY and 41 other Senators introduced a bill last March providing for study of the Federal-State question. In the House Representative FREDERIC R. COUDERT, JR., Republican, of New York, offered a bill last month for a joint congressional and governors commission to study the issue.

Either of these bills, if enacted, would carry on the special study of the subject made by the Hoover commission, which reported that "Federal-State relations is the cardinal question of our Federal system of government."

Low-Priced Footwear Imports Menace Tyer Rubber

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, April 21, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Evening Tribune, Lawrence, Mass., Thursday, April 20, 1950, by Raymond N. Maynard:

RUBBER TARIFF CUT ENDANGERS TYER CO.

(By Raymond N. Maynard)

In common with some 30 different small New England industries which stand to be affected by proposed United States tariff reductions, the Tyer Rubber Co. of Andover is a long-established local industry that will be seriously threatened through the importation of low-priced footwear.

Company officials and employees have recognized a definite threat to the continued operation of the Andover plant, brought about by a 50 percent reduction in tariff on waterproof footwear which was effected by our Government in 1947 and they are further disturbed at the apparent prospect that there may be a further reduction in tariff in footwear duties later in the year.

At a conference held in the plant office with other interested parties Tuesday afternoon, to decide on a plan of action, Wallace E. Brimer, general manager and treasurer of the company, stated that unfavorable weather combined with the increased availability of imported low-priced footwear are at least retarding customary early orders for domestic rubber footwear for next winter, as a result of which production there has been severely curtailed and the work force is down about one-third.

"The whole footwear industry," he said, "is disturbed by the 50 percent reduction in tariff on waterproof footwear which was effected by our Government in 1947, and more disturbed at the apparent prospect that there may be a further reduction in such footwear, plus a radical reduction in the tariff on canvas footwear, to be negotiated later in 1950. It is recognized that international trade is essential and that it is not a one-way street, so that we must buy abroad as much as practicable."

PROTESTS TO CONGRESS

"However, hand labor is a relatively higher factor in both waterproof and canvas footwear than in products such as automobiles and other hard goods and chemicals in the production of which automatic-machine processes can be used extensively. This factor enables foreign producers with low labor costs, in the absence of adequate tariffs on imports, to undersell domestic-footwear producers by as much as one-third to one-half.

"Management and employees have informed Senators and Representatives of the seriousness of this situation, urging a restoration of the higher tariff rates previously in effect on waterproof footwear, and protesting any consideration of further tariff reductions on waterproof or canvas footwear."

The seriousness of the situation also drew a statement from Alfred Demers, president of local 137, United Rubber, Cork, Linoleum, and Plastic Workers of America, CIO, in which he stated: "Local 137 has protested, approximately a year ago, to Congressmen and Senators about the low tariff on rubber footwear and fabric footwear coming in from Czechoslovakia. Japan is also sending over rubber and fabric footwear, and as a result of this, many of our members are out of work.

"I believe it is the duty of all civic-minded citizens, merchants, and businessmen to protest this low tariff rate. Local 137 of Andover has passed a resolution and sent it to all affiliated locals, the international union, and the national office of the CIO urging that something be done to save the jobs of the local members. Unless cooperation is forthcoming, more people will be out of work and this will affect the communities in which they live. I urge everyone to contact their Congressmen and Senators by letters or card protesting the low tariff rates."

PROTEST HOFFMAN PLAN

Nor does the proposed solution to the problem as suggested by ECA Administrator Paul G. Hoffman offer any comfort. His plan, as an answer to complaints by various industry and labor groups that the Marshall plan is bringing in a flood of foreign goods that is robbing them of their livelihood, has two parts: (1) Let workers thrown out of jobs by imports draw existing Federal-State jobless pay until new jobs can be found for them; (2) set up a program to train the workers for new jobs and retrain management to set up new industrial enterprises that could employ the displaced workers.

Present at the conference, conducted by John H. Kelly, assistant sales manager on footwear, were Vincent Treanor, president of the Andover Taxpayers' Association; George Winslow, town clerk representing the board of selectmen; Alfred Demers, union president; Jack Barry, executive manager of the Greater Lawrence Chamber of Commerce; and plant officials.

MARKET BADLY AFFECTED

On February 13, Mr. Brimer wrote letters to Congresswoman EDITH NOURSE ROGERS, Congressmen THOMAS J. LANE and JOSEPH W. MARTIN, and to Senators HENRY CABOT LODGE and LEVERETT SALTONSTALL informing them of the concern of management and employees over the threat of imported tennis shoes and rubber footwear from Japan and Czechoslovakia, respectively.

He stated that the canvas-topped tennis shoes from Japan were being displayed in New York then at prices which, even with the present 35-percent duty on the price of a comparable United States item, are a third or more under our prices, and the rubber footwear products apparently from Czechoslovakia with the present 12½-percent duty on the price of comparable United States items are about one-half our prices. Furthermore, the offerings indicate that the volume is on the increase to an extent which distinctly affects our whole domestic market.

He pointed out that the 1947 action which reduced the previous 25-percent rate of duty on rubber footwear to 12½ percent on the price of a comparable United States item has resulted in a most serious threat to the industry, and he understood there is a probability of similar action being taken to reduce by 50 percent the duty on imported tennis shoes, if not to completely change the import tariff to a lower percentage ad valorem on both tennis and waterproof footwear. If the latter action should be taken and the American selling-price principle should be eliminated, then unemployment in our industry and financial difficulties for the companies in it would be disastrous.

"The majority of our business is in the two types of products mentioned above," he wrote. "We employ normally about 1,000 in Andover, a town having a population of approximately 13,000 and we assure you that our situation is serious.

"We have suffered two full winters now without normal snowfall, our employment is down about one-third, and the prospect of waiting another 8 months for the rubber footwear season is bleak enough without the added threat of ruinous competition from imported products.

"Foreign competition from countries with much lower wage levels is particularly injurious in our industry where the percentage of factory wage and salaries is about 47 percent of total cost. The difficulties of competing with cheap labor increase as the importance of the labor cost increases in relation to total cost, and there are few if any industries in which labor plays a more important part relatively than in the rubber and canvas footwear industry.

"We urge that you use your influence to forestall any further reduction in tariff on these products and also to restore the rate of tariff on waterproof footwear to the 25 percent which was established in 1932, reaffirmed in 1937, and maintained until 1947 when it was cut in half."

Acknowledgment was received in all instances from the Congressmen and Senators, and the information was forwarded to the Department of State in Washington. As a result, replies received from Jack K. McFall, Assistant Secretary of State, were forwarded to Mr. Brimer.

NEGOTIATIONS THIS YEAR

The letter from Assistant Secretary McFall, contained the following information: "In stating that there is a possibility of reducing by 50 percent the duty on imported tennis shoes, Mr. Brimer no doubt has in mind the announcement on November 10 by the Department of State that the United States will participate in tariff negotiations under the framework of the general agreement on tariffs and trade beginning in September 1950.

"Up to the present time, however, no decision has been reached with respect either to the countries with which the United States proposed to negotiate at the next tariff conference or to the items to be listed for possible negotiations. The negotiations at this conference will be conducted in accordance with the Trade Agreements Act. Before entering into negotiations a notice of intention to negotiate will be published, together with a list of articles which it is proposed should be considered in such negotiations.

"It should be emphasized that interested parties will be given ample opportunity to express their views regarding those negotiations both by submitting formal statements to the Committee for Reciprocity Information and by testifying in oral hearings conducted by that committee. The views so expressed will be taken into consideration by the interdepartmental committee on trade agreements before making its recommendations to the President regarding the concessions to be granted and requested in the negotiations. At the present time the membership of the trade agreements committee includes representatives from the Departments of State, Commerce, Agriculture, Treasury, Defense, and Labor, the United States Tariff Commissio.. and the Economic Cooperation Administration.

"It is expected that the public notice mentioned above regarding the negotiations will be issued within the next several weeks. The Tyer Rubber Co. is being placed on the appropriate mailing list for the receipt of announcements concerning the negotiations.

"In mentioning the possibility of a change in the single American selling price principle, Mr. Brimer no doubt is referring to a provision in the Habana charter for an International Trade Organization which would require the abolition of the use of American selling price as a basis for determining the dutiable value of imported merchandise. The charter would require that dutiable value be based on the actual value of the imported merchandise and not on the value of domestic merchandise.

"However, it must be kept in mind that the charter would not require a change in the protective incidence of the duties presently based on American selling price, but only in the basis of value used. The proposal to eliminate the use of American selling price, which is presently used as a basis for dutiable value in only a few classes of merchandise, is being considered in connection with possible legislation to simplify customs procedures which it is expected will be submitted to the Congress by the Treasury Department.

"Mr. Brimer requested that you use your influence to restore the tariff rate on waterproof footwear. The only way that this can be done without violating our commitments under the general agreement on tariffs and trade would be through a successful action under article XIX (the escape clause) of the general agreement. All of the tariff concessions in the general agreement are subject to this article which permits a contracting party to withdraw or modify any concession if, as a result of unforeseen developments and of the concession, increased imports threaten or cause serious injury to domestic industry. If Mr. Brimer believes that his company has a good case for such action he may address a request for consideration of his case to the United States Tariff Commission, Washington, D. C.

"In order that the views expressed by Mr. Brimer may be made known to the various Government agencies concerned with trade-agreement negotiations, a copy of his letter is being sent to the interdepartmental Committee for Reciprocity Information, which in turn will bring it to the attention of interested officers in those agencies."

The American Way—How May We Improve It?

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks, I include one of the prize-winning essays from the American Legion annual essay contest in Ohio. This essay was submitted by Miss Patricia County, a freshman in Brilliant (Ohio) High School, and it is one of the 12 winners out of over 75,000 submitted in the State of Ohio. I think this is an indication that our young people are thinking about some of the problems facing this Nation, and with such thinking as is shown by this essay, I feel that the future of our country is in safe hands.

THE AMERICAN WAY—HOW MAY WE IMPROVE IT?

(By Patricia County)

In the seventeenth century freedom-loving people of the Old World, in order to escape tyranny of the rulers, began the hard journey to the new continent of America in order to enjoy freedom of religion which was denied them in their own country. The colonies so established were mostly self-ruled until the reign of King George the Third, in which the war of independence was fought and won by the Thirteen Colonies. It was then the foundation of the present American way of life was laid under the wise guidance of Washington, Jefferson, Franklin, and other leading patriots of that time. Freedom of religion, freedom of speech, and freedom of the press were guaranteed to all under the Constitution established at that time. People withstood all attempts of minority groups to establish so-called isms which would undermine all freedom established under our Constitution.

The American way is opportunity for everyone. It is having your abilities recognized, being given a chance to use them, a poor man becoming a millionaire. It is the illiterate becoming a man of letters. The American way is for men of different creeds giving their life belts to others of the ship and going down with it in harmony. Under the American way free schools, even for the poorest, were established for education, advancement, and culture. The American way means freedom.

The American way means freedom—but the question is, how can we improve it? It is true, our democracy is not perfect. It is not Utopia, so we must always be alert for new ideas to improve our way of life. We should exercise great care in our choice of lawmakers, shake off lethargy, and get out and vote to prevent minority representative elections detrimental to the welfare of the country. An important item is to find out whether the politician has any racial prejudice. If he does, he does not belong in office. Why not increase the salaries of elective officials so less people will be susceptible to bribes?

We should spend more money to improve our educational systems. Educate every American. Reach back into the mountainous districts; give them better facilities and more teachers. An educated nation is a progressive one.

Something vitally important at the present time is to rid our country of communism and racial prejudices. Racial prejudice will lead to more communism, and thence to great unrest within our Nation.

Youth centers should be established for our children. We must guide them in their leisure as well as their education. Teach them the right way to play and work and they will never lean toward the left.

There should be cooperation between labor and industry. Arguments should be settled by conferences instead of strikes which cripple our economy.

There are many more ways the American way of life can be improved. Let us always be on the alert, so we won't be heading down the road toward socialism. We don't want the Government taking care of us from the cradle to the grave. A welfare state is not for us. We want to think, act, and live a free life, to work as hard as we please, to get what we want out of life, to retain our human dignity, which is the heritage we have fought for—and for which we will continue to fight.

Veterans of Foreign Wars Oppose World Federalism

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, enthusiasm for world federalism is diminishing. Recently Rhode Island and California have rescinded resolutions approving that movement. Out in front and leading the fight against the resolutions now pending, is the Veterans of Foreign Wars. National Commander in Chief Clyde A. Lewis is blazing away with all guns. His organization has just begun to fight.

Mr. Speaker, I am including an article from the current issue of Stars and Stripes:

VFW TO OPPOSE ONE WORLDERS—NATIONAL COUNCIL AUTHORIZES SPECIAL STAFF AND SPEAKERS' BUREAU TO FIGHT MOVEMENT

The Veterans of Foreign Wars will continue its campaign against all forms of world government by setting up a special staff, a speakers' bureau and an information center to keep the public alerted on the many schemes and plans which would have the United States join some form of federation which would eventually destroy our form of government.

This was the decision reached recently in Kansas City, Mo., by the VFW national council of administration.

"The VFW will not be able to establish a center as elaborate as that maintained by some of the proponents of world government, but the best job will be done consistent to the organization's ability to maintain such a project." Commander in Chief Clyde A. Lewis, of Plattsburg, N. Y., said following the meeting.

"We can not hope to spend sums like the United World Federalists, Inc., whose expenditures were close to $300,000 in 1949 to push their world government plan, nor will we have as highly paid national and regional material which they can use to spell out what these schemes would mean to us as a Nation," he continued.

Commander Lewis pointed out that the VFW has made available a pamphlet entitled "The Importance of Sovereignty to Assure

Freedom," in which there is enough general information upon which to base solid arguments against world government "schemers."

"We are determined that so long as overseas veterans are organized and have sacrificed so much around the world in life, limb and health, we shall continue to crusade for an America as our forefathers envisioned it. That means strict adherence to the Constitution of the United States; loyalty to the Declaration of Independence, and support to the United Nations through which we believe the world's ills can be solved eventually.

"We do not believe that by giving up any more of our sovereignty we can accomplish more than by sitting at a table with sovereign nations, working in cooperation to find ways to improve the peace of the world. We believe that through the Marshall plan and the Atlantic Pact we have gone far enough, and that by working in close harmony with these nations we can build up sufficient strength to discourage any aggressor nation."

Fertilizer Consumption Rapidly Increasing

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. BURDICK. Mr. Speaker, a newspaper article recently written by the distinguished Representative from Iowa, the Honorable H. R. GROSS, aroused my interest in a matter of vital concern to Iowa citizens.

I am surprised to know that the consumption of commercial fertilizer is increasing so rapidly in a soil known to be as rich and productive as the soil of the State of Iowa.

I am also surprised to know that a survey made by experts of the United States Department of Agriculture indicates that highly fertilized pasture lands may be the cause of the X-disease that has killed so many cattle, and forced some cattle men to give up the cattle-raising business.

The thing that shocks me most in connection with this matter is the fact that fertilizer money is being used to subsidize the research work of the Bureau of Plant Industry, and these gifts of fertilizer money are believed to be responsible for keeping the people in the dark as to why it is necessary to use so much fertilizer per acre, and how the excessive use of soluble nitrogen affects the health of both man and animals.

The purchase of the influence of public officials is a blow at the foundations of popular government.

I am strongly in favor of the appointment of a special committee to make a careful study of the extent of this corrupting influence, and the effect of present methods of fertilizer manufacture on the health of the people.

The Honorable H. R. GROSS rendered a service to the people of his State when he brought this matter to their attention in his newspaper articles in the Tripoli Leader, and other newspapers in that State, and he is to be commended for his interest in the welfare of the farmers.

Since the article in the Tripoli Leader throws considerable light upon this important matter, I insert it in the RECORD as a part of my remarks:

Congressman GROSS' statement reads as follows:

MAKERS' MALPRACTICE DOUBLE COSTS OF FARM FERTILIZERS—LETTER TO CONGRESS RAPS INDUSTRY FOR HIKING COST $250,000,000

(By Representative H. R. GROSS)

WASHINGTON.—Iowa farmers, who have more than tripled their use of commercial fertilizer since 1944 and who forked over nearly $16,000,000 for that product in 1949, probably will be interested in studying charges that it takes as much as two bags of fertilizer to do what one bag did in 1925.

The reason is not the soil or the farmer, but the fertilizer, according to sponsors of a bill that would regulate the registration, manufacture, labeling and inspection of fertilizer and fertilizer materials shipped in interstate commerce.

The charges are contained in the following portions of a letter written by William G. Holman, of 305 B Street NE., Washington, D. C., on March 14 to the National Fertilizer Association, and inserted in the CONGRESSIONAL RECORD on March 20 by Congressman KEEFE, Wisconsin Republican, who introduced the bill, H. R. 3045, a year ago.

"GENTLEMEN: I have just read a statement by you in the March issue of the Fertilizer Review which reads as follows: 'We know from the price indexes that the cost of a ton of fertilizer is higher today than it was in 1925. The actual figure is—let's see—8 percent; a ton of fertilizer costs about 8 percent more now than it did 25 years ago.'

"A statement by Mr. O. V. Wells, Chief, Bureau of Agricultural Economics, United States Department of Agriculture, and published in the December 1948 issue of the Plant Food Journal, shows that your statement is far from being correct.

"Mr. Wells said: 'The Bureau of Agricultural Economics indexes indicate that fertilizer prices last fall were only 55 percent above the average for the prewar years, 1935–39,' and the Bureau probably did not take into consideration the facts that I shall bring to your attention.

"Namely, that the farmer is forced to use 50 percent more fertilizer per acre today than would be necessary if the fertilizer had contained the same proportions of water-soluble and organic nitrogen that it did prior to 1925.

"You failed to tell the public that prior to 1925, only one-third of the nitrogen in fertilizers was derived from water-soluble sources—such as nitrate of soda, and sulfate of ammonia—if we are to believe the source tags that appeared on the bags.

"The remaining two-thirds of the nitrogen was derived from organic sources, such as dried blood, fish scrap, animal tankage, and cottonseed meal.

"You probably know that Federal and State agronomists recommended these proportions, and believed that one-third of the nitrogen from quickly soluble sources was as much as the plant could take up before some of it was washed in the soil water beyond the reach of plant roots.

"You know that when fertilizer was made this way, the average consumption per acre was three to four bags—and it grew tobacco that made Buck Duke and Dick Reynolds rich and famous.

"You also know that soon after the enactment of the Webb-Pomerene Act, a few fertilizer manufacturers acquired control of the phosphate market—see Federal Trade Commission Report—and that soon after that they compelled other manufacturers to increase the water-soluble nitrogen content of the fertilizer to 65 percent, and to reduce the organic nitrogen content to 35 percent.

"The farmers complained about this radical formula change, and soon thereafter, the State laws were amended. These amendments permitted the manufacturers to increase the total nitrogen content of all fertilizers 21 percent, to take source tags off fertilizer bags, and to use almost unlimited proportions of cheap, water-soluble sources of nitrogen without letting farmers know that this was being done.

"The radical reduction in the organic nitrogen content of the fertilizer forced the farmer to use at least 50 percent more fertilizer per acre in order to get enough organic nitrogen to feed his crop to maturity, and this increased the amount of the farmers' national fertilizer bill $250,000,000.

"The record shows that the National Fertilizer Association was indicted and fined $9,000 in a Federal court in North Carolina for violations of the Sherman Antitrust Act, and for having exerted an undue influence on State lawmakers, and law-enforcement officials, and the attention of the Congress has recently been called to the fact that the fertilizer interests have been subsidizing the research work of the Bureau of Plant Industry.

"If I were in your place, and wanted the respect and esteem of the public, I would openly advocate the enactment of H. R. 3045 that will compel all manufacturers to be honest with the farmers; such a law would make it easier for State enforcement agencies to see that the farmer got an honestly made fertilizer, and would help to protect the health of the people."

Mr. Holman, writer of the above letter, has devoted himself to the fertilizer subject for years, and has served as consultant to a number of Representatives and Senators of farm States.

I would like to point out, in connection with his statement on the $9,000 fine under the Sherman Antitrust Act, that antitrust laws will never be properly enforced until prison sentences, instead of fines, are meted out to violators.

The Tidelands Bill

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial from the Boston Sunday Post, Boston, Mass., April 23, 1950:

DOUBLE TALK

The tidelands bill, which would give give States control of tidelands for 3 miles offshore, has been reported out of the Judiciary Committee in the House with a somewhat surprising exception.

In the case of Texas the jurisdiction would extend 10½ miles offshore, and the reason given is that this exception was made because of the conditions under which Texas entered the Union. As a sample of silly double talk, that takes the all-time honors.

Of course, the reason for the 10½-mile limit which would be accorded Texas is that oil fields have been found that far out from the Texas shore line. Why not say so? Why pretend that Texas came into the Union with special privileges? It is this kind of foolish deception that does the greatest harm to democracy.

It is perfectly reasonable and logical for Texas to want to control, for tax purposes, oil lands which lie as much as 10 miles out in the Gulf of Mexico. It is a pity that George's Bank doesn't lie closer to the Massachusetts coast line, but it is a safe bet that the Commonwealth would exercise control of the fishing there—a control that is vitally needed.

National Modesty Week—Truman Takes Credit

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, the President has taken full credit for the wonderful state of the Union. Some newspapermen outside of Washington think he is a bit optimistic. My friend Tex Reynolds, a foremost journalist in Wisconsin and columnist for the Racine Journal-Times, recently expressed his views on this subject. I include his column of April 15, 1950:

BESTOWING THE CREDIT FOR SHAPE OF NATION IN WEEK OF MODESTY

This marks the close of National Modesty Week, observance of which was led by the President of the United States himself.

In setting the keynote for the week, Mr. Truman did a great imitation of a shrinking violet. He said this country is in fine shape, and frankly admitted that he deserves the credit. In fact, he came right out and claimed it.

Of course, there'll be nasty Republicans who'll say they are glad to give Harry the credit for what has happened in the last 5 years. For instance, the Government going into the hole so many billions of dollars that nobody can count the amount of the debt, hardly, to say nothing of figuring any way to pay it.

These same low-down critics of the Happy Haberdasher will allow as how he can have all the credit he wants for the agricultural situation. That is, for the surplus-potato deal, and the mountains of dried eggs, milk, wheat, etc., in the Government's hands, which were bought at high prices with the taxpayers' money, but which can't be sold without hurting the market, which is going to pot anyway, which is reducing the farmers' income, which they don't like. (I'd be in bad shape if I couldn't spell "which.")

Others will gladly bestow upon Missouri's favorite son all the credit he wants for current high income taxes that cause arthritis in practically everybody's pocketbook. Also for special war excise taxes on various items, such as war paint for women, telephone calls, railroad tickets, etc., though the war has been over for 5 years.

You'll find plenty of the aforesaid Republican-minded snakes in the grass who'll also say the Chief Executive can have all the credit for conditions within government itself. That is, for red herrings like the traitor Alger Hiss, and for Maj. Gen. Harry Vaughan, the big influence and percentage man.

Then there'll be those who won't deny Margaret's papa all the credit he desires for a shrinking dollar and growing prices so that when you take a $10 bill to the store, you don't need any market basket to carry what you can buy. In fact, you don't even need big pockets in your coat. Or if you want to buy big things, like automobiles, washing machines, refrigerators, etc., and you do it on time, you don't have to worry because you won't live long enough to pay the last installment anyway.

If Mrs. Truman's husband wants the credit for the shape of this country's foreign affairs, he can have that, too, many will agree. For example, the big drive to stop communism, financed by billions of American dollars, which partially succeeded in some parts of Europe, though not in others, while the Communists stepped out and grabbed the biggest hunk of Asia.

Also, some will maintain, the White House landlord can take the credit for our splendid military situation. That is, the rapid and wholesale decline in the strength of the Army, Navy, and Air Force, at a time when war is a possibility and our Government is talking tough to the Russians and telling the world that we can lick anybody.

Oh, there'll be some who'll say that no one man can rightfully claim credit for all this, even if he is President. They'll maintain that all this is the work of many people, which no single individual could possibly control.

But this line of thought is contrary to the whole purpose of national modesty week. During this great week, at least, common courtesy to the Nation's No. 1 citizen dictates that when, in all modesty, he takes credit for what has happened in this country, he should be allowed to keep it.

We Must Face the Facts

EXTENSION OF REMARKS
OF
HON. EDWARD T. MILLER
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. MILLER of Maryland. Mr. Speaker, it is reported that the President, in his speech last night, gave assurance that no known case of Communist or other subversion in Government has gone uninvestigated.

All loyal citizens should be comforted by this declaration, but many of them would rest easier if they were confident that the investigations were of sufficient scope and thoroughness. Correspondence indicates doubts on the part of many level-headed Americans as to the wisdom of using nets designed to catch "red herring" in an effort to take sharks—even though the sharks are red too.

The President also stated in his speech: "There is no area of American life in which the Communist Party is making headway." That assertion would be more reassuring if the American people had recovered from the shock of the Hiss case, and of learning that the Russians had acquired our atomic secrets and other vital information through leaks from within American life.

Mr. Speaker, under leave, I include here an editorial by Mr. C. P. Ives, which appeared in yesterday's Baltimore Sun and which focuses attention on an important feature of our present difficulty:

A SYMBOLICAL QUESTION FROM SENATOR GREEN
(By C. P. Ives)

At the peak of Mr. Budenz' testimony before the Senate committee Thursday, the administration wheelhorse, Senator GREEN, of Rhode Island, was questioning the witness with considerable zeal.

Why, Senator GREEN wanted to know, hadn't the witness testified in behalf of the Government at the trial of the American Communist Politburo members in New York City last year?

"But Senator," said Mr. Budenz, "I was the chief witness for the Government; I spent 10 days on the stand."

Senator GREEN'S question may well stand as a kind of small historic symbol. For the lack of awareness of the facts of life betrayed by the time-worn liberal from Rhode Island only slightly caricatures the official attitude of all the 1933 men on the whole question of communism since that date.

As it happens, indeed, there is a smack of the same flavor in a speech by another Rhode Island liberal, made the very night before the Budenz testimony. I refer to a New York City speech by Attorney General McGrath.

In this address Mr. McGrath once more denounced hysteria and witch hunting of the kind the executive branch has steadily (and sometimes rightly) attributed to Congress since the days of Martin Dies. He asserted again that the executive branch could be depended on to handle the communism issue.

Yet within a few hours Mr. Budenz was to testify in open hearing that only weeks after Senator MCCARTHY first raised his voice, had the FBI got information from him on Mr. Lattimore.

Think of it. Here is testimony, so far uncontradicted, that in this supremely important episode, the executive branch once more lay back and waited for a Member of Congress to stimulate testimony from the man long since established as the executive branch's own No. 1 informant on communism.

Personally, I find this statement of Mr. Budenz hard to believe as anything he said throughout his day on the stand. And yet in his behalf it may be said that Senator TYDINGS, in his rather frequent pre-Budenz statements on Mr. Lattimore, hardly hinted at anything in the FBI files of the sort finally adduced from the most obvious sources in these matters.

For was not Mr. Budenz an obvious source? Was he not a source indeed, rather demanding attention by executive officials alert not merely to defend the Republic but to protect innocent men against possible smears?

Let's see about that. Mr. Budenz talked first before the Un-American Activities Committee of the Congress in November of 1946. In that testimony he laid the finger on one Gerhart Eisler as the top Communist in the United States. Eisler was cited for contempt by the committee, fled the country and ended up as a functionary of the east German Communist state.

In March of 1947 and in August of 1948, Mr. Budenz put the finger on one Harold Christoffel before two congressional committees. Christoffel was tried for perjury and convicted.

In September of 1947, Mr. Budenz appeared against one Santo in a deportation hearing. Santo left the country under warrant of deportation.

An August of 1948, Mr. Budenz testified against one Reinicke, a Hawaiian school teacher. Reinicke was fired from his post.

On August 24, 1948, Mr. Budenz testified before Congress' Committee on Un-American Activities that though he didn't know the man personally, "Mr. Hiss was a member of the Communist Party." Hiss was convicted of perjury.

In September of 1948 Mr. Budenz testified against one Alexander Stevens in a deportation hearings; Stevens left the country under a warrant of deportation.

Finally, as even Senator GREEN now knows, Mr. Budenz was the warhead of the Government's case against the American Communist Politburo, spending 10 days on the witness stand. The jury convicted.

Despite this record, however, the Justice Department took no steps—so Mr. Budenz says—to squeeze everything available out of him. Not until Senator MCCARTHY spoke did the FBI get Lattimore statements from Mr. Budenz. Only now has Mr. Budenz agreed to name his final 400 concealed Communists to the FBI—and here by all means let him follow Senator GREEN'S counsel and name his Government suspects first.

Nothing said here, of course, is meant to suggest in any way that the Budenz testimony (so much of it hearsay) on Mr. Lattimore is true.

What I mean to say here is that on the basis of a minor and so far uncontradicted point of Mr. Budenz' testimony it seems once more to have taken congressional protest (rude as it often is) to move the executive branch into an inclusive examination of alleged Communist infiltration.

In the New York address Attorney General McGrath warned against vigilantism. But everywhere in America heavy-hearted Americans know that the antidote to vigilantism (or worse) is faithful and emphatic discharge of their sacred oaths by the constituted authorities.

Our American Watch Industry

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. MASON. Mr. Speaker, before World War II—1931–35—47 percent of the American market for jeweled watches was supplied by imported watches from Switzerland, and 53 percent of the American market was supplied by our American jeweled-watch industries. In 1934 we signed a reciprocal-trade agreement with Switzerland. Later our American watch factories were retooled and converted for war needs, making precision instruments for the Army and Navy. Switzerland then took over the American market for jeweled watches to such an extent that by 1946 Switzerland supplied 86 percent of the jeweled watches sold in America.

Mr. Speaker, since 1941, when we entered the war, a total of 59,000,000 Swiss watches have been imported. During the 4 years—1945 to 1948, inclusive—an average of more than 9,000,000 Swiss watches were imported each year. This importation of Swiss watches under our reciprocal-trade agreement with Switzerland has seriously damaged our American watch industry. Today there are only three American jeweled-watch companies left in the United States, Elgin, Hamilton, and Waltham, and the Waltham Watch Co. is already bankrupt and in the hands of the receiver.

The serious question concerning the American jeweled-watch industry is the important part it plays in national defense. It is absolutely essential that a pool or reservoir of skilled watchmakers be maintained, to be drawn upon in time of war to make precision time instruments—chronometers, fire-control watches, time fuses, aircraft instruments, jewel bearings, et cetera—without which not a battleship nor a warplane can be operated, not a bomb can be dropped, not a rocket bomb fired until a delicate timing instrument to operate it has been installed. There is no source for the kind of skill needed to make these precision instruments other than the jeweled-watch industry. Yet our reciprocal trade agreement with Switzerland has almost destroyed our American jeweled-watch industry that is so essential to our national defense.

Switzerland has captured the world trade in jeweled watches. Even the American market has been taken over to the extent of 80 percent. Switzerland furnished practically all the precision instruments used by Germany in the last war. She also furnished most of the precision instruments used by our European allies. She could do this because she was a neutral in the war. Do we want to depend upon Switzerland in time of war for precision instruments? Dare we risk being dependent upon Switzerland?

Mr. Speaker, under leave to extend my remarks I include a letter received from Mr. LeRoy A. Mote, secretary of the Elgin National Watch Co., and a clipping from the Elgin Daily Courier-News of April 17, entitled "Manufacturing Divisions, Watch Factory on 4-Day Week."

The letter presents a picture of conditions as they are today.

ELGIN NATIONAL WATCH CO.,
Elgin, Ill., April 19, 1950.

Hon. NOAH M. MASON,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN MASON: On April 1, we announced the laying off of approximately 300 employees in our plants at Elgin, Ill., and Lincoln, Nebr. This lay-off was about evenly divided between the two plants. In announcing that lay-off, we stated: "Because of the disruption of the watch market resulting from the extensive liquidation and sacrifice sales of Swiss watches which are being dumped on the market in great quantities, it has become necessary to reduce our production schedules." These liquidation sales that have been going on for the last 6 to 9 months, and which are now beginning to include nationally advertised brands have, indeed, had a serious effect upon the business of American watch manufacturers.

We now find that it will be necessary to even more extensively curtail our production schedules than we had anticipated some 3 weeks ago, and I enclose a clipping from the Elgin Daily Courier-News of April 17, commenting on the action that has been taken. The 4-day week schedule will be in effect for about 5 weeks, which is the time it will take to revise our production schedules and determine the full extent of the additional lay-off necessary to permit us to return to a 5-day week.

Had the State Department taken a realistic approach to the situation back in 1945–46, when we were before the trade agreements organization protesting the reduced rates of the trade agreement with Switzerland, much of this could have been prevented. Our approach to the trade agreements organization at that time was predicated largely upon our anticipation that this situation was bound to result from the flood of Swiss watch movements which were coming in during the war. As a member of the Ways and Means Committee, you are generally familiar with the efforts we have been making in connection with the tariff.

We, of course, have been closely checking on market conditions with our jewelry-store outlets, and it is quite evident that another factor which is contributing to the slowdown in sales at normal retail price levels is the continuance of the excise tax. Of course, the basic difficulty is the dumping of these Swiss stocks. However, since we know that the excise tax is also influencing the situation, we thought it advisable to call this aspect of the matter to your attention.

Yours very truly,
LEROY A. MOTE, *Secretary.*

[From the Elgin (Ill.) Daily Courier-News of April 17, 1950]

MANUFACTURING DIVISIONS, WATCH FACTORY ON 4-DAY WEEK

All employees of the manufacturing departments of the Elgin National Watch Co. went on a 4-day week work schedule today.

The sales department, however, will continue on a 6-day schedule and office employees, especially those who service the sales department, will remain on a 5-day week.

It was stated at the watch factory that the reduction of the workweek was necessitated by a slacking up of sales, which made it inadvisable to increase the inventory.

The curtailment of hours applies to the Lincoln as well as the Elgin plant.

What action the factory executives take at the end of the 5-week period will be decided by conditions as they exist at that time.

ITO Is Premature

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, a Washington Post editorial on April 21 calls attention to Mr. Acheson's plea for adoption of the International Trade Organization charter. Hearings are now under way before the Foreign Affairs Committee. This is legislation that should not be considered, Mr. Speaker. The editorial clearly points out its weaknesses. I include it at this point:

ACHESON'S PLEA FOR ITO

It is a moot question whether the present ITO charter, for ratification of which Secretary Acheson is pleading, would be an effective means of removing obstructive trade barriers. There are too many escape clauses and qualifications, some of them applicable only for a so-called transitional period, and others of a permanent nature. Mr. Acheson admits, for instance, that, charter principles to the contrary notwithstanding, countries in balance-of-payments difficulties may be compelled to apply quota restrictions to imports owing to shortage of dollars or other foreign currencies. He also concedes that the charter does not—and cannot—remove all trade discriminations. Moreover, there are certain permanent exceptions to the commitments regarding trade policies—relating to national security, agricultural policy, economic developments, and regional preferences. For example, under the charter, quantitative import restrictions are permitted when their purpose is to insure enforcement of national measures designed to

limit domestic production or liquidate temporary agricultural surpluses. Admitting the necessity of these escape clauses, they raise the question whether much is to be gained by adherence to an elaborate code for the guidance of trading nations that is loaded down with qualifying reservations and exceptions to the general rules.

As a matter of fact, there is no expectation of attaining the long-range objectives of the ITO for some time to come. There is also considerable danger that the temporary escape clauses of the charter, if used over an extended period of time, might become permanent. In any case, so long as the ECA continues to provide large-scale aid for western Europe, the provisions of the charter will have very little effect on the character of international trade. Under existing conditions, therefore, it is, in our opinion, premature to press for action on a plan that is based on future hopes rather than immediate accomplishment. The case for deferring a decision is also strengthened because of the fact that the proposal to accept membership in the ITO has given rise to sharp differences of opinion among business groups, trade and civic organizations.

Coast Guard Reserve Training

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Herald, Boston, Mass., Saturday, April 22, 1950:

DEFENSELESS PORTS

Although it is our earnest hope that the omnibus appropriation bill will emerge from the House greatly reduced in size, we are obliged to give our support to one proposed increase. That is an item of $4,100,000 which the President requested for Coast Guard Reserve training and which the Treasury-Post Office subcommittee has unaccountably cut out of the bill.

This sum is considered absolutely essential for the proper maintenance of port security which is one of the wartime responsibilities of the Coast Guard. During World War II the Coast Guard had more men assigned to this duty in the ports of Boston and New York alone than it now has for all its peacetime duties everywhere. Obviously it must rely on its reserve to handle this vital function in the next emergency. Yet it has been denied all funds to train such a reserve.

Secretary of Defense Johnson, who has been notoriously penny-pinching in his allocation of available defense funds, has gone on record as "fully concurring" with the President's request for Coast Guard funds. "It is vital to national defense," he has said, "that a modest but fully trained force be in being to detect sabotage, supervise explosives loading, prevent waterfront fires and explosions, control the identity of waterfront personnel, etc."

That is good enough for us. If these vital functions are officially assigned to Coast Guard, then Coast Guard should be given the wherewithal to fulfill them. It is particularly unthinkable in these days of atom and super-atom bombs that our ports should be left to the protection of untrained and unorganized volunteers.

The reason for the failure to supply reserve funds up to now appears to be the purely technical one that Coast Guard is outside the Defense Department and requests until now have not gone through all the formally required channels. But in the event of a sudden attack upon our port cities, technicalities will not prevent disastrous loss of life and property.

We hope that the Coast Guard training appropriation will be restored in an amendment from the floor and that it will be part of the omnibus bill when the President signs it.

Farm Price Support Program

EXTENSION OF REMARKS

OF

HON. GLENN R. DAVIS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, there are differences of opinion regarding the highly publicized Brannan plan, whatever that may contain at this moment. There can be no reasonable difference of opinion, however, as to the responsibility of the Secretary of Agriculture to administer and effectuate the existing laws.

There are a substantial number of responsible farm leaders who fear that the present Secretary is deliberately mishandling the present farm program in order to make his own plan look good in contrast. The fears of one such farm leader, James C. Green, executive secretary of the Wisconsin Farm Bureau, are expressed in the following article from the Wisconsin State Journal of Madison, Wis.:

BRANNAN HANDLING OF SUPPORTS RAPPED—J. C. GREEN, STATE FARM BUREAU HEAD, SEES PERIL TO CO-OPS

A charge that Secretary of Agriculture Charles F. Brannan is mishandling the national farm price support program was made Wednesday by James C. Green, Madison, executive secretary of the Wisconsin Farm Bureau, in answer to a statement last week by Brannan claiming that the Farm Bureau is "undermining cooperatives."

"The Secretary's method of supporting dairy prices is damaging Wisconsin marketing cooperatives," Green said, "and it will destroy them if it is continued.

"LOSE CUSTOMERS

"It gives co-ops no choice but to sell to the Government, and thus losing their regular customers.

"This practice is making farmers dependent on government and seems intended to soften them up for the kind of direct subsidy that Brannan is talking about," Green declared.

"The Secretary is trying to discourage farmers from marking their own agricultural products."

He said Brannan should announce price supports for dairy products at terminal markets, instead of at shipping points in this country.

AID TO CO-OPS

Green said that would restore the function of co-ops as sales agencies for their farmer members and strengthen their position when the day of normal marketing returns.

He termed "shortsighted" the policy of accepting Government payments now in exchange for the commercial market outlets which the co-ops have built up over past years.

Support price of butter now 60 cents a pound is uniform throughout the country and makes no provision for freight, storage, or commissions, Green said.

SOLD TO GOVERNMENT

In consequence, many sales of dairy products are being made to the Government.

Green said he has written to Don Anderson, assistant director of the Dairy Branch of the Production and Marketing Administration (PMA) in the Department of Agriculture, urging that support prices be based on terminal markets.

The Farm Bureau is greatly concerned over the future of cooperatives, and contrary to what Secretary Brannan says, wants to see them expand instead of withering away under paternalistic Government interference," Green declared.

Menace of Imports of Shoes From Czechoslovakia

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following communication and enclosure, that I have received from Mr. Maxwell Field, executive vice president, New England Shoe and Leather Association, Boston, Mass.:

NEW ENGLAND SHOE AND LEATHER ASSOCIATION,
Boston, Mass., April 24, 1950.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

DEAR MR. LANE: Our association has sent its final communication to the Commissioner of Customs, Frank Dow, requesting that he act favorably on its petition that current imports of women's low-priced shoes from Czechoslovakia be investigated as a violation of the Antidumping Act of 1921. A copy of this letter is enclosed.

We earnestly request your approval of this suggestion, namely that you personally call on Commissioner Dow to urge that he approve this investigation on the basis that the necessary information cannot be secured in any other way than by an official investigation of a Government agency, such as the Treasury Department.

I personally will be in Washington tomorrow and Wednesday and will call you to learn your reaction to the latter suggestion.

With kindest personal regards.

Sincerely yours,

MAXWELL FIELD,
Executive Vice President.

APRIL 18, 1950.

Mr. FRANK DOW,
Commissioner of Customs, Treasury Department, Washington, D. C.

DEAR MR. DOW: We greatly appreciate your informative letter of April 14, in which you have clarified several important questions with respect to the current status of women's low-priced shoes being imported from Czechoslovakia.

We wish to commend your Bureau for its speedy action in holding up the release from customs custody of all such shoes until they are legibly and conspicuously marked with

the name of the country of origin. A large number of the shoes now being sold at retail, that have come to our attention, have marks which are illegible and inconspicuous, so that your forthright action will help protect the interests of the American shoe industry.

Our association, as you know, filed on March 9 a formal petition with the Honorable John W. Snyder, for an immediate investigation of these imports as being in violation of section 160 (a) of the Antidumping Act of 1921.

In this communication, we advised the Secretary that it was very difficult for our association to present factual data of the production costs, or the wholesale or retail prices in Czechoslovakia of the same or similar shoes, as is required under the act. The reason for this is that these shoes are being produced in a nationalized industry behind the iron curtain, where this type of information is considered secret and severe penalties are meted out to any informants. Actually, our association has been formally advised by officials of both the United States Department of Commerce, as well as other Government agencies, including the State Department and the Department of Labor, that this information could not be furnished our association. It is self-evident, therefore, that these conditions prohibit more complete and current information being furnished to you, and this fact, we feel, justifies, more than any other fact, action by your Bureau in undertaking a formal investigation to prove whether there is a violation of the Antidumping Act, for it is only as a result of a Government investigation that the facts can be established, once and for all.

Our communication to Mr. Snyder was acknowledged on March 17 by W. E. Higman, chief of the Division of Classification, Entry, and Value, who advised that our petition had been referred to his office for a reply, and that "this matter is receiving consideration and, when a decision is reached, you will be advised." Mr. Higman has a complete file of our correspondence, and we respectfully suggest that this file be brought to your attention with this letter so that you may be fully advised of all the information which our association has furnished your bureau in support of its claim of suspicion of dumping of these Czechoslovakian-made shoes.

We advised Mr. Higman on March 24 that a former commercial attaché of the Czechoslovakian consulate in New York City, E. J. Hajny, had advised us that the rationed prices of women's leather shoes in the spring of 1949 were 400 to 500 koruna per pair, or the equivalent in dollars of $8 to $10 per pair. Presumably these shoes are comparable in selling qualities to the imported shoes, as they were also made of leather uppers and nonleather synthetic soles. Mr. Hajny informed us that the free market prices of these shoes during this same period was $35 to $40 per pair. He further informed our association, and we so advised Mr. Higman, that by December 1949 prices on the free market were lowered by 30 to 35 percent, and that rationed shoe prices were also decreased slightly, but not anywhere as substantial a reduction as for free market prices. This information can be verified by contacting Mr. Hajny at his home at 7035 Broadway, Jackson Heights, Long Island, N. Y. (Telephone Newtown 9–7400).

On March 27 we wrote again to Mr. Higman sending him several pairs of Czechoslovakian shoes, one stamped Kerrybrooke Casuals which is being retailed at $1.95 in Sears Roebuck's retail stores, as well as through their 1950 spring and summer catalog (see pair L on the bottom of page 90). The second pair was purchased from R. H. Macy in New York at $2.39 per pair. We stated at that time that in the opinion of shoe manufacturing members, these shoes represented unusual values and were superior even to comparable American-made shoes retailing at $4 to $5 per pair, as claimed in our letter of March 9 to Mr. Snyder. In this same communication, we enclosed an affidavit by a native of Czechoslovakia who now is employed in one of our member factories in Boston, by name Bernard Katz, in which he stated that he had in his possession a laced sandal type cemented shoe, with plastic sole and leather platform, for which his wife had paid 400 koruna, or $8 per pair last year. Several other pairs of women's leather shoes were mentioned in this affidavit, the original copy of which I am enclosing with this letter.

The value of both this statement, and that of Mr. Hajny, referred to above, is that from two reliable sources we have established the fact that cemented shoes with leather uppers and a leather wrap platform, and plastic soles, were sold in Czechoslovakia last year—and presumably are still being retailed this year—at prices equivalent to $7 to $8 per pair. It is our association's claim that for customs purposes, the shoes in question should be valued on the basis of these foreign value prices of similar merchandise offered for sale in the latter part of 1949—at the time when the imported shoes were shipped out of Czechoslovakia—which prices, so far as we know, are still in effect currently in that country.

As we have indicated in our letter to Mr. Snyder, the Czechoslovakian shoes that have been imported into this country were copies of American styles, based on American lasts and patterns and deliberately priced below their costs of manufacture in order to capture an important segment of the American shoe market. This action, in turn, has created great injury to many manufacturers in the American shoe industry, as well as having harmful effects on the full time or continuous employment of American shoeworkers employed in these factories. A number of New England shoe manufacturers have already written to you directly advising of the extent of injury which these companies have suffered as a result of the continued importation and sales of these Czechoslovakian shoes by large mail order, chain, and department stores throughout the country.

American shoe retailers are also being injured by these shoes which are being sold by a few competitors, because these competitors, with no requirement that they must list the country of origin in their advertisements or in catalogs, are promoting all-leather shoes at prices one-half or more under domestic prices of comparable American-made shoes, so that these afore-mentioned retailers are losing considerable business to their few competitors carrying these Czechoslovakian shoes.

The magnitude of the injury caused by these imports to American shoe manufacturers, their workers, and retail customers is best revealed by the following facts:

Imports of women's and misses' shoes from Czechoslovakia

	Pairs	Dollar value [1]
Total, year 1949	99,491	$101,413
1950—January	58,018	47,064
February	153,436	146,644

[1] These figures from U. S. Department of Commerce releases.

It is significant to note that the combined imports of January and February of this year of 211,454 pairs, valued at $193,708, is over double the total imports of 1949 and the average prices of these shoes, according to Government figures, is only 95 cents per pair. Our association respectfully points out that such a heavy increase in these imports confirms our statement to Mr. Snyder that over a million pairs of these shoes are expected to be imported in this country during 1950, and also that the declared prices on the import manifests constitute a suspicion of dumping in violation of the Antidumping Act of 1921.

We trust that the facts herewith submitted by our association, including the cost estimates in our letter to Mr. Snyder—see copy attached—and the evidence submitted to Mr. Higman, will warrant your issuance of notices of suspected dumping to the various appraisers, or the issuance of withheld appraisement because of suspected dumping, in compliance with the Antidumping Act of 1921.

May we again repeat our appreciation for the action of officials of the Bureau of Customs in their consideration of our association's formal petition. If you feel that additional information is necessary before you can make a final determination with respect to our association's claims that the Antidumping Act is being violated, please so advise us and every effort will be made to furnish this data promptly. We cannot help, however, reiterating our oft-expressed claims that factual information on prices of costs in Czechoslovakia today can only be obtained through a formal investigation by your Bureau under the Antidumping Act of 1921.

Yours very truly,

NEW ENGLAND SHOE AND LEATHER ASSOCIATION,
MAXWELL FIELD,
Executive Vice President and Secretary.

Removal of Postmaster at Bagley, Wis.

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. DAVIS of Wisconsin. Mr. Speaker, last week a Wisconsin postmaster Stanley Hall, of Bagley, with whom I attended college, was notified that he was to be ousted for inefficiency. It is quite obvious to the people of Wisconsin that Mr. Hall's inefficiency consisted of failure to contribute to the Democratic campaign fund. Rex Karney, fact-finding associate editor of the Wisconsin State Journal of Madison, Wis., wrote an excellent exposure story, accompanied by photostatic copies of the fund solicitation letter and the subsequent dismissal letter. It is interesting to note that thereafter there appeared in the hands of Democratic organizing committee officials—not in the hands of postal officials—letters of complaint regarding Mr. Hall.

A majority of the residents of Bagley have signed a statement testifying to Mr. Hall's efficiency and good service as postmaster. Wisconsin's senior Senator has demanded an investigation by the Postmaster General. And properly he should.

This entire sordid situation is well described in an editorial which appeared in the Wisconsin State Journal entitled "Rule of the Carpetbaggers." Its text is as follows:

RULE OF THE CARPETBAGGERS

The story of the Bagley postmaster who was fired from his job after refusing to contribute to the Democratic campaign kitty should surprise no one.

That fact that this postmaster, 39-year-old Stanley Hall, always had done his job well,

and that the majority of the residents of Bagley were willing to attest to that fact, has no bearing on the matter.

His sin was that he had the guts to stand on his hind legs and tell the political shakedown artists to go to——

That sort of thing isn't tolerated in Wisconsin Democratic politics. You toe the line. You accept, unquestioningly, the decisions made by the knee-pants brain trusters that have seized control of the Wisconsin Democratic Party through the medium of the Democratic organizing committee.

So you have a wife and 6 children to support?

Come across, boy. We would appreciate your contribution. The 1950 campaign fund must be assured.

Neither is the fact that Stanley Hall had been a lifelong Democrat, like his father before him, of any consequence.

Because the Democrats—the real honest-to-goodness Jeffersonian Democrats—no longer control the Wisconsin Democratic Party.

They have been frozen out by the tea party intellectuals, the remnants of the LaFollette Progressive machine, and some Socialists who haven't the honor or principle to admit that they are Socialists. The Democrats have been shunted aside and are supposed to show up only when the collection plate is passed or the votes are needed at the polls.

Incidents similar to the ouster of Stanley Hall will continue to happen just so long as Wisconsin Democrats continue to allow the present crop of carpetbaggers to run their party.

As long as the Miles McMillins, the Pat Luceys, the Horace Wilkies, the Andy Biemillers and their ilk run the Wisconsin Democratic Party, such happenings will be commonplace.

Keep the Issue in Sight

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks, I am including an article that appeared in the Milwaukee Sentinel. It deals with the McCarthy charges against the State Department and I commend it to all Members:

KEEP THE ISSUE IN SIGHT

(Reprinted from the Tablet, official organ of the Roman Catholic diocese of Brooklyn)

Arthur Krock, well known journalist, and other Washington newspapermen, as well as Government officials, are surprised at the quantity and type of mail being received at the Capitol since Senator JOSEPH MCCARTHY has made his charges against the State Department.

Mr. Krock, his colleagues and officials think the Senator's charges are exaggerated, if not untrue, and maintain he has not as yet proven his pro-Red charges against even one State Department employee, or former employee, yet most of the mail from the American people seems to favor the Senator.

They undoubtedly wonder why this is so.

The reason the American people either accept or are sympathetic with charges against the State Department is twofold.

First, the people, by and large, believe the United States was betrayed or sold out in the recent war, and thereafter, to Russia.

The people were led to believe they were brought into the conflict in behalf of liberty and democracy, to vindicate the Atlantic Charter and the four freedoms, and to maintain the freedom of small nations against aggressors, and they observe today that despite their tremendous sacrifice of life, blood, armaments, matériel, and wealth there is more slavery, more dictatorial rule, more tyranny, and a greater threat of war than before.

They see in communism a greater threat than nazism, and observe that Russia has endeavored to fulfill to the letter her ideological promise of world revolution, destruction of liberty and all human rights, and international dictatorship.

Moreover, the American people know that at Quebec, Tehran, Yalta, and Potsdam millions of people, whole nations and tremendous power, were given to Russia with the acquiescence of our representatives.

Americans then ask: Who betrayed our country, our principles, the cause for which we fought?

The people reason either our State Department must have been hand in glove with Russia, either Communist spies or friends of the Soviet dictatorship sold us out, or else our representatives were too stupid to know what Russia was up to.

In whichever case, they are waiting for the answer to this frightening situation of more tyranny and more war which now threatens civilization.

Did spies sell us out or were our representatives just unbelievably stupid?

Secondly, the American people read about the Hiss case.

They know how this seemingly sinister character, placed in the Government, then promoted to key positions and finally sitting alongside of the late President Roosevelt at Yalta and as former Secretary of State Stettinius' adviser at the formation of the United Nations at San Francisco, was convicted of perjury based upon his espionage activities.

Finally the people know that the present Secretary of State, Dean Acheson, not only refused to move against Hiss when he was carrying on his espionage activities but even after his conviction the Secretary refused to repudiate him.

Why wouldn't the people have sympathy for Senator MCCARTHY's charges?

Why wouldn't they condemn the crowd that asserts these charges injure the prestige of the State Department, and the United States is injured abroad by such loose charges?

What gall.

Moreover, is it strange that the people refuse to accept the frantic denials of criticized employees that they are not Communists—when they know that many of Soviet Russia's best friends here have no membership card in the Communist Party?

In the midst of the Senator's attack someone added an even worse charge than he, namely, that the State Department had acted as a home for a colony of degenerates.

And the top security official of the State Department immediately stated that he had dismissed 91 of these perverts from the State Department.

Whether or not he got rid of all of them we are unable to say, but police officials in Washington on Tuesday stated that the capital had 5,000 of these offenders and 4,000 of them hold Government jobs.

What a shocking scandal, what a curse to put on the American people.

What an insult to the morality and decency of our Government.

What a threat to our security.

There is no reason to wonder at Senator MCCARTHY's charges—exaggerated, poorly presented, premature or not—being supported, for the people have never had explained to them why and how the Soviet was permitted to capture and enslave one-quarter of the world and seemingly with our acquiescense.

The Tablet made a fair suggestion to President Truman when he assumed office in 1945.

It urged that he repudiate the secret Yalta agreements—many of which neither he, nor anybody else, save Alger Hiss, knew about at the time—and take full responsibility for whatever went on thereafter.

It then suggested that the President recreate the State Department and investigate everyone who had acted as a catspaw, if not an agent, of those who betrayed our Nation.

This was not done, although the perfect stooge then occupying the Secretary's post was dropped and later Henry Wallace was forced out.

The people have no confidence in the TYDINGS committee, or officials who consider Senator MCCARTHY—a former marine—the principal menace to our Nation while they are trying to protect and hide those who were pro-Soviet in their deeds, words, and activities.

What the American public wants to know is this:

Why was the United States sold out at Yalta and by whom?

Who put the likes of Hiss, Wadleigh in our State Department, Judy Coplon in the Department of Justice, and Harry Dexter White in the Department of the Treasury?

Who put the 91 degenerates into the State Department and who kept them there?

Who was responsible for the abandonment of China, the insane set-up in Germany, and the loss of liberty to Estonia, Lithuania, Latvia, Poland, Hungary, Yugoslavia, Rumania, Bulgaria, and Czechoslovakia?

Who decided Formosa has no strategic importance?

The exaggerations or misrepresentations—if they be such—of a Senator MCCARTHY, or the ridiculing of his charges by officials, newspapers and the radio, merely concern an effect.

The administration, and the administration alone, can answer to the people for the vicious results of policies which imperil the world.

Senator MCCARTHY is but a side issue, an individual who is endeavoring to blow the lid off a malodorous situation.

The threat to the United States is not so much the Soviet abroad as the pro-Soviet forces, and their defenders, in the United States.

Communist Infiltration

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent I include the first of a series of articles that are to appear in the Washington Times-Herald by Mr. Frank C. Waldrop, on the infiltration of Communists and communism into our country and our Government.

And Mr. Speaker, I shall ask permission to insert all of these articles, as they appear, in the Appendix of the RECORD.

The first article follows:

BIGGEST STORY

(By Frank C. Waldrop)

Mr. Westbrook Pegler is resting, incredible as that may seem. So for a while this space will be filled with a reporter's account of 20 years spent on one news story.

It is a story of everything from riots in the streets of Washington to the silent, deadly explosions of ideas in men's brains around the world.

It touches on, as chapters in passing, two fantastic world wars and the corrupting of American policy, both foreign and domestic. The shape of the story today has all of us calculating and wondering about another war yet more awful than the last.

It is the biggest news story of the twentieth century because it deals with events and decisions, words and thoughts that have had shattering effect on civilization and done immeasurable damage to the human race.

And in this placid, beautiful city of Washington, not in Moscow, were the decisions made that caused this biggest news story of the twentieth century to become what it is.

The story, of course, is of communism's rise from the cellars and jail cells of Europe to that which it is today.

This writer's connection is an account of that rise as noted by one American newspaper reporter who has only used his eyes to see and his ears to hear.

The details and the evidence are all of record here in Washington, D. C., in the Library of Congress, in the Department of Justice, in the Department of State, and in the intelligence files of the Army, Navy and Air Force.

The facts are nobody's guess. They are unshakable and they are dyed with the blood of millions of humankind.

Just so, they are also forever marked as the follies of men in public office who would not admit the facts, because those facts would show them wrong in their own willful judgments.

Some facts this running record will develop in detail, are these:

Communism is an international movement intended to conquer and rule the world. But that is not to say it can conquer, in the open.

As a matter of fact, it has more often run backward toward internal collapse, than forward. It has only been kept alive by help from outside.

That help, in the past 20 years, has been primarily American. The tax dollars of United States citizens and outright United States gifts from the rich and well-to-do are the real reason for world communism's establishment.

The Communist organization in the United States is not, and never has been, a political party contesting here in the arena of free expression for public acceptance. The masters of Communist action know very well they cannot win that way.

The Communist organization in the United States is an arm of the international conspiracy for power and it operates by any means, legal or illegal, to obey the orders it gets by regular courier service from Moscow.

Finally, communism is not and never has been, a working class movement. Its authors, leaders, and developers the world over have been invariably from the educated and well off, who turned to conspiracy and illegal violence for means to rule.

These statements just above are no longer very vigorously denied in Washington. They have been proved too terribly true. But they were just as obviously true 5, 10, and 15 years ago as they are this very hour.

And 5, 10, and 15 years ago these obvious truths were literally dangerous to utter in this very city of Washington.

People who did so had to be prepared for the most vicious kind of punishment.

This punishment was dealt them by the Communists in offices of power in the Government of the United States. Sometimes the Communists acted directly, sometimes through dummies.

How did the Communists ever achieve such power and influence?

This series begins to develop the record step by step.

It will deal with the idea of communism, and what that is.

It will go on with the basic "who, what, when, where, and why" of that idea in action, which is the only reason for saying that communism is the biggest story in the world today.

Second Anniversary of the State of Israel

EXTENSION OF REMARKS

OF

HON. CHASE GOING WOODHOUSE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mrs. WOODHOUSE. Mr. Speaker, under leave to extend my remarks, I insert herewith a radio talk given over WNLC, New London, Conn., on the second anniversary of the founding of the State of Israel:

This week the new State of Israel is celebrating its second anniversary. A people with a long history and a great tradition, after tragic years of exile, have founded a new state. It is a homeland for the Jewish people, but it is more than that. It is the bridgehead of western civilization and of democracy in the Middle East, and as such it is an important factor in our hope for a world at peace.

In 2 years Israel has gone forward in a way which no purely logical forecast could have predicted. It has achieved to this remarkable extent because of the spirit of its people. They are imbued with a deep religious sense, with a deep purpose. They have a goal. Last fall as I watched the men and women in the streets of Tel Aviv I had a feeling of viewing a great crusade. The men and women showed determination and action. They had a purpose. Above all there is about them as we saw them at work in the streets, in the hotels, even in the recreation camps for the immigrants, an aura of happiness, a sense of people who had found their place in life.

In a very real degree Israel epitomizes a force which the world needs if we are to find peace. We must have a revival of a truly religious spirit. The great scientific inventions which have made possible modern industry and also modern warfare make it essential that we act in accordance with a genuine religion. I speak not of any sect, theology or dogma but of the idea of a power above and beyond man which inspires him with a purpose, with an ideal of responsibility to humanity, and of immortality achieved by fulfilling that responsibility.

Our lives are not our own. They are for the service of our group. The concept of the size of that group has been expanded by the scientific inventions which have all but eliminated time and space and have made the world so small.

The degrading results of the abandonment of religion by the Nazis, their wiping out of entire communities, the decimation of the people of the Jewish faith in Europe, have brought home to the Western World the fact that our culture, our entire way of life, has a deep religious basis. Where religion is lost, people revert to barbarism, and the actions of the leaders in control of the Soviets reinforces and emphasizes that realization.

Faith, a belief that life has a purpose, that we each have a responsibility toward making that purpose a reality not only for ourselves, not only for our immediate family, not only for the people of our country but for the people of the world, is essential, if we are to have peace and to survive as civilized human beings.

This deeply religious feeling of brotherhood, of the oneness of humanity, of the dignity and worthwhileness of the individual lies at the very core of American life. In days of prosperity and security it is likely to rest a bit below the surface, but in these days of doubt and insecurity we are feeling the need for its more open expression.

Nowhere have I seen it so happily expressed as in Israel. There it is evident in the faces and bearing of the men and women one sees hurrying through the streets of Tel-Aviv or at work in the shops and on the farms. Here is a nation brought into being after centuries of suffering, suffering which culminated in a threat of annihilation; brought into being by leaders who refused to see difficulties because they saw a goal which had to be achieved if their people were to be saved.

And the men and women who have followed the leaders, who have with the help of friends in America and elsewhere found their way through struggle and hardship from eastern Europe, from North Africa, from Yemen are imbued with the same deep feeling of a great religious crusade in which they are an integral part.

In Israel we have a vividly dramatic presentation of the idea of brotherhood, of obligation to one's fellows. We hear much of the achievements of Israel. Perhaps we should talk more of the difficulties which have been overcome by sheer will power, devotion, and hard work, and of the difficulties which are still present. The economic problem this new nation faces is intense. Never before has a nation invited immigrants to its shores in such numbers, percentagewise, when its resources were so limited, its agriculture and its industry so undeveloped, its housing so short, its government so new, its peace so unsure. The population of Israel has just passed the 1,000,000 mark. Of this million nearly 400,000 men, women, children, the old and infirm, as well as the young and strong, have arrived in the past 2 years. The leaders of Israel had promised a homeland to their people in need anywhere in the world. In spite of the difficulties they are keeping their promise and the door is open.

These immigrants include highly trained professional people from eastern Europe and also children from Yemen who have never before arrival in Israel seen a bed or worn a pair of shoes. Currently, the bulk of the immigration is of underprivileged people from North Africa and from Yemen. They have to be oriented in reception camps, taught Hebrew, prepared for work on the farms, jobs and houses found for them. The task is colossal.

Every possible help must be given this State of Israel in order that they may build a material basis for their structure now grounded so largely on faith and the will to achieve.

One great need is for private investment. Israel must have irrigation projects if the land is to support its growing population. American engineers have carefully prepared plans which are feasible. With water the land can produce in abundance. Already citrus fruits provide some two-thirds of Israel's exports.

There is need for more industry. To date industry has been carefully planned with emphasis upon producing articles which require relatively small amounts of imported materials. This is necessary because Israel must still import one-half its food and total imports are nearly seven times as great as its exports.

New idustries are being developed. American capital is helping in the construction of a steel mill. A tire and tube factory is being built, financed in part by American

interests. A company backed by several large American labor groups is prepared to construct $2,000,000 worth of housing.

This is just a beginning. The future of Israel depends on peace with the Arab states, in the development of a sound economy, and on the willingness of the United States and Great Britain to give the new nation—already a member of the United Nations—financial and political backing.

This help must be forthcoming. For these pioneers in Israel are serving not only their own people. They are serving all peace-loving and God-fearing people everywhere. They are building a bridgehead of democracy and humanitarianism in the Middle East where the heavy hand of tradition and of feudalism has so long held static living conditions of hunger, misery, poverty, want, illiteracy, and disregard for human life and for the dignity of the individual. Israel with its close ties with the west and its traditional background of the east is in a unique position. It is permeated with the spirit of democracy, with the gospel of botherhood, and of life with a purpose. Such people are the hope of peace, for peace cannot be built out of material things alone; peace comes only out of the minds of men.

So today peace-loving peoples can wholeheartedly offer congratulations to Israel on its second anniversary and give serious thought to further assistance in its great undertaking.

Is America Losing Its Way?

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. REES. Mr. Speaker, under permission heretofore granted me by the membership of the House to extend my remarks in the RECORD, I am enclosing a short editorial by one of the outstanding editors in my State, Mr. A. Q. Miller.

It is entitled "Is America Losing Its Way?" I commend it for your reading and thought.

IS AMERICA LOSING ITS WAY?
(By A. Q. Miller)

During the month of February each year the Nation's thoughts turn to two great Americans—George Washington and Abraham Lincoln—men with great minds, great visions and great souls, men who loved their country dearly and who gave it a full measure of their loyalty. The former is credited with having established the Union, and the latter with having preserved it.

Like others of our founding fathers, these two great Americans took the people into their confidence and discharged their duties with a singleness of purpose, placing the Nation's welfare ahead of personal and political gain. It was on this kind of foundation that America was built. For 160 years America stood like the Rock of Gibraltar—upright before the world, respected and honored, the symbol of democracy and the envy of the free nations of the earth. America taught that in a democracy people derive their just powers from the consent of the governed, and welded together a Nation conceived in liberty and developed under the philosophy of free enterprise.

Here for a century and a half, in such an atmosphere, was built a Nation with the greatest liberty and freedom, the highest standard of living of any nation on earth. It was in this atmosphere, with such lofty ideals, that our forefathers wrote the declaration of Independence, Constitution, and Bill of Rights, which was declared by some foreign governments to be the greatest Charter of Liberty ever penned by man.

Henry Clay declared he would rather be right than President. George Washington said the first duty of every American was to America, to do justice to all. Said Washington: "Let us raise here a standard to which wise and honest men can repair,"—"a government," Lincoln declared, "of, by and for the people, which should not perish from the earth." After the Civil War, out of his great heart, Lincoln said: "With malice toward none, with charity for all, with firmness in the right, as God gives us to see the right, let us strive to finish the work we have begun and bind up the Nation's wounds."

It is a far cry across that century and a half of illustrious history to the present era of greed and p er politics. The country has been led down the primrose path to the brink of disaster by false leaders, ostensibly into the lands of milk and honey, upon promises of security if the people would give up some of their liberties, with the inevitable result that they are losing both their security and liberty.

Somehow America seems to have lost some of its ideals, patriotism, and love of country which in the early days animated individual citizens and inspired them to a greater national pride and spirit.

Our country and our world can well afford to turn their thoughts to such examples as George Washington at Valley Forge and Abraham Lincoln at Gettysburg.

Renazification and Remilitarization of Germany

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. GRANAHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an address which I delivered on Thursday evening, April 20, 1950, at a public meeting held at Mann School, Fifty-fourth and Berks Streets, Philadelphia, sponsored by the Wynnefield-Overbrook Committee To Stop the Renazification and Remilitarization of Germany and its affiliates, the Wynnefield Hadassah, and Jewish War Veterans, Post 148, of Wynnefield:

Ladies and gentlemen, I am always grateful for the opportunity to talk to you and discuss matters of mutual concern, and to this end such meetings as this serve an exceedingly useful purpose. I am interested in learning your problems and I am likewise anxious to acquaint you with mine, as I view them from the Nation's Capital.

Tonight it is my duty to report to you about one of the most unhappy subjects within our recent memory. It is not the war, but its aftermath and specifically its aftermath in Germany. We who had fervently hoped that the end of hostilities would herald an era of peace must now confront the fact that there is no peace. And there will be no peace until the western powers correct the tragic mistakes made as the result of their failure to keep faith with the war dead, the veterans of the great conflict and the millions of living and deceased victims of the Nazi reign of terror.

The continuation of the so-called cold war is a menace to world peace, but we likewise face another problem no less real and considerably more vexing in the western zone of Germany. This latter problem—the rebirth of extreme nationalism and remilitarization—is too often lightly dismissed with the declaration that "we are doing all that we can." But are we? Ladies and gentlemen, let us face the fact. We are not, and unless we rise to our responsibilities now, it may well be too late. To put it bluntly, the allied program in western Germany is destined to be a flat failure if the participating nations do not act at once to stop appeasement, stem the growing tide of nazism and implant the seeds of democracy in such a way that they will flourish and not be stamped out under the heels of Nazis who have been permitted to rise to positions of prominence and influence by wishful-thinking representatives of the triumphant western powers.

The failure of the west to denazify Germany is best summed up by the question of an unreconstructed nationalistic German editor who recently asked: "Who learns from whom?" Five years of occupation have taught us that if anything is on trial in Germany, the "defendant" is not the German nation, but democracy. Our foreign correspondents, qualified students of world affairs, and our wire services bring this lesson home to us daily in disturbing news reports. What do these dispatches reveal?

Here are but a few cases: Ludwell Denny in the New York World-Telegram reports: "Scores of new sheets have announced publication plans, and an estimated three-fourths are former Nazis. Among the old Hitler and Goebbels aids who are active again are Max Winkler, Herbert Cobaltsky, Othmar Best, and Max Willmay."

The Stuttgarter Zeitung discussing the British financial crisis writes: "It is very possible that Great Britain's value to America as an ally will soon sharply depreciate. This would be tremendously important for us Germans, because recent months have shown that it is a definite policy of the British foreign office to hold down Germany economically and politically. * * * If Anglo-American friction increases and Britain's situation becomes weaker, we may expect that America may assign an increasing importance to Germany's role on the continent and lend a more willing ear to German wishes."

In this city, the Philadelphia Inquirer editorially high lighted an unsavory aspect of the German situation when it reported: "A German town in which Nazi tendencies merit watching is Wolfsburg, in the British occupation zone. Wolfsburg was founded by Hitler in 1938 as the site of the Volkswagon automobile plant * * * It appears that there are strange goings on in Wolfsburg. The Nazi straightarm salute has been seen and the Horst Wessel song, Nazi anthem, heard. Furthermore, in a city election the Nazi-like Deutsche party polled a popular majority of 12,619 votes as against 7,800 by the social democrats and 4,009 by the Christian democrats. Later the two democratic parties swung together and with the aid—of all things—the Communists, kept the Fuehrer-heilers from taking over. All of this should be a sharp warning, not only to the British, but to all other occupation forces, against a revival of Nazism either openly or underground."

These shocking disclosures are not new. They are not isolated cases. Reports on subsurface Nazi activities in Germany have been repeated time and again since VE-day.

Unquestionably much of the extreme nationalism which has come to the fore in Germany has been deliberately inspired by the Communists who are practicing their traditional policy of divide and conquer. The stakes in Germany are high. Let us not deceive ourselves: the Soviet union will not

spare any effort to reap the rich reward on the Rhine. Evidence of this policy was further substantiated last week in a communication from Major General Maxwell D. Taylor. He warned of the possibility of more disorders in Berlin. "These," he said, "can be instigated by Communists along the Soviet boundary or even well within the western sectors, where demonstrators can stage surprise raids from s-bahn or u-bahn stations. • • • The few incursions which have recently taken place have been small and have hardly justified the adjectives which have at times brought forth. However, there is quite likely to be an increase in the 'spontaneous' instigated disorders in the coming weeks. Some of these," General Taylor asserted, "may even become quite serious and may require stern measures. I feel sure that we shall meet any such situation with firmness. While there is no blinking at the evidence of a persistent Communist desire eventually to take over Berlin and to absorb it into the Communist-dominated eastern state, the desire will remain unfulfilled if we know determination."

The resurgence of German nationalism is a major threat to world peace, but it should also be recognized that its rise is not the exclusive fault of the Western Powers and that a lion's share of the blame can rightly be attributed to the Soviet Union in its quest for world domination.

It is no secret that the eastern regime, with its artificial boast of freedom from Soviet control, is being used to inflame nationalist passions in the western zone of Germany. The New York Post points up this fact in its comment that "The climax of the performance, according to the Russian script, will come when western Germany's mounting insistence on similar independence forces the United States to pull out before it loses every vestige of German support. In short, the Soviet Union has resolved that the only remaining German problem is not that country's possible future with fascism but whether the east or the west can succeed in luring the new Reich into a carefree love affair."

Ladies and gentlemen, the disgusting spectacle which occupies our attention in Germany sickens the heart of freedom-loving people throughout the world.

The war isn't over until the peace is won, and the state of affairs in Germany today is a far cry from peace. There can be no real peace when we continue to permit ourselves to be diplomatically boxed in a corner, surrounded by the threat of communism, a rebirth of nazism in its most despicable form, utter lawlessness, and the remilitarization of our unreconstructed enemies.

It is high time that the Western Powers redeem themselves in the eyes of the world, in the eyes of the veterans, in the memory of the millions of dead, including the 6,000,000 Jews gassed and starved and subjected to horrible agony. You know and I know that there can be no peace so long as thousands of victims of the Hitler reign of terror still stalk Europe homeless, uncared for and unwanted.

The fate of these tragic, persecuted people is the shame of the world. I cannot believe that any American in his heart would deny them hope, and the moral, spiritual, and financial support so necessary to reestablish themselves to their rightful position in the community of nations.

If anyone harbors any doubts to the effect that the Jews are no longer persecuted in Germany, I feel sure that this information will dispell them. A few nights ago, the following report was brought to my attention: A substantial number of Jews in the French occupation zone of Germany are receiving post cards, postmarked Frieburg, requesting them to "Report to the state crematorium for extermination," according to a dispatch appearing in the newspaper, Droit Et Liberté.

One such postcard, the account stated, addressed to Jews at Emmerdingen read:

"As you have reached the required age, you should report immediately to the state crematorium, portal No. 9, furnace No. 36, door No. 5 in order that your bodies may be burned. You should bring some firewood, coal, and a container for your ashes, which will be used for the manufacture of soap. You should close all pores and openings in your bodies so that your gases will not poison employees at the crematorium."

That, ladies and gentlemen, is but one sample of the type of revolting literature being distributed to Jews in Germany today. And some people still have the gall to say that the Jews are not being persecuted.

The solution of the German problem is a world problem and its solution is our collective responsibility. Governments are made up of people and we are all subject to human failings, but if we are alert to the dangers inherent in the German situation and continually make our will known to our elected representatives and Government officials our demands will be heeded.

Every week brings hundreds of letters to my Washington desk decrying the policies of the western powers toward the extreme nationalists in the western zone of Germany. Their writers have just cause to be alarmed, and yes frightened and fearful of the future. I can fully appreciate their concern. As a veteran I know the horror of war. As your Congressman I am intimately acquainted with the many tragic problems of Jews in all walks of life, and as your elected representative I have and always will do the utmost in my power to assist in solving these problems. Moreover I consider it a sacred obligation because I have fought for every legislative measure designed to stamp out Nazism and restore the right of people who have undergone intolerable racial and religious persecution. I might also add that your kind support and guidance has been an invaluable help to me.

But, ladies and gentlemen, one man, or one group of men, or one government cannot hope to solve the problem alone. Its solution depends upon a combined effort. As the foremost nation in the world today, I demand that the United States assert its leadership among nations and assume the responsibility of charting the course which not only will prevent Germany from ever being a menace to world peace again, but likewise secure once and for all time the inalienable rights of all people regardless of race or creed to enjoy the fruits of freedom without fear.

The road ahead is long and beset with many pitfalls. We cannot hope to proceed without making any mistakes. The important thing is that we correct those mistakes before they cripple our program. That we have made some progress is certain, but inevitably our attention was diverted to the crisis occasioned by the high-handed tactics of the Soviet Union. It is time that we concentrate our efforts on the matters at hand in Germany particularly as they affect the western zone. We will rise or fall according to our determination to carry out our sworn pledge to de-nazify the German nation so that it never again will constitute a threat to peace in our lifetime, and in the lifetime of our children. Anything less would be a betrayal.

I urge, with all the power at my command, that we prevent the election of former Nazis to public office, that we stop a remilitarization program, that we enforce law and order under heavy penalty, that we strengthen our program of preventing further territorial expansion by the Soviet Union in Germany and elsewhere throughout the world.

Furthermore, I recommend an expanded program of assistance to the persecuted racial and religious groups which have experienced the venom of Hitler and his sympathetic successors.

We must all have a hand in the great crusade to stem the tide of extreme nationalism and the remilitarization of an enemy nation that twice in our lifetime has attempted to enslave the world.

We cannot afford to give Germans weapons because they will be turned on us.

We are in a fight to spread the gospel of democracy and freedom as a substitute for nazism, fascism, socialism, and communism.

It is perhaps the most important fight of our time for if we lose it we will have lost everything. Let us not rest until we win.

Thank you.

America's Growing Unemployment

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. JACKSON of Washington. Mr. Speaker, in my opinion, America's No. 1 problem is our growing unemployment. While prosperity continues, and employment and production are high, these very facts may hide from us the growing paralysis of unemployment. The drop in joblessness of a half million from March to April may cause us to forget that in May and June, over a million and a half persons will be emerging from our schools and colleges and will be added to the list of job seekers.

I am inserting in the RECORD an excellent analysis of this situation by Dewey Anderson, director of the Public Affairs Institute, in a recent letter to the Washington Post.

I am also inserting an editorial that appeared on Sunday, April 23, in the Washington Post, commenting on Mr. Anderson's analysis. I commend both of these commentaries to my colleagues.

The matters referred to follow:

FALLING EMPLOYMENT: IS IT JUST A BOGEY?

(By Dewey Anderson, executive director, Public Affairs Institute)

Despite high levels of economic activity, unemployment persists, is becoming widespread, and causes Herblock's Uncle Sam to cast a disturbed eye on current economic curves.

What explains it all? In a nutshell, this country is experiencing serious and possibly critical unemployment which is rooted in a deficiency of effective private demand in relation to a rapidly growing potential of full-employment output.

Stripped of this economic gobbledegook, we just don't seem to be able to expand our private purchasing fast enough to take off the market all that our advancing technology produces.

So, new workers entering the labor force don't get jobs, and only a fraction of the million plus laid off since 1948 have been rehired.

Reverting to the more precise descriptions of economics and statistics, let's take a look at the facts.

Some people would have us believe that this unemployment scare is a bogey, that what we really have is a couple of distressed industries, textiles and coal, and a couple of distressed areas, New England and the Middle Atlantic States. Well, hard as it would be to solve unemployment even in these relatively circumscribed industries and regions, joblessness is not confined there.

Right now there are 43 so-called E areas, cities, and towns having such substantial labor surpluses that unemployment is running over 12 percent. Of the 100 major labor markets whose pulse the Government takes regularly, half were classified this January 1 as having substantial labor surplus with unemployment rates high above the national average of 7 percent. By comparison, January 1949 showed only 19 such areas, and in November 1948, when the downturn first started the number was only 9.

Of the 50 areas having substantial labor surpluses, 19 are located in the New England and Middle Atlantic States, 11 in the North Central States, 11 in the South Atlantic and South Central States, and 9 in the West. So, considerably over half of the areas suffering substantial unemployment are elsewhere than in the coal and textile regions.

Looking at the ratios between the insured unemployed to covered employment, we get a good measure of actual job losses. The latest available data are for the week ending February 11, 1950, during which Pennsylvania, Connecticut, and Massachusetts ranged from 6.1 to 6.3 percent against the national average of 7.1 percent. Outside of New England, however, 23 States had jobless ratios exceeding that of the States just mentioned. Half of this number had unemployment ratios ranging from 9.5 percent for Tennessee to 19.6 percent in Oregon.

A declining bituminous coal industry or the migration of textile plants from New England to the South create local employment problems. But they are not sufficiently significant in the national sense to characterize what is happening in the United States. Still confining our figures to the ratios between the insured unemployed and covered jobs, the following comparison of national averages for 3 years shows an unmistakable deteriorating trend in employment.

	Percent
Week ending Oct. 9, 1948	2.4
Week ending Feb. 12, 1949	5.7
Week ending Feb. 11, 1950	7.1

The last figure for February 1950, must be interpreted in the light of approximately 1,300,000 job claimants who had exhausted their job benefits by December 1949, and though they may still remain unemployed do not appear on the rolls. With the start of new benefit years in April, May, June, and July, it is likely that the ratio will rise further.

Some writers have tried to describe the current concern with unemployment as a bogeyman, because they point out that youth coming into the market for the first time is being absorbed faster now than, say, a year ago. The ratio of unemployed youth 24 years old and younger to total unemployment has dropped from 40 percent in February 1948, to 33 percent in February 1949. Point well taken and point fully proved. But is it?

In February 1948, there were 2,639,000 unemployed. Of this number, 1,020,000, or about 40 percent, were 24 years old or younger. But such young people in the labor force totaled 11,860,000. So, 9 percent of this youth group were unemployed.

Now take a look at the figures for February 1950, a year later. By that time unemployment had almost doubled, rising to 4,484,000. But while the number of youth unemployed had risen above the previous year to 1,550,000, their ratio did decline relative to total unemployment. However, the actual number of young workers in the labor force in February 1950 had fallen off by 140,000 while their rate of unemployment had risen to 14 percent contrasted with 9 percent a year earlier.

It is true that percentagewise all other age groups have shown greater relative increases in unemployment rates since 1948. But this is so because as early as 1948 youth was already experiencing great difficulty in getting jobs and had already reached high unemployment rates. Older workers had remarkedly lower unemployment rates and hence had a lower statistical base from which to climb.

How badly affected young people are by the current inadequacy of new job opportunities is shown in the first quarter of 1950 where males aged 14-19 are 16 percent unemployed, those 20-24 years old suffer over 12 percent unemployment, whereas in no other group in the labor force was unemployment as high as the national average of 7.2 percent. We conclude from all this that young people entering the labor market for the first time, or those with limited work experience are hit first and hardest on the downswing of the unemployment cycle. They are the most prominent element in the currently unemployed, although older, experienced workers have also experienced a sharp increase in joblessness.

Some people viewing the figures on duration of unemployment come to the too superficial conclusion that jobs keep opening up at a rapid rate and take workers off the unemployment line before they suffer severely. The facts that tend to support this view are: Currently about a third of those unemployed have been jobless for a month or less, while two-thirds have been unemployed for 10 weeks or less.

But take a look at these facts, too:

In October 1948 the number unemployed for 3 months or more total approximately 400,000. Since then there has been an unspectacular but steady month-to-month accession of long-time hard-core unemployed. In March 1950 the number unemployed for 3 months or more had risen to 1,800,000, more than 4 times the number 17 months earlier. In March 1949 17 percent of the unemployed had been out of work 15 weeks or more; a year later the percentage was 28. Here is hard-core unemployment manifesting itself both as a trend over the last 2 years, and in sufficient numbers to present a problem of national concern which cannot be shrugged off.

This becomes even more significant when one examines the most important employment sector of the economy, manufacturing. Here is the largest absolute user of workers, where the largest amount of wage income available for purchases is disbursed, and the sector which is most sensitive to changes in demand for capital and consumer goods. October 1948 represented the postwar peak in manufacturing employment, a total of 12.7 millions being at work then. By July 1949 (after seasonal allowances), production-worker employment had fallen by 1.3 millions, or almost 11 percent. Between July and September of that year a brief moderate upturn raised the total by 200,000, or less than 2 percent. Since then production-worker employment has remained relatively unchanged.

There is no evidence of expanding job opportunities, either in durable- or nondurable-goods manufacture. There is evidence that employers in durable-goods industries apparently prefer to increase hours of work rather than employment when confronted with a pressure for increased output.

What characterizes today's employment situation in manufacturing is a severe contraction in jobs, followed by a relatively extended period of stability—that is of stagnation. For only an expanding employed labor force in the production sector of the economy fits the needs for over-all economic growth required by an increasing population. Coupled with a marked rise in worker productivity, there is in prospect further reductions in employment unless there is an accompanying rise in effective demand, something which is not now in sight.

In testimony offered before the Joint Committee on the Economic Report, in January 1949, we were constrained to observe that the dynamic expansion of the private sector of our economy apparently ceased as early as 1947. Since then, it has been primarily Government policy such as foreign aid, rearmament, housing subsidies, etc., which have supported the level of total expenditures upon which our employment has been sustained. Even with this unprecedented volume of supporting Government expenditures, there has developed a growing hard core of distressed unemployed workers not restricted to any geographic area, and a substantial growing body of young people for whom job prospects remain dim short of a greatly changed economic future not now discernible.

WASHINGTON.

[From the Washington Post of April 23, 1950]

NO ROOM FOR THEM

An article by Dewey Anderson, executive director of the Public Affairs Institute, appearing last Friday in the Washington Post provides convincing statistical proof that this country is confronted by serious unemployment. This unemployment is not confined to New England and the Middle Atlantic States, nor to a few distressed industries. It is Nation-wide, and is due chiefly to the fact that new jobs are not being created fast enough to take care of a rapidly expanding labor force.

Young people entering the labor market for the first time have been especially hard-hit; in the first quarter of this year, for example, 16 percent of male job seekers between the ages of 14 and 19 were unemployed as compared with a national average of slightly more than 7 percent. Furthermore, last March 1,800,000 people had been unemployed for 3 months or longer—more than four times the comparable number reported for October 1948. Here, Mr. Anderson notes, "is hard-core unemployment manifesting itself both as a trend over the last 2 years, and in sufficient numbers to present a problem of national concern which cannot be shrugged off."

The employment situation in manufacturing is especially disturbing, for a decline in numbers employed has been followed by comparative stabilization. Since the per capita productive output of workers employed by manufacturing industries has been rising, a further reduction in employment in this sector of the economy is in prospect in the absence of an offsetting expansion of industrial activity.

Mr. Anderson explains that the present unemployment is due to "inability to expand our private purchasing power fast enough to take off the market all that our advancing technology produces." But this explanation does not answer the question at issue: How to increase the effective demand for goods. Can it be done by systematic doses of inflation that, by raising prices, would encourage industry to produce more, employ more workers and put more money in the hands of consumers? Or is it possible to increase productive output and provide more jobs without resort to inflationary expedients?

This newspaper has suggested that the remedy for unemployment lies in creating new industries and lowering production costs so that existing industries can expand their markets and provide more jobs. But we confess that this advice is easy to give but not always easy or possible to follow. A statistician can sit down and figure out on paper how much this country is capable of producing and how much it must produce in order to insure maximum employment. For instance the President's Council of Economic Advisers estimates that to insure reasonably full employment by 1954 it would be necessary to raise output from the level of $258,000,000,000 (the 1949 figure) to $300,000,000,000 or more. Again, how is it to

be done? Can private industry be depended on to make wise decisions, or even to respond to urgings to expand production facilities? Is there any way of determining how much money needs to be spent on investment in production facilities? Do we know whether too much or too little purchasing power is going to investors or to consumers? Is there any assurance that an increase in purchasing power will be used to buy more consumer goods, or will surpluses of some commodities pile up—a condition that would result in reductions in the scale of operations and less employment?

These are only a few of the many questions raised by the specter of chronic unemployment. We do not know the answers, but we hope that public discussion of this vitally important subject will provide needed enlightenment.

Dedication of Restored McLean House at Appomattox, Va.

EXTENSION OF REMARKS
OF
HON. TOM B. FUGATE
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1950

Mr. FUGATE. Mr. Speaker, on April 16 in Appomattox more than 20,000 people gathered to dedicate the restored McLean House. As you know, the McLean House was where Gen. Robert E. Lee surrendered the Confederate Army to Gen. Ulysses S. Grant on April 9, 1865. The occasion was most colorful with all State officials present, including the Governor, Lieutenant Governor, attorney general, and members of the State senate and house of delegates.

Dr. Douglas S. Freman, the greatest historian living on Lee and the South, covering the period of the War Between the States, delivered the main address.

United States Senator VIRGIL CHAPMAN was present and spoke briefly.

Robert E. Lee 4th and Ulysses S. Grant 3d were present.

Our colleague, WATKINS M. ABBITT, Congress of the Fourth District of Virginia, was presiding officer.

Under unanimous consent to extend my remarks in the Appendix of the RECORD, I include the most fitting remarks of Congressman ABBITT on this occasion:

One week ago today, Sunday, April 9, was the eighty-fifth anniversary of one of the most significant and far-reaching events in the history of our great country. There is no date of more importance to us since the adoption of the Federal Constitution than April 9, 1865. On that Palm Sunday, Gen. Ulysses S. Grant, commanding the Federal troops, and Gen. Robert Edward Lee, at the head of the army of northern Virginia, met here in this country village where we are today assembled.

For a number of years prior to actual hostilities our county had become sharply divided in political philosophy as well as national outlook. Different problems confronted the two main sections of our country. The economic stability was different in the North from that of the South. Bitter feelings were aroused. Animosity was kindled, hard words were uttered, until finally war was almost inevitable between the two sections of our country.

This developed gradually into a shooting war involving principles and ideals of government with neither side willing or able to give in short of war.

In a general way we are all familiar with subsequent events relating to the War Between the States. Both sides felt strongly that they were fighting for principles that could not be sacrificed, for ideals that were just and right.

The patriotism, loyalty, and bravery of these armies have never been surpassed.

The war raged over a wide area and for four long years. Each side had their ups and downs. For a while high hopes of victory were beating in the breasts of the people of each side. Finally the tide began to turn and the southern cause appeared to be hopeless. Then followed that fateful Sunday, April 9, 1865.

General Grant in dictating the peace terms demonstrated his love for his country, his honesty of purpose, and his sincere belief in the future of this great Nation. General Lee in accepting the peace terms and in his farewell address to his men demonstrated his farsightedness, his wisdom, and his courage, as well as his belief in the future of our country and the position of the South in years to come.

The peace that was made between Generals Grant and Lee at Appomattox has been a lasting one. It has stood the test of time, as witness our presence here today to dedicate as one of our national shrines this historical peace house, which stands as a monument to a lasting peace between the two warring sections of our great country.

It represents the reuniting of a war-torn Nation; the welding together of a mighty people; the healing of a wide breach; and stands as an emblem of peace between our people as well as in memory of those great warriors who fought, bled, and died for principles they believed in and were willing to sacrifice their all in defense of them.

It is true that after the peace terms were signed a number of the people thought that a great cause had been lost, that a bitter defeat had been suffered, but I say to you today that as a result of that conflict and the peace that we commemorate here today, our Nation has developed into an even finer, greater, and better one than ever before. We realize that there are some things dearer than life itself, that where there is a struggle not everyone can win, but that where principles are involved man must follow his conscience and his heart.

On behalf of the people of Appomattox County particularly and the Commonwealth of Virginia in general I extend to you, and each of you who are here as well as those within the sound of our voices, a hearty and cordial welcome. We are proud of the privilege and opportunity of having you as our guests. We desire to extend to you every courtesy and consideration possible. We want you to feel at home, and if there is anything that you desire to know or need, please feel free to call on any of us to assist you at any time.

Address by the Ambassador of Ireland to the Fordham University Club of Washington

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. McMAHON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by the Ambassador from Ireland, Hon. John J. Hearne, to the Fordham University Club of Washington at the Mayflower Hotel last evening. This is the Ambassador's first address in the United States, and, as all Senators know, he is the first Ambassador from Ireland to the United States. The address is well worth reading.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I was greatly honored by the invitation of your president to address you on this occasion. It was the first invitation I received, after my appointment was announced, to address an American audience, and it gave me a particular personal pleasure to accept it. A few days ago I was most graciously received by the President of the United States when I presented my letter of credence. In coming to you this evening, I feel that I am reentering your capital through portals longer, although not more familiar to me than those through which I so recently entered. I shall always remember that my first public address in Washington was made to the members of the Fordham Club and shall always recall with happiness and gratitude the welcome you gave me in these first days as an earnest of the good wishes of your far-famed university for the success of the mission of the first Ambassador of Ireland to the United States.

A man's life, Mr. President, however carefully planned for its chosen tasks is, nevertheless, providentially designed, and, therefore, sometimes, deviously led by unexpected paths to its appointed labor. Thirty years ago I started my professional career as a lawyer with the laudable enough ambition of becoming a leading counsel at the bar of Ireland. My legal career did not end in that way. I did not become a leading counsel in Ireland; I became, instead, a leading case in Canada. That is why I am here. The Canadian people suffered me for 10 years or so; the Canadian Government feel, I believe, that their suffering was of much longer duration. When they could stand me no longer they looked around for somewhere to send me, and, as we had just declared a republic in Ireland, they put me quietly over the border into the Republic nearest to hand on this continent. As it was the Republic nearest of all to the heart of our own people the Government of Ireland endorsed my deportation and advised our President to accredit me to President Truman. As I say, a man's life, however carefully planned, is sometimes deviously led along unexpected paths to its appointed labor.

Our toastmaster has told you something about me prior to my first adventure in North America. He gave you an account of some mythical personage bearing no resemblance and certainly no relation to any living person. Mr. President and gentlemen, you will by now have realized the fact of the matter, namely, that Ireland carries her vast investment in international friendship in the most fragile of vessels.

I am greatly honored, Mr. President, and very happy to have been afforded this opportunity of addressing you in this informal way at this particular time on the subject of Irish-American relations. The establishment of an Irish embassy in Washington and of an American embassy in Dublin are events of exceptional significance and importance in the long story of the friendship between Ireland and the great American people. We all know that our relations do not depend upon formal diplomatic intercourse, that they are deeper and closer than any that can be defined in terms of treaties or pacts, and that they have survived and will outlive the vicissitudes of our separate fortunes. The long association of this great country with

my own constitutes a unique historical phenomenon. And it is because I feel that, taken together, the character, the intimacy and the permanence of our friendship is so stupendous a reality in international life that I refer to it in this first address in the Capital of the United States for what it is, for what it has been to us both and for what it may become to the world at large. I have not come to tell you the story of our people in their ceaseless pilgrimage across the globe. You know the part they played on the continent of Europe in that prolonged and prophetic twilight between the actual downfall of the pagan and the virtual enthronement of the Christian western world. You know how they stood sponsors at the birth of that France around which all Europe grew up and grew old, a role which our people were destined—I like to think predestined—to fulfil, again and again, in other ages, and in parts of the world then unknown. You recall how, later, here in this hemisphere, great Irishmen, deprived of liberty and justice at home, planned and labored with others to secure these priceless possessions, for those who came after, and did, in fact, secure them in the political systems of the two great democracies of North America. Tonight, Mr. President, I seem to stand at the end of a long procession of men and women of Ireland who came to you through all the years not as emissaries but as emigrants and who here found a refuge, a welcome, and a home. Was it any wonder that with a story beginning as one of compassion so deep on your side and of indebtedness so great on ours, was it any wonder that our people gratefully gave you of their best in the years that are gone: fathers of confederation, churchmen, administrators, statesmen, soldiers, judges, doctors, men of letters and of science, mining and railroad engineers, agriculturists, merchant princes, captains of industry, my voice gives out before my memory fails—nation builders all. I could go on and on down the line of the long procession of Irishmen which passes even to this hour into American history. But let me turn from this too reminiscent retrospect to the promise which the character of our friendship holds for all mankind today.

We have been passing through a period in which great changes have been taking place in many countries, including my own; a period in which the relations between States have become more than normally complicated by epidemic economic crises, and the whole field of foreign affairs profoundly affected by the oscillations of a seismic ideological upheaval. The experiences through which we have been passing have placed a great strain upon governments and parliaments in most countries, and have, in particular, imposed a heavy burden upon the shoulders of statesmen and other public servants responsible for the framing and execution of policy at home and abroad. Great, however, as the strain on individuals has been, the strain on the relations between particular nations has been greater still, and the strain on the structure of international society as a whole—if it remains a whole—greatest of all. In former times, the great episodes or periods of historical experience merged into each other by almost imperceptible differences, with but little discernible change, and no apparent rupture, from age to age. Today, by contrast, we are moving, not slowly and serenely through an easy transition, but swiftly and unsteadily through a rough and ruthless interregnum. We are all asking ourselves, or asking one another the question as to what will emerge at the end, whether, that is, we are at the beginning of a gradual transformation of human society or on the verge of a sudden catastrophic collapse of our civilization.

Mr. President, I am neither a historian, nor a philosopher, nor a statesman. One would need, I imagine, to be all of these to fully understand all that has been happening in the world in the incredible times in which we have been living, to sum it up, and to trace, through events and trends and tendencies, a pattern of things to come. Ordinary observers like myself, who have none of these qualifications, must approach the study of the international scene with whatever knowledge of history, or philosophy, or political science he has been able to pick up as he goes along, and to form his conclusions in the light of what he learns.

It seems to me, sir, that throughout all the changes we have been witnessing, certain long-standing phenomena persist which stand above and beyond them all, and which seem to possess inherently the character of permanence and, at the same time, the coherence of universal validity. All our lifetime we have been looking on at great experiments—which have now become an experience—in international cooperation. There was the League of Nations: there is the United Nations. The minds of contemporary statesmen have been spontaneously fertile of forms and methods, in general, of a technique of cooperation for world peace, and of designs for a framework of international order regulated by agreed constitutional organs. The relations between states were never so fully organized in a formal or technical sense as in our own time. And there has been a gradual delimitation of the field of interstate relationships not regulated by agreement. That is all to the good. We must, however, bear in mind that international relations cannot be defined as a technical science until we have arrived at some general agreement on a code of international law. I am contending, Mr. President, that the nations which are closest together are not bound by treaties or pacts or constitutional bonds or formal links of association. The Council of Europe was a natural and inevitable coming together of peoples separated by frontiers, differently constituted, but bound to each other by a common philosophy of life spoken in divers tongues, largely similar legal systems, and a historic inheritance of literature, music, and art, classically woven upon a mighty religious tradition into a continental civilization. Let me put it to you this way. What has mattered most to all polite peoples is the inner life of the nation and not the external form of the state. And what is going to matter to us most today, I mean to countries generally, is their internal rather than their external, that is to say, their intellectual and moral rather than their institutional relations with each other. It is in the light of that circumstance that the reality of Irish-American friendship is most clearly discerned and defined. To take the point a little further, if I am not venturing too far, let me add this. Ireland's exclusion from the United Nations whatever its intention has not effectively ostracised the historic Irish Nation from international society, as witness the recent raising of the status of Irish envoys in North America to the highest diplomatic rank. I am keeping to my thesis, Mr. President, and arguing that international relations have ceased to be institutional and have become ideological.

Let me come to it in another way. The historians have never been more industrious than in the past few years in the task of the interpretation of history and in the interpretation of the task of statesmanship. They submit three proposals for the solution of the problems by which we are confronted. They propose, first of all, the establishment of a world government. For myself, I am convinced that we cannot establish a world government in—to use a familiar American expression consecrated by two great American Presidents—a world community half slave and half free. Secondly, the historians suggest that, in the economic field, a working compromise should be formed between extreme capitalism and extreme socialism. Thirdly, they urge the reestablishment of the secular superstructure of society upon its original religious foundations. I, being a layman and not a historian, or a philosopher, or a statesman, would have begun with the third proposition.

I would have done so for the following reason. The bond of the relationship which exists between Ireland and Europe, or America, or Australasia and which survives the experience of the sometimes different interests of these widely separated regions of the world is the fact that the character of their peoples is formed upon a common pattern of life. They are united in a common intellectual tradition securely founded and forever transfigured in converging stories of classic ancestral glory. They are bound by ties of immemorial antiquity in the older, and of perpetual renewal in the younger countries of which I speak. Let us make no mistake about what that pattern of life has been. Let our universities make no mistake about it. Let them preserve the tradition of teaching young men and young women to distinguish fashion from good taste, money from wealth, interference from influence, notoriety from fame, pride from self-respect, speed from progress, respectability from worthiness, generally speaking the spurious from the genuine, and the temporal from the eternal. Let our statesmen make no mistake about it. Let them continue to keep the constitutional system square with the needs of civil society, that is, with man's moral welfare as well as his material well-being, so that the State can never again become, as it has become in so many countries, an instrument to undermine and destroy civil society. Let them see to it that in no nation now free will the State cease to be the minister and seek to become the master of a man's spiritual or social destiny. Let them have in mind that in the history of polite nations there is a moment in which the philosophy of life of a people passes into their national law. That, in the case of my own country, has, in circumstances of which you are aware, been a delayed development. It has not been happening in all democratic countries. Generally speaking democratic countries have stopped short at "the freedoms" as if they were the end, and not the beginning, of man's fullest development in civil society. Freedom of speech, freedom of association and assembly, and the others simply removed positive obstacles in the way of the full development of the human person in the civic or national or international communities to all of which he normally belongs. The placing of "the freedoms" as cornerstones in the democratic structure based it upon sound foundations. But the building itself remains to be completed, if not indeed to be begun. Western civilization is built upon certain social realities which have held it together and given it form, unity, and design; I mean, for example, the family, the sublime sacrificial dedication of marriage, parental and filial rights and obligations, private ownership of property in the context of these things, and in that of the integral human welfare of every citizen. These basic social realities still stand outside the framework of the national law: they have not become part of the organic life of the state. What has been happening is this:

The freedoms guaranteed in modern democratic systems to protect the social nature of the citizen as a human person have been taking the place of the prerogatives they were intended to protect. Instead of the whole philosophy of western culture passing into our laws and the emergence of a Christian democracy we have had the complete secularization of society in the modern political, economic, or social state. Marxism, remember, is not an oriental or an eastern European but a western social doctrine. If our civilization is to survive we must put it back upon its original foundations. Two

world wars have been fought in our lifetime to make the world safe for democracy. It does not need a third world war but it does need a mighty crusade to make democracy safe for the world. If, in that crusade our two peoples are associated in the years to come it will be a logical inference of our history and a fruitful consummation of our friendship.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. ELMER THOMAS
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. THOMAS of Oklahoma. Mr. President, I have a letter from Mr. Sam M. Myers which portrays the reaction of some of the displaced persons here in the United States. I ask permission to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STILLWATER, OKLA., *March 9, 1950.*

Re Petro Muycn and wife and children (Anna, Stefa, Olga).

Hon. ELMER THOMAS,
United States Senate,
Washington, D. C.

DEAR SENATOR THOMAS: Some time in December 1949, the above-named family arrived in Stillwater. Since that time I have built them a house, chicken house, etc., on a farm which I own about 4 miles north of Stillwater, Okla. I am now building a barn on this place for the family. Petro has been helping with the building and has also planted some 50 or more fruit trees and shrubs around his house and on the farm. These I purchased for him. I have also purchased him a cow, 2 young heifers, a sow and 7 pigs, 12 laying hens, some 50 other frying-size pullets, a buck and several doe rabbits. I have bought him stoves, furniture, groceries, utensils, lamps, and tools with which to farm and live. I have paid for garden seed, potatoes, and grain which I expected him to plant so that he would be more or less self-supporting, but I learn he is dissatisfied and wants to leave the farm and go to New York.

Now I do not object to his leaving me, for I am certainly getting the little end of the bargain. But I am told that these DP's who have been allowed to come to America are not permitted to occupy jobs or housing which an American might want, nor are they allowed to become public charges. If these people go to New York there is no question but that their condition will become worse, for they do not have the mentality nor the education to find any employment except in the sweatshops, starve, or become objects of public charity.

The Muycns came to me through the Ukrainian American Relief Committee, Inc., 54 DeLong Building, Thirteenth and Chestnut, Philadelphia, Pa. I was not required to sign any guaranty or post any money which I know is ordinarily required by the United States Department of Immigration in the case of other aliens. However, shortly after the arrival of the Muycn family the UAR, Inc. sent me a statement for their transportation from New York to Stillwater in the approximate sum of $208, which I paid by check.

It seems that the entire DP program has been very loosely handled. Stringent laws to control this influx of foreigners are necessary, in my opinion, or our standard of living will be driven to an all-time low. From my experience with these people I favor laws which will "freeze" them in a particular locality, preferably in the interior, in agriculture, perhaps—or in some field which is not in direct competition with organized labor. Thanking you for any consideration you deem advisable to give this letter, I am,

Sincerely,

SAM M. MYERS.

Contemptuous "Officers of the Court"

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine editorial entitled "Contemptuous 'Officers of the Court'," published in this afternoon's edition of the Washington Evening Star. It purports to give the ideas of Solicitor General Perlman, who in a recent address spoke of the need for the lawyers of this country to purge their own ranks of those who by contemptuous conduct tend to breed disrespect for the courts.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONTEMPTUOUS "OFFICERS OF THE COURT"

Solicitor General Perlman touched on a subject of wide public interest when he called on the legal profession to purge its ranks of lawyers who, by their contemptuous conduct, tend to breed disrespect for the courts. The average citizen, reading of the activities of attorneys in some of the recent trials of Communist leaders and others, has been disturbed by the actions and words of a number of those "officers of the court." At the New York trial of 11 Communist officials, for example, it appeared that a deliberate effort was being made by defense attorneys to harass the judge, prolong the trial, and confuse the jury. The disgraceful antics of some of the lawyers and their clients have probably never been equaled in a Federal courtroom.

Mr. Perlman undoubtedly had this case, among others, in mind when he told the Federal Bar Association: "We have witnessed trials of criminal cases in the Federal courts in which lawyers have been punished with fines and sentences to imprisonment because of the contemptuous manner in which they conducted themselves, and because of tactics employed by them in violation of the orderly and proper performance of their duties as lawyers and officers of the court." The Solicitor General made the worth-while suggestion that the Federal Bar Association make a study of all such cases, with a view to initiating disbarment or suspension proceedings if such actions have not already been started by the proper bar groups.

And Mr. Perlman has made another good suggestion in the interest of maintaining the high prestige of the bar. He has asked the association to study also the question of disbarring lawyers who decline to answer congressional or grand jury questions on grounds of self-incrimination. That an attorney, like any citizen, has the constitutional right to take refuge in this technical maneuver is undeniable. But there is a grave doubt in the minds of many persons, including Mr. Perlman, as to the right of a citizen using this device to serve as an officer of the court. A lawyer, because of his important relationship to the machinery of justice, has heavier responsibilities as to his conduct, whether as counselor or witness, than those of the average citizen. When he fails to live up to those responsibilities, he should expect to forfeit his rights as a respected member of the bar.

Promotion of Tourism Can Supply Europe With Dollars

EXTENSION OF REMARKS
OF
HON. J. WILLIAM FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by me relative to the promotion of tourism in connection with supplying Europe with American dollars. I believe this statement will be very useful if studied by the ECA and if the ECA will take it to heart. I also submit the statement for the information of all Members of the Senate.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

PROMOTION OF TOURISM CAN SUPPLY EUROPE WITH DOLLARS

In the long run, the soundest basis for world peace is international understanding based upon good will between all people. Communism breeds on fear, suspicion, and misunderstanding, much of which would never arise if there were a wider understanding between those peoples in the western world who live by a code of decency and whose faith is based upon the dignity of individual men.

The nations of the western world are aware of this problem. Every day both jointly through UNESCO and individually they are taking measures in an effort to solve it. The State Department of the United States is very active in this field for many reasons—chief among them being the fact that our country has the most to lose from the disastrous conditions misunderstanding inevitably precedes.

In an effort to show the nations of Europe the ideals by which we live, we have done and are doing many things. The United States has encouraged and has given strong support to UNESCO. We have established the foundation for the largest exchange-of-students program ever undertaken in the world. Businessmen and diplomats, for example, are explaining the areas of this country they best understand to their counterparts overseas. In return, we have had many guests of the same nature. In every way, we seek to encourage the exchange of persons and information with other countries.

A further measure, and one which is often overlooked, for breaking down the barriers of ignorant prejudice between ourselves and our allies is tourism. Necessity restricts

the flow of international tourists in one direction right now. Ours is the principal country with citizens who have the time and means to cross an ocean. But this flow will serve because it will bring Americans and Europeans face to face.

If millions of citizens of the United States would travel abroad, understanding between peoples of th. west would undoubtedly be greatly strengthened. In speaking in terms of millions of American travelers, you may think me more hopeful than accurate. But in this year of 1950 there is enough transportation available to carry more than a half-million United States citizens to Europe and return. The amount of space is increasing rapidly and the rates for it are coming down. Clearly an opportunity exists for the kind of travel international understanding demands.

From a standpoint of practical help to Europe, tourism has few equals. As our citizens go from country to country, they leave behind dollars which the world badly needs. In paying for rooms and meals, in buying foreign merchandise for their own use and as gifts, they help give other countries the means to partake in world trade. This lessens the need for recovery payments by this Government to others. The supply of dollars left in Europe, of course, will return to the United States through increased purchases of our exports.

In an article in the New York Times magazine, April 23, 1950, Joseph A. Barry, Paris Bureau manager for the newspaper, has this to say:

"Parliament refers fondly to the American tourist as Britain's biggest dollar earner; he brings in more than the textile industry, more than the export of whisky and cotton combined. By the aggregate, the same tourist spends more than $500,000 a day in France alone during the season. Entertaining him gives Switzerland one-seventh of her income. Next to the olive tree and the tobacco plant, he comes first in Greece. Without any qualifications, he is Ireland's leading source of foreign exchange. And so on, up and down the transatlantic coast and into the Mediterranean Basin."

These facts are, I believe, well known in the Senate. In drawing up the basic legislation on ECA, attention was paid to this specific topic. In authorizing the expenditure of billions of dollars for European recovery, it was the intention of the Congress to see that ideas as well as goods were to cross the Atlantic. The promotion of tourism was strongly urged not only in our committees but is written specifically into the act.

To date there has been no lack of material things sent to our friends in Europe under the Marshall plan. Shiploads of food, machinery, tools, seeds, and rolling stock have made a mighty contribution to the rehabilitation of an area left physically and morally devastated at the end of the war. In a few short years, Europe has had an unequaled opportunity to learn about the things Americans make. But full advantage has not been taken of an opportunity that is even more important—the opportunity to learn what Americans are.

Much of this laxity must be blamed directly upon the European nations. In entering the Marshall plan, they had full knowledge of its main intent—to give them the time and materials necessary for a new start. After that it was up to them to help themselves. Helping themselves economically certainly implies the attraction of dollars to their market places. Yet, though the tourist industry last year earned more money than any other for Marshall-plan Europe, to date it has suffered the most because of European neglect.

At present we are sending help to 16 European countries and it seems plain that every one of them could do far more to help themselves by attracting tourist dollars. What can these countries do to get the maximum benefit from the American traveler?

This question was partially answered the other day by one of the ECA nations. The first topic considered in the new British Parliament—after the political skirmishing was finished—was that of the American tourist. A member of the Conservative Party opened the debate by pointing out that Britain needed more medium priced hotels and more imagination by hotel management if it was to compete on equal terms with France and other countries for the tourist dollar. He went on to say, "Travel facilities are inadequate and expensive."

The gentleman was seconded by a member of the Labor Party—this topic being one of the few on which the two main parties in English politics agree. The Labor member described his country as a way station on the high road to high times in Paris. He pointed out that hundreds of thousands of tourists' dollars were being lost to that country.

Mr. Horace Bottomley, British Secretary for Overseas Trade, answered the criticisms by saying that the British Government realizes the importance of tourist business. "We are aware of the need to attract the right kind of tourists," said Mr. Bottomley. "We want to get at the middle classes, who are now traveling more than before and if we can appeal to them in any connection we shall do so."

I, for one, am glad to see that men of responsibility overseas are becoming aware of this problem. The answer, of course, to the problem posed by the British Secretary for Overseas Trade is to give the American tourist what he wants. That, as the Conservative member of Parliament points out, certainly includes medium-priced hotels with clean rooms, efficient service, and imaginative management. Such hotels are an asset to any country. They would serve its own citizens as well as attracting the American who now is discovering that it is an easy thing for him to go abroad for his vacation.

Foreign countries should also, it seems to me, make it easy for tourists to get around; to see not only the outstanding points of interest but also the people in all parts of their land. American farmers, for example, probably have just as much interest in French farmers and their methods as they do in French cathedrals. The cross-pollination resulting from such meetings will prove valuable to everyone in the world.

Tourism is an industry. As far as earning dollars is concerned, it is the most important industry in Europe. No industry can operate at maximum efficiency unless its plant is modern and in smooth running order. This truth holds for tourism just as much as it does for any other industry. It follows that for the sake of their own future, Marshall-plan countries would be wise to see that their tourist plan is up to date and designed to attract increasing numbers of American tourists.

If the intention of the Congress was to help promote tourism as a dollar producer for Europe through the Marshall plan, it might be wise to see how successfully this has been accomplished. What has been done to carry out the purpose of section 117 (b) of the Foreign Assistance Act of 1948 which specifically says that the Administrator shall promote and develop travel by citizens of the United States to and within participating countries?

Many billions of dollars have passed through the hands of the ECA Administrators. So far as I have been able to discover, not one dollar of direct funds has been spent for the promotion of tourism. I have found that in November 1948 about $14,000,000 in counterpart funds was released at the request of Italy for this purpose. No other outlay of counterpart funds for tourism has come to my notice.

Of the $9,000,000,000 that have been appropriated to the Marshall plan so far, the expenditure for tourism represents less than two-tenths of 1 percent. It is of interest to contrast this with another figure: In 1949, American travelers to Marshall-plan Europe spent $164,000,000. This amount represents 32 percent of all dollars earned by the area last year.

Until the ECA has demonstrated that it really is interested in building up the one industry that shows tremendous possibilities in returning some of the American taxpayers' investment in European recovery, the Congress must assume that its purpose has been disregarded. While to promote tourism Congress has removed the 15-percent tax on overseas transportation, and raised to $500 the amount of duty-free goods a 12-day traveler can bring back, its vaster scheme is being nullified. Both ECA and the countries participating in the recovery program can promote tourism principally through the improvement of facilities for the service and comfort of visitors. Counterpart funds should be used liberally in the development of the tourist industry—Europe's best dollar generator.

Address of Roscoe Drummond

EXTENSION OF REMARKS
OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. HAYS of Arkansas. Mr. Speaker, under leave to extend my remarks, I include the following excellent address of Roscoe Drummond at the recent conference of the American Society of Newspaper Editors in Washington, D. C.:

I am grateful for this opportunity to present to the American Society of Newspaper Editors this on-the-spot report of some phases of fighting the cold war. I do not know whether I have been invited as a former editor or as a present bureaucrat, but I know which I would prefer. From my vantage point it is evident that there is no group in the world more determined and more eager to get at the facts and to look at the facts than the American press.

The need was never so great as it is today to take a full and a fresh and a fearless look at the struggle that is going on in the world today and to determine, on the basis of the facts, the size of the effort which the United States will have to make in order to win. It is my deep conviction that if we do not win it we face a return to the Dark Ages.

For the past 9 months I have had a small share in fighting the cold war on the European front, and the central findings which I wish to lay before you today are these:

1. We are only just beginning to grasp the fateful nature of this struggle; we have not yet measured its magnitude or the size of the effort necessary to win it.

2. While the Communists may not want war, they do not want peace, and we of the democracies are letting them get away with murder by allowing them to succeed in preempting the cause of peace everywhere in the world. The Communists are not acting for peace in any capital, in any country, in any continent. The Communists are at war today inside every free country in which they have any sizable group; they are making war by attacking the peaceful processes of every parliament in every free country in which they have a political toehold.

3. Despite significant set-backs in Europe, the Communists have made perilous headway

in Asia; they show no signs whatsoever of giving up anywhere else in the world; they will not abandon their tactics until the free world demonstrates an impregnable unity and strength. We in the United States will not be acting to secure the safety of the Nation until we clearly calculate that there is no short cut to peace with aggressive communism, that winning a cold war, like winning a hot war, has its own priorities in expenditure and in sacrifice.

4. Finally, the free nations of the North Atlantic community must strengthen our political, our economic, and our military alliance of peace, and I think we have the right to look to the meeting of the North Atlantic Foreign Ministers in London next month as the occasion to do this.

While I have been in Paris I have received letters from a few in America who have suggested that all this talk about communism in Europe is a kind of boogeyman dreamed up by Government officials to scare the country into needless expenditure. I doubt if there are any here this noon who share that view and I will not offer arguments in answer. But for those who would like a thumbnail illustration of the size of the Communist gallstone which the French people have in their midst, let me cite these facts:

There are 166 Communist and 15 Communist-affiliated deputies in the 621-member French National Assembly. In the only national election held in France since the end of the war, the Communist candidates polled 28.6 percent of the total popular vote.

Under similar circumstances in the United States the following conditions would prevail: There would be 23 Communist Senators in the United States Senate; there would be 124 Communist Congressmen in the House of Representatives. There would have been 13,980,732 Communist votes cast in the 1948 Presidential election.

Political, economic, and social conditions in France are improved over what they were when the Communists emerged as the strongest single party in the country and in Parliament. But if you translated into American terms the present visible strength of communism in France—if you conceive of the conditions just described as existing in the United States—then you have the evidence on which to appraise whether French communism is an exaggerated bogy or a sombre menace.

When a few weeks ago the French National Assembly was preparing to register its majority verdict that Communist efforts to prevent the unloading of American military aid at French ports were acts of sabotage and therefore unlawful, the Communist deputies arose en masse, ripped off the tops of their wooden desks, started a bloody battle with their fellow members, stormed the speaker's rostrum and tried by violence to halt the parliamentary processes of their Government.

And this was not surprising. It is Soviet communism's planned strategy of war to break down the institutions of free governments. I quote to you verbatim from the Constitution and Rules of the International Communist Party.

Each Communist representative must remember that he is not a legislator bound to seek agreement but an agitator detailed into the enemies camp to carry out party orders.

"Communism repudiates the possibility of winning over of parliaments. Its aim is to destroy parliaments."

The Kremlin is not deserting its purposes. It mellifluously talks peace to the unsuspecting and is making war on the free institutions and the free parliaments on which it can lay its deceptive hand.

Two weeks ago in Paris the French Communists held their first full-dress party congress since 1947; an enormous banner across the hall bore these meaningful words: "The true internationalist is he who is prepared unreservedly, unhesitatingly, and unconditionally to defend the U. S. S. R."

Along the spacious, busy Champs-Elysees the Communist Party exercised some of their shock troops and directed a few warm-up riots against Le Figaro because it didn't like what this newspaper was printing. During these abortive assaults on the Figaro offices, and the subsequent raids on news vendors, young Communists were to be seen in the passages of the nearby Metro receiving their orders from tough, hard-faced leaders and setting out to apply their commando tactics. Nothing too violent at this point, of course, just a little practice.

Greater violence and greater preparations for violence are taking place elsewhere. The preparations are in the Soviet zone of eastern Germany and there the Soviets are using methods which the Nazis employed such a few years ago. There are marching youths, mammoth mass meetings, appeals to militarism and the national front, violent abuse of opponents and frequent party purges. Despite their explicit pledge to outlaw German militarism, the Russians are today training a German army in the eastern zone in the guise of a police force.

Deliberate violence, political strikes, prearranged riots—these are the essence of Russia's attack upon the parliamentary processes of the unconquered free nations. They make up the strategy of the kind of war calling itself peace, which the Soviet Union is now waging. It is evidence of our failures—the failures of we of the west to join in an adequate imaginative information program, that, despite a record totally opposite to their words, Moscow continues to capture the headlines with peace offensives, peace appeals, and peace fronts.

You have heard it said that the Russians are not in a position to go to war. There is some truth in that, but I think we have only begun to see what a trivial, irrelevant, and deceptive truth it is. We are tempted to think that we have laid hold of quite a significant fact when we say that Russia may not want war. The real truth—and I venture to repeat it—is that while Russia is not likely to make war on any country, the Soviet Communists are today making war in every country they have not yet conquered.

These facts measure something of the nature of the struggle which the Soviet Union imposes upon America and the free world and they indicate something of the size of the effort which will be needed to win.

I believe that we can win. I believe that we are moving in the direction of winning. I believe that we are going to win. But I am convinced that it will take a total cold-war effort to do it and I believe that the American people will be ready and willing to sustain such a total cold-war effort—or in Mr. Acheson's phrase, "total diplomacy"—only as the nature of this struggle is truly and fully stated. There are no visible limits to the Soviet ambitions for world domination. It is to achieve that domination that Moscow is today making war in every country which it has not yet conquered. Unless the United States leads the free nations of the world in resisting this domination in defeating this attack—in winning this war calling itself peace—I do not believe that the America we know today can survive. That is the nature of the struggle which Russia has imposed upon us and it is only to the degree it is fully appreciated that America's leadership will be adequate.

That leadership, in association with our partners in western Europe, is already bringing results. There is much on the winning side of the ledger and some of it is this: The Marshall plan is successfully laying the foundation for recovery. In the wake of economic progress, the democratic governments of western Europe are showing new virility and new vitality. Politically, communism is being forced on the defensive in western Europe.

You are aware I am sure that in every national election in Europe since the Marshall plan took shape the Communists have lost voting support and they have lost parliamentary seats.

They have lost in western Germany, in Austria, in Belgium, in Britain. In Norway last fall the Communist Party representation in the Storting was obliterated. Before the voting there were 11 Communist members in the 150-member Norwegian Parliament. After the voting—the first since the Marshall plan—zero Communist Deputies in Parliament.

It is on the credit side that the recent British elections wiped out the two Communists and the five fellow traveler members of the House of Commons. One hundred Communist candidates, the largest number in British political history, stood for election in February and the British electorate rejected every one of them. Every single Communist candidate ran third; every single Communist candidate was defeated by both Conservative and Liberal opponents.

It is on the credit side that the French Communist press—there are 20 Communist daily and 97 Communist weekly papers in France alone—has lost 1,500,000 circulation in the past year.

It is on the credit side that the Italian Communist Party admits the loss of 200,000 workers from its rolls in 12 months.

It is on the credit side that both the French and Italian Governments are effectively standing up to the Communist threats and the Communist attempts to prevent the arrival of military aid and thereby to nullify some of the fruits of the North Atlantic Treaty.

All this means that when the free people of western Europe are given the chance to work and improve their standard of living, the majorities are rejecting communism every time, and at every opportunity. No wonder the Cominform was brought into being for the avowed purpose of keeping the Marshall plan from being realized. No wonder the Cominform hates free elections.

The Tito-Stalin feud which came to a head in part because the grass was being made to grow greener in western Europe is hurting communism on both sides of the iron curtain.

The tonic of Tito's independence is tending to spread to neighboring Communist-dominated peoples, who would also like to be independent, and to Communist groups further west. The Kremlin does not like it the least little bit. The reason that the Kremlin is horrified is that a deep and incalculable heresy is being developed within the Communist world. Moscow intends that communism everywhere should be run by and for the Soviet Union. Tito found that out when he tried to be only a Yugoslav Communist. He learned that he could remain in good standing with the Kremlin only by being a Soviet Communist in Yugoslavia. The heresy which Tito is now flaunting to the Communist world is the horrendous idea:

That there can and should be equality among the Communist Parties.

That there can and should be independence among the Communist states.

To the Kremlin dictate that "the true internationalist is he who is prepared unreservedly, unhesitatingly, and unconditionally" to serve the interests of the U. S. S. R. above all else, Tito has delivered a daring and resounding "No." Tito's successful assertion that Communist Yugoslavia can be independent of Communist Russia is one of the most valuable threats to Soviet imperialism operating in the world today.

To the extent that such doctrines are accepted by the Communist Parties outside Russia, the hopes of Soviet world domination would be seriously blunted. To the extent that the Communist Parties throughout the world refuse to be the obedient tools

of the Kremlin, as Tito is refusing to be, the power of Moscow to cause trouble around the world would be greatly reduced. Without endorsing communism in any form, let us help to strengthen Tito's independence and encourage the trouble he is causing.

Although more effective information measures need to be undertaken by the west I would not wish to leave the impression at all that we and our partners in western Europe are leaving the field to the Communists. A valuable program is being carried out by the State Department and the Marshall plan information activities, with which I am associated, are not negligible.

I report to you that the 2,000 daily newspapers in the Marshall plan countries, having a circulation of 110,000,000 Europeans, are publishing a total of 4,000 Marshall plan news articles on the average every week.

In the field of radio we are receiving cooperation from all the participating governments and at present Marshall plan radio programs are going out over Europe's networks in all languages and are reaching, according to our best evidence, approximately 40,000,000 out of the potential 100,000,000 radio listeners. We are producing radio programs for schools, labor, and women's groups. We are producing farm programs and family programs.

We are completing this spring a 12-month production program of 60 ERP documentary films. Marshall plan newsreel shots are now being regularly shown in the commercial theaters of Europe which have a weekly attendance of approximately 30,000,000 people.

In the interests of trying to find out as nearly as possible the different states of mind in Europe about the Marshall plan, we have utilized the best professional means of measuring public opinion in the different countries. European public opinion polls have shown this result: That more than four out of five Europeans show themselves aware of the Marshall plan; that from a quarter to a third of them have a detailed understanding of how the program works and can actually explain the operation of the counterpart fund. They show that, whereas 28.6 percent of the French voted to support the Communist Party line in 1946, today only 16 percent of the French people are following the Communist line in opposition to the Marshall plan.

This is the part of the evidence which suggests that the free world does have the capacity and the ammunition to win this deadly struggle and successfully to counter this war-calling-itself-peace. It doesn't mean that the fight is over. Far from it. It doesn't mean that the Communists are giving in. They are not. It doesn't mean that communism will not continue to be a grave menace until the free world has achieved such a unity and such a strength that it is secure against the conditions on which communism feeds.

The greatest danger of all prevails in Germany today. While the western allies are acting to give western Germany freedom and independence, Moscow is acting to fasten the Soviet police state upon the eastern zone. Germany is the major psychological battlefield on which this deadly struggle between the slave world and the free will be determined. Until that decision is clear—and it is far from clear today—and until Germany becomes a cooperating, not a domineering, partner in the community of western Europe, the outcome of this struggle will remain in serious doubt.

There is no easy panacea, there is no single policy, there is no one action which will be equal to winning this cold-war struggle.

It is not enough to say "throw out the spies and all will be well."

It is not enough to say "hold Berlin and all will be well."

It is not enough to say "complete the Marshall plan and all will be well."

Only the sum total of resolute actions will win this struggle. Remember that we are meeting with war in every country which aggressive communism has not yet conquered. It will take a total and sustained cold-war effort on our part to win. We must be ready, I believe, to put a priority upon our willingness to sacrifice for a total cold-war effort. There must be steadfastness and staying power in our decision.

Speaking as an individual, I would like to invite the American Society of Newspaper Editors to consider the merits of two proposals which I offer as additional and I believe, urgent measures for strengthening the weapons in the hands of the free world.

1. I suggest that we have reached the point when the Atlantic community needs and must lay its hands upon greater political unity and strength. To that end, may not the time be appropriate for creating a North Atlantic political council which, free of the veto, can discharge in the Atlantic community the responsibilities which the United Nations Security Council is prevented from discharging at Lake Success? Such a step is in line with the preamble and article II of the North Atlantic Treaty and would mean that the free nations, bound together in this alliance for peace, would be in continuous consultation and capable of taking constant action in the common welfare.

2. I suggest that we have already reached the point when it is urgently necessary to create and carry forward a common information program for the entire North Atlantic community. I would not mute but I would strenthen the Voice of America. I would not mute but I would strengthen the Voice of Europe, but beyond this, we need a united voice speaking on behalf of the free nations of the North Atlantic Pact. Such a step would be another tool in the hands of a North Atlantic political council and it could be brought into being by the negotiating of a North Atlantic information compact as an arm of the treaty itself.

As never before, Communist propaganda and Communist deception are directed against all the nations of the West and I propose it would be helpful for all the nations of the West to join to defeat this political warfare.

It is my hope that you will find these proposals worthy of your examination and discussion. I do not offer them in the expectation that they will be adopted out of hand, but I do believe that either these measures—or something better—are now needed. I submit them for your scrutiny and I am confident that discussion which you can precipitate will bring a sound answer.

A long and hard struggle may be ahead of us. I think we can win it. I think we have got to win it. But I have to report to you that, in my judgment, we are not yet exerting a total cold-war effort equal to winning it.

Fiftieth Anniversary Edition of the Anderson (S. C.) Daily Mail

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in Dixie Business, commending my very good friend, the distinguished former United States Senator Wilton E. Hall, publisher of the Anderson Independent and Daily Mail, on his recent anniversary edition of the Anderson Daily Mail. It is my opinion that this is a masterpiece in anniversary editions, and I join with my good friend, Col. Hubert F. Lee, in his remarks about former Senator Hall on this edition.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HALL

Our good friend and former "boss," Senator Wilton E. Hall, publisher of the Anderson Independent and Daily Mail has brought out a fabulous 304 page special fiftieth anniversary edition of the Anderson Daily Mail which, as a top newspaper special edition expert, is a glory to behold. In 1925, we went to Anderson to persuade Senator Hall to keep the United Press wire service and in turn Hall talked us into staying with him as advertising manager of the Anderson Independent. The year we went with Editor Hall was one of the finest we have known. Although we were tied up with the selection of the South's 50 foremost business leaders, we are grateful for the invitation to help on the big special edition of the Anderson Daily Mail which friend Hall extended us. We still have the itch to get back into the special-edition field that kept us from starving during the depression days when Dixie Business was dragging financially. Maybe some of these days we will.

It was Wilton Hall who interested us in starting the Lee Press Syndicate in 1926 and it was he who furnished us reprints for our weekly mailing to client newspapers over South Carolina. It was patterned along the lines of the highly successful Gilreath Press Syndicate which the late Frank C. Gilreath, Sr., founded 40 years ago and which is still carried on by his able son, Frank C. Gilreath in Atlanta. We blow a silver trumpet for Hall and the Gilreaths for the helpfulness they have been to us in the years past.

Facts and Record, Natural Gas Act Amendment

EXTENSION OF REMARKS

OF

HON. OREN HARRIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. HARRIS. Mr. Speaker, through the maze of propaganda, misinformation and misstatement of facts, the record clearly shows that those who voted for the Kerr amendment to H. R. 1758, clarifying the Natural Gas Act of 1938, were right and consistent.

When these facts are all brought to light, the consumers will see and understand the truth. They will appreciate the vote of those of the Congress who would not yield to pressure, propaganda, and "real" special interests, who obviously will be profited by the action of the President in vetoing the bill.

The consumers will ultimately find out, the vote for the amendment was in their best interest and an effort to give them cheaper fuel for their homes by bringing more and more natural gas to them and competing in the American way with

other fuels admittedly costing much more.

The record reveals that the vote for the amendment was the right vote in that it was sustaining the right of Congress to make legislative decisions.

When the facts and the record are considered so consistently, I frankly cannot see how the Supreme Court could hold otherwise than with the plain language of the act. It is true that the Court has not specifically held on this point but the purported action of the Federal Power Commission in announcing its intentions contrary to the law and the administration for 12 years makes this proposal right and necessary.

In order, Mr. Speaker, that the facts and the record may be considered together and that everyone may know the background, history, intention of Congress, and necessity of the amendment, under unanimous consent I insert herewith the provisions of section 1 (b) of the Natural Gas Act of 1938, exempting the production and gathering of natural gas, the history of the provision, clearly showing the intent of Congress, the first action of the Commission in 1940, 2 years after the enactment of the act, as to the intent of Congress; a restatement of the Commission through its staff as a result of its investigation in 1945, the action of the Commission, their recommendation and request in 1947, together with a letter from the chairman of the Commission urging the adoption of a bill at that time with the same identical purpose as the Kerr amendment and with a categorical statement that it was fully in accord with the legislative program of the President; the Commission's order No. 139 of August 7, 1947, restating their position and the intent of Congress when the act was passed; the statement of Speaker RAYBURN, who was chairman of the committee when the original hearings in 1936 were started by the Committee on Interstate and Foreign Commerce, that resulted in the Natural Gas Act of 1938; the statement of Mr. PRIEST, majority whip of the House, and a member of the Committee on Interstate and Foreign Commerce, who introduced the same bill at the request of the Commission in the last Congress; the statement of Mr. HALLECK, the majority leader of the House in the Eightieth Congress; a wire I transmitted to the President, April 4, 1950; and a statement carried in the Washington Post on Saturday, April 22, by Mr. Paul McBride, Arlington, Va.

The matters referred to are as follows:

PROVISION OF SECTION 1 (B) NATURAL GAS ACT, 1938

The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

BACKGROUND AND HISTORY OF PROVISION OF SECTION 1 (B) AS TO INTENT OF CONGRESS

In 1936, when the Interstate and Foreign Commerce Committee of the House of Representatives was considering H. R. 11662, which was a predecessor to the bill which finally become the Natural Gas Act, Mr. Dozier A. DeVane, then solicitor for the Federal Power Commission, referring to section 1 (b) of that bill, which was identical with section 1 (b) later adopted in the Natural Gas Act, told the committee:

"The bill makes no attempt to regulate the production or gathering facilities of a natural gas company, this function being purely local in character, nor is any attempt made to exercise control over distribution facilities."

At the same time, Chairman Lea of the committee asked this question:

"Well, when the supply company is brought before the Commission in an action to regulate its rates, and they say, 'We have got to pay so much for gas; we cannot control that price which they charge us and we have to charge a higher price delivered to the buyer,' does the Commission have any power over that?"

Mr. DeVane answered:

"No; not the price that is paid to the gatherer, to the man that produces it; that is binding if the transaction is at arm's length. If the transaction is not at arm's length, of course, its reasonableness may be inquired into, under the decisions of the Supreme Court."

Repeatedly similar statements were made both in committee and in debate on the House and Senate floors that the act only regulated the wholesale price of gas, this being the price charged for gas by the interstate carrier to the distributor. Nowhere is there any intimation in any proceeding before either the House or the Senate that the intention of the bill was to regulate the price paid to the independent producer and gatherer dealing at arm's length, but, on the contrary, this was expressly stated to be not subject to the act.

In 1940, 2 years after its enactment, the Commission held in the *Columbian Fuel Corporation case* (33 P. U. R. (NS) 3) that "it was not the intent of Congress to subject to regulation under the Natural Gas Act all persons whose only sales of natural gas in interstate commerce, as in this case, are made as an incident to and immediately upon completion of such persons' production and gathering of said natural gas."

REPORT OF COMMISSION STAFF FROM 2-YEAR STUDY, 1945

No subject relating to the administration of the Natural Gas Act has received greater attention throughout the course of the natural-gas investigation than the meaning and implications of section 1 (b), with reference to the exemption of the production and gathering of natural gas from jurisdiction under that section (p. 1 of their report).

It is evident from the testimony, indicating a widespread atmosphere of anxiety and uncertainty among State officials and the industries concerned, that this matter is in need of further clarification. A continuance of the existing disturbed situation is certain to interfere with the effective performance in the public interest of the duties of both the Federal and State regulatory agencies in their respective spheres, and it will also affect adversely the interests and actions of oil and gas producers, land and royalty owners, and the transmission companies which purchase gas in the field. It may be expected also that unless this issue is clarified the results will be detrimental to those who consume natural gas and to the efforts of conservation authorities to prevent its waste (p. 1).

COMMISSION REQUESTS THIS AMENDMENT

The Chairman of the Commission on June 23, 1947, advised this committee that—

"Under these circumstances, as we have stated previously, your committee may now wish to consider the adoption of an amendment to clarify this situation. Therefore we are submitting to you and your committee the attached legislative proposal, which is in accord with the Commission's interpretation that the Congress intended independent producers and gatherers to have a nonjurisdictional status under section 1 (b) of the Natural Gas Act, and is likewise in accord with previous rulings and determinations by the Commission regarding this matter."

Pursuant to the recommendation, our colleague on the committee, the Honorable J. PERCY PRIEST, of Tennessee, introduced H. R. 4099, which was proposed on the floor of the House as a substitute for the Rizley bill, but it did not prevail.

On July 10, 1947, the Honorable Nelson Lee Smith, Chairman of the Federal Power Commission, in pursuance to the request of the then chairman of our committee, our esteemed friend and colleague, the Honorable CHARLES A. WOLVERTON, advised the committee as follows:

"MY DEAR MR. CHAIRMAN: This is in response to your request of July 9 for an early comment by the Commission regarding H. R. 4099, a bill introduced by Congressman PRIEST, of Tennessee.

"The Federal Power Commission urges the enactment of this bill at this time to make it perfectly clear that independent producers and gatherers of natural gas are exempt from the provisions of the Natural Gas Act and the jurisdiction of this Commission.

"The enactment of this bill would dispel the uncertainty regarding the status of such independent producers and gatherers which has been created following the recent decision of the Supreme Court in the Interstate case. Such action by the Congress now should dispose of this important and noncontroversial matter.

"This procedure would enable the Congress to defer action on the many other aspects of natural gas regulation involved in the complexities, uncertainties, and ambiguities of H. R. 4051 (the Rizley bill), to which we referred in detail in our statement of July 1 to you and the members of your committee. As you know, all these problems are being carefully analyzed by the Commission, in cooperation with all interested parties, in the natural gas investigation (docket No. G-580). A full report on this investigation will be submitted to the Congress for its consideration within the next few months.

"I am authorized to state that the position of the Commission in this matter is fully in accord with the legislative program of the President.

"Respectfully yours,

"FEDERAL POWER COMMISSION,

"By NELSON LEE SMITH, *Chairman*."

ORDER 139 BY COMMISSION

UNITED STATES OF AMERICA, FEDERAL POWER COMMISSION

Before Commissioners Nelson Lee Smith, Chairman; Claude L. Draper, Leland Olds, and Harrington Wimberly.

Docket No. R-106

AUGUST 7, 1947.

In the matter of a rule to make the position of the Commission regarding the independent production or gathering of natural gas

ORDER NO. 139 SUPPLEMENTING THE COMMISSION'S GENERAL RULES INCLUDING RULES OF PRACTICE AND PROCEDURE—PART 03, SUBSTANTIVE RULES, GENERAL POLICY, AND INTERPRETATIONS

For the reason stated below, it seems appropriate and desirable at this juncture for

the Commission to adopt and promulgate the rule contained herein, which is designed to relieve any existing uncertainty regarding the Commission's position that it will not seek to assert jurisdiction over the sale of natural gas to interstate pipe lines by independent producers or gatherers.

Following the release in March 1947 of the staff report in Docket No. G-580 on this subject, entitled "Section 1 (b) of the Natural Gas Act with Reference to Production and Gathering," the Commission consistently therewith on May 27, 1947, issued a notice of proposed rule making in this matter. At that time, since there were prevalent many expressions of uncertainty as to the Commission's interpretation of section 1 (b) of the act with reference to the status of independent producers and gatherers of natural gas, and as to its intentions with respect thereto, it seemed evident that a formal administrative rule was necessary to affirm our belief that it was the intent of Congress to exempt such independent producers and gatherers when it enacted the Natural Gas Act in 1938.

During the first session of the Eightieth Congress which adjourned on July 27, 1947, various bills regarding this matter, as well as other important proposals for amending the Natural Gas Act, were introduced and considered by the Congress. At the hearings on these bills before the Senate and House Committees on Interstate and Foreign Commerce the Commission likewise stated its view that independent operators who produce or gather natural gas and sell it at arm's length to natural-gas companies subsequently transporting such natural gas in interstate commerce are exempt from the provisions of the Natural Gas Act.

Reference also was made at these hearings to the pending case before the Supreme Court of the United States in *Interstate Natural Gas Company, Inc.*, v. *Federal Power Commission*. The subsequent decision of the Court on June 16, 1947, addressed to the particular circumstances of that case which involved the operations of a natural-gas company subject to the act, immediately became the basis for diverse interpretations and agitations by interested parties, as to its implications regarding the jurisdictional status under the act of independent producers and gatherers.

In view of these circumstances, the Commission urged the immediate adoption of H. R. 4099, the specific and sole purpose of which was to make entirely clear the exemption of the independent production and gathering of natural gas from the provisions of the Natural Gas Act. This proposed amendment, however, was not enacted during the closing days of the session of the Congress which has just ended.

This brief review of developments in this matter has been presented so that there may be no basis for misunderstanding or continuing expressions of fear and uncertainty regarding this matter, which is noncontroversial. The Commission gives its assurance to independent producers and gatherers of natural gas that they can sell at arm's length and deliver such gas to interstate pipe lines and can enter into contracts for such sale without apprehension that in so doing they may become subject to assertions of jurisdiction by the Commission under the Natural Gas Act.

The rule herein has this specific purpose and is issued at this time because the Congress has not yet reaffirmed such exemption by amending the act. It is also our intention, in keeping with the position heretofore taken, to continue to recommend to the Congress that it take appropriate clarifying legislative action regarding this matter.

General public notice of the proposed rule in this matter has been given by publication of notice in the Federal Register on June 5, 1947 (12 F. R. 3679), and by mailing copies of such notice to all interested persons including States and Federal regulatory agencies.

All of such persons have been afforded an opportunity to submit written statements or briefs setting forth their comments, views, and suggestions with respect to this proposed rule.

Finding that such action is necessary and appropriate to clarify the meaning of section 1 (b) of the Natural Gas Act, the Commission pursuant to the authority contained in that act, particularly section 16 thereof (52 Stat. 821-833; 830; 15 U. S. C. 717-717w; 717o), hereby adopts and promulgates the following rule as a new section of Part 03—Substantive Rules, General Policy and Interpretations, of Subchapter A—General Rules, chapter I of title 18 of the Code of Federal Regulations, such new section to read as follows:

"SEC. 03.79. Jurisdictional Status of Independent Producers and Gatherers. The Federal Power Commission is of the opinion that it was the intent of the Congress that the control of production or gathering of natural gas should remain a function of the States and that the Natural Gas Act should not provide for regulation of those subjects.

"For the purposes of administering the Natural Gas Act, the Commission will construe the exemption contained in section 1 (b), to the effect that the provisions of the act shall not apply to the production or gathering of natural gas, as including arm's length sales of natural gas by independent producers and gatherers, made during the course or upon completion of production and gathering. The Commission, consistent with this construction, will not assert jurisdiction over such producers and gatherers who might be subject to jurisdiction solely because of such sales."

The interpretative rule hereby adopted shall become effective August 7, 1947. The Secretary of the Commission shall cause publication of this order to be made in the Federal Register, and further, shall serve copies thereof on all interested parties.

By the Commission. Commissioner Draper dissenting.

[SEAL] LEON M. FUQUAY, *Secretary*.

Date of issuance: August 15, 1947.

SPEAKER RAYBURN REQUESTS AMENDMENT

Mr. RAYBURN. Mr. Speaker, with my long record in this House of Representatives, starting way back, being a member of the subcommittee that wrote the Federal Power Commission Act, being a member of the subcommittee that wrote the Federal Trade Commission Act, and being the author of the Securities Act of 1933, of the Stock Exchange Regulation Act of 1934, and of the Utilities Holding Company Act of 1935, I do not think I could be accused of having any great desire to serve the interests over the people.

If I felt as my distinguished and beloved friend from Ohio [Mr. CROSSER] has indicated he feels, that the Federal Government should own and control all the natural resources of this country, then my position on this and much other legislation would certainly be changed.

We have been going along the other line for more than a century and a half, and our country has grown to be the greatest and the most prosperous country in the history of the world.

The difference between this amendment and the bill we passed in the House is simply this, practically nothing more or nothing less: As a concession to some people who said they wanted to carry on this thing and not make this final, the Senate amendment in which we are seeking to concur today, in addition to the bill that passed the House, says, "We are going to pass this legislation but we want to carry on the study to see whether or not passing this legislation we have done the proper thing."

In being for this bill, as I was when it originally passed the House and as I am now in favoring concurring in the Senate amendment, I have some pretty good company. The Federal Military Establishment was asked about this bill, and this is the guts of what they said, after all elements of the Department of Defense has studied it:

"Enactment of the bill will remove uncertainties now existing as to the extent of the application of the Natural Gas Act and will clarify its terms. Its effect should be to encourage the development of oil and gas resources and thus would be of benefit to the national security."

That is what our whole Military Establishment says about this legislation.

This bill simply says that the little fellow, who goes out and strikes some gas, is not going to be hauled up to Washington and tried before the Federal Power Commission, and that the independents in gathering, not in the transportation in interstate pipe lines or anything of the sort, shall not be placed under regulations that they would be in interstate commerce.

In my opinion—and I state this to you deliberately; I would not deceive you; you know that—this will not raise the price of natural gas to any consumer in the United States one red penny. I think this thing should be gotten out of the way. We should concur in this Senate amendment and then have this study and see where we go from there.

MR. PRIEST SPEAKS FOR AMENDMENT AS NEEDED AND CONSISTENT

Mr. PRIEST. Mr. Speaker, because several references have been made throughout the debate in this Chamber last year and in the other body to the Priest bill, references showing that the Priest bill of 1947 is rather largely the same as the bill now pending with the exception of the Senate amendment providing for continuation of a study, I want to take a few minutes to point out one or two important considerations in connection with this bill.

Reference was made by my colleague, the gentleman from Massachusetts [Mr. HESELTON], I believe it was, to the Rizley bill that was before the Eightieth Congress. The Rizley bill was before the Committee on Interstate and Foreign Commerce for quite a while. Extensive hearings were held. I was not for that bill; I thought it went too far. At that time the Federal Power Commission came before the Committee on Interstate and Foreign Commerce. They came to my office and requested me to introduce a bill as a substitute for the Moore-Rizley bill. That request came also from the White House.

In a letter to the then chairman of the Committee on Interstate and Foreign Commerce, the gentleman from New Jersey [Mr. WOLVERTON], the Federal Trade Commissioner said this:

"This is in response to your request of July 9 for an early comment by the Commission regarding H. R. 4099, a bill introduced by Congressman PRIEST, of Tennessee.

"The Federal Power Commission urges the enactment of this bill at this time to make it perfectly clear that independent producers and gatherers of natural gas are exempt from the provisions of the Natural Gas Act and the jurisdiction of this Commission.

"The enactment of this bill would dispel the uncertainty regarding the status of such independent producers and gatherers which has been created following the recent decision of the Supreme Court in the Interstate case. Such action by the Congress now should dispose of this important and noncontroversial matter."

The last paragraph of the letter reads:

"I am authorized to state that the position of the Commission in this matter is fully in accord with the legislative program of the President."

Mr. HARRIS. Mr. Speaker, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from Arkansas.

Mr. HARRIS. Is it not a fact that the bill that passed the House last August, H. R. 1758, and the amendment that was passed by the Senate and sent over here, which is before the House at this time, is exactly the same thing and has for its purpose the exemption of independent producers and gatherers of natural gas where the sales are at arm's length?

Mr. PRIEST. Exactly, and that is the law as it has been in effect since 1938. This makes no change whatsoever. It says that a law which has been in effect for 12 years, during which time the retail price of natural gas has declined 12 percent, shall continue to operate on that same basis.

Mr. MONRONEY. Mr. Speaker, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from Oklahoma.

Mr. MONRONEY. Is it not a fact that if a driller were drilling for oil and found gas, that he would inadvertently find himself in the public-utility business?

Mr. PRIEST. Assuming that the Commission has the jurisdiction which some claim it does, but which the law does not give it, and which was made perfectly clear in all of the legislative history of the act.

MR. HALLECK URGES ITS ADOPTION

Mr. HALLECK. Mr. Speaker, I trust that we can have a little light on this measure as well as heat.

First, may I say that a bill similar to this, except the opponents of this bill say it went much further, was passed in the Eightieth Congress. It did not come to passage in the other body.

This bill is almost identical with a bill introduced by the gentleman from Tennessee [Mr. PRIEST] in 1947 which was approved by the unanimous vote of the Federal Power Commission. It was approved by the Department of Defense. It was said by the Commission to be in line with the President's program.

In this Congress, the Eighty-first Congress, that bill was introduced by the gentleman from Arkansas [Mr. HARRIS]. It was reported by the great Committee on Interstate and Foreign Commerce on which it was my privilege to serve some years ago. The bill was passed by the House of Representatives and went to the other body where an amendment has been put on, that again may I say quite respectfully from the standpoint of the opponents of the measure should make the bill better rather than worse.

What is the situation that is now before us? Simply this: Shall we adopt the amendment that was agreed to in the other body and be done with this matter, or shall it go on to conference? I say that under the circumstances certainly there is no reason that I can see why anyone who supported the bill before should not support it now.

Now, what are the circumstances back of this legislation? In 1938 legislation for the regulation of the transportation of gas in interstate pipe lines was introduced and brought to passage. I was on the committee at the time. I am making these brief remarks here because of the participation I had in that debate at that time. Here is what I said in connection with that legislation:

"In the past few years the interstate transportation of gas in large pipe lines at high pressure had been growing by leaps and bounds. Gas is brought from the producing areas in these pipe lines and sold at the city gates to the public utilities which distribute the gas to the consumers. It is obvious the distribution of the gas by the local distributing company is subject to State regulation and the interests of the consumers are protected by State regulation. However, the transportation of gas in interstate commerce in the pipe lines and its sale to the distributing companies for resale is not subject to State regulation, and as a result we have had a situation under which the price charged the distributing company at the city gate has been fixed wholly by the judgment, discretion, or action of the interstate company. It is charged that in many cases that price is excessive. This bill seeks to regulate those prices."

That is the reason I supported the legislation. Now, then, specifically the question is, Shall the Federal Power Commission extend its control to the production and gathering of gas? May I say at that point that if such control could be so extended, might it not as logically be said that the production and gathering of oil shall be controlled by the Commission as a public utility? Might it as well not be said that the production of coal in the mines shall be controlled by the Federal Power Commission as a matter of controlling a public utility?

The bill that we passed in 1938 specifically exempted by its terms the production and gathering of gas, written in after careful consideration.

A specific question was put to the great chairman of our committee, Mr. Lea, of California, who voluntarily retired from this body a year or so ago. He was asked specifically if it was designed to apply to the production and gathering of gas, and he said this: "The bill does not apply to the production and gathering of gas."

The Commission, may it be understood, has in the 12 years that this law has been on the books never asserted the right to control the production and the distribution of gas. No one ever thought they had any such power under the legislation. I do not think they have now, but as sometimes happens, there was a case in the Supreme Court a few years back, and there were certain words used in the opinion that were outside of the necessities of the decision that seemed to indicate the possibility that the Commission might have the power to invade this entirely local field, or such field as has heretofore been said by the Congress to be local, and assert the right to control the production and gathering of the gas. That is the situation that gave rise to the introduction of legislation similar to this in the Eightieth Congress. It is the situation that has given rise to the introduction of this legislation in this Congress, yes, to the adoption of the legislation by the House and the adoption of the legislation with one amendment that I have already referred to by the Members of the other body.

Now, then, I have beyond all of that, may I say, Mr. Speaker, a deep conviction, as I am sure all of you who have served with me know, that if, for instance, the right to regulate the production and gathering of gas at the source is to be invested in the Federal Power Commission, the Congress of the United States ought to make that decision. That power should be granted by the Congress of the United States. It is quite obvious it could not be obtained from any other source rightfully, and to attempt to apply the statute in a way that I say strains the statute is, in my opinion, not the way that the affairs of Government should be administered.

The gas is produced and gathered at the source, even as oil is produced or coal is produced. Then a pipe-line company buys it at arm's length from competing producers and puts it into the pipe lines. If it goes across State lines it is then in interstate commerce.

Until we passed the act of 1938 there was no power anywhere to regulate the price to be charged for that gas moving in interstate commerce, so to fill that gap, and that gap only, the Congress enacted this legislation.

Carried with that is the right in the Federal Power Commission to control the price of gas at the city gate, to see to it that the city is not charged too much for the gas. Then the matter of fixing the rate to the consumer as he pays it to the distributing company becomes a matter of local regulation. That is all there is to this whole business.

I say again, the Federal Power Commission never asserted this right. As a matter of fact, it specifically disclaimed it in 1947. The Court has not specifically held that it has the right. So I say again, it is simply a matter of clarification and a definite delineation of what was obviously the purpose and intent of the Congress of the United States.

COPY OF WIRE TO THE PRESIDENT BY MR. HARRIS, CHAIRMAN, PETROLEUM SUBCOMMITTEE

APRIL 4, 1950.

I want to strongly urge your approval H. R. 1758, Kerr amendment, Natural Gas Act, passed by House and Senate. Speaker RAYBURN, House Majority Leader MCCORMACK, Majority Whip PERCY PRIEST join in wholehearted support this bill. As chairman House subcommittee, Interstate and Foreign Commerce Committee, I am thoroughly familiar with this proposal. Committee reported it in my name as chairman, slightly amending original bill I introduced January 24, to fully conform with the purposes and intent of the FPC proposal introduced by Congressman PRIEST, a member of the committee 2 years ago and which was testified by the Commission to be in full accord with your, the President's program. It passed House in August as reported by our committee by a vote of 183 to 131. The Kerr bill as amended to conform to only the purposes and intent of the proposal passed the Senate. It was in different language but the same purpose only with an additional provision of a continuing study by the FPC on the subject in the public interest. The House agreed to the bill as amended by the Kerr amendment last Friday by a vote of 176 for it with 26 Members voting for the bill as passed the House in August being absent and not voting Friday.

This amendment, Mr. President, merely clarifies the intent of Congress when the original act was passed in 1938, to the effect that independent producers and gatherers of natural gas would be exempt from FPC regulations where sales by such producers and gatherers are at arm's length, at or prior to inception of interstate transmission or trunk lines of interstate natural gas companies. It conforms to the FPC order 139 issued August 1947, on being necessary because of confused interpretation Court decision in the Interstate case, June 1947.

This amendment, Mr. President, does not change any procedure or authority exerted in the history of the Natural Gas Act. It does not change the stated intent of the act when passed in 1938. It merely clears up a confused and uncertain status by court interpretation. Grave misrepresentations have been made to the effect it will increase cost of gas to consumers. This I respectively submit is gross misrepresentation. The history of the administration of the act shows the cost on a national average to consumers to gradually be reduced by 12 percent, during the 12 years of the Natural Gas Act administration.

I join with Speaker RAYBURN in confidently stating that this will not have adverse effect on the cost of gas to consumers. On the other hand, it will benefit consumers reducing their fuel cost by making more gas available to them.

The price of natural gas to consumers has steadfastly gone down and the cost of other fuels increased tremendously over the same period of time.

The contention that this is not competitive fuel, I respectfully submit, is in error. The competitive element is in the field where there are thousands of leases from which gas

is produced and the competitive element prevails in the usual business way as the big natural gas companies bid for it.

The FPC definitely has authority over rates at wholesale prices for resale and any grossly unfair or unusually high rates as in the past be prohibited by Commission. Furthermore, State utility commissions have regulatory authority over rates by distributing companies and can likewise continue to exert authority where the regulated monopoly business prevails. I urge your approval.

OREN HARRIS,
Member of Congress.

DEFEAT OF THE KERR BILL

Undoubtedly the Kerr amendment to the Natural Gas Act of 1938 was beaten in the final stretch by an ill-informed press, irresponsible columnists, and well-intentioned, but erring, municipal officials of America's largest cities who succumbed to inaccurate information and pressure from a major labor union that was interested to an extreme in keeping its large segment of coal miners in the pits of an ailing industry suffering from acute gas pains.

Quantities of natural gas most assuredly will be reduced the instant any manner of Federal regulation is exercised by the Federal Power Commission, for virtually all major independent producers have long-time contracts with transporting companies that can become nullified only if any Federal regulation of independents is begun. Wholesale cancellation of present contracts is a certainty in the event of FPC control, and less gas decidedly means higher gas prices to the consumer.

Independent producers generally have gas as a byproduct of oil drilling, and total sales in interstate commerce last year reached only $70,000,000. To maintain their independence, these producers in all likelihood will convert their natural gas into liquid gas, to fertilizer, or to carbon black, while supplies owned by natural-gas companies will be about all consumers can expect.

The Kerr bill was a wholesome one and its enactment into law would have changed nothing that has ever, or is now, in effect. It merely clarified a confusing passage of the Natural Gas Act of 1938 that the Federal Power Commission—and President Truman—urged the Eightieth Congress to enact, and the Priest bill, fully sanctioned by these men, was speedily enacted. It was virtually identical to the Kerr bill.

Later, however, under the leadership of Leland Olds, the FPC reversed its position by a 3-to-2 agreement. This same Mr. Olds was rejected by the most decisive vote the Senate has turned down a nominee in recent history when his term was to be renewed.

An even more controversial Moore-Rizley bill was adopted by the House in the Eightieth Congress, and the Harris bill was easily agreed to during the first session of this Congress. It was the Harris bill, amended by Senators KERR and THOMAS for the benefit of consumer protection, that the President vetoed last week.

It is strange, however, that every committee chairman in the Senate, with the exception of Senators CHAVEZ, NEELY, and TYDINGS, voted for the bill and strongly fought for its adoption. Even Senator BYRD and Senator TAFT gave their full approval to the measure, as did leaders in the House of Representatives.

Even after the Supreme Court ruled on the status of independent producers, all but one member of the Federal Power Commission joined in issuing an order—still in effect—guaranteeing this type producer freedom from fear of Federal regulation.

Upon this assurance, producers in the Southwest expanded their production and enabled transporters to bring this cheapest of all fuels to areas in all parts of the Nation—and at a price that has steadily declined for 12 years.

The Kerr amendment simply stated that these companies could continue in the future, as they have in the past, in running their own affairs. It further pointed out that in the event of unscrupulous price rises, an investigation would be made and results reported to the President.

Since 1938, if a transporter of natural gas owned producing wells, the entire process of production and transportation had been under the Federal Power Commission control. More than 75 percent of Chicago's natural-gas supply comes from wells owned by the transporter. Their rates have been and will remain under Federal regulation, but the mayor of that city cried out against the Kerr measure.

It is unfortunate, too, that the President found this pressure so great that he felt for political reasons he must reverse his past requests for such legislation and veto the measure.

PAUL MCBRIDE.

ARLINGTON.

Import Tax on Copper

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE FOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. PATTERSON. Mr. Speaker, President Videla of Chile, in effect, called for passage of H. R. 7151, the Patterson copper bill, at a luncheon in his honor yesterday in New York.

I believe that Congress should take due notice of his statement that reimposition of the tax would benefit no one in this country. The Chilean Nation has cooperated splendidly with the United States in the community of Pan-American countries, and a severe economic strain would result from restoration of the tax. Furthermore, the almost immediate effect upon employment in the brass industry would create a problem of great magnitude.

Action is imperative now if we are to head off these serious consequences.

President Videla's remarks on this subject are included in the following news story from the New York Herald Tribune for Wednesday, April 26, 1950:

CHILE PRESIDENT SEES MENACE IN COPPER TAX—SAYS RESTORATION BY UNITED STATES WOULD HURT HIS COUNTRY

President Gabriel Gonzalez-Videla, of Chile, said here yesterday that restoration of the United States import tax on copper would do severe economic and social damage to his country.

Addressing a luncheon in his honor at the University Club, President Gonzalez-Videla said that certain copper-producing groups in this country are advocating the resumption of this tax at a time when the United States is developing its plan of technical and financial aid to other countries and when American industry is in need of foreign copper.

The tax, he said, would benefit nobody in the United States and would do harm to its industries. However, he added, he had complete confidence a way out would be found to straighten out any difficulty between two friendly countries whose destiny it is to walk together through the years ahead whether of prosperity or reverses.

NO ARBITRARY EXPROPRIATION

Speaking of the friendly cooperation between North American capital and Chilean labor, he said that this kind of risky mining business can only succeed where laws offer complete guaranties of security to foreign capital and where foreign capital does not operate to take undue advantage of its power. He pointed out that there has never been a single case of arbitrary expropriation in Chile and said there will never be hostility of any other nature to capital or property.

President Gonzalez-Videla said the United States would be unable to face another foreign war if copper ingot were not forthcoming from Chilean ports. He praised North American copper concerns for setting aside a part of their profits to raise the living standards in the regions in which they operate, adding that these companies have surrendered positions of high technical and administrative responsibility to Chilean citizens.

TAX NOW SUSPENDED

The 2-cents-a-pound tax on copper imports has been suspended since the beginning of World War II but will become effective again after June 30 unless it is waived by Congress. The President of Chile spoke before more than 100 industrialists at the luncheon which was sponsored by C. Donald Dallas, chairman of Revere Copper & Brass Co.

Mr. Dallas said that Chile, because of existing legislation, is one of the few countries in the world to create a favorable environment for foreign investors. He added the hope that the much-needed copper from Chile "will always continue to flow freely into this country and that American industry and that of Chile will thus be mutually helped at all times."

Cornelius F. Kelley, chairman of Anaconda Copper Mining Co., said that without Chile's contribution to the last war, that conflict "could not have been fought as it was, won as it was, and the victory would have been of exceeding doubt." Calling the copper tariff a prohibitive restriction, Mr. Kelley warned that "in this time of tension we do not know how soon we may be put to the necessity of arming again as we have in the past."

Communism Versus Church

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of April 25, 1950:

COMMUNISM VERSUS CHURCH

The struggle of Russian totalitarian communism against the various churches and against religion may be approaching a climax, at least in eastern Europe. The latest news

is of the vigorous counterattack on communism by sorely tried Protestant and Catholic churchmen in the Soviet zone of Germany. There is a still confused conflict in Poland, but clearly the situation is critical. The activities of the Czech and Hungarian Governments against the clergy and churches have filled many columns of news recently.

This whole struggle of east and west is throwing up some of the most profound spiritual problems in history. It would be a fatal mistake for western countries to think of the expansion and pressures of Soviet communism simply in terms of territories, countries, political forces, military threats, espionage, or propaganda. We are in the midst of a conflic as fundamental in its way as that of Christianity against the pagan world. Communism, like fascism, puts itself forward as a substitute for religion. In academic circles one hears much talk these days comparing in a technical or mechanical sense the spread of communism with the spread of Christianity in the first few centuries A. D. If there could be any basis for such comparison, it would only become possible through a failure of the democratic world to realize its danger and to make the truth about communism known. If communism really were a movement to spread brotherhood, peace, and the fair sharing of the world's goods, it would in the first place not be in conflict with many religious doctrines, and in the second it would not be Russian totalitarian communism.

The challenge we face is on two fronts. It is doctrinal in that Marxian communism is atheistic and materialistic, and it is political through the workings of the totalitarian system, which cannot countenance any force that is not completely controlled by the state. On the doctrinal side, communism is as much against Protestantism, Judaism, and Mohammedanism as it is against Catholicism. We hear so much about the attacks on the Roman Catholic Church in eastern Europe these days that we are apt to overlook the scope of the attack. It is another case of not asking for whom the bell tolls; it tolls for all of us.

A Prayer

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. GOODWIN. Mr. Speaker, increasingly nowadays it seems that we find in the daily prayers of the Chaplains opening our legislative sessions not only inspiration for moral and spiritual uplift but also material for sober thought and reflection to guide us as lawmakers in the discharge of our purely temporal duties. I find a splendid example of this in the instance of a recent prayer by the chaplain of the Massachusetts Senate, Rt. Rev. Msgr. Francis A. Burke, LL. D., and under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the Wakefield (Mass.) Item of April 24, 1950, quoting therefrom with appropriate and laudatory comment:

A PRAYER

Prayers of the senate or house chaplains are more or less considered as routine each day and seldom win any mention.

There was one, however, last week which should have had first-page attention.

It was delivered by Senate Chaplain Burke in our own legislature.

He said, in part: "You cannot, without undermining public confidence, pyramid taxes, talk brotherhood, and practice prejudice, have so many on public pay rolls as to create too great a burden on the taxpayers, or contend in differences between the worker and the employer one side is always right and the other wrong. You cannot reduce the work hours per week beyond the ability of those to pay to absorb that additional economic responsibility. * * * You cannot have too much social security without begetting too much national insecurity. * * * Seeing one cannot spend what one doesn't possess, it follows that an unbalanced budget eventually leads to the cleaners."

Report of Projects Committee to Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. SID SIMPSON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. SIMPSON of Illinois. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following report of the projects committee, which was unanimously adopted by the recent Fortieth Annual Convention of the National Rivers and Harbors Congress held in Washington on March 23–25, 1950.

The permanent projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the congress are vigorously pressed for inclusion in the Government's public-works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public-spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The following are the members of the committee who served at its recent annual session:

NATIONAL RIVERS AND HARBORS CONGRESS,
PROJECTS COMMITTEE

Representative SID SIMPSON, of Illinois, chairman.

New England division: Larry M. Hess, executive secretary, Taunton Association of Commerce, Taunton, Mass.

North Atlantic division: Brig. Gen. James H. Stratton, United States Army (retired), consulting engineer, New York, N. Y.

South Atlantic division: H. H. Buckman, consulting engineer, Jacksonville, Fla., vice chairman.

Southwestern division: J. C. Murray, traffic manager and commerce counsel, Greater Little Rock Chamber of Commerce, Little Rock, Ark.

Lower Mississippi Valley division: Byron P. Lyons, chief engineer, Department of Public Works, State of Louisiana, Baton Rouge, La.

Upper Mississippi Valley division: Al Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River division: Everett T. Winter, vice president, Mississippi Valley Association, Omaha, Nebr.

Ohio River division: O. Slack Barrett, president, Ohio Valley Improvement Association, Cincinnati, Ohio.

Great Lakes division: Harry C. Brockel, municipal port director, city of Milwaukee, Milwaukee, Wis.

North Pacific division: George E. Thomas, assistant manager, Washington, D. C., headquarters, Seattle, Wash., Chamber of Commerce.

Western Intermountain region: E. W. Rising, vice president, Southwestern Idaho Water Conservation Project, Inc., Boise, Idaho.

The report follows:

REPORT OF THE PROJECTS COMMITTEE TO THE FORTIETH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS

WASHINGTON, D. C., *March 25, 1950.*

Hon. JOHN L. MCCLELLAN,
President, National Rivers and Harbors Congress,
Washington, D. C.

DEAR MR. PRESIDENT: In pursuance of the call of the president, your project committee met on March 23, 1950, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 78 proposals embracing all resource improvements with which this congress is concerned, including navigable waterways, harbors, flood control, soil conservation, reclamation, and water conservation.

Of the proposals examined, this committee is convinced that 34 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $622,576,590. Eight proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 29 proposals surveys have been authorized, but the reports on such surveys have not been completed, and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find four proposals which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization. Of the proposals investigated, we find three are without

necessary data or sponsorship to enable the committee to reach a reasonable conclusion on their worth. However, we desire to give the applications sympathetic consideration, and, if possible, offer to the proponents the services of this congress in reaching a solution of their problems. We have, therefore, not classified these, but have suggested that the secretary communicate with the applicants concerned and request additional data upon the receipt of which further consideration will be given to their proposals.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

The committee desires to bring to the attention of all concerned the existence of a major omnibus flood-control and river-and-harbor bill. This bill, known as H. R. 5472, contains numerous items authorizing the construction of flood control and navigation improvements throughout the Nation. In addition, the bill carries authority for the Federal agencies concerned to conduct preliminary examinations and surveys in the interest of flood control, navigation, and allied purposes throughout many river basins. The bill has been passed by the House of Representatives, approved by the Senate Committee on Public Works, and is at present on the Senate Calendar. Enactment of this legislation will prove a valuable supplement to the existing river-and-harbor and flood-control law.

Your projects committee is well aware of the substantial and widespread benefits that are resulting from the construction and operation of flood-control structures throughout this great land of ours. These projects are providing a security never before known to a great many peoples who have previously witnessed the ravages of floods and experienced the miseries associated therewith. The improvements constructed in the interest and betterment of navigation have facilitated the growth of trade with other nations, developed water-borne commerce among the States, and strengthened the transportation system for the security and continued growth of the Nation. The picture is bright, flood-control and navigation improvements are constantly proving their worth, justifying the faith of the Congress of the United States in authorizing their construction. However, much hard work still remains to be accomplished to alleviate the needless suffering and hardships wrought by floods and to produce the best possible measures for the betterment of navigation.

Your committee again desires to make the recommendation that the National Rivers and Harbors Congress actively and forcefully foster the early completion of those projects essential to the future well-being of the Nation. In this respect it is essential that the Federal agencies concerned have sufficient funds with which to carry out the plans for the development of our water resources as approved and authorized. Therefore, Mr. President, your committee feels strongly that the Congress of the United States and all agencies concerned should be informed of the need for sufficient appropriations to carry on the work of project construction which has previously been approved, and which represents a prudent and far-seeing investment in the development of our natural resources, and to prosecute with diligence the work of investigation which is vital to the formulation of a sound and well-integrated program of river-basin development, and that not less than $10,000,000 be provided therefor annually. We further recommend that the amount of $53,000,000 recommended by the Bureau of the Budget for river and harbor maintenance be increased to $70,000,000.

Respectfully submitted.

SID SIMPSON, *Chairman.*

NOTE A.—A project which has been placed in class II, III, IV, or V by the committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I—Endorsed, such status continues, and it is unnecessary to follow up at subsequent sessions with new applications. All projects "endorsed" by the Congress, upon the recommendation of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPENDIX A

(Letter "R" following the project number indicates revision of a previous application)

Class I—Projects endorsed

Endorsed: This means that the committee is convinced that the project is sound, needful, and sufficiently advanced in status, and should be promptly constructed in the will be reported upon by the committee more

Project No.	Name of project	State	Division
709-R-2	Upper Monongahela River modernization (Hildebrand and Opekiska Dams)	West Virginia	Ohio River.
722-R-2	Cape Fear River at and below Wilmington	North Carolina	South Atlantic.
736-R	Taylors Creek	do	Do.
744-R-2	Oregon Inlet and related channels	do	Do.
745-R-2	Masonboro Inlet	do	Do.
748-R	Craney Island disposal area	Virginia	North Atlantic.
779-R	Wallace Channel	North Carolina	South Atlantic.
784-R	Central Valley project	California	South Pacific.
804	Des Moines and Mississippi levee district No. 1	Missouri	Upper Mississippi Valley.
806	Connecticut River from Long Island Sound to Holyoke	Connecticut and Massachusetts	Northeastern.
817	New Cumberland locks and dams, Ohio River	Ohio and West Virginia	Ohio River.
818	Kansas River (flood control)	Kansas and Nebraska	Missouri River.
821	Susquehanna River, West Branch, reservoir system	Pennsylvania	North Atlantic.
824	Cache River Basin	Arkansas and Missouri	Lower Mississippi Valley.
825	Yadkin-Pee Dee Rivers (flood control)	North Carolina and South Carolina	South Atlantic.
826	Rocky Fork Reservoir (Paint Creek)	Ohio	Ohio River.
828	Mystic River, Boston	Massachusetts	Northeastern.
829	Tampa Harbor	Florida	South Atlantic.
830	Lake Worth Inlet	do	Do.
831	St. Augustine Harbor and vicinity	do	Do.
832	Arthur Kill, New York and New Jersey Channels, New York Harbor	New York and New Jersey	North Atlantic.
833	Savannah River	Georgia	South Atlantic.
834	Brunswick Harbor	do	Do.
835	James River, Richmond	Virginia	North Atlantic.
836	Cape Fear River, at and below Wilmington	North Carolina	South Atlantic.
838 (684-R)	Mississippi River, New Orleans to the Gulf of Mexico (Tidewater Channel)	Louisiana	Lower Mississippi Valley.
839	Sabine-Neches waterway	Texas	Southwestern.
840	Freeport Harbor	do	Do.
841	Galveston Harbor and Channel	do	Do.
842	Brazos Island	do	Do.
846	East Pass from Gulf of Mexico into Choctawhatchee Bay	Florida	South Atlantic.
847	Central and southern Florida flood-control project (first phase)	do	Do.
848	Canaveral Harbor	do	Do.
849	Intracoastal Waterway, Caloosahatchee to Anclote River	do	Do.

Class II—Projects classified as meritorious

Meritorious: This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and open for further consideration by the committee.

Project No.	Name of project	State	Division
771-R	Burns Harbor	Indiana	Great Lakes.
781-R	Raystown Reservoir (Juniata River and tributaries)	Pennsylvania	North Atlantic.
790-R	Hudson River, improvement of, from Albany to New York	New York	Do.
795	Bayou Coden (channel dredging)	Alabama	South Atlantic.
809	Smiths Creek (Oriental)	North Carolina	Do.
819	Kalamazoo River and tributary, the Battle Creek River, at Battle Creek and vicinity (flood control).	Michigan	Great Lakes.
843	Farmers levee and drainage district (East Chandlerville levee project)	Illinois	Do.
844	Channel and harbor at Everglades, Collier County	Florida	South Atlantic.

Class III—Expeditious report on authorized survey requested

Expeditious report on authorized survey requested: This means that the committee believes the Congress should request the engineering authority to expedite the report of its investigation and survey of the project to the end that appropriate further action may be had thereon in regard to classification by the Congress.

Project No.	Name of project	State	Division
723-R	Cape Fear River above Wilmington (flood control)	North Carolina	South Atlantic.
725-R-2	Carolina Beach	do	Do.
727-R	Neuse River Basin (flood control)	do	Do.
728-R-3	Harbor at Morehead City	do	Do.
773-R	Waccamaw River	North Carolina and South Carolina	Do.
780-R	Little River Inlet	do	Do.
794	Bayou La Batre (channel dredging)	Alabama	Do.
795	Dauphin Island Bay (channel dredging)	do	Do.
797	Perdido Pass (channel dredging)	do	Do.
798	Fowl River (channel to Mobile Bay)	do	Do.
799	Waterway from Bon Secour Bay to Gulf via Oyster Bay	do	Do.
800	Au Gres River Basin (flood control)	Michigan	Great Lakes.
801	Kawkawlin River (flood control)	do	Do.
805	Saline River and tributaries (flood control and drainage)	Illinois	Ohio River.
807	Chowan River and tributaries (flood control)	North Carolina and Virginia	North Atlantic.
808	Neuse River (flood control), Smithfield to Wayne county line	North Carolina	South Atlantic.
810	Holden Beach (Brunswick County)	do	Do.
811	Hatteras Inlet to Hatteras	do	Do.
812	Cape Channel, Pamlico Sound	do	Do.
813	Pantego and Cucklers Creek (flood control)	do	Do.
814	Norfolk Harbor channel	Virginia	North Atlantic.
815	Thimble Shoal channel	do	Do.
816	Lambert Point anchorage	do	Do.
822	Baltimore Harbor and channels	Maryland	Do.
823	do	do	Do.
837	Mobile Harbor	Alabama	South Atlantic.
845	Apalachicola Harbor and channel to Gulf	Florida	Do.
850	Big Muddy River Basin (flood control)	Illinois	Upper Mississippi Valley.
851	Wabash River at Peru (flood control)	Indiana	Ohio River.

Class IV—Projects recommended for survey

Recommended for survey: This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government.

Project No.	Name of Project	State	Division
778-R	Lockwoods Folly Inlet	North Carolina	South Atlantic.
793-R	Cleves Flood protection project	Ohio	Ohio River.
803	Wisconsin-Fox Rivers waterway	Wisconsin	Upper Mississippi Valley.
820	Dana Point-San Clemente Harbor	California	South Pacific.

Rev. Philip Frederick McNairy

EXTENSION OF REMARKS
OF

HON. ANTHONY F. TAURIELLO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. TAURIELLO. Mr. Speaker, recently my community suffered a loss when the Very Reverend Edward R. Welles, dean of St. Paul's Cathedral in Buffalo, N. Y., was designated as bishop of the Episcopal Diocese of West Missouri at Kansas City. Bishop Welles' transfer will cause him to be missed not only by the Episcopal Diocese of western New York but to all the people there who have grown to know and to love him.

Bishop Welles has achieved an enviable record in religious and civic matters. The affection with which he is held in the hearts of the people of Buffalo is proof of the splendid spiritual influence he has generated and nurtured among so many thousands. It is indeed a matter of great satisfaction to know that his strenuous labors so faithfully performed have been recognized and rewarded. While we shall miss him much, we rejoice in his elevation and wish him well.

Buffalo has indeed been fortunate in the choice of Bishop Welles' successor, the Reverend Philip Frederick McNairy, who has accepted the call to become the new dean of St. Paul's Cathedral. The Reverend Mr. McNairy has been serving as rector of Christ Episcopal Church at St. Paul, Minn., and has achieved a brilliant record.

I want to join the citizens of Buffalo in extending to the Reverend Mr. McNairy a cordial welcome and my very best wishes for a long and happy stay in my native city.

Under leave to extend my remarks, I include herewith two articles from the Buffalo Courier-Express, relating the details of these historic events:

P. F. McNAIRY WILL BE DEAN AT ST. PAUL'S—ST. PAUL CLERGYMAN ACCEPTS CATHEDRAL CALL

The Reverend Philip Frederick McNairy, 39-year-old rector of Christ Episcopal Church at St. Paul, Minn., will become dean of St. Paul's Cathedral here on August 1. The Right Reverend Lauriston L. Scaife, bishop of the western New York Episcopal diocese, announced yesterday that Rev. Mr. McNairy had accepted the unanimous call of the wardens and vestry of the cathedral.

The Reverend Mr. McNairy succeeds the Very Reverend Edward R. Welles, who will be consecrated bishop of the Diocese of West Missouri at Kansas City next Wednesday.

IMPRESSED BY HIS ABILITY

Bishop Scaife said he is "very happy" the Reverend Mr. McNairy had accepted the call.

"I have known him a comparatively short time but I have been impressed with his strength of character and his deep convictions so far as the place of the church in modern society and in the community are concerned," the bishop continued.

"I also have been impressed by his preaching ability, his forceful administration, and his ability as a devoted and consecrated pastor. I feel that he will be a splendid addition to the diocesan family and to the community at large."

Charles R. Wilson, 95 Oakland Place, senior warden of St. Paul's Cathedral, said last night he was very much pleased that the Reverend Mr. McNairy had accepted the call extended him.

"WELCOME" NEWS

John K. Walker, 21 Saybrook Place, junior warden at the cathedral, said news of the Reverend Mr. McNairy's acceptance was most welcome. Walker's comments were in a communication to his son, Charles W. Walker, 66 High Park Boulevard, Eggertsville. The elder Walker currently is vacationing on the west coast.

The Reverend Mr. McNairy told the Courier-Express by telephone from his St. Paul home last night that he is looking forward to the deanship of the cathedral here "as a tremendous opportunity of which I hope I am worthy."

He added that "I don't expect to make any radical changes at the cathedral. Those changes which I will make will be made with the consent of Bishop Scaife, the parishioners and vestrymen of the church."

The Reverend Mr. McNairy said he will return here Monday morning to have further conferences with Bishop Scaife and cathedral officials. He will remain here just for the day to dicuss matters of policy and plan a preliminary program for the Fall.

He added that his St. Paul parish will observe its centennial in May and "were it not for this occasion I would be able to assume my Buffalo duties much earlier than August 1st."

The Reverend Mr. McNairy said he will take up residence here before he becomes dean of St. Paul's Cathedral August 1st.

ACTIVE IN COMMUNITY AFFAIRS

The new dean has an enviable record as a clergyman and in community affairs.

His first clerical position was as head of St. Andrew's Mission at Columbus, Ohio, in 1934. From 1935 to 1940 he was rector of St. Stephen's Church, Cincinnati. He has been rector of Christ Church at St. Paul since 1940.

Since becoming rector of Christ Church, the Reverend Mr. McNairy has served as president of the standing committee of the Diocese of Minnesota, deputy to the general convention, chairman of the Department of Christian Education, chairman of the Department of Promotion, chairman of youth work, dean and director of the Carleton Conference, and dean of the St. Paul Deanery.

The Reverend Mr. McNairy's civic activities have included chairman of the Council of Social Agencies at St. Paul for 2 years, chairman of the St. Paul Council of Human Relations, a member of the Advisory Board of the YMCA and YWCA and a member of the Board of Directors of the St. Paul Community Chest.

RECEIVED AWARD

The St. Paul Junior Chamber of Commerce presented its annual award for service to the community to the Reverend Mr. McNairy in 1946.

The new dean was born at Lake City, Minn., on March 19, 1911. He was graduated from Kenyon College, Gambier, Ohio, in 1932 with a bachelor of arts degree. In 1934 he was graduated from Bexley Divinity School, Gambier, with the degree of bachelor of divinity.

The Reverend Mr. McNairy married the former Cary E. Fleming of Columbus in 1935. They have three children: Philip, 12, a student at Breck School, St. Paul; Judith, 10, and Patricia, 5.

BISHOP WELLES ENTHRONED IN KANSAS CITY—FORMER BUFFALO DEAN INSTALLED IN DIOCESE

KANSAS CITY, April 19.—The Very Reverend Edward Randolph Welles, former dean of St. Paul's Cathedral, Buffalo, today was enthroned as fourth bishop of the Episcopal Diocese of West Missouri.

The consecration combined a brilliant setting of church pageantry with the enshrined traditions of the solemn occasion. Church leaders in dark red, the liturgical color of the day, mingled with those in black, white, and purple vestments.

More than 700 persons in the Grace and Holy Trinity Cathedral here knelt as 12 bishops climaxed the ritual by the laying on of hands ceremony which stood as the symbol of a new member in the line of succession started when Christ sent forth the 12 apostles.

With the Right Reverend Henry Knox Sherrill, of New York, presiding bishop of the church, as celebrant and consecrator, Dean Welles was elevated to the position as the spiritual leader of 10,399 persons. He succeeds the Right Reverend Robert Nelson Spencer, who retired last October.

As the ceremony neared its end, Dean Welles rendered the oath of conformity, which read:

"I, Edward Randolph Welles, chosen bishop of the Protestant Episcopal Church in the diocese of West Missouri, do promise conformity and obedience to the doctrine, discipline, and worship of the Protestant Episcopal Church in the United States of America. So help me God, through Jesus Christ."

TRADITIONAL CHANT SUNG

Then the traditional chant of Veni, Creator Spiritus (Come, Holy Spirit) was raised as the 12 bishops clustered around the 42-year-old bishop-elect and, simultaneously, placed their hands upon his head.

He then was given his bishop's mitre and his cape, which was of gold cloth with a dark red border. The Very Reverend Claude W. Sprouse, dean of the Grace and Holy Trinity Cathedral, handed the new bishop his crozier, or pastoral staff, and Dean Welles was enthroned on the cathedra, or bishop's chair. He wore also an amethyst ring, presented him earlier in the ceremony by his brother, Samuel Welles, of New York, and a pectoral cross, hanging on a chain around his neck. The ring had belonged to his grandfather, also Edward Randolph Welles, who was consecrated bishop of Wisconsin in 1874. Finally, with Dean Welles kneeling before the altar, Bishop Sherrill said:

"Receive the Holy Ghost for the office and work of a bishop in the church of God, now committed unto thee by the imposition of our hands."

Earlier, the ceremony had started with a two-block procession of church and lay leaders. It was a colorful gathering, with crucifers in red and white robes stationed along the long line which moved slowly into the gray stone cathedral. At that time Dean Welles wore a purple vestment and cap. He smiled with confidence as he took his place in the procession, flanked by his attending presbyters, Dean Sprouse and the Reverend Sewall Emerson, of Norwalk, Conn.

As the procession moved forward into the cathedral toward the chancel and altar, the choir, wearing white surplices over fuchsia robes, raised their voices in the words of the processional hymn: Jesus Calls Us O'er the Tumult of Our Life's Wild Restless Sea.

COMMUNION CELEBRATED

Bishop Sherrill then celebrated communion, with only the bishops and others having official part in the ceremony taking the sacrament.

Bishop Lauriston L. Scaife, of western New York, read the epistle, and Bishop Goodrich R. Fenner, of Kansas, read the gospel, from St. John. Prayers and hymns preceded the sermon by the Right Reverend Stephen Fielding Bayne, Jr., bishop of Olympia, Wash.

Faithful is not among the glittering words used in describing a calling, but it is the fundamental requirement for an Episcopal bishop or priest, Bishop Bayne said.

An Episcopal priest, rector, or bishop must be faithful as a teacher, as a shepherd to those in his care, and faithful to his Lord and the apostolic line, he said. Bishop Bayne is rated as one of the church's top preachers.

Many words are useful in describing a clerical calling, he said, such as adventure, opportunity, service, and vocation.

The life of a bishop is full of distraction and confusion, he said, but still he must be a teacher, in conference and controversy, alike.

A bishop must be faithful to those entrusted to his care, he said, as a shepherd, which entails two great temptations. One is to overlook the human and mortal phase of his "flock" and the other is to stay, with the ninety and nine because it is so much trouble to seek out the straying one.

The testimonials were offered next. William A. Moon presented the certificate of election, and the Reverend Earle B. Jewell presented the canonical testimonial of the convention.

The Reverend Edwin W. Merrill offered the consents of the standing committees, and the Right Reverend Everett H. Jones offered the consents of the bishops.

After Dean Welles had given his promise of conformity, Bishop J. Gillespie Armstrong, of Pennsylvania, said the litany for ordinations, with responses from those in the cathedral.

Bishop Sherrill, after offering a prayer, then proceeded to examine Dean Welles with a series of questions to establish his readiness to discharge his office according to the doctrines of the church.

After the ceremony, Bishop Welles returned to the chancel to bestow his blessings on members of his family and the congregation.

The 160 clergy and laity in the procession, including those taking part in the ceremony, filled the chancel at the forepart of the cathedral.

The Older Workers

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. GOODWIN. Mr. Speaker, it has given me great satisfaction to note the favorable response from all over the country to my bill (H. R. 7571) to furnish an incentive for our older workers to keep on working and producing. In line with the generally favorable comment, I include herewith, under leave to extend my remarks, an editorial from the Boston (Mass.) Herald of April 17, 1950:

THE OLDER WORKERS

America is going to be stronger if it keeps its older men and women productive, rather than eagerly pensioning them off to idleness, as we are inclined to do. Instead of seeking new ways to support them at an increasingly early age, why not have Government supply the incentive to keep them at work longer? Early retirement is good neither for the individual nor for society.

Senator BRIDGES and Congressman GOODWIN have sponsored a bill to relieve those over 65 from paying the old-age tax if they choose to continue to work. This is a fair suggestion. But the great majority of retirements are not from choice; they are the result of arbitrary age policies set up by corporations. Some of the incentive should be addressed to them.

If the corporations were also relieved of the old-age tax on the pay of those over 65, there would be a small incentive to retain and hire older men and women. The lifting of the State unemployment tax on the pay of those over 65 would further assist.

It may take a little time for some legislators to realize it, but the best gift to a vigorous man in his sixties is a worth-while job.

Foreign Oil Imports

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following letter from Mr. H. R. Pinckard, of Huntington, W. Va.:

DEAR MORRIE: I have been out of the city and only received your telegram this morning.

As for foreign-oil dumpings, I have expressed by opinion frequently in editorials, one of which I enclose.

If this were simply a matter of foreign products displacing American, I would not be so dubious. Trouble is that mines are being closed because of markets lost to cheap foreign oil; and once they are closed and the "iron is pulled" (a mining phrase which

means to remove rails and other installations from the shaft) there can be no quick resumption of operations at that location.

Yet, we all know that oil shipments from abroad would be among the first imports cut off by war. Then converted customers would be thrown back on a fuel which could no longer be supplied in sufficient quantity.

In view of international uncertainties, it does look suicidal to put so much dependence on an undependable product—whose abundance at the moment is costing us heavily in wages, taxes, dividends, and human security.

Cordially,

H. R. PINCKARD.

Much has been said about the effects of foreign oil imports on the American coal industry. However, we have found that few people, even among miners and railroaders who are losing their jobs because of cheap oil being dumped in eastern United States ports, fully appreciate the gravity of the situation.

Here is an easy guide which may be applied to oil imports for ascertaining their effect on the coal and transportation businesses:

Every 4 barrels of foreign oil displaces 1 ton of bituminous coal. Every time 4,000 barrels of oil are dumped, one miner and one railroader lose their jobs. Remember those figures.

On this same subject I received the following letter from Mr. Arthur Downing of Logan, W. Va.:

MY DEAR MR. BURNSIDE: Many thanks for your wire of April 21.

You certainly did not make a mistake when you stated that big oil imports were hurting the coal business in West Virginia.

Hundreds of thousands of tons of coal have been displaced by the dumping of foreign residual oil on the eastern seaboard. This cheap foreign oil has pushed the domestic producers of such oil back from the seaboard and they are pushing for markets in the Middle West, thus displacing coal in this district's normal market.

There is one thing the Government should give some thought to, and that is that when a coal mine goes down it usually is gutted of all machinery, rail, copper wire, etc. It cannot be opened up again just overnight. If this country should ever go to war and a great many mines have been laying idle for a period of time, the country might find itself very, very short of fuel because its source of supply of oil would be cut off and coal then would become a necessity.

A tax on foreign oil which would put it on a price parity with coal is certainly not out of order. It is a must if the coal industry is to keep in shape to supply this country with fuel, as and when it needs it.

Your help and influence in this matter is sincerely appreciated.

Yours very truly,

ARTHUR DOWNING,
President, Logan Coal Operators' Association.

Sister Helen Madeleine

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. SALTONSTALL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an editorial paying tribute to an eminent Massachusetts citizen, the editorial being published in the Boston Post, Tuesday, April 25, 1950. I think it is well worth the attention of Senators.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SISTER HELEN MADELEINE

The courage of nuns is commonplace knowledge. These women develop a quiet confidence in God, to whom they have dedicated their lives. The result is that no enterprise is too difficult, no task staggering. Sister Helen Madeleine, dean of Emmanuel College since its founding 31 years ago, is a case in point. After those years of service when the ordinary college dean might seek retirement to a life of study or ease, Sister Helen Madeleine will journey to Japan to help open a new college there staffed by the Notre Dame nuns. She has had many honors since the doors of Emmanuel College opened. She has had the tremendous satisfaction of seeing the school, in its short span of years, become one of the leading Catholic educational institutions in the country, and one of New England's outstanding colleges for girls. Its success, though she would blanch at the statement, is mainly due to her great personality. It will never lose the impetus she has given it. She will be honored at a formal reception at the college next month and will leave for Japan in June. The accomplishments she leaves behind make her one of the great women in the history of Boston.

Two-Price Plan for Wheat

EXTENSION OF REMARKS
OF
HON. LOWELL STOCKMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. STOCKMAN. Mr. Speaker, I have had so many requests for an analysis of the bill H. R. 7245, providing for a two-price or certificate plan for wheat, which I introduced on February 9, 1950, that under leave to extend my remarks, I wish to include in the RECORD a copy of an analysis of the bill. The two-price plan is recommended by the Oregon Wheat Growers League and endorsed generally by the farm organizations of the Pacific Northwest, who believe its adoption would greatly reduce wheat surpluses, since it would allow wheat to share the feed-grain market and find greater export outlets. It provides for parity for that part of the wheat crop used for domestic flour or other human foods, while the remainder of the crop would move into export and feed and industrial markets at competitive prices. The analysis of the bill is as follows:

SUMMARY OF H. R. 7245 FOR TWO-PRICE OR CERTIFICATE PLAN FOR WHEAT

WHAT IS INTENDED

A. How certificates would be issued to growers:

1. Each certificate would represent 1 bushel of wheat—60 pounds net weight, exclusive of dockage.

2. The value of each certificate would be equal to the difference between full parity price and the market price or loan rate (whichever is higher) as determined at the beginning of the marketing year. It could never exceed 60 cents a bushel and would remain constant throughout the marketing year.

3. Number of certificates each year would equal amount of wheat estimated to be used for all human food purposes in the United States.

4. Certificates issued to each farm would be that farm's share of the national domestic consumption for human food, allocated on basis of a percentage of the normal yield of the acreage allotments already established.

5. Certificates would be issued to producers in the form of drafts on Commodity Credit Corporation, cashable at local banks. They would be issued as soon as practicable after the amount of certificates has been determined. Payments would be made out of revolving fund described below.

6. Acreage allotments and normal yields would not necessarily be changed every year. Possibly revision every 3 or 4 years would be sufficient. Thus, allocation of certificates would remain constant for several years.

7. Growers would not ordinarily be required to seed within allotments in order to receive certificates. Thus, acreage allotments would be used chiefly to determine the number of certificates a farmer would be entitled to receive. In cases of large surpluses, however, it might be necessary to invoke production controls and in this event, farmers should be required to comply in order to receive certificates.

8. Loans would be at about the rate for corn but not less than 60 percent of parity as figured in act of 1948.

B. How certificates would be bought by processors:

1. The Commodity Credit Corporation would establish a revolving fund, administered through the Federal Reserve System. Growers would be paid out of this fund and collections from processors would be paid into it.

2. Processors would purchase certificates through member banks in the total amount required to cover sales of flour and other wheat products at the end of each month.

3. Purchases of certificates would be required on manufactured products sold in the domestic market using conversion factors as under the 1933–35 processing tax law.

C. Effects of this plan:

1. The price of wheat would be about the same as that for corn and other feed grains and would probably be above the loan rate most of the time.

2. Differentials and relationships would be determined by competitive conditions in the market.

3. Wheat would move freely into livestock feed, exports and industrial uses, and marketings would be relatively large. Feeding wheat to livestock would increase and more wheat would be available to processors of dairy and poultry feed.

4. Growers would shift out of wheat on farms where other crops would be more profitable than low-priced wheat. Incentive to maintain full wheat acreage would be less than with a high price support.

5. Mills would add the cost of the certificate to the cost of the wheat in figuring prices of flour, breakfast food, and other wheat products. The price of bread and other wheat products would thus reflect parity price for wheat. The cost of the certificate, however, could never exceed 1 cent per pound of bread. The total cost of wheat and certificates to processors would be no different than the present program which holds the price of wheat at about parity. Freedom of market movement under a low loan would be a big advantage to mills over the high loan program. Since mills would not need to buy certificates until after the flour is sold, they would avoid having additional money tied up in raw material between the time the wheat is purchased and the time the flour is sold.

Address Before National Milk Producers Federation

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following comments which I made to our delegation at the seventh congressional dinner of the National Milk Producers Federation on April 17 at the Shoreham Hotel in Washington. I hope this will be helpful, not only to the farmers of my district but to the whole Nation:

I believe our thinking, these days, should be along the lines of thrift and economy. Certainly no one can accuse the farmer of having the "gimmies." He wants to earn his way by the use of his brains and brawn. We should direct our efforts toward production in the fields where there are no surpluses. As fluid milk for instance. In two of the largest cities of my district in West Virginia, Huntington and Parkersburg, there is a real shortage of milk. A very clever magician has just produced, by good tricks, five liquids but it takes old bossie the cow to produce milk. There is, each year in my district, a fine market for early sweet corn. This is a fine field for increased production because if the farmer can market early roasting ears he can really clean up, and if he misses this early market, he can still use the corn for feed.

The establishment of a new wholesale market in Huntington will be of great value. Farming has formerly been a gamble but the increased use of science has eliminated some of the hazards. I have sent many thousands of scientific bulletins to farmers of the Fourth District, which I hope will be helpful. I call your attention to another matter that is not generally understood by the public. It takes a decline of 6 points in the price paid to the farmer for an item to cause a 1-point decline in the price to the consumer. The difference is due to the costs of processings, etc. These things are matters of importance, not only to the farmer but to all, regardless of our business or occupation, because what affects the farmer affects us all.

The Ban on Baseball Broadcasts

EXTENSION OF REMARKS
OF
HON. ANTONI N. SADLAK
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. SADLAK. Mr. Speaker, with further reference to the remarks I made yesterday under leave to extend my remarks I should like to include an editorial from the columns of the Hartford Courant (Conn.) of April 25, 1950.

THE BAN ON BASEBALL BROADCASTS

The fury of the scorned woman has been equaled and perhaps surpassed. And that by the baseball fan in this vicinity, who has been denied the pleasure of listening to the broadcast of a major league game. The familiar cry, "Kill the umpire," is yielding to "Kill Happy Chandler," in annoyance at baseball's high commissioner.

If the air waves hereabout were not crackling with base hits Sunday, they were blue with fans blowing their tops. It seems that the Springfield club of the International League is against major-league broadcasts while its team is playing at home. It fears that fans might listen to the radio instead of watching the local game. Hence the new rule that no broadcasting outlets within a radius of 50 miles of the Springfield park may carry the games in Boston or New York or Brooklyn. The rule seems to be part of the agreement whereby baseball sells broadcasting rights to radio stations and to the sponsors of the broadcasts.

The details of the deal are not essential. The purpose counts. And that is to try forcing a bigger attendance at minor-league games. You may be sure of one thing. If baseball's moguls thought broadcasting cut attendance they would stop selling broadcasting rights. Perhaps a minor-league club does suffer slightly, but even that is doubtful. Our amiable Charlie Blossfield, of the Hartford Chiefs, has never invoked the broadcasting ban. When he has a good club the turnstiles click. When he doesn't, fans stay away. The real fan likes his baseball in the flesh.

Many of the complaints Sunday took an interesting slant toward the ban. Fans wanted to know if Chandler thinks he is Hitler or Stalin. How about their right to hear what they want to hear? Other fans swore that they wouldn't be driven into attending a game in Springfield just because they can't hear a major-league broadcast. John Fan just won't be kicked around.

The responsible parties in baseball and radio should reconsider the rule. Suppose the Courant, for the sake of getting a bit of advertising income from the Hartford Chiefs, agreed not to report games in other cities, or to exclude from its edition going to cities in the Colonial League all references to the Chiefs. What would the public think? This would raise the question of the freedom of the press. How free is radio when its outlets can be silenced?

Arming of the Arab States

EXTENSION OF REMARKS
OF
HON. LOUIS B. HELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. HELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

MY DEAR COLLEAGUE: I am taking this opportunity to express to you my deep appreciation, as well as my admiration, in your bringing to the attention of the State Department the alarming situation in the arming of the Arab states by Great Britain.

You performed a masterful stroke, which I am sure not only the Jews of this country and the Jews all over the world appreciate, but all peace-loving people owe you a debt of gratitude.

It was an impressive sight to see 32 Members of Congress united under your leadership in bringing to the attention of the Secretary of State, the Honorable Dean Acheson, the sentiments of these Representatives, non-Jews as well as Jews, from all parts of the country. In addition, six of the outstanding Members of the House, including the leader of the Democratic Party in the House, the Honorable JOHN MCCORMACK, who expressed their regret at not being able to accompany the delegation because of important prior congressional engagements, added their endorsement to the protest.

Among the Congressmen who went to the State Department were Republicans as well as Democrats who were anxious to join with you in protesting against the shipment of arms to the Arab States by Great Britain.

It was fortunate that you visited Israel and the Arab states last fall, where you could see with your own eyes and hear with your own ears what was going on. You very properly visualized the danger of a repetition of a war between the Arabs and the Jews, with all of its horrible consequences. Indeed, such a war in the Near East, as you indicated, might be the spark to start another world war.

I have heard many Members of the Congress express admiration for what you did on this memorable occasion, and therefore I personally want you to know how grateful I am to you for inviting me to join with others in calling on the Secretary of State in this connection.

You must also be aware of the fact that the press of the country gave a very favorable report of this visit to the State Department.

With kind regards, I am,
Sincerely yours,
LOUIS B. HELLER,
Member of Congress.

Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. LARCADE. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was unanimously adopted by the fortieth annual convention of the National Rivers and Harbors Congress held in Washington, D. C., recently.

The resolutions committee, of which I served as chairman, consisted of one delegate from each State, Territory, island possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them and reached unanimous agreement thereon.

This convention was attended by 332 registered delegates from 42 States, Alaska, Puerto Rico, and the District of Columbia, as well as many others who failed to register, guests, visitors, and so forth. These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations, and transportation interests; with memberships totaling several millions.

We believe this unanimous expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of

the United States concerning the matters dealt with in these resolutions.

(The report follows:)

REPORT OF THE RESOLUTIONS COMMITTEE TO THE FORTIETH ANNUAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MARCH 25, 1950

FOREWORD

Fully cognizant of the fact that this Nation and its people cannot prosper in the absence of a productive economy stemming from wise development of our natural resources; and ever conscious of its obligation to keep its members and the American people adequately informed and to provide the guidance required to insure proper development and utilization of our water resources to serve the ever present and increasing needs of navigation, flood control, power development, irrigation, and related uses; the National Rivers and Harbors Congress at its fortieth annual convention, unanimously adopts the following carefully considered resolutions:

WATER AND LAND RESOURCES POLICIES

The National Rivers and Harbors Congress recommends to the Congress of the United States that it—

1. Establish a permanent commission in the legislative branch of the Government for the purpose of studying and making adequate research with respect to all matters concerned with the development, conservation, and utilization of the water and land resources of the Nation;

2. Authorize such commission to employ a staff, who by training and experience are competent to conduct the necessary research;

3. Instruct the commission to confer with official Federal and State agencies, and with other organizations, including engineering and industrial societies and water use associations, interested in water and land use and control;

4. Authorize and appropriate sufficient moneys to conduct the work of the commission; and

5. Instruct the commission on the basis of the study and research thus conducted, to recommend to the Congress, from time to time, policies and legislation for the future development, conservation, and utilization of the water and land resources of the Nation.

AUTHORIZATIONS FOR FUTURE WORK

The National Rivers and Harbors Congress is in full accord with the pending legislation in H. R. 5472 which provides for continuing a well-planned program of river and harbor and flood control construction throughout the Nation. The projects contemplated are sound, their economic value has been established and their submission to the Congress has received the approval of our highest office of review—the Bureau of the Budget. Notwithstanding the merits of this legislation its defeat in whole or in part may be desired by those who are unwilling to admit the potential disaster in a flood-swollen stream; in an unsafe channel; or in a city without electricity during a coal strike. We commend this excellent legislation, destined to foster our national economy, to the Congress of the United States for immediate adoption in the present session. Common sense dictates that it is necessary.

APPROPRIATIONS

The wealth of our Nation did not come about by accident. Its immense wealth was derived largely from our abundant store of natural resources and the prudent development of those resources. We cannot prosper in the future by accident but by continuing proper development of our land and water resources we will make a substantial contribution to continued prosperity. Our future rate of development of these resources and the future safety of our people from floods are contingent upon appropriations from the Federal Treasury. Requisite appropriations should naturally be consistent with our national economic conditions but should not be related to the economic status of other nations. Enormous expenditures abroad are becoming less and less popular with many of our people, especially to those who are depending on our Government to provide safety from floods. These are the facts that prompt us to urge the Congress to appropriate for Americans the funds which will permit the responsible agencies to develop our resources and build the vital protection works our people deserve. Now is the time to appropriate for expeditious advancement of these improvements.

BUDGET POLICY

The administration's policy of no new starts expressed in the budget message for fiscal year 1951 gives cause for alarm with respect to the future of river and harbor and flood-control improvements. The items for which money was budgeted were those already started with no provision for starting new projects regardless of necessity and economic justification. We can only conclude that this policy, regardless of the reasons publicly announced, eliminates the necessity for decision as to which areas should benefit first from new projects and should this policy continue our river and harbor and flood-control work will come to a standstill in 2 or 3 years. We believe such a policy cannot be accepted as being in the national interest, and we appeal to the Congress to remedy the situation now before the full effect of this budgetary restriction is felt throughout the Nation.

REGIONAL AUTHORITIES

The National Rivers and Harbors Congress is cognizant of the strategy of the valley authority proponents of concentrating on a Columbia Valley Administration in the hope that its adoption will provide another step in favor of similar administrations in all major river basins of the country. We are opposed now, and have been in the past, to the creation or extension of valley or regional authorities which are unjustified, unnecessary, and in opposition to our democratic principles. We are apprehensive lest complacency in this matter will permit the existing agencies to be removed from the field of natural resources development with detriment to the interests of the States involved and to the Nation as a whole. We cannot concur in the President's policy respecting regional administrations as enunciated in his state of the Union and budget messages.

HYDROELECTRIC POWER

The President of the United States in his State of the Union and Budget messages to the current Congress emphasized the need for increased production and transmission of hydroelectric power. This Congress has also long advocated increased production of power where its production comes from economically justified projects and is consistent with other purposes of such Federal projects. However, we reaffirm our position with respect to unnecessary competition with the private power industry.

CORPS OF ENGINEERS

We reaffirm our faith in the operations of the Corps of Engineers of the United States Army in connection with the planning, construction, and operation of Federal improvements for navigation, flood control and allied purposes. We are unalterably opposed to the transfer of these functions or of the Corps' organization to the Interior Department as recommended by the Hoover Commission or to any other agency. Careful and thorough examination of the criticism and recommendations of the Hoover Commission has shown such criticism to be based upon inadequate evidence, half truths, and even malicious falsification and its recommendations are consequently dangerously immature and fallacious. We find the charges of duplication and waste between agencies to be grossly exaggerated and in many instances absolutely groundless. We believe the Hoover Commission failed completely to weigh the national defense value of the present system; the economy of obtaining worthy public improvements and developing experienced military leaders at the same time; and, last but by no means least, the efficiency and excellence with which these functions have been performed for over a century. Under the circumstances we strongly urge that no reorganization of the civil functions of the Corps of Engineers be undertaken and we pledge our untiring effort to combat any such reorganization plan if proposed.

DEPARTMENT OF THE INTERIOR

The Department of the Interior through the Bureau of Reclamation has made notable progress in its continuing program for reclamation of the arid and semiarid lands of the 17 Western States. We commend the Bureau of Reclamation for this progress and encourage it to continue in the arid areas where the problems obtaining are unlike those in the humid areas of the Eastern States which have flood control and drainage under the Corps of Engineers as a primary consideration with irrigation as an incidental benefit. The acute problem in the arid western areas has required their concerted efforts in the past and will continue to do so in the foreseeable future. We have and will continue to advocate adequate funds for the Bureau of Reclamation to properly provide for irrigation in these western areas.

SOIL CONSERVATION

We are still confronted with dangerous loss of our cultivable soil and with silt destroying the efficiency of the navigation and flood channels of our streams. Fertile slopes are being covered with worthless subsoil eroded from hill lands and a detrimental soil deposit is being laid in the beds of the navigation and drainage arteries of the Nation. Notable progress has been made by the Soil Conservation Service but much remains to be done. We urge that funds for soil erosion control under the Department of Agriculture and for major drainage and channel improvements by the Corps of Engineers be made available so as to continue this highly important and beneficial work as rapidly as practicable.

TIDELANDS

We believe it proper that the several States of the Union be permitted to contribute to the economic prosperity of the Nation through ownership and development of the tidal lands within and adjacent to their boundaries. As long as the States and their people are denied this ownership the development of these resources is in doubt. We urge legislation to give to them that which appears to be theirs, making their rights subordinate only to the paramount right of the United States to continue with improvements for national defense, navigation, and flood control as now authorized or as may be authorized in the future.

A MENACE TO WATER-BORNE TRANSPORTATION

Our marine transportation industry has prospered under a system of free enterprise whereunder the rights of all concerned to make prices competitive has long been acknowledged. We believe this system will be jeopardized by a recent movement, on the part of several railroads, which would tax, by means of higher charges, one group of their customers for the benefit of others. The railroads allege that there is a necessity for relief from section 4 (1) of the Interstate Commerce Act for specific commodity rail rates much lower than rates for short hauls. The contention of the railroads that these rates are necessary to make them competitive with either existing or potential water competition is not compatible with the general

increase in rail rates since 1941 of 57 percent while barge rates have actually gone down. This move could contribute substantially to the annihilation of competition from water carriers since each successful rate case is used as a precedential argument for future cases. We appeal to the Congress of the United States to enact legislation to limit the degree to which the Interstate Commerce Commission can exempt rates under section 4 (1) of the Commerce Act. Only such legislation can assure a reasonable future for the water carriers of the Nation and a reasonable rate for the shippers along our waterways. Constant defense against such attacks alone is not enough—the help of Congress is essential.

AMERICAN MERCHANT MARINE

The National Rivers and Harbors Congress reaffirms its continued active support of a strong and well-balanced American merchant marine immediately available in event of a national emergency and adequate to provide the shipping services essential to our business and agriculture. At present unfavorable economic conditions are being experienced in our coastal communities and harbor areas by reason of insufficient United States flagships for our armed forces in event of an emergency, commercial travel, and domestic shipping. Moreover, shipbuilding and repair employment has reached a low level. The Congress believes that assistance to the American merchant marine can be accomplished by sufficient Government interest to induce private capital and the maritime industry to expand the present facilities; by fair and adequate Panama Canal tolls, taking into account the actual cost of transiting merchant and military vessels and by according proper importance to the national defense value of the Canal; by reactivation and reinterpretation if necessary by the Congress of the statement of policy contained in the Merchant Marine Act of 1936 respecting the equal importance of the American merchant marine to other components of our national defense structure.

FEDERAL BARGE LINES

The Inland Waterways Corporation is serving thousands of shippers throughout the Mississippi Valley area. Such service is essential to the trade, commerce, and continued development of this vital section of our country. It has been demonstrated that with modern equipment the Corporation can be operated without expense to the taxpayer. The acquisition of such equipment is essential for the eventual disposition of the system to private enterprise. Legislation is pending before both bodies of the Congress to provide additional authorization for funds to rehabilitate the Federal barge lines. Hearings have been held on this legislation in which representatives of the valley have testified in favor thereof. The National Rivers and Harbors Congress strongly endorses the pending legislation before the House of Representatives and the Senate of the United States to rehabilitate the Federal Barge Lines, and requests that the Representatives in the Congress from the valley area use their influence to secure the speedy enactment of this vital legislation.

Curtailment of Postal Service

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. WIDNALL. Mr. Speaker, under leave to extend my remarks—this morning I received a letter from a constituent concerned with the recent order of Postmaster General Donaldson seriously impairing the postal service. With this letter was included a Purple Heart medal received by the writer in recognition of his service in the armed forces of the United States.

This letter points up the impact of the ill-advised and unwarranted order of the Postmaster General.

The people of the United States do not seek or desire impairment of postal service. Economy can be effected in many ways other than reduction in personnel. The order of the Postmaster General should be immediately rescinded or drastically revised.

The letter follows:

APRIL 24, 1950.

Congressman WILLIAM B. WIDNALL,
Representative, Seventh Congressional District, Bergen County, N. J.,
Washington, D. C.

DEAR SIR: I am one of the postal employees affected by the order cutting postal service. I have a wife and child and this order really hurts those in my position. Of course I am rather lucky, I will be allowed to work 3 days a week, but I guess this is in appreciation of the 3 years I spent in the armed forces of my country.

Now, sir, my problem is this: If I only work 3 days per week, how am I to pay my bills and feed my family?

I have thought of an idea to feed my family for a while. With this letter I am sending you a package which will contain a medal that the Government gave me and since I cannot eat it, I was wondering if you wouldn't send me some of the surplus food that you have in trade for it.

Thanking you for taking the time to read this letter, which I hope will be of some help to the millions of boys like myself, who gave up much of their time, and in some cases, all of their lifetime, to fight for this great and wonderful country, which I am now wondering whether or not is so wonderful after all.

Very truly yours,

CHESTER H. FORD.

Hail to the Lions

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. RODINO. Mr. Speaker, as a public servant interested in the activities and welfare of his constituents, it is always a source of pride for me to read of the accomplishments of the many civic-minded groups and civic-minded individuals who make up his constituency.

By their endeavors in behalf of their respective communities—these people demonstrate that they are ever ready, regardless of sacrifice or effort, to discharge their obligations as citizens of this great America. They realize that democracy is a two-way street—that the fruits of democracy cannot be enjoyed unless in turn we give to it of ourselves in full bounty.

In this wise they prove their Americanism. Through their deeds they advance Americanism and make America stronger. And, in the ultimate, these are the things by which we give expression to democracy.

The men of the Lions Club are, by their civic interest, performing a public service. I am particularly happy to salute the members of the Lions Club of Nutley who have been outstanding in their contribution to their community. For 25 years of real service—on their silver anniversary—I salute them.

Under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Nutley Sun of Friday, April 21, 1950, entitled "Hail to the Lions":

HAIL TO THE LIONS

Twenty-five years ago the Nutley Lions Club was created under the sponsorship of the Rutherford Lions. This week, as the town club fittingly observes its silver anniversary, the Nutley Sun hails with respect a record of a quarter of a century of constant service to the community which has marked the Lions activity.

By many accomplishments, the Lions have earned the respect and admiration of the town, but two have been outstanding: the annual award of an honorary symbol to the outstanding citizen of the year and the eyesight-conservation campaign which has done much to help school children take proper care of their eyes.

The local citizenship award has served, each year, to center the attention of the town on the generous, successful, devoted activities of some person whose efforts might otherwise go unacknowledged. In all its selections for the honor, the Lions Club has used excellent, impartial judgment. In its eyesight-conservation work, the Lions Club has completed a survey of the third and fourth grades in the town's parochial and public schools to ascertain whether or not the need exists for an orthoptic clinic. By such an effort, the Lions have underwritten an extremely useful service to the community.

Nutley's 47 Lions are part of an organization numbering 7,800 clubs and 40,000 Lions in 30 countries around the globe. Our Lions have made an indelible mark upon the life of our community.

Things That Do Not Add

EXTENSION OF REMARKS
OF
HON. HERBERT C. BONNER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. BONNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial. Yes; I agree with the editor of the Elizabeth City (N. C.) Daily Advance. I want to see economy practiced and good administrative judgment shown by the Veterans' Administration, the Department of Agriculture, and all other Government departments and agencies. I hope the two instances of bad management as here shown will be corrected and not duplicated in any respect.

The editorial is as follows:

THINGS THAT DO NOT ADD

Congressman HERBERT C. BONNER, speaking last week before the Northeastern Firemen's Association in session here, called for the continued sharing of America's dollars and

resources with the people of Europe and declared that keeping up appropriations were necessary in order to keep war away from our door.

The Congressman urged his people to continue to bear with the Federal Government in its appropriations. Most of us, the Daily Advance believes, have utmost confidence in Congressman BONNER and we are willing to continue stringing along with the Government as far as is absolutely necessary.

However, in some cases it is hard to remain quiet when we read about money that is being wasted by the Government. One such instance came up last week when it was announced that the Army was going ahead with economy plans to close down its $5,000,000 540-bed Murphy General Hospital, occupying 93 acres in Waltham, Mass. It was only 6 years old and built of brick, but the Government had no further use for it. Meanwhile, 10 miles away in Boston, work was started on a new $10,000,000 1,000-bed hospital for the Veterans' Administration.

The question we would like to ask is why couldn't the Veterans' Administration use the $5,000,000 hospital no longer needed by the Army, thereby saving several million dollars?

Another item that merits the public's attention, especially in view of the Government's big money spending, was brought to light in last week's issue of Time. That article revealed that farmers could sell all of their corn to the Government for $1.48 a bushel; store it right on their own farms and then buy it back for feed at 65 cents a bushel. Under the plan the farmers had found a perfectly legal right to sell their corn and have it too and make as much as 83 cents a bushel in the bargain.

We agree with Congressman BONNER that the United States should do everything possible to share what we have with other countries but wouldn't it be a lot better if our Government would clamp down on needless expenditures as cited in the two cases above?

Being a little more economy minded in the right places might go a long ways toward providing funds for foreign aid. At least we wouldn't have to dig so deep into our pocket.

Miss Katharine Lenroot

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. BOLLING. Mr. Speaker, Miss Katharine F. Lenroot, Chief of the United States Children's Bureau, was honored last week for her long and devoted service to children. Miss Lenroot's contribution in this field is an important and outstanding one and the award presented to her is certainly merited. I would like, therefore, to include in the RECORD the citation accompanying the Survey award, together with Miss Lenroot's acceptance speech, which have been called to my attention by the American Parents Committee:

PRESENTATION OF SUEVEY AWARD TO MISS KATHARINE F. LENROOT, CHIEF OF UNITED STATES CHILDREN'S BUREAU, BY LEONARD W. MAYO, CHAIRMAN OF THE AWARD COMMITTEE, AT THE NATIONAL CONFERENCE OF SOCIAL WORK, ATLANTIC CITY, APRIL 24, 1950

Katharine Lenroot, in behalf of the committee appointed by the Survey, I am happy to present to you the Edward T. Devine Memorial Award and Plaque for 1950.

Born in Wisconsin, graduated by the Superior State Normal School and the University of Wisconsin, and recipient of the degree of doctor of laws from the latter institution, deputy industrial commissioner of Wisconsin, special agent in the Children's Bureau, assistant director of its Social Service Division, Assistant Chief, and since 1934, Chief of the Bureau, yours has been and is "an imaginative and constructive contribution to social work."

Recipient of citations and other honors both in your own and in distant lands, all bearing testimony to your untiring devotion to the children of the world, president of the National Conference of Social Work in 1935, and twice your country's delegate to the Pan American Child Welfare Congress, this award is made in recognition not only of your unceasing efforts to make more secure the lot of children and youth, but quite as much as a tribute to the unselfishness and the humility that has characterized your sensitive and skillful approach to the multitudinous problems that arise in administering a many-sided and complex program.

We are pleased to honor an eminent leader whose interest and concern are not limited by the bounds of the agency in which she works, but whose commitment is to all children, their families and their communities, and to all agencies which serve them, both public and private; a social worker who has brought distinction to her profession at home and abroad; and a person whose regard for spiritual values in these days has been amply demonstrated not only in active membership in her own church, but in her professional and official relations in the cause of children.

ACCEPTANCE SPEECH OF KATHARINE F. LENROOT, CHIEF, UNITED STATES CHILDREN'S BUREAU, AT PRESENTATION OF SURVEY AWARD

I recognize that this award is given to me not by reason of any individual contribution, but because for more than a third of a century I have been part of an organization and a movement dedicated to the advancement of human welfare through concern for and service to children and youth. Accordingly I accept this very great honor, not for myself, but in behalf of my colleagues past and present in the Children's Bureau and in public and private organizations concerned with children in our own and other countries. It is a special joy to accept this award from you, Mr. Mayo, because you have been for so many years a counselor and coworker and because of the leadership you are now giving in the Midcentury White House Conference on Children and Youth.

As never before, at this midcentury point recognition is being given to the importance of the child. We sense that if the second half of the twentieth century is to see victory in the struggle between totalitarianism and freedom, children and young people must be aided in every possible way to develop depth of insight, strength of character, and ability to relate themselves effectively with other people. It is for this reason that there has been such widespread interest and participation in the Midcentury White House Conference on Children and Youth, and in the international scene in the work of the United Nations and its specialized agencies in behalf of the child.

It is with very deep feeling that I associate this award with the survey and with the memory of Dr. Edward T. Devine. The story of the founding of the Children's Bureau begins with a trip to Washington by Dr. Devine and Lillian D. Wald to enlist the interest of President Theodore Roosevelt in the establishment in the Federal Government of a bureau concerned with the welfare of children and child life.

In looking back over the growth of the new profession of social work during the past 50 years, one finds Dr. Devine and the Survey, of which he was one of the founders, pioneering in social care work, education for social work, social research, community organization, social interpretation, and social reform. Having its roots in the local community, social work has come to be a matter of major concern to Government as well as to voluntary endeavor. It has begun to find its place in the development of national and international social policy, though its importance is only partially understood and its full contribution is yet to be realized.

The impact of social work upon people and civic affairs is both an individualizing and an integrating influence. It always views people in the light of the uniqueness of each individual and the relatedness of each to other persons. It has drawn upon the knowledge and skill of many different professions and disciplines, such as economics, sociology, law, medicine, psychiatry, and education. It has been profoundly influenced by religious concepts and motives.

Today we see that opportunity for the full development of each child's personality not only is a test of democracy, but also is the most important means we have for its preservation and further development. This can be accomplished only through personal dedication on the part of all citizens and an outpouring of personal and material resources for advancing our understanding of and service to children, beyond anything hitherto achieved in any country. In such a mobilization there must be the fullest possible utilization of all existing resources, both public and private, far greater development than we now have of citizen responsibility and citizen participation, and cooperative planning of a high order for the extension of such services and programs as may be required to assure every child his fair chance in the world.

Postal Cuts Indefensible

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. PHILBIN. Mr. Speaker, far be it from me to criticize the distnguished Postmaster General. He is an outstanding, admirably equipped public servant, capable, experienced, and devoted to the interests of this Nation. He is faced by a heavy deficit in his Department for the year of over one-half billion dollars. Quite naturally he is energetically seeking ways and means to cut down the size of this deficit. However, the curtailments in service and personnel which have been ordered are, in my opinion, very unwise, unsound, and ineffective in remedying the situation confronting the Post Office Department. This great Nation cannot and should not take such a backward step. Postal business is greater than ever. The demand for postal service is greater than ever. The need for this service is greater than ever. It is unfair to the people of the country to deny them of this service. It is unjust to very many faithful postal workers to throw them out of work in such arbitrary, summary manner at a time when there is, as I have stated, greater need for their service than ever before.

The Congress is under a definite duty to act in this crucial matter. We can work for economy and a balanced budget. That is surely an obligation. We can also work for streamlining this Department, coordinating its activities, simplifying the administrative load. But we should not trifle with efficiency and adequate modernized service to the public. Obviously we should not trifle with the careers, the livelihood, the morale and well-being of our devoted postal workers of every grade and station. I personally feel that a great injustice has been done by promulgating this order.

It is for these reasons that I enter my militant protest against the order and urge the executive department to cancel it forthwith. In additon, I have joined with the distinguished gentleman from Indiana [Mr. WALSH] in introducing a bill nullifying this unjust, ill-considered, inopportune decree, and I hope this House will move speedily to rectify a situation which is likely, unless remedied at once, to produce great dissatisfaction among the general public and lowered morale and reduced efficiency in the postal service.

I urge the House to be aroused to the need for immediate action and hope the order will soon be rescinded.

Terror and Misery in Czechoslovakia

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. MULTER. Mr. Speaker, a most interesting and revealing article on the situation inside Czechoslovakia appeared in the April 17 issue of the magazine New Republic. The article is written by Dr. Hugo Skala, formerly chief of the economic section of the Czech Ministry of Finance, who now resides in New York. He describes a picture of economic disruption and disillusionment in Communist-dominated Czechoslovakia which should not escape the attention of freedom-loving people in this country and abroad. Dr. Skala's article is as follows:

THE TERROR IN CZECHOSLOVAKIA

(By Hugo Skala)

That there is serious trouble behind the iron curtain is now perfectly clear. Moscow obviously fears that the defection of Yugoslavia may be paralleled in greater or less degree in Hungary, Bulgaria, Rumania, Czechoslovakia, and Poland. In most of these countries purges are in progress; how thoroughly they are justified, even from Moscow's point of view, we do not know and perhaps shall never know. The Kremlin has treated individuals with cruel injustice in the past and is quite capable of doing so again. Among these purges none has been more severe or, probably, less justified, than that in my own homeland, Czechoslovakia.

To understand the background of this purge one needs to know the underlying economic facts which have had almost no publicity in the United States. The plain truth is that Czechoslovakia today is economically prostrate, because of the actions of the Communists before and after they seized power by a revolutionary coup. Her once flourishing foreign trade has almost disappeared, except for some exchange of products with the other satellite countries, which often results in giving Czechoslovakia goods of inferior quality and of types she does not need or want. When Russia ordered the Czechs to stay out of the Marshall plan, it was very nearly the final straw. Now she desperately needs a big foreign loan, but her political status is such that she is unlikely to get it.

When Czechoslovakia got back her freedom, in 1945, her economic situation was confused. Hitler had liquidated many of the Jews, and the Czechs, with understandable bitterness, expelled many of the Sudeten Germans, including 2,500,000 highly skilled workers. Because of these politics, and through war damage, titles to about two-thirds of industry became unclear, and restitution almost impossible. Even without much attention to ideological motives, nationalization of the large firms seemed a good idea. It was advocated by the Communists, who also persuaded the country to accept a rigid system of national planning.

The Russians were fairly popular at that moment; the Red Army, which had liberated the country from the Germans (the Americans fell back as the result of a high-level policy decision), was used by the Czech Communists for propaganda. The Czechs also asked themselves what have we got to lose? Their overseas trade had disappeared because of the war, even the trade (40 to 55 percent of the total) with Germany and through Germany to other foreign markets. Raw-material sources were cut off. When the Red Army left the Czechs indulged in a brief but reckless period of high living; the result was both a squandering of resources and a serious inflation. The 2-year plan of the Communists seemed attractive at the time; it was an important factor in their winning 36 percent of the votes in the 1946 election. This was the last free election Czechoslovakia was to have.

But in economic terms, the Communist scheme for a planned economy did not work. In fear of punishment, factory managers speeded up the production of goods, but they ignored both public demand and the problem of quality, which fell so low that soon the shelves were loaded with things people would not buy at any price. When the shops would take no more, the goods simply piled up in the factories, which turned into warehouses; there was nobody to turn off the spigot. Goods too bad to be bought at home were, naturally, too bad to send abroad. For policy reasons, the Czechs bought inferior cotton from Russia and India which was woven into fabrics which were unsalable even on the home market, where there was a critical shortage. Being short of iron and steel, the Czechs curtailed their exports of manufactured goods to Poland, in order to divert them to Sweden on a semibarter basis. Poland threatened reprisal, whereupon the Czechs gave the Poles steel products which had been earmarked for export to the Netherlands. The Netherlands then complained, and was given goods which had been ordered by the Swiss; and so on.

Production, which was based on prewar figures as to demand, could not adjust itself to realistic market requirements. People could not get clothing, paper, linen, furs, furniture, enameled ware, or many other things, even when they had the required ration vouchers. The factories were filled with unfinished heavy machiney unusable because each item lacked a few parts needed from abroad and unobtainable because of the lack of foreign exchange. Billions of bricks deteriorated from rain and frost, while housing construction was at a standstill through the shortage of pipes, steel, and timber.

The coal industry was injured by the mild winter of 1947–48, by the resumption of British deliveries to Italy, and by German reparations coal for France. Unsalable Czech coal lay on the ground in heaps and was damaged by the weather. Austria and Italy stopped buying; Switzerland transferred her purchases of coke to Germany. Nevertheless, the mines kept producing like the magic spring of the sorcerer's apprentice: coal was in the plan.

The East European Economic Council of Mutual Assistance is supposed to aid Czechoslovakia; but its resources are limited and its help is a sorry joke. In fact, under Russian direction, it is seeking to merge the Czechoslovak economy with that of Poland. The question can seriously be asked whether Russian policy is not to destroy the Czech economy in toto, in order to make sure that the country will remain subservient to Moscow's aims. It is interesting to note that no Czech has received any war damages or any compensation for the nationalization of his property. Nor has any money been freed, from the billions of crowns that were frozen.

In short, Czechoslovakia's present situation is about as gloomy as could be imagined. There are great stocks of unsalable goods, some of them only partly finished. Raw materials and foreign credits are lacking. Consumer goods are inferior and are bought only out of desperation. The people have lost confidence in the currency; while the legal rate for the crown is 2 cents, on the black market it is one-tenth of a cent. The ironclad grip of the Czech and Russian Communists prevents all freedom of thought or action; the terror is in full swing. The Czechs are sharing all the miseries of being a part of the Russian system; if there are any advantages, they have yet to discover them.

Oregon Is "Recarpeting" Vast Burn

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ellis Lucia, from the Washington Post of April 23, 1950:

OREGON IS "RECARPETING" VAST BURN

(By Ellis Lucia)

(Mr. Lucia is a frequent contributor to the Oregonian magazine and other publications, and in the past 5 years he has written numerous articles on the history and problem of the Tillamook burn.)

A family from one of the Plains States, touring Oregon for the first time, complained they couldn't see the scenery. There were too many trees in the way.

This tourist family would probably be amazed at what the people of the Beaver State have set about to do. Oregonians are digging into their pockets to spend $10,500,000 to plant more trees.

Oregon last fall raised the curtain on the greatest forest rehabilitation program ever attempted in a single area on the North American Continent. The Nation's leading lumber-producing State is being turned into a gigantic forest laboratory.

Such a project may seem at first glance to be about as senseless as buying another fur coat for a movie star. Yet under the surface is a different picture.

Timber stocks in Oregon have been depleted rapidly in the past few years. Millions upon millions of board feet were logged to help win World War II. The postwar de-

mand for lumber has kept mills humming at full speed.

However, a series of disastrous fires has been even a greater cause for alarm. Vast forest areas have been laid waste. Next to nothing was being done to reclaim these lands. The problem was brought home to residents of the northwestern part of the State after the war, when major mills cut their last logs. The timber simply wasn't in the hills.

The loggers and millmen moved to southern Oregon. Eugene and Roseburg are now the lumber capitals, for they are close to the last great timber stands within the continental United States.

Oregonians saw an ominous threat to their forest industry. In 1948, Oregon forests produced 7,000,000,000 board feet of lumber, 645,000,000 feet of plywood, and wood for 545,000 tons of pulp. The forests bring Oregon an annual income of $600,000,000. They employ 60 percent of the State's workers. There was reason to worry about the future.

As a result of action by the voters, the State last summer got into the tree-farming business on a large scale. The $10,500,000 forest rehabilitation program will attempt to reclaim 750,000 State-owned acres of poorly stocked or blackened timberlands.

Focal point of this undertaking is the 300,000-acre Tillamook burn, once one of the richest timber-producing regions in the world. Located in the northwestern corner of the State, it has thrice been ravaged by fire since 1933.

The big burn is a constant reminder of the State's dwindling timber reserve. Its proximity to Portland, Oregon's only metropolitan center, makes its ghostly bleached snags an eyesore to motorists driving to the Oregon beaches.

In the first fire alone, 12,500,000,000 board feet of top-grade timber were consumed. Ashes rained down on ships 500 miles at sea and to a depth of 2 feet on the beaches 30 miles away. Chickens went to roost in the middle of the day because of the darkness. Giant firs 400 years old were cremated.

Three thousand men couldn't stop it. Deer, elk, and other animals perished in the forest's game preserve. Fish died in the ash-choked streams. Flames reached to a height of 40,000 feet. The fire left Oregon $100,000,000 poorer.

SEED SOURCES DESTROYED

A few years later, in 1919, the burn exploded into flame a second time, and 225,000 acres of burned-over lands and 28,000 acres of green old-growth timber were ravaged. During the war year of 1945, fire cut loose a third time, crackling through 110,000 acres, threatening the watersheds of several towns, costing the lives of 3 men and destroying 10,000 acres of young trees and the last seed sources.

In the intervening years, private companies have done an amazing job of salvage. Nearly as much footage has been recovered as in original cruise estimates. Several million board feet are still being recovered daily. High lumber prices have made this salvage job economically profitable.

Yet today the Tillamook burn, still drenched by heavy coastal fogs which make trees grow, is a wasteland of stumps, snags, and brush. It is a powder keg in summer, an idle area too steep and rocky for anything but growing trees. The problem area is 500,000 acres. Every year this land lies idle costs the people of Oregon $1,800,000.

This is the area foresters hope to replant. Ground work was laid by the 1947 legislature, which passed a forest-research bill. A 5-cents-per-1,000 board feet severance tax was levied on logs. Sixty percent went to the State forest-products laboratory at Corvallis to further new methods of utilizing wood-waste products. Forty percent financed experiments in forest protection, management, and rehabilitation. Many planting experiments were carried out in the Tillamook burn, testing different types of trees under varied conditions. Tests also were concerned with combating tree diseases and rodent control.

SEEDING BY HELICOPTER

Under the new reforestation Act, work must be done entirely on State-owned lands. Mapping crews are determining the planting procedure to be used in different sections. Such surveys will decide whether seeding can be by airplane or whether hand-planting will be necessary. Much of the seeding will be done by helicopter.

An idea of the magnitude of the job may be conceived from this: One ton of Douglas fir seed will be required to restock 6,000 acres by direct seeding. Hand-planting will cost $20 an acre. It takes a man a full day to plant 680 trees. Aerial seeding will cost from $6 to $8 an acre. Snags must be felled to reduce fire hazards. Bids from private outfits are taken for snag-felling projects. The State purchases cone seed for the project from cone gatherers.

Roads must be built and corridors cleared for fire protection. An unchecked fire could undo years of tedious work in a few hours. Between 10,000 and 15,000 acres are being planted this year. The program will stretch over a 15-year period.

The first $300,000 in bonds has been authorized. Under the act, no more than $750,000 worth of bonds may be issued in any one year. The reforestation program will cover smaller devastated areas in addition to the Tillamook burn.

Nevertheless, the big burn is destined to become the Nation's top-ranking forest research laboratory. What is learned there will give new hope to other States with forest devastations.

Growth of Communism

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD the second article by Mr. Frank C. Waldrop on the growth of communism in our country:

BIGGEST STORY

(By Frank C. Waldrop)

On January 19, 1930, a clerk by the name of Steve Katovis, on picket duty with strikers at One Hundred and Sixty-first Street and Union Avenue, the Bronx, New York City, was ordered to move on by Policeman Harry Kiritz of the Morrisania police station.

He refused. The policeman announced that unless Katovis obeyed this lawful order he would be arrested.

Thereupon a riot broke out. The policeman was beaten and his club taken from him. A detective, Donald Carey, attempted to help him and was knocked down.

Policeman Kiritz broke loose from his attackers, drew his revolver and fired in the air. The crowd kept coming, so he fired again and hit Katovis.

On January 24, 1930, Katovis died and on January 27 he was buried after a Communist funeral with 10,000 paraders marching from Union Square, Manhattan, to the cemetery in Queens.

Policeman Kiritz was absolved of blame by an official inquiry, on the ground that he had shot in pure self-defense.

A few days later a Communist-led mob marched on New York's City Hall and 400 policemen had to be turned out to keep order.

On May Day 1930 the Communists developed a crowd of 30,000 in Union Square and sharp on the strike of noon began rioting. New York City police on horseback, in riot wagons, in uniform and plain clothes, were their targets.

Women with hatpins jabbed the horses' bellies. Others screamed and tore their clothes as they accused "Whalen's Cossacks" of unprovoked assault.

And the plainclothes detectives slid 3-foot long shillelaghs out of their pants legs and began raking heads as a boy runs a stick down a picket fence.

"Whalen's Cossacks" scientifically split the seething mass into into workable detachments, and by 1 o'clock the riot wagons were full of bleeding, half-conscious cops, citizens, and Communist agitators who had not been expert enough to duck when the fighting started.

By 1:30 the people in Union Square were back at work. Most of them never knew why or how they had got mixed up in the terror and the screaming.

A great many were just office employees from nearby life-insurance companies who had been drawn by the bands, flag waving, and excitement generated by the skilled crowd-builders.

These had been assigned by Communist general headquarters to organize this May Day riot, which could be propagandized all over the world as a rising of the enslaved masses of New York.

While all this was happening, the writer of this piece was a breathless and fascinated observer, being introduced to and educated in communism.

When Steve Katovis started that riot in the Bronx and lost his life for it, nothing could have seemed less to me. I was a young reporter only a few months in New York.

My job was humble enough. I was a very junior rewrite man on the lobster shift, 12 midnight to 7 a. m., on the New York Evening Journal.

My salary was $65 a week, and considered fabulous, for one so ignorant and young.

Nobody felt more guilty about it than I. So I had developed the habit of spending as much time after working hours as I could in trying to learn the streets and sights and sounds and smells of Manhattan.

Then, when the awful eye of the city editor should fall on me at last in judgment, perhaps I could make him think me fit to keep.

And, of course, in the manner of boys, having such a superb anti undeserved job on the Journal, I was pulling every possible string to get on another paper. As it happened, the New York World.

That in itself showed how little I knew, for the World was on its last legs and the Journal was full of bite and bounce.

But, anyhow, it happened that while I was mousing around the World one morning trying to see the city editor I heard somebody talking about the big doings that would come off next day in Union Square on behalf of the "martyred hero of the masses," Steve Katovis.

Such was the accident that led one reporter onto the biggest story of our times, the rise and growth of the Communist movement in world politics.

For as soon as I heard that something exciting was due in Union Square I laid my plans to horn it on it.

Just why the "martyred hero" had been "martyred" I had no idea. Communism was just one among a million million things of which I was ignorant.

One Hundredth Anniversary of Mittineague (Mass.) Congregational Church

EXTENSION OF REMARKS
OF
HON. FOSTER FURCOLO
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. FURCOLO. Mr. Speaker, I am sure the Members of Congress will want to join with me in extending best wishes to the Mittineague Congregational Church which is celebrating the one hundredth anniversary of its founding this week.

The history of this church, located in West Springfield, Mass., is one of considerable struggle and covers a disastrous fire and a great amount of hard work over the years. The church has overcome all difficulties to attain its present high position in the community. It typifies the continuous effort of the American people to establish religion in our country, and I know that the Reverend Charles H. King, and his associates, will be pleased to know that during this week of their celebration, we extend to all of them every wish for future progress.

I am proud to acquaint the Members with the successful achievements of the fine congregation of this church, and I know you will all join with me in extending congratulations and good wishes on the one hundredth anniversary of the founding of the Mittineague Congregational Church.

Red Terror Is Spreading

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by M. F. Everett, from Catholic Action of the South:

RED TERROR IS SPREADING

(By M. F. Everett)

Further proof of the spreading of Red terror came last week in the trial of 10 religious in Czechoslovakia, in statements from outstanding American leaders, and in reports of an extension of religious repression in Poland.

The Czech religious, all national figures, received sentences ranging from 2 to 25 years' imprisonment, plus fines. Though the foreign press was forbidden to attend, it was learned that the procedure did not go entirely according to plan. Some of the defendants showed evidence of intimidation and torture. But one retained his faculties sufficiently to keep the carefully picked spectators in an uproar.

It was evident that the trial on charges of treason was rigged to put pressure on the hierarchy to take the oath of loyalty to the Red regime and to prepare the way for proceedings against the bishops, particularly Archbishop Josef Beran, of Prague; Bishop Joseph Mathocha, of Olomouc; and Bishop John Vojtassak, of Scepusio. Another key leader aimed at is the Praemonstratensian Abbot Bohuslav Jarolimek, of Prague. Two abbots and a Jesuit provincial were among the 10 just tried.

The trial was called "one of the most atrocious injustices of our days" by a Catholic daily in Rome. Speaking along the same line of Red aggression, Gen. George C. Marshall, father of the European recovery plan, wartime United States Chief of Staff, and former Secretary of State, emphasized that victory over Soviet Russia in the struggle for the mind of man is as "vital to peace and prosperity as any military campaign in history." He asserted that the reconstruction of Europe means not only material but spiritual and moral rehabilitation.

Warning against proposals to reduce the ECA to a mere relief affair, he declared: "Make no mistake about it. The chips are down. Unless we achieve victory, the great military and financial sacrifices of the United States may have been largely in vain." His words were echoed by other leaders.

In Poland the Communists are making further efforts to dominate the church. They are attempting to obtain signed agreements directly from the priests that will mean breaking off all relation with international religions. Among the conditions they are trying to force on the priests is that of recognizing the Reds' Caritas organization, which was set up to supplant the Caritas or charitable agency of the church.

Copies of a number of documents pertaining to the Reds' seizure of the Catholic Caritas were sent to United States members of the hierarchy by the Right Reverend Monsignor Edward E. Swanstrom, executive director of NCWC War Relief Services. They amplify NCWC news service reports about the matter and give the full background of WRS work in Poland. Since the program began in Poland in September 1945, 126 shipments were made to that country by WRS, a total of 17,853,572 pounds, valued at $6,255,347.63. These goods were distributed by Caritas in Poland to the people in greatest need.

Lack of space makes it impossible to reproduce the documents here. It is enough to note that the Reds have determined to throttle Catholic charitable activities, even at the cost of extensive aid to people greatly in need. They refused to allow a WRS representative to enter Poland after George Szudy was forced to leave for family reasons following 30 months' service. The relief program in Poland, because of Caritas, was one of the most efficient operations undertaken by WRS for the American hierarchy.

The American Council of Relief Agencies was notified by the Reds in Poland to liquidate the activity of these agencies by May 1, 1949, though the Communists offered to distribute further gifts. WRS continued to send shipments to Cardinal Sapieha, chairman of Polish Caritas. Finally, the Reds on January 23, 1950, ordered the seizure of Caritas and the placing of its program under state control. The government embarked upon a program of prosecution of Caritas personnel and named new officials, who were friendly to the Reds. A carefully planned campaign seeks to prove that embezzlement and sheer corruption dominated the work of Caritas.

WRS had to stop shipments to Poland. Hundreds of thousands of the poor, the sick, and the crippled who were dependent upon the charitable agencies of the church look with terror to the future. Perhaps the greatest charitable move in history, the gigantic work of WRS, financed through the generosity of Catholic Americans, was shut off abruptly in a great Catholic nation, Poland, because of Red persecution.

The Reds' satanic campaign is ready to sacrifice thousands of Christ's least ones in their insane hatred of religion. Let there be no mistaking of their intention or their action. It is either Christ or communism, and we must make our choice soon.

Communists in Universities

EXTENSION OF REMARKS
OF
HON. HAROLD H. VELDE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. VELDE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from Peoria Star, April 24, 1950:

COMMUNISTS IN UNIVERSITIES

T. R. McConnell, dean of arts and sciences at the University of Minnesota, told a group of educators in Chicago last week that there are not enough Communists in American colleges and universities to constitute any serious danger.

It is an interesting coincidence that an assistant professor of physics at the same university was named last September by the House Committee on Un-American Activities as the Scientist X who allegedly gave atomic secrets during the war to a man described as a Soviet agent.

Dr. McConnell's remark might be more significant after the Department of Justice has presented the Scientist X case to a grand jury, if the Department ever does.

Petroleum Imports Problem

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. GAVIN. Mr. Speaker, the increasing concern over the petroleum imports problem calls for immediate attention by Congress. It is not a long-range solution that is needed. It is a short-range remedy that must be applied if we are not to see conditions in the oil industry of the United States, in coal, and transportation and in many other lines grow progressively worse.

For many weary months the independents in the oil industry have been telling Congress of this rapidly growing menace to their existence. Volumes on volumes of testimony have been printed. The evidence has been compiled. It should not be necessary to keep on studying the question.

The State Department has professed deep concern because the British Government put restrictions on imports of oil from the dollar countries. American companies have been denied some part of the market they have supplied. The effect of this will be to compel a restriction of production by those companies in foreign fields—the Middle East and South America—or to increase imports into the United States. It was not the

latter point that worried the State Department. They probably will continue to say, as they have been doing, up to the moment that the last independent oil man is forced out of business here that no injury is being done.

The amount of oil involved in the British action is 75,000 to 100,000 barrels a day. That is insignificant when compared to the cut-backs in production in the United States last year. The direct effect of imports into the United States is apparent in the successive reduction of allowable production in the principal oil States. It is seen in the falling off of State revenues, as my good friends who represent the State of Texas can testify with great eloquence. It is seen in the loss in employment in the oil fields and the refineries of the United States.

My State of Pennsylvania is the pioneer oil-producing State of the Nation. The beginning of the oil-producing industry occurred in the district which I represent. After the passage of nearly 90 years, we still have a sturdy producing and refining industry in Pennsylvania. It is of great consequence to the economy of the State, the Nation, and the numerous communities where the oil industry exists.

The Pennsylvania-grade industry, famous for the production of high quality lubricating oils, is directly in the path of imported oil. I do not propose to wait until the industry is forced into idleness or liquidated. I ask for "short range" action; something which is immediate and productive of quick results. The Penn Grade industry produces superior quality lubricating oils but it produces many other products as well. Not all of a barrel of crude oil can be converted into lubricants, only a lesser part of it. The other products must have a market and it is this market that the cheaply produced foreign oils is taking away from a native American industry whose contributions to the American standard of living have been virtually immeasurable.

I read with amazement, amounting almost to unbelief, that the Secretary of State and the ECA Administrator had thrown out suggestions to the effect that injuries to American enterprise caused by the large-scale importing program which the Administration is actively working to bring about could be softened by Government loans. That American workers who lose their jobs because of imports could be given Government-financed training to fit them for other jobs. They were talking about imports generally. Oil now forms a substantial part of all imports. Oil is included in the thought of such a debasing program. American progress did not come through loans from the RFC and the creation of a large class of displaced persons, eager to work creatively but waiting on a Government job-placement bureau to give them assignments.

Bills are before this Congress to keep the home markets secure for our own oil. We have plenty and even a little too much right now. Our exports of oil shrink day by day, and we import far more than we sell abroad. Penn Grade refiners have testified that the operation of the ECA is drying up their once flourishing market in Europe for their lubricants. The door is being shut abroad and imports threaten them at home. This is no long-range program.

You are hearing from the coal industry and the coal miners on this same subject. The railroads and railroad employees are in this fight to preserve home industry. The independents in the oil industry told us long ago what the effects of unrestricted imports would be. They informed us month by month of conditions. Nothing was done about the increasing menace to a free economy and to the domestic oil industry. Instead, we have allowed a few men in the administrative branch to emphasize the welfare of a few giant corporations holding vast concessions abroad.

The people are being awakened to what is happening to them. How long must they wait and how severe must be their injuries be before we act?

Postal Service Curtailment

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution recently passed by the council of the city of Medford, Mass., in form as offered to the council by Mayor Frederick T. McDermott:

CITY OF MEDFORD, MASS., *April 20, 1950.*

Whereas any curtailment of postal service in the city of Medford by the United States Post Office Department would be of the most undesirable thing that could possibly happen from any standpoint of reasoning; and

Whereas Medford at the present time is experiencing a period of rapid growth, both as a residential and business area resulting in a tremendous increase in valuation: Therefore be it

Resolved, That it be the sense of this city council that no decrease in postal service or reduction in the number of employees of the United States Postal Department could be compatible with the march of progress that is taking place in Medford in the past year, and the anticipated continued progressive trend in the next 5 years; and be it further

Resolved, That, because of the above stated facts, this council does hereby urge the United States Postal Department to retain the present delivery service and forego any sugestion of curtailing employment; and be it further

Resolved, That a copy of this resolution be transmitted upon its passage to the Postmaster General, Washington, D. C., and to the Representatives and Senators representing this district in Washington, for their consideration and action thereon.

In council, April 20, 1950: Passed.

A true copy, attest:

ODESSA E. RIVERS,
Assistant City Clerk.

Wise and Forceful Expressions of an Eminent Columnist

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles by Lowell Mellett, from the Washington Evening Star:

[From the Washington Evening Star of April 18, 1950]

ON THE OTHER HAND—A REMINDER THAT LOCAL CRIME IS A MATTER OF LOCAL RESPONSIBILTY

(By Lowell Mellett)

Crime should be curbed wherever it raises its ugly head. The question is, Who has the duty to curb it? And the answer is, the Federal authorities when the crime is against the Federal statutes, the State or local authorities when the crime is against State or local laws.

Out of the present hullabaloo in Congress over crime in this, that, and the other city, there emerges a clear indication that some of our national lawmakers have forgotten this simple principle. Either that or they choose to disregard it for reasons of their own—the principal reason being political, the desire to score off the opposition party.

This is a dangerous tendency which if followed very far could prove disastrous to our democratic society. It could lead to that police state, which nobody wants on any terms.

WARNINGS GIVEN FREQUENTLY

Every competent Attorney General in recent times has warned of this danger. William D. Mitchell, now suggested by some as the ideal counsel for the Senate special committee to investigate crime, was Attorney General under President Coolidge. As such he called attention more than once to the unwisdom of unloading on the Federal Government the task of correcting evils that are purely local. Like those who have followed him in office, he was continually besought to send the FBI into one community or another where there happened to be dissatisfaction with local law enforcement. He resisted such demands. And this was at a time when the FBI was a comparatively small agency. Now that it has reached its present proportions, he doubtless would be even less disposed to permit its participation in local affairs.

And what is said here concerning the FBI goes also for the United States Congress. Aside from the principle of home rule and local responsibility, which should be sufficient, there is the fact that Congress has, and always will have, plenty to do without picking up the troubles of any particular community. The National Legislature is habitually behind in the business of national legislation. If it must have cops-and-robbers entertainment now and then to relieve the monotony of real work, there will always be a MCCARTHY or a HICKENLOOPER to provide it.

EXCELLENT SOUNDING BOARD

Once it is established that local communities can shift their responsibilities and shrug them off on Congress there will be no end to such proceedings. Some Congressmen will be happy to bring their domestic squabbles to the Capitol for airing. It is an excellent sounding board.

For one local community the Congress has long accepted full responsibility. It serves as the city council for the District of Columbia. This provides a situation that satisfies nobody, but nobody likes to give up authority and Congress has not yet been able to make itself let go of the District. So we have Congress stirred up for days at a time over scandals or alleged scandals in the Washington Police Department. Usually someone demands that the FBI take a hand and clean up the situation. Because of Washington's confused status as a Federal city such demands are not wholly illogical, but the FBI has managed for the most part to avoid involvement and, no doubt, if permitted will continue to do so.

But now that local crime is being made a national issue, something to be used in the coming congressional campaign, the temptation to call in the Federal police is almost overpowering. It is a temptation to be resisted, save where there is convincing evidence of law violation on a national scale.

[From the Washington Evening Star of April 20, 1950]

ON THE OTHER HAND—ABOUT A PALLBEARER WHO FOLLOWS A HEARSE THAT'S NOT GOING ANYWHERE

(By Lowell Mellett)

There has to be an explanation for the spirit of frustration among Republican entrepreneurs, even in face of the fact that the Democrats are not making a shining success of this session of Congress. The explanation could be the absence of the one sure-fire issue required by a party out of power. That issue is hard times. And we haven't got 'em.

Representative JOSEPH W. MARTIN, JR., minority leader of the House, made a speech in Pittsburgh the other night, a speech filled with gloom. "Sickening to the patriot's heart is the orgy of waste, extravagance, and plain bad management encountered on every hand in Washington today," he said; "shocking waste, sinful waste, demoralizing waste of the people's substance."

He declared we've got to remove "the threat of socialization which hangs like a pall over the spirit of American thrift and industry."

PALL OVER PITTSBURGH

As he spoke there doubtless was a pall hanging over Pittsburgh, the smoke from the city's great blast furnaces, still roaring day and night despite the threat so disturbing to Representative MARTIN. The steel business continues to burst at the seams. Production last week represented 97.5 percent of capacity, the total output being within a few tons of the all-time record. The steel makers could hardly be worried by the situation and the buyers of steel obviously are not.

If a pun is permissible Joe found himself a pallbearer without a funeral.

And it's like that most anywhere he may go. In the words of Joe Livingston, eminent business analyst, "Good business is becoming a habit." Mr. Livingston finds confirmation in Wall Street, which he says is pronouncing the benediction with higher stock prices. But, he says, Wall Street is choosy, in a way that reflects business itself. The dominant characteristic of a boom, he says, unanimity with everything going up at once, is missing. The stocks that are advancing are the kind that are bought primarily by investment trusts, mutual funds, and banks for investment accounts. Wall Street is not having one of those 1929 speculative orgies that does nobody any good.

Two good Joes, MARTIN and Livingston, but they don't see alike. One can't see the other's pall—only the silver lining.

SOME MORE OF THE SAME

Some more of the same is offered by the President's Council of Economic Advisers. In its latest report to Congress the Council states that the production of goods and services had reached an annual rate of $258,000,000,000 during the first quarter of this year, a gain of almost $3,000,000,000 compared with the closing period of 1949.

Consumers' spendable income, meaning the money people have to spend after paying taxes, was up, reaching a new high rate of $181,000,000,000 annually, a gain of $1,200,000,000. But it isn't all being spent. People apparently are being reasonably prudent, since savings also are increasing.

Nor are the corporations able to join the ranks of the pallbearers. Their profits are running at an annual rate of $30,500,000,000, an increase of $1,000,000,000 over last quarter. The national income, or dollars earned in production, indicates an annual total of $220,300,000,000, according to the Council, a gain of $1,200,000,000 in wages and profits.

All this despite the tie-up in the coal industry, which showed its worst effects during 2 months of the quarter.

Maybe JOE MARTIN, a cheerful fellow by nature, should stop following a hearse that isn't going anywhere, and join the boys on the band wagon.

[From the Washington Evening Star of April 22, 1950]

ON THE OTHER HAND—WHEN DOES MR. ACHESON HAVE TIME TO THINK? WHAT KEEPS HIM GOING?

(By Lowell Mellett)

Two questions naturally occur to many people. One is, When does a man in the spot occupied by Dean Acheson have time to think? Beset, on the one hand, by the critical problems of a world in ferment, with explosive incidents happening or about to happen each day of the week, and on the other hand, by a calculated campaign of harassment intended to interfere with his work, when does he have time for the quiet meditation from which great decisions come?

The other question is, What keeps him going, in the face of the misunderstandings and misrepresentations that assail him at home and abroad?

SOMETHING HE HIMSELF SAID

The answer to the second question can be found, perhaps, in something Mr. Acheson himself once said. At the private services for Justice Louis D. Brandeis, following his death, the then Assistant Secretary of State spoke in behalf of himself and others who had served as secretaries to the Justice. As reported by A. T. Mason in his book, Brandeis—A Free Man's Life, Mr. Acheson's remarks included these sentences:

"We are the generation which has lived during and between two wars. We have lived in the desert years of the human spirit * * * years when the cry was, 'What is truth?' * * * These were years during which we saw in action his burning faith that the verities to which men had clung through the ages were verities; that evil never could be good; that falsehood was not truth, not even if all the ingenuity of science reiterated it in waves that encircled the earth. * * *

"But to him, truth was less than truth unless it was expounded so that the people could understand and believe. During these years of retreat from reason, his faith in the human mind and in the will and capacity of people to understand and grasp the truth, never wavered or tired. In a time of moral and intellectual anarchy and frustration, he handed on the great tradition of faith in the mind and spirit of man which is the faith of the prophets and poets, of Socrates and of Lincoln."

CONVICTION ON TRUTH

So it would seem that it is this that keeps Dean Acheson going—the conviction that truth must be expounded so that people may understand and believe, plus a faith in the will and capacity of people to understand the truth.

It explains why he has not yet wavered or seemed to tire in his efforts to expound the truth as he sees it; why he can appear day after day before the various committees of the House and Senate to discuss at length and in detail the wide range of matters that come within the purview of the State Department, responding readily to informed and intelligent questions and avoiding as best he can the pitfalls set for him by those having less than a friendly interest. Also it explains why he compels himself to meet with official and unofficial groups of all kinds for off-the-record quiz sessions. And finally why he takes on the burden of public speeches in Washington and elsewhere, despite the wear and tear on his physical strength.

As for when he has time to think—the Lord only knows.

Parenthetically it could be asked also, when does the Secretary have time to engage in the elaborate conspiracies against the welfare of his own country, with which, in effect, he stands accused by reckless and irresponsible practitioners of a certain kind of politics and a certain kind of journalism? For that one the said practitioners would prefer not to have any answer.

Mr. Speaker, let it be said in tribute to Acheson "that he may well stand before his God and Creator, guilty as charged, and take his chances than to stand before Him as will his calumniators with vile tongues in their heads."

Communist Enigma: Solution?

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. PATTERSON. Mr. Speaker, a contributed column in the Catholic Transcript, the newspaper of the Hartford diocese, probes the question of the Communist enigma. The editor, Rev. James M. Gillis, C. S. P., sets out in vibrant form premises upon which the prevalence of communistic activity may be based. Admittedly, no solution is given to the riddle of communistic adherence; but a thorough soul-searching on our part may enable us to determine the shortcomings of either religious teachings or democratic practices which allow our people to be ensnared in the delusory web of utopian existence through Communist philosophy.

COMMUNIST ENIGMA: SOLUTION?

(By the Rev. James M. Gillis, C. S. P.)

I have often confessed in this column that to me the spread of communism is a psychological riddle. Invariably after the appearance of such a confession I receive letters intended to do away with my perplexity. I appreciate the motive of the writers of those letters and I am in consequence thankful. But I still have to admit that for me the riddle remains unsolved.

Take, for example, a letter like this from an obviously intelligent and zealous lady in Albany, N. Y.: "You say that you do not understand why men and women are fooled by communism. There are many reasons:

"1. People are not curious enough. A man bet he could go out and get the signatures

of 50 men who didn't know what they were signing. He won the bet.

"2. Americans are too busy to make a study of communism.

"3. Too much is printed and not enough is condensed. I had to sacrifice much in order to find time to keep up on the current news of communism because things are happening so fast all over the world. I have two piles—one of clippings and one of books on communism. To get the facts I would have to spend weeks or months going over all of them. We need booklets with to-the-point facts.

"4. Atheists are pleased with the Communists' statement: Religion is the opium of the people.

"5. False statements impress the poor: Communists are working for peace, bread, land, higher wages and freedom from capitalism.

"6. Communists write letters; anti-Communists don't. Before the picture 'The Iron Curtain' was first shown, the Fox Co. received thousands of letters and telegrams protesting its being shown, and threatening the company, directors, and others. After the picture had been shown, over 8,000 letters and telegrams were received protesting the picture. Few letters were received commending the picture. When news commentators criticize Russia or communism, Communists write all the sponsors of programs and the radio broadcasting companies requesting that the speakers be taken off the air. They request their relatives and friends to join in their protests and to conceal themselves as members of any Communist organization.

"7. When bills are to be passed in legislature or any problem voted on, Communists flood the State Department with mail. Catholics do not show much action about such things.

"8. Many people are under the impression that Communists are fighting only Catholicism. This false impression alone draws many people to the side of Communist sympathizers.

"9. In every company, club, or organization there are Communists to spot sympathizers as easy prey for their organizations.

"10. People are betrayed into thinking they are joining a new political party. Mr. J. Edgar Hoover says it is not a political party but a treasonable and traitorous conspiracy.

"11. If Spain is 80–90 percent Catholic, why did outside foreigners convert many of them to communism and then murder their priests and nuns and burn down their churches? Italian Catholics, French Catholics, and millions of Catholics of other countries are much the same. There is weakness in Catholicism. There is strength in communism. Catholics have the feeling of contentment; they are sleeping. Many of our best churchgoers are ignorant and uneducated in their religion."

Evidently the writer of that letter had done some intense thinking on the cause of the spread of communism. I hope she will not be displeased if I say that her explanations don't go deep enough. The poor, she says, are fooled. But why? They have newspapers and radios. They must know brute facts about communism. Those of them who are Catholics have both information and exhortations from the Pope, bishops, priests—why do they remain ignorant?

My correspondent says further that Communists are articulate, non-Communists inarticulate; Communists active, non-Communists inactive. True, but again, why? In fact, the lady ends as I do with a "why?"—why are so many Spanish and Italian and French Catholics still on the wrong side? Yes, why?

Perhaps I may best put the problem in some words I wrote in the Catholic World for February 1947:

"Those to whom I put my question, How do you account for the welcome given to communism by intellectuals and nonintellectuals, hoi polloi and the hoity-toity alike; by actors, artists, novelists, historians, educators, labor unions, publishers of books and magazines, Congressmen, clergymen and members of a score or more of other assorted business and professions, give me reasons which, to be effective, would have to exist in combination but which normally exclude one another. My friends and informants speak of zeal, enthusiasm, a quasi-religious ferver, a need of something to take the place of the abandoned religion; a keen sense of the injustices done to workingmen in times past; mental, moral, spiritual restlessness and general discontent; psychopathic disturbances so widespread as to be epidemic; exhibitionism; sadism or masochism; desire for novelty; bitterness of soul consequent upon atheism; pessimism to the point of desperation; sentimental and emotional idealism; anger, envy, hatred in the heart of the have-nots; the ever present attraction of class warfare and racial conflict; demagogic leadership working through mob psychology. And so on. But not any one of the causes alone would suffice and the combination of five or six of them in one person seldom occurs. It may be that the many motives mentioned operate separately in different persons, but what has brought them together in the closely compact and wonderfully well-organized movement that is world communism?

"There—I submit—is the unsolved and perhaps insoluble enigma."

Should We Adopt the Federal FEPC?

EXTENSION OF REMARKS

OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio debate on the American Forum of the Air program, between the Senator from Minnesota [Mr. HUMPHREY] and the Senator from Florida [Mr. HOLLAND] on the subject Should We Adopt a Federal FEPC?"

There being no objection, the debate was ordered to be printed in the RECORD, as follows:

ANNOUNCER. The National Broadcasting Co. presents the American Forum of the Air, founded 21 years ago by Theodore Granik and dedicated to the full and public discussion of all sides of all issues, coming to you from NBC Theater in Washington, D. C.

Now, here is your moderator, Theodore Granik.

Chairman GRANIK. Our great American democracy is proud of its many minority groups—millions of Catholics, Jews, Negroes, Mexicans, immigrants, and children of immigrants, all good Americans—but spokesmen for these minorities contend that many among them cannot get jobs and improve their standards of living because of unfair discrimination on the basis of race, color, or religion. Others, however, say that if these faults occur, they are faults of mind and heart, or of social inheritance, which can be eradicated only by education and example, that no law can be effective if it is not acceptable to the people affected.

With this very controversial issue confronting our Congress and our Nation, the American Forum of the Air asks, "Should we adopt a Federal Fair Employment Practices Commission," known as the FEPC?

Two distinguished Senators are here to give us their views. Senator HUBERT HUMPHREY, former mayor of Minneapolis and now Democratic Senator from Minnesota; and Senator SPESSARD L. HOLLAND, Democrat, of Florida, former Governor of that State.

Now, Senator HOLLAND, would you start out our discussion by answering this question: Can we legally assure any citizen that in applying for a job he will not suffer discrimination because of his race or religion?

Senator HOLLAND. My answer would be no; not under under American law because such a law would attempt to control the thought processes, the mind, the objectives, the intentions of individuals, and that isn't done under American law. It is attempted under some kinds of ideology with which we have no common ground whatsoever, but not under our system of law.

In the second place, may I say that it cannot be done practically because it can never be done without the concurrence of the States and of the people, and it has already been shown in that part of the Nation outside of the South, leaving that out of the discussion for the moment, that 17 sovereign States have turned down FEPC, 8 have adopted a compulsory FEPC, and 2 a mere voluntary FEPC without strength. I call to your attention that the population of the States that have turned it down is twice that of those that have accepted it, and likewise that in California, the only place where it was submitted to popular vote, the people voted it down by 2½ to 1, and in every county in California they voted down FEPC. It cannot be enforced without popular support.

Senator HUMPHREY. My answer to the question is, of course, that a Federal law pertaining to employment practices can and should be adopted and that it can be enforced. I think that my answer is bolstered not merely by my own personal point of view but by the fact that there are 10 States in the Union that do have fair employment practices laws, eight of which are what I would call satisfactory, two of which are on the voluntary side. Besides that, there are a number of large cities. I would like to point out that in these large cities, such as the city of New York and the city of Chicago and the city of Milwaukee and the city of Cleveland and the city of Cincinnati, they have large minority groups, particularly large groups of American Negroes.

These cities have proven conclusively that a fair employment practices ordinance on a city level, with compulsion, does work. For example, recently the Des Moines Register Tribune made a survey of some 25 cities, and it found that out of these 25 cities where the cities had a fair employment practices ordinance, you did have employment of white-collar Negro workers, you did have employment of the minority groups, and that discrimination was being eliminated.

I would like to make this further observation, that it is entirely within the purview of the Federal Government to pass this kind of law. We have banned child labor; we regulate labor insofar as safety regulations are concerned. I don't think anyone has denied the constitutionality of a law that would affect employees in interstate commerce. So I say, frankly and candidly and with some conviction, that this law should be enacted, that it will work, and that it will produce the results which we have every right to expect.

Chairman GRANIK. Do you think it is constitutional, Senator?

Senator HOLLAND. I think it is clearly unconstitutional, but I want to address myself briefly to that portion of my distinguished colleague's remarks which had to do with the large cities. Admitted that several of the large cities do have FEPC Acts which are

local, I think it is interesting to note that in every case the States in which those cities have been located, in every case except the State of New York, have declined as States to accept a State of FEPC because they have not liked what they saw working out in the cities. That is true in Pennsylvania as to Philadelphia. It is true in Ohio as to Cincinnati and Cleveland. It is true in Illinois as to Chicago. And it is true in the State of my distinguished friend, Minnesota, where after a trial run in Minneapolis, it was knocked out in the State senate last year by 34 to 29, showing conclusively that the good people of Minnesota didn't like what they saw down in the main city, the city of Minneapolis.

Chairman GRANIK. Let's see what the former mayor has to say about that.

Senator HUMPHREY. I am very glad my distinguished colleague from Florida brought that up, because that opens up a new area of conflict. No. 1, the good people of Minnesota do like fair employment practices. No. 2, not only do the good people of Minneapolis like it—and they are all good people—but the city of Minneapolis was awarded the Nation's award for outstanding work in human relations. A city that only 5 years ago was described by Perry McWilliams as the second worst city in the Nation in terms of discrimination was last year at Christmas time given the national award on the part of the National Association for the Advancement of Colored People and on the part of the Conference of Christians and Jews, for outstanding work in the field of human relations.

Now let's go into the legislatures for awhile. I am glad my friend in Florida brought up the legislatures, because the legislatures in this country are the most unrepresentative bodies in America. The legislatures of the States have not been reapportioned, most of them, for 50 years. California has a need of reapportionment that is second to none. New York has a need of reapportionment. Ohio has a need of reapportionment. In other words, the State of Minnesota hasn't been reapportioned since 1910, when the city of Minneapolis had a population of some 200,000 people, and now it has 550,000 people.

To say that a legislature does not pass FEPC and, therefore, that it is wrong is no answer at all. Let the legislatures of the United States, of the several States, reapportion their States. Let those people who are hiding behind the cloak of minority rule come out and believe in majority rule.

Senator HOLLAND. I am sorry, Mr. Moderator, that my distinguished friend doesn't believe in the type of democratic government that prevails in the statehouse in Minnesota.

Senator HUMPHREY. I surely don't.

Senator HOLLAND. Nor that that prevails in the statehouses of the other fine States of this Nation. Suffice it to say that it seems to me it is a very clear and conclusive illustration that the people of his State, after having seen the project work for 2 years in his city, where he helped to establish it, would have nothing of it, but knocked it out. They didn't want it in Minnesota.

Let me say this, my friend referred to California. I remind him again that the sovereign people, the sovereign people to the tune of 2,250,000 voted in California, and they voted 2½ to 1 against any FEPC, and there wasn't a county in all that State but which showed a majority against FEPC.

I wonder how my friend answers that?

Senator HUMPHREY. Your friend will be delighted to answer it, but let us go back first of all to the State of Minnesota. I understand that the gentleman from Florida is telling me that the legislature of the State of Minnesota on this issue represented the people. Let's take a look at who represented the people. The Governor of the State of Minnesota was elected with an overwhelming majority. He happens to be a Republican Governor. He happens to stand foursquare for fair employment practices. He also went before the legislature and encouraged it. Who fought it? The Minnesota Employers Association. Who is the Minnesota Employers Association? Let me say the most conservative and, in fact, the most reactionary group in the State of Minnesota. Who else did they fight? They fought the Governor, they fought the junior Senator from Minnesota and the senior Senator from Minnesota. They fought everything out there that I can think of. Then they were able in a legislature that had not been reapportioned since 1910 to bottle this thing up in committee. Despite the fact that the Catholic church, the Protestant churches, every one of them, the Jewish synagogues, every one of the veterans' organizations, despite the fact that every trade union in Minnesota, both political parties, despite the fact that county after county resolution was for FEPC by State law, still the legislature didn't enact it. So my friend says apparently the people don't want it?

Senator HOLLAND. My voluble friend still doesn't explain why his own senate turned it down 34 to 29 and why his own house has declined ever to let it come out. I think that it is a very sound conclusion to draw that they didn't like what they saw in Minneapolis.

Chairman GRANIK. Let's go to Mississippi for a minute.

Senator HUMPHREY. Let's go to Mississippi, because it just so happens wherever the minority rules, wherever you have minority rule in this country, that is where you have this kind of situation.

Chairman GRANIK. May I quote from Governor Wright of Mississippi. He says: "Every American is a potential employer, a potential owner of a business, and in the development of any business any man who invests capital, any man who operates a business, must have the freedom to choose the type of employees he desires."

How do you feel about that?

Senator HUMPHREY. I think that is just wonderful, except that I do not believe any man ought to be discriminated against in employment because of his race, his color, or creed. This happens to be the anniversary, so to speak, of "fourscore and seven years ago," that Abraham Lincoln talked about, this year of 1950. This is the anniversary of the Emancipation Proclamation, fourscore and seven years ago. Here is a country that has in its Declaration of Independence that all men are created equal. Here is a country that has in its Constitution the whole concept of the people of popular sovereignty, of the people ruling. Here we are at a point where we have an opportunity to give people a chance for what? For economic well-being. That is all we have been talking about. We are not talking about social habits or anything else. We are talking about a job. So what I point out very frankly is that America cannot afford to discriminate against people on the basis of such false factors as their religion. For example, the Catholics, and we discriminate against a lot of them. The Jews, the Mexicans, the Spanish, the Italians, the Negroes—they have been discriminated against in State after State and locality after locality, and forced to take substandard labor when they are equipped to do good jobs.

Senator HOLLAND. I am glad you took us South, Mr. Moderator, because I think we well disposed of the situation outside of the South. Better than two to one the States have shown they don't want FEPC.

In the States of the South, 15 States, nobody has even suggested FEPC. Because the great population of our whole area, both white and colored, is so very definitely against it.

My friend speaks about the Negroes with great volubility. But I want to remind him the 1940 census shows less than 10,000 Negroes in his State, with 2,750,000 people; whereas we have in the Southland between ten and eleven million Negroes, and we are living kindly with them, and they are happy to live there, and they are good, patriotic citizens, and they are not supporting the causes of communism, as are some of the groups that are supporting this same legislation, and that doesn't mean that everybody who supports it is in that group, of course, at all. They are good and sound and patriotic citizens.

May I call to the attention of the Senator that we are greatly disturbed in the Southland because of some developments which have occurred in this recent year? We know that there has been behind this effort, because it is in the President's Civil Rights Commission Report, that segregation is to be abolished. We know that they believe in social equality. The Senator himself in his testimony before the House committee testified that he believed in social equality. It has been terribly disturbing to the Southland to see, since this was last debated in the Senate last year, the two strongest leaders of NAACP, the executive secretary, Walter White, and the legislative representative, whom the Senator knows, after having divorced their Negro wives, married white women; and I tell you right now the feeling in the South on the part of the good white people and the good colored people, and we have millions of them, is that that shows we are trying to go in the wrong direction and we will have none of it in the Southland. [Applause.]

Senator HUMPHREY. Mr. Moderator, we are not talking about marital relations. We are not even talking about childbirth. We are talking about employment. May I point out in reference to the Negro population there are more Negroes in the city of Chicago than there are in any city or any one area in the South? There are more Negroes in the city of Chicago than there are in almost any State in the South. Yet in the city of Chicago, if you please, we have a fair-employment practices ordinance that works, and it works well. There are more Negroes in New York City than there are in almost any city in the South, in fact, in any city in the South, and yet fair-employment practices works well there.

I also want to say the innuendo of my colleague from Florida is not becoming to a distinguished representative in the Senate. [Applause.]

This is not communism. As a matter of fact, the one thing that is robbing us of our great moral weapon in this world today is the way we treat our minority groups in this country. I would remind my friend from Florida that whether or not some people in the South like this or not, the fact is that there are more colored people in the world than there are white. The fact is that some of the people in the South have denied people the right to vote, and we have poll-tax States, not in Florida. There are more people who vote in my county than in any city in South Carolina. There are more people who vote in my city than vote in any three counties in South Carolina.

I submit to you that we cannot afford to have American policy in a critical world situation dictated by the prejudices and the minority prejudices of a group any place in this country. The race problem is a fundamental international problem. We are losing face in Asia. We are losing it all over the world.

Chairman GRANIK. Senator HOLLAND.

Senator HOLLAND. I want to answer two of the statements of my good friend. First, with reference to Chicago, he was very careful to tell us about the Chicago FEPC, but he didn't tell us that the demonstration of what was done under it was unsatisfactory to both parties in the Illinois Legislature, and that both houses of the legislature knocked it out when it was proposed there in Illinois.

As to the second question, the question of what we are doing in the South, I think that what we have got to show in this Nation is that we will stand up for constitutional government and continue to offer the same brand of freedom and opportunity which we have offered throughout the history of the Nation.

I think the fact that most everybody else outside of this Nation and all the world wants to come here and settle with us and seem to be delighted to get here under our laws indicates that the people of the world think that we are doing a pretty swell job.

I want to say to my friend that insofar as the people of the South are concerned, they are making headway, white and black, on the basis of good will, on the basis of tolerance, on the basis of mutual respect and mutual understanding, and we don't like to be dictated to by the people who come from a State where less than 1 percent of their population is black or like the State of North Dakota, for instance, because one of its Senators has been very voluble, where the census shows 201 Negroes from that State. We think they don't know very much about the problem, and we would rather leave the problem to our own good people, both white and black, who are working it out in exceedingly good fashion and have come away ahead without the help of the rest of the Nation.

Having a group just a few years ago, relatively speaking, turned over to them without resources, without education, without health, without even any of the property which would give them a chance, they have come forward in such a way that they are all proud of them, and insofar as the South is concerned, as whites and as Negroes, we are making progress and we are making progress together and we are asking that we not be disturbed in that progress by having passed the type of legislation such as this which will set us back 50 years on the path of progress and prosperity and good will. [Applause.]

Chairman GRANIK. How do you feel about that, Senator?

Senator HUMPHREY. I would like to ask my distinguished friend from Florida to get off the defensive for a while. We are not just talking about the South. We are talking about people, American people. We are talking about people who are more American than almost anybody, except the people who came over on the Mayflower, almost native Americans. In fact, we are talking about the American Indian, native Americans, if you please. Discrimination isn't a matter of Louisiana or Florida or South Carolina. It is a matter of Minnesota, North Dakota, New York, and Washington. We are not talking only about constitutional government, my good friend from Florida. We are talking about human rights. In this world today the issue of human rights is the number one issue. That is what our fight is with communism, who deny human rights. May I point out that every time Mr. Gromyko or Mr. Molotov wants to put an American representative back on his heels at the United Nations they do what? They bring up the way we treat our minority groups. When we proposed, for example, that we investigate the slave camps of Siberia, what was the immediate response? The immediate response was, "Let's investigate the poll tax, the lack of economic opportunity. Let's investigate the lynchings," if you please, "in parts of America." What did our Government representatives say? They said, "If that is the case, we had better have no investigation."

One more thing about the legislatures. My friend has been a Governor, and I want to repeat that there is no one area of government in the United States that is more lacking in true representation of the majority will of the people than the legislatures. The Congress of the United States is reapportioned every 10 years by the Constitution, by the census. The cities of the United States are reapportioned time after time by the will of their electorate. But the State legislatures, I repeat, in Illinois, in California, in Pennsylvania, in New York, have not had reapportionment for better than two generations, and they have disproportionate representation, because 50 years ago over 50 percent of the people of this country lived in rural areas. Today only 20 percent live in rural areas.

Senator HOLLAND. Mr. Moderator, I had begun to thing my friend was starting a filibuster——

Senator HUMPHREY. I was just following through on my friend from Florida.

Senator HOLLAND. But I am glad to see he is not.

May I say that I am a little surprised that my friend has frankly quoted here Mr. Gromyko as an authority on international affairs. Insofar as we are concerned, we don't regard him as such in the Southland, and I think in most parts of the Nation.

To the contrary, when Mr. Gromyko says something, we are inclined to suspect his motives because we found out that they have not had anything to do with the permanence or the prosperity or the welfare of the United States of America.

Senator HUMPHREY. I want to ask my friend from Florida this question: Does he think that the Catholic Church is wrong when it says we need a national FEPC? The National Catholic Welfare Conference? Does he think that the National Baptist Conference is wrong when it says we need a national FEPC? Does he think the Methodist, the Congregational, or the Presbyterian Church is wrong? Does he think the President's Committee on Civil Rights that represented every segment of the economy is wrong? Does he think the Democratic Party was wrong and that the Republican Party was wrong in their platform commitments on fair employment practices? Does he think, if you please, that every single religious group in this country, every one of the Protestant, Catholic, and Jewish groups, are wrong, and that the A. F. of L. and the CIO are wrong?

Chairman GRANIK. Let him try to answer, please.

Senator HUMPHREY. Or does he think, if you please, that the only people who are right are the people who have for years maintained a minority rule in many of their areas and denied people the right to vote in many of their areas and who have taken upon themselves to be the self-protectors of the American way of life?

Senator HOLLAND. I am glad to answer that question. In the first place, I don't think anybody has a right to speak for all those groups, except the two political parties, which I will mention in a moment. I know perfectly well, as one member of one of those groups, I have heard thousands and thousands of good Methodists express themselves who are not at all in accord with any such expression. I know, furthermore, that most of the gentle, well-intentioned, and kindly people who make that kind of expression haven't the slightest knowledge of the situation. They don't know at all that it involves bringing in an ideology which is entirely foreign.

Now with reference to the political parties, my friend knows as well as I do that the declarations in the two platforms have been nothing in the world but political, that they have been designed to secure minority votes in certain key States. They know that the complete lack of sincerity of both parties is shown clearly by the fact that they haven't done a thing in the abolition of segregation or in the abolition of discrimination right here in the Nation's Capital, where they have had complete control, regardless of whether it was Democrats or Republicans who were in the majority. It has been a political issue all the way through.

Senator HUMPHREY. I want to answer that. I want to say if my friend from Florida will get on the floor of the Senate on Tuesday when we meet and propose that we have a chance to debate civil-rights issues without a filibuster, without their threat of a filibuster, I will guarantee to him that he will find out that this isn't just a political promise. He will find out that the votes are there. But whenever we propose to bring up a single issue pertaining to civil rights, we are immediately confronted with a solid block of people who have specialized in the art of filibustering, not in the art of legislation but in the art of protecting minority rights with minority tactics.

Chairman GRANIK. Gentlemen, let me take a question from the audience. I see Miss Penuel has a gentleman who has a question. Go ahead, sir.

Question. Senator HUMPHREY, don't you believe that if FEPC is enacted in any State, it should be done by vote of the people?

Senator HUMPHREY. Are you asking me that question?

Question. Yes.

Senator HUMPHREY. No, I do not, because I believe in representative government. If that were the case, I would say if you are going to have a tax law, which surely affects everybody and FEPC affects only those engaged in interstate commerce, then let's abolish our legislatures or Congress and have a referendum. To be sure, FEPC should be enacted like any other law, like child-labor laws, if you please. It should be enacted like appropriation bills, like soil-conservation laws, by the will of the people as expressed through their representatives in the Government. That is my conviction.

Senator HOLLAND. May I say I am surprised again to find that my friend does not believe in the expression of the will of the majority, and he has taken exactly the same position which a Negro lawyer took before one of our committees, representing a union, when he complained of the fact that the great State of Pennsylvania in three successive sessions of the legislature had turned down FEPC, and said, complainingly, "The only way in the world we are going to get this thing done is down here in Washington. Please do it." In effect he meant, pass it whether the States want it or not and whether the people want it or not.

If that is sound democracy, then I don't know the meaning of the word.

Senator HUMPHREY. May I make this observation? We had a type of referendum on civil-rights legislation, because we had a group of people in the Democratic Party who walked out of a national convention, out of their own party, and they went out and created a new party. They called it the Dixiecrats. They put up a candidate, and the one issue of this Dixiecrat candidate was that he was going to have white supremacy; he was going to protect the rights of the white people. How many votes did he get in the United States of America? How many votes did he get?

Senator HOLLAND. I am glad that my friend raised that question because I don't happen to be a Dixiecrat. I stuck with the party, and I also stuck along with the Governor of our State, the six Members of the House, myself as one Senator—the other Senator was also of the same opinion, but for a different reason—all the Cabinet members, the members of the legislature, and so forth; and we, sticking with our party, carried our State, but I want to say to my friends we did that notwithstanding the fact that we were not in any sense for the civil-rights plank nor for the Taft-Hartley repeal plank, and we made that very clear in every community in our State. We could not have carried the State without taking that position.

Senator HUMPHREY. Do you think you could have carried it with Thurmond?

Senator HOLLAND. We didn't want Thurmond.

Senator HUMPHREY. I ask you, do you think you could have carried it with him?

Chairman GRANIK. May I take another question?

Question. Senator HOLLAND, do you support and advocate a voluntary Fair Employment Practices Commission law for your State? Senator GRAHAM, of North Carolina, has recently come out for a voluntary FEPC.

Senator HOLLAND. I don't understand that Senator GRAHAM is suggesting that at all for North Carolina. I understand that he is suggesting it for the Nation. There are ample numbers of set-ups here which could be approved by the South wholeheartedly by way of conciliation and by way of adjustment. One of our distinguished southern House Members from Arkansas has suggested a department in the Labor Department for that purpose alone, free from compulsion; but you can't ram this kind of thing in America down the throats of the great majority of the States of the Nation when 3 to 1 of them are against it at this time and when their people back them up in that position.

Chairman GRANIK. Senator HUMPHREY?

Senator HUMPHREY. I want to say I am happy my friend from Florida believes in FEPC. He just isn't quite sure whether he wants it sugar-coated or whether we wants it chocolate-coated. He says he believes in fair-employment practices——

Senator HOLLAND. He hasn't said anything of the kind, Mr. Moderator. He has said that he is perfectly willing to have a division of the Department of Labor set up to study this question——

Senator HUMPHREY. Oh; to study it.

Senator HOLLAND. To conciliate in this field, but without any power of compulsion whatsoever, because he believes those powers of compulsion are foreign to and incompatible with the American system of law.

Senator HUMPHREY. May I point out what Daniel Webster once said about a law without a penalty. He said it is nothing more nor less than an expression of good advice. It was a pretty great American who made that statement.

I repeat that in FEPC, as was testified to before the House Committee by every single officer—I want my friend from Florida to contest this, if he can. Every single officer of any Fair Employment Practices Commission, local or State, anywhere in the United States, who testified on the House bill, H. R. 4453, said that it should have compulsory measure within it. To be sure, which has not been brought out here, we emphasize adjudication, conciliation, education, mediation; and in the 2,000 complaints which have been brought to the attention of Fair Employment Practices Commissions in the United States today, not one has had to use compulsion in order to get compliance.

Senator HOLLAND. I was glad that point was brought out, because that shows perfectly clearly that the advocates of this bill are afraid to put it in court; they are afraid of its unconstitutionality, and they realize perfectly well also that it cannot work except in a State where it is approved by the people of the State. I want to recall to your mind also that we had it work in a situation of heavy employment instead of unemployment and depression. So there hasn't been a fair trial run, and there hasn't been an attempt at a run in a State that doesn't have a feeling of the majority of the people for it.

Chairman GRANIK. We wanted to take some more questions, but we have time only for summaries. Senator HUMPHREY, your summary, please.

Senator HUMPHREY. My summary is simply that it is thoroughly within the American tradition to guarantee to every American not only his political rights, but his right for economic opportunity. The fair employment practices bill that is before the Congress is one that is based upon the principle of education, adjudication, mediation, and conciliation, and it carries with it, as all effective American law does, penalties for that recalcitrant antisocial minority which will not abide by the decision of the majority.

I point out that 50,000,000 people already in this country are covered by fair employment practices legislation. I also point out that the major cities of the Nation, where the employment problems are acute, where there are plenty of tensions because of racial groups, have made FEPC legislation work. I further point out that all responsible groups in this Nation that represent the religious life of America and the political life of America are working in behalf of fair employment practices legislation.

Chairman GRANIK. I am sorry, Senator HUMPHREY, your time is up. Senator HOLLAND, your summary, please.

Senator HOLLAND. I point out that three to one of the States in the Nation don't want this, that 100,000,000 of the 150,000,000 people of the Nation have shown rather clearly that they do not want it, that the system is incompatible with our American system, and that we can't adopt it without doing great violence to the Constitution.

I point out also that insofar as the South is concerned, it has even graver doubts about this than the other phases of the controversy, known as civil rights, because of the attack on segregation and the effort for social equality, which is a part of this and which has demonstrated itself on the part of two of the outstanding leaders of the Nation within the last few months.

Chairman GRANIK. Thank you very much, Senator HOLLAND and Senator HUMPHREY.

Radio Address of Hon. John S. Wood, of Georgia

EXTENSION OF REMARKS

OF

HON. W. M. (DON) WHEELER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. WHEELER. Mr. Speaker, under leave to extend my remarks I am including an address recently delivered by our colleague, the Honorable JOHN S. WOOD, of Georgia.

I cannot too strongly urge the membership of this House to read the following speech for it is on a timely subject and poses a serious question which this House must answer in the not too distant future.

Mr. WOOD's speech follows:

Tonight I want to talk with you about the tremendous monopoly power that is now possessed by the great Nation-wide labor unions and that is, with increasing frequency, exercised by them in a manner that imperils the very health and safety of our Nation. We can and should meet squarely the issue raised by this union power. We will be playing with fire if we temporize on this issue any longer.

Let's consider for a moment the principles that are involved. In America we have always had an inborn fear of power, whether it be Government power or the power of private groups. Our constitutional system, that we first learned about in grade school, was designed so as to dilute Government power and to prevent too great a concentration of such power in any one Government entity. It was because of this inborn fear of power that the founders of our country, in creating the Federal Government, saved important powers of government to the States and to local subdivisions. It was because of this inborn fear of power that they provided for the separation of the legislative, executive, and judicial branches of Government and made each serve as a check on the other.

About a hundred years after the adoption of our Constitution, a new kind of power began to assert itself in the United States—a kind of power that unless checked would have completely destroyed freedom of opportunity in America and would have been able to dictate to the Government itself the terms on which it should govern. This new kind of power was the power of business monopoly.

In meeting the issue raised by this new power of business monopolies, Congress was faced with three possible alternatives:

1. It could ignore the power and let it overrun us.

2. It could permit the power itself to continue in existence and merely seek to control its exercise.

3. It could break up the power and prevent its resurgence.

We can be eternally thankful that Congress chose the last of these alternatives, and in our antitrust laws made the existence of monopolies unlawful and provided for their dismemberment.

Union monopoly power did not arise as an important force until after the enactment of the Wagner Act in 1935, and it was not until the war period a few years ago when it began actually to assert itself to an alarming extent. And it was the Government itself that nurtured the growth and concentration of union power. During the war the National War Labor Board developed the practice of making pattern determinations in labor disputes. These pattern determinations would cover all of the employees in a given industry, no matter how widely scattered throughout the country that industry might be, or how different the conditions affecting the various units in the industry. As a result of these industry pattern determinations of the National War Labor Board, the great Nation-wide unions began to insist after the war that employers bargain with the national union on an industry-wide basis, rather than with the local unions on an individual employer basis. The effects of such industry-wide bargaining became immediately apparent. When all of the employers in a given industry could not or would not accede to the union demands, the union would strike the whole industry at one and the same time. We can still recall vividly the serious Nation-wide coal strike that took place while the war itself was going on. And we can also still vividly recall the strike of the engineers on all of the Nation's railroads shortly after the termination of hostilities, but while the war emergency was still very acute.

Because of the danger to the national economy, and to the health and safety of the Nation, that resulted from industry-wide strikes in vital industries, Congress in the Taft-Hartley Act sought to give the public a means of protecting itself. In that act Congress authorized the President, whenever he should find that a Nation-wide strike in a vital industry threatened to jeopardize the Nation's health or safety, to apply to the courts for a court order stopping the strike for a period of 80 days.

The Taft-Hartley Act has been the law of the land for less than 3 years. And yet during this short period the President has invoked his authority under the act on no less than seven occasions. Let me emphasize this—on seven occasions since the early summer of 1947 the President has found that union monopoly power was threatening the health and safety of our Nation. And this does not take account of the serious Nation-wide steel strike last fall.

The last Nation-wide strike in a vital industry is still fresh in our minds. Through the dictatorial power of one man—John L. Lewis—the country was brought to the very brink of disaster. Because of this one man our courts were rendered powerless to enforce their decrees, and the President was compelled to ask Congress to give him authority to seize, requisition, and operate private property in peacetime in order to forestall economic collapse.

Our narrow escape from complete national paralysis as a result of this coal strike should give us pause—should make us reexamine whether the provisions that were devised in the Taft-Hartley Act to deal with emergencies caused by union monopoly are adequate. It is essential that we now take another look.

We are today facing precisely the same three alternatives that were before the Congress in the latter part of the last century when our country was threatened by business monopolies:

1. Congress can ignore the monopoly power of labor unions, and let that power overrun us and bring the Nation to its knees. There are those who call themselves liberals who seem to want this alternative.

2. Congress can permit the monopoly power of labor unions to continue in existence and merely seek to control the exercise of that power when it threatens great national emergencies. This aiternative was the one that was chosen in the Taft-Hartley Act. It was a logical one to choose when the Taft-Hartley Act was under consideration in the Congress, for legislative bodies are reluctant to take more than one step at a time. But our experience under the national emergency provisions of the Taft-Hartley Act in the short 3 years the act has been on our statute books has taught us that we cannot effectively control the exercise of monopoly power. For when we permit monopoly power to continue in existence, it becomes so vast that it can make a mockery of whatever controls we devise, just as John L. Lewis made a mockery of the solemn decree of the court in the recent coal strike.

3. As the third alternative, Congress can break up the monopoly, and return the real control of labor unions to the American working men and women in the various communities throughout the United States who are union members. I earnestly believe that this is what we must do—and do soon—if we are to preserve America as the land of the free.

I have just this week introduced in the House of Representatives a bill that will accomplish this, and I want to discuss with you for a moment the provisions of that bill.

My bill would make it impossible for a labor organization to represent for collective bargaining purposes the employees of more than one large employer. And it would make it impossible for labor organizations representing the employees of different employers to conspire together with respect to their bargaining proposals or arrangements. Similarly it would make it unlawful for two or more employers to conspire together with respect to their bargaining proposals or arrangements.

I recognize very well that in the case of the small employer, the employees may be too few in number to have a separate labor organization, and for this reason the bill does permit labor organizations to deal with any number of small employers, provided the labor organization does not seek to represent more than 10,000 employees altogether.

If this bill should become law, labor unions would again flourish under local employee control, rather than being dominated by national or international labor organizations in which real control by the men and women who work is diluted to the vanishing point. And, since the collective bargaining with respect to every employer would be entirely independent of the collective bargaining in respect to every other employer, the likelihood of crippling industry-wide strikes in vital industries at one and the same time would virtually disappear.

The bill that I have introduced does not embody an idea that is original with me. The bill contains substantially the same provisions that were contained in the Taft-Hartley bill in 1947 as that bill passed the House of Representatives by an overwhelming majority—the provisions outlawing industry-wide bargaining. Unfortunately, the House provisions in this respect were rejected by the Senate, and thus were not included in the Taft-Hartley Act itself. But these very same provisions only failed of adoption in the Senate by one vote.

We cannot temporize with this problem any longer. We must frankly recognize that as long as we countenance industry-wide bargaining we shall be plagued year in and year out by industry-wide strikes that will prostrate the Nation's economy. Let's outlaw this pernicious practice now, and make it possible for the American working men and women who are union members to have a real say in the bargaining arrangements with their employers.

The Washington Dope Habit

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald:

THE WASHINGTON DOPE HABIT

Some dope addicts acquired their evil habit after having had the narcotic administered to them during the course of an illness. The victim continued to use the drug long after the disappearance of the need for it. It is the same with government.

For example, there is the Government support of farm prices. It was introduced during the course of the depression, when wheat fell to 40 cents, corn to a quarter, cotton to 3 cents a pound, and butter to 18 cents. There was no expectation that the Government would continue to hoist prices after wheat got back to, say, a dollar a bushel and other commodities sold at corresponding levels. But wheat now sells for $2.25, corn for $1.38, cotton for 32½ cents, and butter for 59 cents. Yet the Government goes right on using the farm-depression narcotic.

Or take the wages-and-hours law, of which the provisions relating to hours were the important part. It was directed toward sharing work when there were not enough jobs for all the carpenters, bricklayers, painters, and other skilled and unskilled workers. It, of course, created no new work. It simply encouraged large employers to use more people in doing it. This was done by requiring employers to pay penalty rates above a stated number of hours.

CONDITIONS NOW EXACT OPPOSITE

Once unemployment ended, the treatment for unemployment should have been stopped, too. But nothing of the sort took place. Throughout the war and the postwar boom, when the need was for more work from everybody, the Government went right on enforcing the law to penalize overtime.

There is the Reconstruction Finance Corporation. It was set up in the Hoover administration to make loans on good security to banks, insurance companies, railroads, farmers, industrial concerns, and State and local governments. It was developed to cope with a drastic deflation. It provided credit sources to sound borrowers who would readily have found lenders in ordinary times. It was an agent of inflation or, as F. D. R. said, "reflation."

The conditions which now exist are the exact opposite of those which the RFC was created to cope with. The country is in the midst of a vast inflation. There is an excess of credit. But the RFC goes right on administering the depression narcotic. Money is now so plentiful RFC has to take wild risks to compete with private capital sources. One of its postwar projects was the Lustron corporation, which was given $37,500,000. The enterprise has already defaulted on $22,000,000 of its obligations, and Carl Strandlund, the head of Lustron, says that RFC will be lucky if it gets 5 cents on the dollar.

Then there is rent control. It has continued for 8 years. Tenants were given the right to stay in the quarters which they occupied without increase in the amount that they paid landlords. The justification for rent control was that a war was on, and building materials and building labor were restricted for use in the production of things essential for the winning of the war. But the war ended 5 years ago.

Materials and labor are freely available for building purposes. Anyone who wants to build a house can do so. The Government is even stimulating home construction by the use of another narcotic, cheap credit. Yet the Government continues to enforce rent control, which was put into effect when home construction was discouraged or forbidden.

H. T. NOT INTERESTED IN ANY CUT-BACKS

Deficit financing is the fifth depression measure which comes readily to mind. Under the New Deal, after F. D. R. had been in office for a few months it became the declared policy of the Government to spend more than its income. The reasoning was that the Government's deficit would compensate for reduced spending. In periods of boom the Government was to spend less than its income. By means of a deficit in times of contraction and a surplus in times of expansion, stability was to be attained. There was no hesitancy about maintaining the deficit as a cure for the depression, but now we are in a boom. Yet the deficit this year will amount to $5,000,000,000, which was more depression medicine than the country ever was given during the depression.

There does not exist in Government the strength of purpose to stop a treatment long after the passing of the need which called forth its use. The flexibility of action which Government planners have in mind is not possible with an officialdom which keeps itself in power by the favors it can do, and the jobs it can provide.

Government agencies are sometimes transferred but, as Senator Borah once pointed out, are never abolished. The weakness in the Hoover report is that economy moves must originate with President Truman, who is no more disposed toward that than toward cutting his salary back to what it was in F. D. R.'s time.

Postal Penny Pinching

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the

following editorial from the Boston Traveler of April 20, 1950:

POSTAL PENNY PINCHING

We feel like screaming: How can people be so stupid?

Costs have been rising in the Post Office Department as they have everywhere else. So what? That's no reason to rush off the deep end.

Here we have a fiscal problem which should be solved through fiscal means. Either the rates must be raised as the Postmaster General proposed, or some form of subsidy must be provided. The third absolutely unbelievable alternative—but the one chosen by the Postmaster—is to smash the postal service to smithereens.

Over the years the civilized world has come to take postal service for granted. No one remembers that the daily mail is the backbone of any communications system without which no nation could possibly survive. Not that the United States has ever been famous for really good postal service anyway. Several European capitals, notably London, far outshine us in that field. But suddenly, we who pride ourselves on our modernity have reverted to colonial customs. Cutting back mail service is like wiring a skyscraper with the latest devices and then saying you can't afford the bulbs. Demented!

If the slash sticks, all mail, including first class, will most likely be delayed 24 hours. What this will mean to business, to Government, to ordinary human relations is incalculable.

This type of administrative mismanagement confirms the worst fears of the "agins." We cannot allocate the blame for this mess with any accuracy. Both Congress and the Post Office Department appear culpable with Congress well in the lead. But if government—meaning the combined legislative and executive—can't even manage the Post Office Department decently, why on earth should anybody believe it could manage anything like a general health insurance program? Let the Democrats who voted against postal-rate rises or subsidies think that over.

The Republicans are always harping on efficiency. This curtailment can't help but slow the whole tempo of American economic life. Where were they on voting day?

The hue and cry has started locally already. We hope it mounts to a deafening crescendo. The cut-back must be rescinded before it has time to do real harm.

The Post Office is easy, gentlemen. How could you have muffed it so colossally?

When Congress Is a City Council

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks, I wish to include an editorial from the St. Louis Post-Dispatch, Tuesday, March 21, 1950:

WHEN CONGRESS IS A CITY COUNCIL

As legislative bodies go, the National House of Representatives is notoriously inefficient. One reason is because its 435 Members must, at frequent intervals, stop their consideration of domestic and international issues and turn themselves into a city council. These are the days when they sit as aldermen for the District of Columbia.

At such time they argue with one another over daylight saving time for the National Capital and other purely local matters. According to the Washington Post, one civic organization in Washington has computed that Congressmen spent 3,000 hours last year on city-hall questions.

This makes no part of sense. A hangover of a time long since departed, when the District of Columbia was small and its business could be easily transacted, this city-council function should be turned over to a suitable administrative body. The transfer will be made belatedly if Congress will only approve the home rule bill for Washington.

But Congress cannot approve the bill until the measure is pried out of committee. Only 40-odd names are needed on the House petition to take the question from the committee and put it on the floor for action on its merits.

Are there any Missouri or Illinois Representatives who have not yet signed the petition? This is a chance for them to strike a sound lick for responsible government in Washington—and to free themselves for more pressing issues.

Our Domestic Mining Industry—It Must Be Protected If It Is To Be Preserved—Address by Paul B. Jessup

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. WHITE of Idaho. Mr. Speaker, our last financial depression started with the loss of markets for agricultural products which soon extended to all branches of industry in this country. If we are to guard against future depression we must safeguard our domestic market for the products of our mines. There is submitted herewith a very interesting presentation of the problem affecting our mining industry by Mr. Paul B. Jessup, a prominent mine taxation expert of Wallace, Idaho:

TARIFF ON BASE METALS

INTRODUCTORY

For the benefit of those of you who might be as uninformed on the subject of tariffs as I was before the preparation of this paper, let me say that the definition of this work is simplicity personified. Tariffs are merely duties imposed upon the importation of goods by the government of the country where imported. The purpose of these duties may be simply to raise revenue for the imposing government or may be for the purpose of protecting its industries against foreign competition.

When one delves into the economic justification of protective tariffs he is treading upon more difficult ground. The arguments between the "free traders" and the "protectionists" have raged for centuries in the history of world commerce. In our own country they provided the distinguishing characteristic between our two principal political parties for a number of years.

To me the word "free-trade" has a curious fascination. It has all the earmarks of getting something for nothing, a utopian idea which appeals to many of us. Upon interrogating others on this subject I find a very anomalous situation to exist. I find that practically everyone in business is mesmerized by the word "free-trade" and thinks it a wonderful idea, except as it might deleteriously affect his own business. If there is any danger from this latter source he is a protectionist. This doesn't add up from a logical viewpoint, as in the aggregate it makes everyone free traders and protectionists alike, which self-evidently is a mutually inconsistent position.

Partial attempts have been made to reconcile these inconsistent positions through a device known as reciprocal-trade agreements. I am not going to complicate my subject or unduly prolong this discussion by going into this phase of the problem. Suffice it to say that reciprocal-trade agreements are merely an extension of the age-old practice of "you scratch my back and I'll scratch yours."

HISTORY OF TARIFFS

It might be well at this point to digress for a moment and briefly summarize the history of tariffs, particularly as applied to the two leading commercial nations of the world, England and the United States.

The history of tariffs in England discloses that during the period England was building up its industrial might it adopted a protectionist tariff attitude. When it reached its industrial peak Mother England was a free trader and profited materially by the latter policy. The United States has to some extent followed the same path. On the whole we were highly protectionist during the period we were building up our own industrial greatness. In recent years we have been leaning more and more toward free trade. I realize that the Democratic Party historically stands for free trade and is responsible for this trend. However, the fact remains, this has been the recent tendency in the United States.

THE PRESENT ZINC TARIFF SITUATION

The present tariff on zinc is 75 cents per pound. I can assure you that this is an extremely important figure. In fact, if it is not changed, it ultimately can mean the ruination of the zinc-mining industry in this country. If you do not believe this, your attention is directed to the fact that the present tariff on lead is 1.06 cents per pound. I do not need to tell you what effect this figure has had on our leading mining industry in the past few months.

The present tariff on zinc amounts to approximately 7 percent of the domestic price for this metal. In the two decades before the advent of World War II, the percentage of the tariff on zinc to the domestic price of this metal was greatly in excess of the existing figure. This naturally accorded the zinc miner considerably more protection than he now enjoys.

SHOULD WE BE FREE-TRADERS OR PROTECTIONISTS?

This question is more of theoretical interest than it is of practical significance.

Until we reach the "Buck Rogers" stage of a world state nations will adopt in whole or in part whatever of these conflicting philosophies that best suit their national interest.

Free trade exists among the various States of the United States because our Federal Constitution requires it. Unless human nature undergoes a radical change there will be no international free trade unless you have international government, which is an unlikely prospect in the immediate future.

WHEN ARE PROTECTIVE TARIFFS ECONOMICALLY JUSTIFIED?

A rabid free trader would accuse me of begging the question by assuming that any protective tariff is economically justifiable. However, it should be apparent that they are justifiable under certain circumstances in the present state of world affairs. Stated in another manner the question could be—when and to what extent should a government's tariff policy be protectionist? The answer would appear quite simple. It should be protectionist when and to the extent its national welfare demands it. The next question should be an obvious one. Does our national welfare demand that our

base metal mining be accorded tariff protection? It should be elemental to any thinking person that every possible protection, tariff and otherwise, should be given our entire mineral industry, whose products are essential to our economy both in peacetime and wartime.

PROTECTION IN THE EVENT OF WAR

The most rabid free trader would be forced to admit that base metals in ample quantity are essential to successfully wage a modern war. However, he may overlook the important fact that any weakness or deficiency in this respect may be the deciding factor in the decision of a possible aggressor to commence war against us. With this in mind it would be an invitation to national suicide to ever allow ourselves to get into a predicament where we are not assured of an adequate supply of base metals at all times.

Our free-trader friend might say that in the event of war we are adequately protected by the national stock pile of base metals plus the available domestic production. We might agree with him if he could accurately predict the duration of any such conflict and the amount of base metals necessary to wage it. However, we know from experience that any such prediction would be impossible. He might also say we can import whatever base metals we might need to supplement the national stock pile and our domestic production. This again may be wishful thinking. It assumes that foreign countries which may have the supply of such metals are both willing and able to transport the same to this country. For obvious reasons these assumptions may all be erroneous, and even if they materialized we might be using shipping space which could be used for other purposes. This could unduly prolong or lose the war for us. We cannot count on being as fortunate as we were in the last war with respect to the importation of base metals.

Consequently, our cheapest insurance against aggression is to make sure that we have an adequate supply of base metals within our borders to meet any emergency. The only way this can be accomplished is to supplement the national stock pile by a healthy and productive base metal-mining industry. We certainly cannot rely upon any source of such metals beyond the continental limits of North America, and we cannot be absolutely assured of this.

The importance of zinc mining in World War II can perhaps best be illustrated by the fact that the United States Government actually furloughed soldiers from the Army to go to work in the zinc mines to relieve the labor shortage created there as a result of drafting the young miners into the service. In the Coeur d'Alene district alone approximately 1,000 soldiers were furloughed for this purpose.

PROTECTION TO OUR DOMESTIC ECONOMY IN PEACETIME

Our free trader may be forced to admit his arguments against a protective tariff are not persuasive where a threat of war exists. However, he will insist that we are now in a peacetime economy where no threat of war exists, and the protective tariff is economically unjustifiable in that it causes artificially high prices to consumers and is deleterious to the recovery of world trade.

From a long-range standpoint these arguments are fallacious even assuming we could safely permit our domestic mining industry to close down because cheaper foreign imports were adequate to supply our domestic needs.

It is to the best interest of both the manufacturer and consumer in this country to have a healthy and productive domestic base metal-mining industry during peacetime. The United States proportion of world production of base metals is relatively large. The following approximated figures for 1948 are of interest. The figures on world production are more in the nature of a guess because no statistical information is available from the countries behind the iron curtain and Japan. Nor do the sources in which foreign production was secured indicate whether or not it includes secondary metal.

Year 1948	Lead	Zinc	Copper	Total
	Tons	*Tons*	*Tons*	*Tons*
World production	1,841,000	1,943,000	2,328,000	6,112,000
United States production	865,000	850,000	986,000	2,701,000
United States consumption	1,129,000	1,175,000	1,344,000	3,648,000
	Percent	*Percent*	*Percent*	*Percent*
Percentage of United States production to world production	46.99	43.75	42.35	44.19
Percentage of United States consumption to world production	61.33	60.47	57.75	59.69
Percentage of United States consumption to United States production	130.52	138.24	136.31	135.06

It should be evident from the above tabulation that the United States production of base metals is a substantial contributing factor in keeping their price at a relatively low level. It by the same token provides the domestic manufacturer with a substantial source of his raw materials. If this production is cut off or materially curtailed the results are obvious. The manufacturer's source of supply would be impaired and the economic law of supply and demand would raise the price of the end product in the hands of the consumer. This condition could be greatly aggravated by the operation of foreign cartels if such a situation were ever allowed to come about. It could result in a severe dislocation of our domestic economy in peacetime which would be fearful to contemplate.

THE CASE OF THE LEAD MINER

We all know what has happened to lead mining, the companion of zinc mining. As a result of the low tariff on this metal, the United States has become the dumping ground for foreign countries, who, as a result of currency devaluation and the desire for dollar exchange, are shipping this metal to us. This has naturally resulted in a drastic decline in the domestic price for lead, and has caused the curtailment and shut downs of numerous lead mines in the United States. Ironically enough, our contribution of American taxpayers' dollars has helped bring this situation about. The advantage gained by foreign producers over domestic miners as a result of cheap labor, high-grade ore deposits, a low tariff, and Marshall plan assistance is bad enough without its being aggravated by currency devaluation.

We must bear in mind that what has happened to lead, can under certain circumstances likewise happen to zinc.

In view of what has occurred to our domestic lead mining we have no grounds for complacency. If this trend continues, it can prostrate our base metal mining in the United States. None of us would be foolish enough to allow our fire insurance to lapse on our home which was being endangered by a forest fire. Are we foolish enough to allow our best insurance against aggression to lapse by allowing our base metal mining industry to go to pot because of inadequate tariff protection?

Our national preparedness policy would hardly seem consistent. We are spending billions of dollars for national defense and are paying little or no attention to the condition of a basic industry, which, if not in a healthy condition in the event of a war, could mean the failure of all of our preparedness efforts.

ILLUSTRATED EFFECT ON MINING OPERATIONS

In support of the contention that it can happen here let us examine what occurs when metal prices sharply decline during a period when labor and material costs maintain a high level.

If the squeeze really hurts, the mine operator will discontinue mining areas where the grade of his ore will not carry the cost of extraction. If possible he will mine the better grade ore in the mine and quite often mine narrower widths to attain a higher grade. Along with this upgrading process he will endeavor to cut costs and increase labor efficiency. However, lower costs are difficult to attain when decreased volume of production results from constricted mining operations. Needless to say, only necessary development work would be carried on if he can make both ends meet. Exploration would come to a halt. If these methods fail he will try to ascertain whether his operating losses are greater than maintenance expenses on a shut-down basis. If they are he would shut the property down.

If enough mines are affected in this manner, the bind is then placed upon the smelters or reduction plants, which would have lost their source of raw material to process by the mine shut-downs. Ultimately the point is reached where it becomes economically unfeasible for the smelter to operate and it shuts down. The economic dislocations in the local communities affected by these shut-downs are obvious. With the shut-down of the smelter, some manufacturer or fabricator loses his source of supply. If he cannot secure his raw materials elsewhere or provide substitutes, it is only a matter of time before he likewise is forced to shut down. If this is carried to its logical extreme the end results of such a chain reaction are evident.

In this connection the free trader will say that before this extreme is reached the high price for metals will cause the mines to reopen and the domestic supply of metal brought into balance. To a certain extent this would be true. However, there are some important consequences that shouldn't be overlooked even if only our peacetime economy were at stake. Ore remnants in the high-graded mines would be irretrievably lost. Many mines once closed never reopen because underground conditions make it a staggering undertaking. In any event, underground production cannot commence like turning on water from a faucet. In the process what has been gained? The advantage of the temporary cheap metal to the manufacturer and the ensuing low prices to the consumer have been lost by the offsetting high prices resulting from domestic mining curtailments. Economic dislocations, unemployment, loss of skilled personnel, technical and otherwise, has resulted. Was the price paid for free trade worth its cost? In my opinion the arguments against a protective tariff for base metals are insignificant in comparison with those in favor of it.

CONCLUSIONS AND POSSIBLE REMEDIES

This paper is no doubt subject to the criticism of oversimplification. Time does not permit going into such ramifications as markets, substitute products, etc. However, one conclusion can be drawn which I believe is basically sound, namely, base metal mining in this country for our own national preservation must be protected, fostered, and encouraged.

Some suggested remedies to accomplish this objective are hereinafter outlined. There are no doubt others that are equally effective. However, the ones enumerated will certainly go a long way toward the solution of the problem.

1. Adequate protective tariffs should be put into effect immediately. The amount of the tariffs should be sufficient to accomplish the purpose desired. We know that existing tariffs are too low. The advantage of tariff protection lies in its uniform application. In this connection the sliding scale or graduated tariff advocated by Felix Wormser would appear to have a great deal of merit.

2. All restraints upon incentives to engage in metal mining, development and exploration should be removed, such as restrictive tax policies, restrictive public land policies and restrictive mine financing policies. The restraints mentioned are merely illustrative and are not intended to be exclusive.

3. If the enactment of adequate protective tariffs and the removal of restraints upon incentives to mineral production and exploration do not accomplish this objective, direct governmental subsidization of metal mining should be considered. The latter policy should only be adopted as a last resort after all other reasonable means have failed to provide adequate protection for our future national welfare.

4. Congress and the administration should be impressed with the importance of the problem from the standpoint of our national security, the welfare of our domestic economy, and the necessity of providing relief before it is too late.

Respectfully submitted.

PAUL B. JESSUP,
Vice President, Day Mines, Inc.

McCarthy's New Look

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial from the Washington News as of April 22:

MCCARTHY'S NEW LOOK

It has seemed to some of us that Senator MCCARTHY was supporting his charges of Communist influences in the State Department with more noise than evidence. But it also has been apparent that a surprisingly strong segment of public opinion was rallying to his support.

Was the Wisconsin Republican beating the Communists at their own game, simply by outshouting them? Or was he the coincidental beneficiary of a ground swell of public resentment against official indifference to a very real menace to national security?

Whatever the explanation, we are convinced that Senator MCCARTHY himself is a factor to be reckoned with since hearing him present his case before the American Society of Newspaper Editors.

His speech was loaded with tough, pertinent questions which could not be laughed off. He was equally adept at answering questions directed at him. Asked why he hadn't named the Communists in the State Department, he said he would name names when the Department's files were opened to him, adding: "If those files proved that MCCARTHY was a liar, they would damn well be opened tomorrow."

That challenge may have to be answered the next time President Truman takes the stump. It's whistle-stop language.

The Senator cited the case of a man who allegedly was investigated 11 times by the State Department loyalty board before finally quitting and taking up active Communist Party work.

"Eleven times the President's loyalty review board lacked the guts to order the man fired," he charged.

That, too, is whistle-stop stuff.

There was the case of George Wheeler, now attacking American foreign policy from behind the iron curtain. Why was this man cleared for highly important State Department work in Europe? Why, indeed?

Dr. Philip C. Jessup has just been appointed head of the State Department's high policy board, which will map our cold war strategy.

"Why does he always join Communist fronts? Why not anti-Communist organizations?" Senator MCCARTHY asked, submitting photostatic evidence Dr. Jessup had been a member of five fronts. JOE MCCARTHY will not be alone in questioning this appointment, particularly when it is recalled that Dr. Jessup gave a character testimonial for Alger Hiss as lately as last year.

Whatever he may have lacked to support his charges at the outset, Senator MCCARTHY is picking up new ammunition and finding new targets as he goes along. It isn't all just old stuff, either, but material, reflecting upon persons now in Government service, which will question the integrity of the Government itself unless it is rebutted to the public's satisfaction.

Land of the Free

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SHAFER. Mr. Speaker, under leave to extend my remarks, I include the following editorial, Land of the Free, from the April 25 editions of the Washington Star:

LAND OF THE FREE

In this supposedly free country of ours, the case of Joe Dickmon is worth watching and remembering.

Dickmon is a Navy veteran with a wife and child to support. Coal mining is the only trade he knows, and he wanted to work 5 days a week instead of the three that had been decreed by John L. Lewis. So he called Mr. Lewis a dictator, and for that he was suspended for 6 months by his local union.

Nearly 3 months have gone by, and Dickmon hasn't had a day's work in all that time. Now, with his wife and child hungry, he has seen the light. He has apologized to his union and has asked to be permitted to work. He says that "common sense" tells him he was wrong in calling Lewis names.

We hear a great deal these days about the dignity of the human being. Our public men, our church leaders, our educators work themselves into a state of indignation when some poor soul is dragged before an iron-curtain court and forced to confess sins he never committed so that his family can eat and survive. But here in the United States, in this "free" land, a young man who has fought for his country can be forced to recant a wholly truthful statement as the price of being permitted to work, and it is passed by with a few paragraphs in the newspapers. If this can happen to Joe Dickmon, it can happen to any one of his fellow miners. Why is it that the articulate friends of the common man remain silent?

Mr. Lewis has expended a generous share of his king-sized vocabulary in denouncing the Taft-Hartley Act, which, if enforced, would have protected Joe Dickmon. Mr. Lewis says it is a slave-labor statute which has put the working man in chains. Many of our so-called liberals have joined in that phony outcry. But they can't think of anything to say about the case of Joe Dickmon.

Women and the Household Budget

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1950

Mr. SHAFER. Mr. Speaker, I dare say that most of the women of America today are concerned each week or each month with a household budget. They know only too well how hard it is to provide their families with the necessities and at least some of the pleasures of existence on the amount of money they have to spend. Even more than their husbands, or their fathers or brothers, they are budget-minded. They understand the necessity of living within the family income.

For this reason, and some others, I shall talk about the Federal budget and the Federal taxes which are its sole support. After all, the Federal budget in a very real sense is like a household budget, and just about the same rules of common sense in spending should apply.

The other reasons why I shall talk on the subject of Federal taxes and the Federal budget involve the fact that Federal taxation and Federal spending have a tremendous and very direct effect upon the status of household budgets, and hence upon the welfare of the housewives' husbands and children—as to nutrition and health, dental, and medical attendance, and other factors equally important.

We shall proceed on the assumption that the Federal budget and wasteful spending by the Government are just as important to the housewives as are their own household budgets.

Everyone knows that President Truman, in the 5 years he has been in office, has spent more than all of the Presidents preceding him since the beginning of the Republic. Everyone knows, or should know, too, that since the day Franklin D. Roosevelt entered the White House, the only years in which the Federal Budget was balanced were those in 1947 and 1948 when Republicans were in control of Congress. It was in those years, too, that the only downward revision in Federal taxes was made in nearly 20 years.

Now why is it so vitally important that the Federal Budget should be balanced, and that tax relief should be given to the people? How would budget balancing and tax relief react favorably on the household budgets of the Nation? The answers are not hard to understand.

When the Federal Government spends in any one year more than it takes in through taxes, as it did this year to the tune of more than $5,000,-

000,000, the Government has to borrow to the extent of the deficit. This is done by the issuance of Government bonds and short-term notes. Husbands, fathers, or brothers, and perhaps some of the housewives, buy a portion of these bonds; but only a comparatively small portion. The banks get most of them, because through operation of various governmental controls, they are forced to take them.

The banks do not just lay away these bonds, and forget them except when they collect the interest, as private investors often do. By law the banks are required to carry these bonds in their reserves. But all banks are permitted by law to make loans to businesses and individuals up to a certain percentage of their reserves. The banks want to accommodate their customers. Therefore, as their reserves grow, by reason of the bonds forced upon them by the Government, they loan more and more money to those who need the money and presumably will be able to pay it back with interest.

But the banks do not hand greenbacks or silver through the teller's window to business and individual borrowers. What they do is to give each borrower a credit on the bank's books—a credit on which he can draw just as if it were actual cash. This, then, comprises what is called credit currency. It is nothing but a series of marks on the books, but it is money just the same. As the amount of this credit currency increases, the currency is inflated, exactly the same as if the Government printed a lot more greenbacks.

Thus as deficit financing by the Government progresses, inflation progresses along with it. There are, in effect, more dollars competing for all the goods and services for sale within the country. Prices go up automatically. The buying power of the dollars in each household budget decreases. You have to spend more dollars to buy the food, clothing, medical attendance; everything families need to keep them healthy, happy and protected from the ills that beset us all.

This is the most direct way in which failure to balance the budget affects the household budgets; unless, of course, you consider that deficit financing tends to create the need for higher taxes, since the borrowed money must be paid back some time. The more you pay in taxes, the less you have to spend for the things your families need; and this fact supplies the reason why taxes should be reduced. The less taxes you pay, the larger your household budgets, and the more your families can have and enjoy.

A little earlier I referred to wasteful spending by the Federal Government. The current "squandermania" of the Democratic Fair Deal administration is the sole reason for this year's $5,000,000,000 deficit and the prospect of one perhaps twice as large next year. National defense has nothing to do with it; neither has foreign aid. This country could afford all that is needed for national defense and for assistance to foreign countries, without any deficit, if a little common sense were used in eliminating needless Federal employees and duplication of effort in the tremendous Federal bureaucracy. If, in other words, the Hoover Commission recommendations were honestly put into effect, instead of being twisted to gain political advantage.

Just let me give a few illustrations of what I am talking about in this respect. At present it costs the Federal Government $11.28 to issue a check, even though the check is for only $1. It costs, more often than not, at least twice this much to buy some article of office equipment which would cost perhaps 50 cents if one were to buy it in a retail stationery store. One Federal bureau was recently shown to have bought office supplies sufficient to last for more than 100 years. Somebody must have gotten paid off on that one, or I am mistaken.

All of this wastefulness is bad enough, as you will grant; but it cannot hold a candle to the things proposed in President Truman's so-called welfare-state legislative proposals. These include the Brannan plan, which intelligent farmers oppose; compulsory health insurance, which is just another name for socialized medicine; unemployment compensation so great that most industrial employees would find it almost as profitable to be unemployed as to work at a job; social security on the scale of the crackpot Townsend plan; all these, and many others.

Has it ever struck you, Mr. Speaker, that behind all these proposals, which are advanced under the pretense of a tender regard for social welfare, there may be motives of an entirely different nature? Has it ever entered your mind that perhaps they are the proposals of a profligate, power-mad gang of political freebooters, who would impose upon all of us exactly the same kind of socialism that has led England to the brink of ultimate disaster? Has it occurred to you that by doing so they hope to entrench themselves in political power so strongly that never again can they be dislodged?

If you have not thought on these things, it is time to do so now. Anyone who spends much time in Washington knows them to be true. The Fair Deal administration, in fact though not in name, is a socialistic administration. Its aim is to bring socialism to the United States. Socialism, as you all know, is a form of government under which the government owns everything; capital, land, factories, homes, and stores, industrial equipment, everything. Under so-called Fabian socialism, as practiced in England, socialization of all private property is carried out gradually. In England it is being done largely at the expense of American taxpayers, through ECA and Government loans. How do you like that?

All the hullabaloo by Republicans in Congress over the manifest intention of the Fair Dealers to impose socialism on the American people is something far more than just politics, as the Fair Dealers would have us believe. Republicans in Congress, and a large segment of the conservative southern Democrats, see plainly the technique being used by the Fair Dealers; they see it, and it frightens them. The socializing technique is not hard to understand, if one has been reading the newspapers and listening to the radio over the past few years.

This technique consists of two parts; first, to persuade the American people that the Federal Government can do better for them the things they hitherto have done for themselves, and second, to tax the American people to the point where they have so little left that they cannot live without Government help.

Everybody is familiar nowadays with the Fair Deal policy of playing off one minority group of the electorate against the others. We see subsidized housing for the few at the expense of the many; we see special favors for some segments of organized labor and severe prosecution in the courts of another; we see tremendoous loans to a few favored businessmen, and what amounts to persecution for others. And we see attempts to regiment the farmers under the guise of so-called production payments, which in the end could be nothing but a dole.

Who is not familiar with the whole rigmarole of subsidies, grants in aid, compensation for this, that, and the other, until one person in every seven today receives money from the Government; much of it money that was not earned and to which the recipient is not entitled. This is the technique by which the American people are being conditioned to believe that the bureaucrats know best, and to accept Government hand-outs as a right instead of as charity.

Most of us are accustomed to think of taxes in terms of the Federal levy on our incomes, both individual and corporate, and in terms of property taxes on our homes and places of business. But these taxes, staggeringly heavy as they are, comprise only a part of the load. As many of us have learned recently, there is a whole field of Federal taxation about which Americans know little. Concealed taxes, we have heard them called. We know of them, but I doubt if few of us know their true extent.

These taxes are almost entirely Federal excise taxes on goods and services. Some of them have existed for many years, and have proved themselves warranted and far from being a burden on the people. Among these are the import duties, called tariffs, which over the years, and have proved themselves and American workmen from cutthroat competition in the American market by cheap labor and its shoddy products from abroad.

But during the war a whole brood of special excise taxes, not only on luxuries, such as furs and jewelry, but on necessities and on necessary services, such as baby powder, women's handbags and luggage, and such as freight charges, passenger fares, telephone and telegraph messages. Republicans are fighting to have these wartime excise taxes repealed, and it looks now as if they have at least, in part, won their point. The New Dealers now hear the protests of the people and are willing to "give" a little.

Miscellaneous internal-revenue receipts for 1949, comprised mostly of excise taxes and excluding customs receipts, amounted to about $8,300,000,000. The American people paid this immense total. For the most part the payment was made in the prices of goods and services

bought. For example, when the housewife last bought a handbag, some baby powder, or made a long-distance call, they were not told that the price they paid included a 20 or 25 percent Federal tax. Thus the tax was concealed from them, the person who actually paid it, so that the dealer, or manufacturer, or the telephone company could pass it along to the Government.

Now this passing along of taxes, which ultimately fall upon the consumer, is another factor in the tremendous burden upon the household budgets. Possibly the householder has failed to consider it. Nevertheless it eats up nearly 12 percent of the family income. Every tax paid by anybody, from the point of production of raw materials, through all the channels of manufacture and distribution, is passed along to the ultimate consumer. This is true also of services, such as rail, highway, and air transportation, communications, and even amusements, such as the movies. The average family of four, with an annual income or take-home pay of $1,800, pays about $267 in hidden taxes each year.

This is true because taxes are a part of production costs of all goods—automobiles, food, clothing, and everything else—and a part also of the costs of rendering services. If those who provide the goods and render the services should fail to pass the taxes along, they soon would be out of business. Therefore it is true that all taxes, in the end, fall upon the individual incomes of the Nation.

Corporations necessarily are not taxpayers, but tax collectors. Or they are taxpayers only in the sense that taxes reduce drastically the dividends they can pay to stockholders. But stockholders are ultimate consumers and taxpayers, too. Nobody wins, except the Federal tax collector.

Here are some figures to illustrate what I mean when I say that hidden taxes, including wartime excises, put one of the biggest dents in the household budget.

When the housewife bought a new Easter bonnet, 150 taxes were included in the price; all of them small, but big in the aggregate. I can make this clear by pointing out that when a woman bought a 21-cent quart of milk yesterday or today, she paid 13 cents for milk and 8 cents in taxes. She paid 75 cents in taxes in the price of the 3-pound dollop of ground steak you bought for $2.25. When a person bought a package of cigarettes, he or she paid 11½ cents in hidden taxes. The ton of coal delivered last week carried in its price at least $5 in taxes. If a person bought a Ford car recently, the price included $700 in taxes.

It would seem to me, from all I have outlined here, that the housewife can be no longer in doubt concerning the importance to them personally, of the failure this year and probably next to balance the Federal Budget. They must realize how disastrous for them personally is the wild extravagance of the Democratic Fair Deal administration. They must understand the technique by which the socialistic Fair Dealers are seeking to harness them and their children forever to the chariot of a ruling bureaucracy, and perhaps in the end to that of a dictator.

The Socialists in Government are busy, Mr. Speaker, teaching us at every turn that we can and must depend upon the Federal Government—big government—for our daily needs. They are busy trying to pauperize us, and thus make us helpless, through excessive taxation. You read in the papers recently that President Truman said any reduction in excise taxes must be made up by an increase in corporate taxes. But corporate taxes are passed along to us, as ultimate consumers; so what is the difference, whether excises are eliminated, if we have to pay just as much anyway? Truman has been called High-Tax Harry with good reason.

Some Republicans in Congress have prepared a bill to limit the national debt to $257,000,000,000, down from the present statutory limit of $275,000,000,000. The debt now stands at $255,600,000,000. They hope thus eventually to put an end to the current "squandermania" of the Fair Deal Socialists of the administration and in Congress. Such a measure has no chance whatever of passage, unless and until people make themselves heard, with no uncertain voice. I think, indeed, such a measure has no chance unless and until a Republican Congress is elected.

A Proper Steel Inquiry

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. MACY. Mr. Speaker, under leave to extend my remarks, I insert in the CONGRESSIONAL RECORD an editorial which appeared in the Iron Age of April 6, 1950, written by Eugene J. Hardy:

THE FEDERAL VIEW—THIS WEEK IN WASHINGTON

Back in 1946 a war-weary Congress put its stamp of approval on the so-called Full Employment Act of 1946. That act, among other things, established the Senate-House Economic Committee, which was supposed to do away with partisanship in economics on Capitol Hill and to lift this most important facet of American life out of the political cockpit.

To say that the committee has failed in this objective is the understatement of the year. As a matter of fact, more bias, more prejudice, and more slanted thinking has come from the Democratic majority of this committee than has been seen around Washington since the days of the Temporary National Economic Committee.

Every now and then some Congressman proposes "an investigation to end all investigations." Such moves are a dime a dozen. Few of them are ever proposed with any other purpose than to gain publicity for the chairman of the investigating group.

Differing from the run-of-the-mill proposal, however, is a resolution (H. J. Res. 446) calling for a continuing study of the steel industry by a bipartisan commission. Its sponsor is Representative W. KINGSLAND MACY, Republican, New York, who is deadly serious about his proposal and says that its purpose is to "eliminate the multitudinous and overlapping investigations of the steel industry and provide the Congress with current, reliable information for its guidance in legislative matters."

This resolution came about as a result of the blueprint for a nationalized steel industry issued by the majority of the Joint Economic Committee, which is headed by Senator O'MAHONEY, Democrat, Wyoming, after that body held 4 days of hearings on last December's steel-price increases. Mr. MACY was alarmed at the biased implications of this document, particularly since his study of steel industry pricing practices during the "gray market" period in 1948 came up conclusions diametrically opposed to those reached by Senator O'MAHONEY and the Democratic members of the joint committee. The New Yorker has also studied the various reports emanating from a variety of congressional committees that have been probing the steel industry for several decades and was impressed at the wide divergence of views.

The bipartisan commission, Mr. MACY feels could do an effective job, largely because its chairman would not be a Member of Congress, but would be selected by the House Ways and Means Committee and the Senate Finance Committee. Two of the members would be appointed by the President of the Senate from the membership and the remaining two would be selected by the Speaker of the House also from the membership. One Member from each House would be from each of the two major political parties.

For the chairman's post, Mr. MACY envisages a man of the elder-statesman type, preferably with industrial and governmental experience, who can command the respect of both political parties.

The Commission would be empowered to hire experts and to draw on existing agencies of Government for staff personnel. In Mr. MACY's view, the members of the Commission would act as an administrative and interpretative body, evaluating for the Congress the information prepared by the staff.

In addition to conducting a continuing study of the steel industry the Commission would make special investigations, inquiries, and surveys relative to the steel industry as the Congress may see fit to request. In other words, the Commission would be sole congressional authority on matters relating to steel.

While the chances of approval for this resolution are slim during the present session of Congress, Mr. MACY is not going to let his proposal for a bipartisan Commission wither on the vine. He feels that by constantly keeping the issue alive and before the Congress, Senator O'MAHONEY and others who prejudge the facts might be a little more objective.

Still, there is some sentiment for studies and investigations being conducted along Canadian and British lines where the facts are developed in closed hearings without displaying the matter at hand in public before there is anything to go on. This was evidenced on the Senate floor last week during debate on the charges brought by Senator MCCARTHY, Republican, of Wisconsin, concerning Communists in the State Department.

Development of facts outside the political arena before reaching conclusions that inevitably have political significance is exactly what Mr. MACY wants to achieve. He is hoping for a single unbiased bipartisan source of information on steel which would halt the many conflicting reports that constantly flow from various congressional committees. Senator O'MAHONEY says that Government controls are needed, that the steel industry has

no regard for the public interest in fixing its policies, and that there is no competition in steel.

Still, by digging into reports on steel issued during the Eightieth and Eighty-first Congresses, "the steel subcommittee is opposed to the reimposition of wartime Government allocations and priorities upon the steel industry."

Subcommittee on questionable trade practices of House Public Works Committee, Eightieth Congress: After a 9-month investigation of steel "gray market," this group reported to Congress that "in spite of the rather general abuse leveled at the large steel producers of this country, they have, as a general over-all proposition, achieved excellent results from the standpoint of production and distribution." The committee found no evidence of disregard for the public in the industry's pricing policies.

Steel Subcommittee of Senate Small Business Committee, Eighty-first Congress: "The three classes of steel producers, integrated, semi-integrated, and nonintegrated, are in competition in the sale of finished steel and in many end products made from steel. When there are adequate supplies of pig iron, scrap, and raw steel the smaller producers can meet their powerful integrated competitors on a reasonably equal footing.

All of these committees conducted lengthy investigations before reaching their conclusions. Senator O'MAHONEY held 4 days of public hearings and announced his conclusions 5 weeks before the hearings opened. Could there be any better proof of the need for a Commission such as that proposed by Mr. MACY.

McNeil Island Penitentiary, Washington

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks, I include one of three stories dealing with the United States Penitentiary at McNeil Island in the State of Washington. This is the oldest Federal institution of its kind in the Nation. Mr. Ralph W. Cowden, the author of three stories concerning the Federal prison, tells of its founding and growth, and of the work done in attempting the rehabilitation of prisoners.

OLDEST FEDERAL PRISON ON MCNEIL ISLAND—PENITENTIARY SITE ACQUIRED IN 1870

(By Ralph W. Cowden)

McNeil Island was named by Captain Wilkes during his expedition of 1841 in honor of Capt. Henry McNeill, of the famous British steamer *Beaver*. Attempts were made to change the name, but it was restored in 1847, minus the one "l." Captain McNeill was a Yankee born in Boston in 1803.

After resisting the Hudson's Bay Company, in 1832, he sold his brig *Lama* to the company and entered its employ, where he rose to the rank of chief factor. On December 24, 1824, John Work, of the Hudson's Bay Company, wrote: "Embarked a little after 4 o'clock in the morning and camped at Sinoughton's, our guide's village, which is called Chilacoom."

One of the most famous pioneers was the first white resident of the island. Ezra Meeker staked a claim there just prior to his leaving in June 1853 to bring his wife and child from their first cabin home at what is now Kalama. After arriving at Steilacoom, he paddled the 3 miles to McNeil Island, but found no trace of his older brother, Oliver, nor of the cabin which was to have been built. He retraced his strokes to Steilacoom, found the boat which his brother had built, located their provisions, and took his family to McNeil Island.

Oliver, who had been working near Steilacoom, appeared, and they built a cabin 18 feet by 18 feet. It was only 7 feet in the highest place, as they ran out of logs, and a storm was expected. The cabin was located near the shore, in sight of Steilacoom, in the proximity of the present penitentiary shipyards. Norwich Man, an Indian, was one of their neighbors.

Meeker was something of a poet at heart, and the grandeur of the view from his cabin, with the sun rising from snow-hooded Mount Rainier, probably determined his location at McNeil. He had ample opportunity to select an ideal spot, as he and Oliver had spent several months touring the Puget Sound area with that in mind. For the greater part of a century, McNeil was the common overnight stopping-over point for travelers on the sound.

AIDED CARAVAN

In September 1854, the Meekers received word that his parental family were members of a caravan of immigrants in distress across the mountains. Ezra left his family under the watchful care of Dr. Webber who lived in Steilacoom and used his field glasses to check the cabin. Dr. Webber had an Indian woman make regular trips to check on the health and necessities of the family.

Meeker took the short-cut over Natchez Pass, and guided the desperate party back over what has become Washington's historical road No. 1. So McNeil Island is rightfully the terminus of this route. Many hazards were overcome on that famous journey. Wagons were lowered over sheer precipices after shooting precious cattle to obtain rawhide. Tunnels were excavated under huge fallen trees to let the wagons pass.

Ezra tried to convince his father to file a claim here, but was overruled, as the elder Meeker thought the soil was too light. He persuaded Ezra to settle some 4 miles from Fort Steilacoom. Ezra makes mention of his brother's claim to Anderson Island, but the only Meeker claims recorded in Olympia prior to statehood were:

Ezra and wife, Fern Hill, 1885.
Jacob R. and wife, Tacoma, 1855.
O. P. widow and heirs, Parkland, 1855.

Thus it appears that Ezra's claim on McNeil Island was never filed.

Steilacoom at that time was the largest city in Washington, and was the fur-trading and lumber center of Puget Sound, as well as the county seat of Pierce County. It was not uncommon to see ships of half a dozen nations moored in her harbors at one time. Capt. Lafalette Balch founded the town in 1850 by erecting a store and trading center. Settlers had lived in the area for a number of years despite protests from the Hudson's Bay Company, Nicholas DeLin built a barrel factory, a sawmill, a brewery, and a salmon-packing plant there between 1852 and 1854. Shipbuilding became a principal industry.

Balch was a member of the council in the first Territorial legislature, but was a poor politician. Plans for removing the capitol from Olympia to Steilacoom were discussed all during the session, but Balch felt so sure of his game that he did not press for vote before the recess. Mr. Denny says that a clear majority was in favor of it in both houses. Balch offended other members, and when the legislature reconvened, he had lost his majority. Another serious blow came to Steilacoom when the Northern Pacific Railway decided that its terminus should be in Tacoma, instead of the former city. Tacoma grew rapidly and the county seat moved there.

The first issue of the Steilacoom Republican, in 1857, announced the following then-prevailing prices: beef, fresh, 15 cents per pound; pork, 12½ cents; butter, 63 cents; coffee, 18½ cents; sugar, No. 1 China, 17 cents; No. 2, 15 cents; whisky, $1 to $2 per gallon; brandy, $2; lumber, $11 and $12; shingles, $6.

School district No. 51 was organized in 1888 and a part of the original building is still in use. Two terms of school were held in the Anderson residence just above Julian's store before the building on the school section was erected. (The plant and grounds had a recent face lifting and a new community house, including school, is now under construction.) A second school district, No. 103, was organized in 1905, and a junior high school was incorporated the following year.

TERRITORIAL JAIL

Congress made provision for the erection of a territorial jail, which was to become the first Federal penitentiary, by an act of January 22, 1867. In 1870 the agent of the attorney general delegated to choose the place for this penitentiary was compelled to journey via steamer to the Isthmus of Panama, traverse the treacherous jungles to the Pacific side and take a steamer to San Francisco. There he boarded another vessel which carried him to Portland, where he changed to a sternwheel river steamer for passage to what is now Kelso. From that point he traveled by stage to Olympia and thence to Fort Steilacoom via bateau, a flat-bottom boat of the period. Fort Steilacoom was then a thriving village and now is the site of the Western Washington Hospital.

The agent of the Attorney General, following his arrival, consulted with the Federal judges of the area, then holding court in Washington Territory, as to a proper place for the proposed penitentiary. Citizens of the Territory were appointed to select a suitable site. They worked to favor Steilacoom by locating there, but the claims of the Puget Sound Agricultural Company, a subsidiary of the Hudson's Bay Company, to all lands in that vicinity, had not been fully adjusted. A Mr. Gove, who was half owner of what is now Ketron Island, offered to sell his portion of that island to the United States for a nominal sum. It was deemed necessary that the entire island should be acquired, and the owner of the remaining acreage was brought into the negotiation. This owner, a lady living in California, demanded a sum for her half which was deemed exorbitant. Efforts to persuade her to take a lesser price for her holdings failed, and the negotiations fell through.

At this critical point came a settler from McNeil Island who offered to give the Attorney General's representative a tract of land, approximately 27 acres, which now is the site of the main buildings of this prison. Perhaps the search for an available island had been an onerous task and had exhausted the patience of the judges who were very busy officials in those days—in any event the offer was accepted and, to make the transfer binding, the sum of $100 was paid in exchange for the deed. The deed covering the site of the present penitentiary was registered in what was then known as New Tacoma, Pierce County, Washington Territory, on September 17, 1870, and conveyed 27.27 acres of land from James Emons Smith to the United States of America. This acreage constituted the entire penitentiary site until 1904 when additional land was acquired as well as easement of tidelands from the State of Washington.

In this connection it is interesting to note that what is now the site of the ball diamond (Babe Ruth Field), the laundry, powerhouse, cannery, and fire station, was an arm of the sound with a depth of approximately 11 feet

at low tide. This was filled in during the years of 1905–06 and added considerable acreage to the institution but deprived it of what might have developed into a perfected cove which would have been eminently suitable for docking facilities.

The contract to construct the first buildings was let to Issac Ellis of Olympia, in April 1873. His bid was for $37,800 and the contract called for the erection of a cell house of brick and stone with wood roof to contain 38 double cells; and an adjacent frame building which was to house the guard force consisting of two men, and an occasional woman prisoner. There were three at one period in the entire history of the institution. An enormous spring was one of the considerations that led to the choice of the site.

OREGONIAN FIRST PRISONER

There is a slight variance of opinion as to when the first prisoner was received. Records available show that prisoner No. 1 was a half-breed born at French Prairie, Oreg. He received a sentence of 20 months for selling liquor to the Indians and was admitted to the penitentiary on May 29, 1875. He was delivered by United States Marshal E. F. Kerney together with two other prisoners. During the remainder of that year only seven additional prisoners were received.

Many famous names in the legal annals of Washington Territory are to be found in the early record books of sentencing judges. Chief among them is that of Melvile W. Fuller, then United States circuit judge and later Chief Justice of the Supreme Court of the United States. The names of Judges Hoyt, Green, Wingard, Turner, and the famous (Hawkeye) Lewis occur with frequency. Their sentences were more often than otherwise severe, even as compared with modern sentences and the offender who sold liquor to the Indians was most severely dealt with. The majority of prisoners incarcerated in the penitentiary in the early days of its existence seemed to have been what was known as squaw men, mostly French half-breeds.

During the early days of the prison the officer in charge was the United States marshal for Washington Territory. Again many names appear which were famous in the annals of the early Territorial history. Among them are Charles Hopkins, the elder, and his son C. B. Hopkins. Tom Brown and James Drake were also early Federal peace officers in the Territory. During the term of United States Marshal Brown all fees were abolished and that official was placed on straight salary basis. Federal courts were held in various sections of Washington Territory at stated intervals and it was possible for the marshal to be in attendance at practically all of them. Frequent entries in the old record books show that the United States marshal not only appointed the guards for this penitentiary but delivered prisoners and witnesses for safekeeping.

Many colorful pages in the early history of Washington Territory are revealed in the old penitentiary records. The famous case of the sailing ship *Challenger* appears, in which the captain and two mates were accused of brutality to the crew. The record shows the admittance of the mates pending trial and of the crew as witnesses. Nothing is shown which would indicate that the mates and crew were kept separate but the record does show that one of the crew was later convicted of perjury. The captain was finally acquitted and the two mates received sentences of 5 years and 6 months and 4 years and 9 months, respectively. One of the mates was later unconditionally pardoned by President Cleveland.

EARLY DAY STEAMERS

Prisoners were transferred to and from Port Townsend, Olympia, Seattle, and New Tacoma via sternwheel steamers, many of them the property of the Oregon Steam Navigation Co. Many of these boats, famous in the history of Puget Sound navigation, appear in the records as making McNeil Island a regular port of call. Some of them were the *Fair Messenger, Multnomah, George W. Hayward, Zephyr,* and *Rip Van Winkle.* In this connection Capt. Neil Henly recounts the fact that many times it was impossible to land prisoners from the steamers by small boat and that the marshal in charge was compelled to take them to Olympia and make the return trip to McNeil. Once on the island the same difficulty was often experienced in leaving; the marshal being compelled to remain as guest of the guards for several days at a time when the sound was particularly rough. Captain Henly very nearly lost his life in one attempt to reach Steilacoom in an open boat during the period.

In classifying new arrivals at the penitentiary many novel rules evidently were followed. In recording the religion of prisoners, the Chinaman invariably was classified as a heathen. Many odd and descriptive names appear, such as Blackbeard Indian, presumably for want of an interpreter or more accurate records. The sentences recorded during the first year of the institution's existence ranged from 7 years for manslaughter to 30 days for selling liquor to Indians.

Witnesses in default of bail, also were confined at the McNeil Island Penitentiary as well as all men waiting action at the hands of the grand jury or pending trial. From the day the prisoner was received a policy of hard work was followed in which all prisoners participated, regardless of the fact that they were witnesses, awaiting trial, or under sentence of the court. It would appear that a similar policy was maintained concerning visitors. The prison log for October 4, 1878, contains the following notation: "The weather is bad most of the time now, Snohomish Peter's wife, mother, and daughter arrived today. The weather is so bad they are all confined to the prison for the next few days, cutting and piling firewood whenever the weather permits."

The Attorney General provided no money for other than actual expenses for food for prisoners and clothing for men serving sentences. Tobacco was not supplied and as the majority of prisoners were penniless it became necessary to devise some means whereby funds could be provided for the purchase of tobacco and other small necessities, such as soap and matches. Captain Henly, who was appointed as a guard January 11, 1883, recounts that a plan was at last formed whereby timber was purchased and shingles made by the prisoners. These shingles were sold and the price of the timber was deducted and the remainder of the proceeds were applied to a prisoners' fund. The net results were small but the work kept the prisoners busy and well supplied with tobacco, also out of mischief.

During the administration of United States Marshal C. B. Hopkins in 1905, the penitentiary was turned over to the Attorney General to be administered directly by him through a warden of his appointment. At approximately the same time a report of the Attorney General then in office announced that the United States penitentiary at McNeil Island would be used as a place of confinement for all Federal prisoners sentenced on the Pacific coast and in Alaska. This policy was carried out and it soon became necessary to add both acreage and housing facilities. To meet this demand the present No. 2 cell house was erected in 1907 containing 66 double cells. This added accommodation was erected and continually taxed to its capacity until the erection of an additional cell house was completed in 1921.

MARSHAL BUSY MAN

Captain Henly, who was an officer of this prison for many years, and in 1882 a deputy United States marshal, is authority for the statement that the marshal of those days did not have an office but that his headquarters were wherever he happened to lay his hat, or in his hotel room. In fact, prior to the abolishment of the fee system, it was the custom for the marshal personally to serve papers, make arrests, and deliver prisoners to both the various ports and to the penitentiary, as necessity required. In this manner he saved the employment of numerous deputies with whom he would have had to share his fee.

The captain's reminiscences of the penitentiary in early days are varied and interesting. For a long time another guard and himself were in full charge of all prisoners confined here, numbering as many as 30. The cellhouse had a wooden roof which offered but little resistance to a prisoner determined to escape; therefore, when the prisoners were not locked in their cells they were out in the field, working in the garden or making shingles.

The only means of communication with Steilacoom was by rowboat and as Captain Henly was usually called upon to furnish the motive power for its operation, he decided that a sailing vessel would afford a solution to his particular difficulties. He enlisted the assistance of the two deep water mates confined and constructed a sloop of some 30 feet in length which proved successful from every standpoint. Later with three Federal judges who had completed an inspection of the institution, the captain negotiated the 3 miles between the penitentiary and Steilacoom in 18 minutes with a spanking breeze. In later years Captain Henly constructed three power boats which have seen much service at the institution. Captain Henly remained in the prison service until 1923.

Charles Julian came to McNeil in 1882. He cleared land, built roads and had the postoffice of Gertrude established. He duplicated, in a larger way, the work of Bengt Johnson on Anderson Island. Julian's Bay later came to be known as Still Harbor. The only earlier homesteaders on the island at the time were the Charles McCain and John Holmes families. But there was an influx of pioneers a short time later. Gustov Nelson came in 1886, working in a brickyard, and later bought and improved a farm. Peter Goldseth settled just west of the penitentiary site, and his wife Margaret became the first "Bee" postmaster. J. P. McCain operated the first store on the island, which was located on a corner of the penitentiary tract. Other early residents include the Grossmans, Ben Harriman, Joe Floyd, the Cammons, the Knox family, and the Wards. Eric Ryberg bought a timber tract in 1890 and donated land for the cemetery site. A Swedish Lutheran church was established on the island in 1897.

McNeil Island Penitentiary, Washington

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks I include the second of three stories written by Ralph W. Cowden on the founding and development of McNeil Island Penitentiary in the State of Washington:

Big Growth Made by McNeil Penitentiary—Entire Island Now Belongs to Prison

(By Ralph W. Cowden)

McNeil island is the site of the oldest Federal prison, but it has kept abreast of the times in improvements, and in aims it is excelled by none.

Three quarters of a century ago, it was a Federal jail for prisoners in the newly organized Washington territory. The inmates were mostly prisoners who had become involved in illicit traffic with Indians, and seamen who had run afoul of the law. Prisoners, as well as supplies, were brought to the island via rowboat, and for many years the bath line took place in a wooden barrel, in water heated over hot rocks.

In 1924 the penitentiary had grown to be an institution of some 400, but was simply an overcrowded place of detention located on the original 27 acres of land. The dining room, No. 2 cellhouse, the laundry and heating plant are the only remaining buildings of that era. Part of the laundry building was then used as a dormitory, and wood was the only fuel.

The institution was becoming cramped when in 1926, State Senator Homer T. Jones facilitated the transfer of the local school section to the penitentiary holdings. The penitentiary farm, in its present location, thus came into being in 1927.

The whole of McNeil island encompasses an area of about 7 square miles. The island is situated in Puget Sound, 15 miles from Olympia, the State capital, and equidistant from Tacoma. The town of Steilacoom, on the mainland, is about 3½ miles from the island. Prison boats make regularly scheduled trips to this point, carrying passengers and mail. Special trips are made to Tacoma and Seattle for freight, as well as to Steilacoom.

BUILDINGS AND GROUNDS

The normal capacity of the main institution is 900 men, and the present population is 1,102. Living quarters for inmates are provided in three cell blocks, an honor dormitory, and an admission and orientation unit. The modern hospital has a capacity of 60 beds. The 700-seat auditorium, built by the inmates, is one of the finest in the Federal prison service. The main kitchen is undergoing extensive renovation.

The power plant is being enlarged and modernized. A Diesel motor of 800-kilowatt capacity recently was installed, and preparations are well under way for installing a new 1,200 kilowatt turbine. The other buildings are used for various purposes, such as administrative offices, school unit for both academic and vocational classes, chapel, library, laundry, cannery, shipyards, and shops of various kinds.

The old system of securing water from deep wells and springs was discontinued in 1937 when the Butterworth Dam and Reservoir was completed and the pumping system put into operation. All of the water from Eden Creek is filtered and pumped either to the camp, which has two steel tanks, of a total capacity of 550,000 gallons, or to a concrete reservoir above the main institution which has a capacity of 680,000 gallons. A second dam is now being completed, which will insure an adequate water supply for domestic, institutional, irrigative, and industrial uses. The lake so created will cover 100 acres.

M'NEIL CAMP

McNeil Island camp supplanted the penitentiary farm in 1943, and has a normal capacity of 250 inmates. About half of the commitments to McNeil camp are short termers from the courts, and half are received by transfer from the main McNeil institution. Population during the past 4 years has ranged from 280 to 355. The two institutions are most closely integrated. The camp furnishing a large proportion of fresh food, and the main institution furnishing services not available at the camp.

Prior to the war, the penitentiary had maintained a farm population of 90 to 150 inmates, who worked at the farm and were housed and fed there in a modern dormitory consisting of three squad rooms housing 50 men each. The original dormitory and culinary unit and office space comprises the heart of the present unit. There are now three additional cottages of the wartime surplus variety which house 50 men each.

The future holds some very interesting possibilities for the camp at McNeil Island. Orchard and berry development will play an important part in the farm economy and should contribute substantially to the cannery operation as well. Continued land development as recommended by the Soil Conservation Service will contribute to the self-sufficiency of the dairy through more abundant pasture and hay, and enable the establishment and operation of an economical beef venture. Close cooperation with the cannery will enable conserving surpluses. Timber operation will someday become important. The various elements should blend into a closely woven program to give the balance and unity a prison farm should have.

The farm has slightly less than 1,000 acres of cultivated land out of a total of 4,409 acres. Of this total, perhaps 2,000 acres can best be considered forest land, since a fine stand of young fir is general. A recent soil conservation survey indicates about 600 acres favorable for production may be cleared and put into cropland. Land clearing provides productive winter work for the inmates and is a stabilizing influence on the work program. Practically all the acreage yet to be reclaimed will be devoted to pasture, forage, and small-grain production.

BIG ORCHARD PLANNED

The orchard and berry program is quite ambitious, with 300 acres devoted to this feature. Two hundred acres of this total are in young orchard that will need several years to reach full productivity. At that time about 65 acres of old orchards, scattered about the island, will have passed their usefulness, and will be removed. This will leave a solid block of over 200 acres of productive fruit to effect the maximum operating economy. This orchard can be irrigated with facilities now available. Trees being grown include apples, peaches, prunes, sweet and sour cherries, pears, and apricots.

The garden operation is quite sizable, with up to 80 acres devoted to it. Most of this is irrigated as needed with portable equipment from permanent underground installations. The chief handicap to the garden operation, is unfavorably contoured land, a condition to be improved by clearing and developing adjacent areas.

The hog and poultry features provide pork and eggs to fill institutional requirements. Yearly pork production is around 500 head.

The dairy unit on McNeil Island has developed from a mediocre beginning to a herd of 67 high-grade milking cows. The first bulls with any important background that were used were loaned by the Department of Agriculture, and came from the Huntley, Mont., experiment station. In 1940 a bull was purchased from Carnation Farms and since that time several others have been obtained from the same source. Then, too, three bulls were supplied from other institutions—one from LaTuna and two from Terre Haute.

In 1940 the herd reached its highest average production, and was at the top of the list for institution dairy herds.

During the war years and since, production has been declining, due to the feed situation and shortage of money for purchases of feed. The only purchased animals in the herd have been the bulls, until recently, when, through the efforts of Director Bennett and Warden Squier, nine purebred heifers were purchased from Carnation Farms.

INDUSTRIES OF PRISON

Prison industries comprise four units: A cannery, a furniture-repair shop, a pallet shop, and a shipyard. A year-round average of some 20 percent of the inmate population is employed in this work.

The largest of the industries is the cannery—both in number of employees and in investment. Approximately 67,000 cases of canned goods have been prepared during the past year. The major part of this pack has been for the Army, and the balance has gone to other institutions and other Government agencies.

The cannery is in operation about seven and one-half months of the year, and work is maintained on two shifts for a considerable portion of that time. In off-season, only one-fourth as many men are employed in maintenance and repair work and in shipping.

The pallet shop, which entails the second largest industry, is presently working on an Army contract. This is operated on a piecework basis and peak production is 685 pallets in 1 day. Twenty-five thousand, four by six-foot heavy equipment pallets, have been completed in the past 6 months, involving the using of over 2,000,000 board feet of lumber and a large quantity of hardware.

The United States penitentiary at McNeil island, commonly known as the "prison without walls," is a laboratory in prison reform.

Prior to 1900, most Federal prisoners were boarded out in county jails. In 1932, with the creation of the Federal Bureau of Prisons, the present program was inaugurated by which prisoners are committed to specific institutions in accordance with their age, the nature of their crime, and previous criminal history; thus was launched the current treatment program looking toward the release of all persons convicted in United States courts.

COMPOSITE M'NEIL PRISONER

A composite type of McNeil island prisoner would show him to be a native-born American, 33 years of age; five feet, seven and three-quarters inches tall and weighing 153 pounds. His physical condition is fair, though his teeth need attention and he will probably elect to have several minor operations performed during his incarceration. He assuredly will gain several pounds before his departure. He is a Protestant who has not attended church in years, and will do so only on a few special occasions while in prison.

He completed the seventh grade in school and will undertake a considerable plan of education while in prison. Surprisingly enough, he will complete a satisfying large proportion of his educational aims. He planned to do a considerable amount of heavy reading after his first inspection of the library but he somehow never does; perhaps three times weekly he will draw works of fiction and his favorite magazines, and let it go at that.

Our average prisoner is married and has fathered one child, though he probably had become semiestranged from his family during the course of his criminal career. He intends, however, to return to his family upon release. His parents are alive and he maintains closer and more uniform contact with them than he did when at liberty. His correspondence has come to assume much importance to him in prison, and he derives his greatest pleasure from his contact with the outside world, receiving about seven letters per month and writing somewhat less than that number.

He was convicted for violation of the Dyer act (he took a stolen car across a State line), was sentenced to 15 months, and thinks his

sentence was pretty severe. He has had one previous conviction for a similar offense and a number of arrests for such misdemeanors as juvenile delinquencies, traffic violations, drunk and disorderliness, et cetera. In the present offense, he pleaded guilty in expectation of clemency, but now believes he might have won an acquittal had he stood trial. He spends a considerable amount of his time pondering his case, wondering if he has grounds for a writ. He will probably not make parole, but will serve 12 months of his sentence, having earned the remaining 90 days as good time for satisfactory behavior. He has an even chance of earning extra good time or money by being assigned to industries, by being recommended for meritorious good time for doing his job especially well, or by being transferred to the McNeil camp.

FEARS TIME LOSS

His disciplinary record in general is good. He affects an elaborate disdain for punishment, actually fearing the loss of his good time more than any other form of disciplinary action. He feels that it is incumbent upon him to express a good-natured cynicism of the prison's administrative policies, while as a matter of fact he is somewhat respectfully impressed by what is being done for him and his mates.

As an individual proven unequal to the obligations of established social order and undismayed by the opinions of his free-world neighbors, he presents an interesting anachronism in the intensity with which he covets, even woos, the respect of his fellow-prisoners. It might be said that the desire for acceptance by his cellmates and companions is a dominant, even a determining factor in the manner of adjustment he is able to make during his prison career.

He spends $4 per month in the commissary, rolls his own cigarettes with issue tobacco, gets by with one razor blade a week. He purchases his own toothbrush—not because the institutionally issued brush isn't good enough, but because it makes him feel more like an individual to have bought his own. He carries a dollar watch; this and a metal nail clipper and a moderately priced fountain pen constitute the extent of his personal estate as a prisoner.

He plays softball and handball, and does nothing at all in alternate, sporadic spurts. He is an inveterate spectator at institutional ball games and at boxing cards. He roots vociferously for the outside team and razzes the federals—but really hopes they will win. He plays dominoes with his cellmates the first part of his sentence and becomes heartily sick of the game before his term is half served. Because of the availability of facilities, he takes more exercise of various sorts than he has since he was a boy; more than he ever will again.

PROUD OF JOB

Our average prisoner is an easy prey for rumor. He will pass on the wildest kind of a story, and yet is impervious to sounder and more conservative information. He exaggerates his exploits and escapades, and sometimes comes to believe the propaganda himself. He works harder in prison than he has ever done previously in life and finds that he likes it. Often he becomes intensely proud of the particular job which is his and is equally quick to resent either interruptions or the disparagement of his fellows. He does good work on his job and takes a somewhat overprotective pride in the importance of his contribution.

He has had few, if any, lodge or club affiliations; he once carried life insurance, but allowed it to lapse, and now possesses little if any property in the outside world. When he arrived at McNeil he brought with him about $15; he receives an average of $4 per month from relatives during his stay.

Though he may be superficially callous, cynical, and without grace, he is actually and inwardly well-meaning, fairly aware of his own shortcomings, willing to be set in the right direction, and eager for a better existence. While he would be the last to admit it, except perhaps to himself, he would like to become what he calls a "square john" and, given the opportunity, would likely become one.

Personally, he is definitely sure that this is his last taste of prison life, and he is no less assured that the life to which he is to be released is a glamorously happy, contented mode of existance.

Unless he takes advantage of the opportunities made available to him in prison, however, he will find himself on the wrong side of the odds, which show that he has more than a 50–50 chance of returning to the fold within 5 years.

McNeil Island Penitentiary, Washington

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1950

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks I include the last of three stories written by Ralph W. Cowden on the founding and development of McNeil Island Penitentiary in the State of Washington:

MCNEIL PRISON HELPS INMATES RENEW HOPE—ERRING MEN GIVEN CHANCE TO REFORM

(By Ralph W. Cowden)

All during the time of its growth and development, the United States penitentiary on McNeil Island has kept abreast the latest methods for the treatment of prisoners with the purpose in view of enabling those sent there to assume responsible positions in society when they are released.

The resocialization of men and women convicted of felonies is no mere matter of incarceration. In the distant past, prisons were exclusively punitive institutions, and the correction and readjustment of the individual was the responsibility of the individual. When a man erred, the law seized him, chastised and branded him, hoped that he and other incipient malefactors would be taught a lesson thereby. His period of isolation rarely had any effect upon him other than to make him a hardened criminal, and apparently had no effect upon prospective offenders. It tended to make the prisoner bitter, mean, and vicious; or bitter, mean, and sly.

An exhaustive study of the situation has been made by leading thinkers and writers during the last three-quarters of a century, and their generalized conclusions are that, to begin with, better-than-traditional types of personnel must be made available to prison work. This was accomplished. Next, living quarters and conditions had to be improved for the men. This is being accomplished, and the Federal Government, with its heavy investment in security institutions, has led the way in adapting old-type structures to more modern beliefs; and in its construction of the past decade has set dramatically progressive standards for the rest of the Nation and the world.

HANDICAPPED AT FIRST

The third factor, treatment, has offered the greatest possibilities and has received the least development. Work and schooling were the first manifestations of activities designed to help the inmate become a better man or woman. Later, embryonic forms of social service made their appearance. The movement was at first handicapped by lack of sound information, by political sabotage, by the misguided efforts of some of its early progenitors, and by public unwillingness to regard improvements on the incarceration principle as anything but faddistic coddling.

In time, however, the importance of an effective treatment program was properly evaluated, and subsequent progress has been rapid and sound.

The Federal Bureau of Prisons has made impressive strides in this direction. Freedom from political fluctuations and the leadership, during crucial inceptive periods, of such men as Sanford Bates, James V. Bennett, and others, has facilitated a slow, gradual, but steady and sound growth of the so-called treatment program. In this category, the bureau has specialized in what might be called a "technique for understanding the individual in the light of his own, as well as society's, best interests." This procedure has necessitated a considerable amount of individual research, a vast computation of records, and an extensive expenditure of time for interviews, correspondence, and other varied, related considerations, but it has paid heavy dividends in better institutional procedures and improved release programs.

The separate phases of the treatment program which the Bureau of Prisons carries on in the interest of both society and the individual in prison are briefly treated under the following headings:

SOCIAL SERVICE

In the Federal institutions, social service is a carefully formulated procedure of dual nature. It serves society and the individual by building up a complete and comprehensive fact picture of the inmate. It serves the individual by performing for him the services which, as a prisoner, he cannot perform for himself. It counsels him on matters of his personal life, it obtains relief and redress for him where these seem indicated, and it acts as intermediary for his dealings with the outside world.

Soon after the inmate arrives at the institution to which he has been committed, he is assigned to a specific social worker who becomes his official intermediary in dealing with the institution or the outside world, such as correspondence with nonrelatives, legal matters, litigation, divorce, and business or financial adjustments. Assisted by the information in the inmate's central file and by not infrequent interviews the social worker comes to know his client, to understand his problems, and to gain insight into his character. In this way, the best possible effect is gained for relationships and attitudes between the institution and the individual.

When the time comes for the inmate's appearance before the parole board, the social worker assists him in preparing his parole plan, which means that he helps him clarify the pattern of life to which he hopes to return, helps him with employment arrangements, helps him to select and secure a satisfactory parole adviser, and assists him in other ways in the formulation of a tentative plan of life that will prove acceptable to the parole board.

One of the principal functions of the social worker is the formation of the dossiers which are the basis for the classification program.

CLASSIFICATION PROGRAM

As has been indicated in the foregoing, treatment is the keynote of Federal penology. Men and women sent to Federal institutions are accorded the specific treatment which meets their needs. In order to formulate and administer this treatment, proper diagnosis must be made. Such diagnosis, in advanced penal practice, is known as classification.

Classification clinics, an integral phase of penal procedure, form the basis and the springboard for all effective rehabilitation.

All committed inmates are, through successive interviews with the social-service unit, exhaustively investigated. Their entire lives are keenly scrutinized for incidents or trends of a revealing nature. Former employers are contacted, relatives, officials, welfare agencies, former wives—all of these are enlisted in the project of creating a complete understanding of the individual. To this mass of information is added the reports and opinions of the chief medical officer of the institution, the psychiatrist, the educational supervisor, and other specialists. All this data is assembled, welded into a coherent entity by the classification section, and presented, within a period of about 30 days, to the institutional classification board.

The committee, composed of the warden, associate wardens, chief medical officer, psychiatrist, supervisor of education, chaplains, and social workers, studies the dossier or admission summary, interviews the individual, and decides upon a pattern of treatment that literally becomes the blueprint for the subject's readjustment to society. Such a pattern is known as the inmate's program, and is not changed in any respect without recourse to the classification clinic.

Factors which the classification board consider are: (1) Custody and supervision; (2) transfer to another institution more suitable to the inmate's needs or requirements; (3) social service; (4) medical and neuropsychiatric treatment; (5) employment and vocational training; (6) education; (7) religious training, and, (8) recreational program.

For instance, it may be indicated that he be programed for a heavy course of education to develop abilities that appear to be incipient. Medical or psychiatric therapy may seem indicated. In these and many other details, the nature of the treatment to be accorded the individual is set up in this fashion and by this committee.

From time to time during the inmate's sentence, when changes of program are required, reappearances before the board are scheduled. Reconsideration may obtain because of the inmate's request or upon the suggestion of one of the board members. Before such recommendations are made, a progress report, detailing information not developed at the time of the first hearing or a change in the subject's attitude or status, is formulated for the use of the committee. Reclassification is frequently ordered after an inmate has applied for parole and been denied.

EDUCATION

No Federal prisoner needs to leave here unimproved mentally. There are day and evening classes, and vocational classes with opportunities for both theory and practice. And there are cell-study, or correspondence courses.

The educational staff is made up of highly trained officers who are specialists in adult education. The civil-service standards are high for any Bureau of Prisons appointment, since leadership qualities are required in every phase of the work. University graduates are not uncommon among the custodial force and a goodly percentage of the new employees served as officers in the last war. The high standards set by the bureau are raising penology to a professional status.

The major objectives of the bureau with respect to education of prisoners may be summed up as follows:

(a) The education of illiterates and semiilliterates.

(b) Opportunities for those who have had little formal education to make up for voids in their education background.

(c) Practical trade training for the unskilled.

(d) Provision for "special subjects" (languages, commercial subjects, navigation, et cetera).

(e) Correspondence courses for those who cannot attend classes or who wish to study technical courses not offered in the curriculum.

Vocational training gained an impetus during the war and has hardly slackened. Men so assigned are given practical on-the-job training, and have regular classroom work as well. A few of the subjects listed under this heading include carpentry, plumbing, electricity, machine shop, auto repair, baking, and cooking. And many supplement their work with correspondence studies. Visual education also has an important place.

Religious instruction and services are essential functions of the rehabilitation program. There are full-time Catholic and Protestant chaplains.

The hobby shop affords an opportunity for avocational talents and has developed some highly skilled techniques. Fly tying is the most popular activity, and excellent work is turned out also in leathercraft, woodwork, and in plastics.

The range of intelligence of Federal prisoners parallels very closely that of civilians on the outside, and the ratio of mental disorders is approximately the same, about one-half to three-fourths of 1 percent; however, the rate of subnormal in Federal prisons is about 18 per thousand, while the general population rate is 7 to 11 per thousand. Seven percent use alcohol to excess and 5 percent are addicted to narcotics.

In recent months music has played an increasingly important part in leisure-time activities. There are currently three organizations of this nature making use of the auditorium and stage in rehearsals for vocal and instrumental performances, and all are under the supervision of a correction officer who has a background in music.

Debating and dramatics are also in a period of intensified expansion. For the most part, local talent meets local talent, but occasionally provision is made for visitors to come to the island of an evening to match talents with local boys.

Under the jurisdiction of the supervisor of education also comes the administration of the library and the manyfold morale stimulative and recreational activities.

RECREATION

Wholesome, balanced recreation has a most important contribution to good morale. Every effort is made to afford prisoners with means and opportunities for healthy recreation. The program is broad enough to cover the need of the younger, more active men, and still afford an opportunity for a variety of activities of a less strenuous nature.

A spacious and well-equipped gymnasium affords opportunity for a multiplicity of activities, even during the winter months. A well-directed leadership insures participation by practically all who so desire.

Outdoor activities include baseball, softball, handball, football, tennis, weight-lifting, bag-punching, basketball, horseshoe pitching, and many others.

JOB PLACEMENT

Realizing that a prison program of training in preparation for release to a better life in the free world was useless unless the man was able to find gainful employment upon his release, the Bureau of Prisons in recent years has set up an employment-placement office in several of its institutions spotted in various sections of the United States. Since 1944, McNeil Island has had a unit of this service designed to assist into free-world employment men who were unable to make the proper occupational adjustment on their own initiative.

The relationship between the job-placement service and businessmen or employers is one of frankness and hard-headed common sense. The prospective employer is offered men with qualifications that he can use, and is shown how these men could be valuable. With the inmate's consent, the prospective employer is furnished a complete description of the man the placement bureau wishes to sell him, an abstract which includes his picture, dressed in civilian clothes, and all details of his training as well as the facts of his criminal career. The job placement bureau enjoyed immediate and growing success despite handicaps with which it was faced.

Not in every case is the employment office able to secure satisfactory employment for releases, nor do a majority of the men released seek the aid of this service. During the time this office has been in existence, complete authentic records as to the number of men who have sought its services is not complete, but records which indicate that in the five and a half years that this service has been available, a total of 637 men have had jobs secured for them immediately prior to their release to the free world.

Keep the Air Waves Free

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. MULTER. Mr. Speaker, I believe it is generally agreed by the Members of Congress that the CONGRESSIONAL RECORD should not be used by a party to a pending law suit as a forum in which to present his one-sided view of the case. Yet we find in the Appendix of the RECORD on page A2826 the insertion of a statement by one Hugh Fulton, counsel for George A. Richards, who is currently involved in a hearing before the Federal Communications Commission on the matter of renewing licenses for three important radio stations owned by him.

Needless to say, Mr. Fulton's statement is nothing more nor less than a piece of special pleading without any pretense to objectivity or balance. It deprecates and disparages the testimony of the Government's witnesses, reflects on the integrity of the Government's counsel and it assails the FCC for having the temerity to bring charges against Mr. Fulton's client.

There is no doubt in my mind that if this hearing were judicial rather than administrative in character, Mr. Fulton's conduct in preparing this statement for publication would constitute at least a violation of the code of ethics which Fulton, as a lawyer, is sworn to observe. More than that, in a judicial proceeding it would be contempt of court.

In the interest of fairness, I am undertaking to present the real issues in the case which Mr. Fulton has deliberately evaded so that the account in the CONGRESSIONAL RECORD will truly be balanced.

In 1948, the Radio News Club of Los Angeles, a professional association of radio newscasters, filed charges against George A. Richards, owner of Station KMPC in Los Angeles, alleging that Richards had threatened to discharge news reporters who refused to distort the news in accordance with his wishes and that on at least one occasion he did discharge a news reporter for failing to present the news as directed by

Richards. After preliminary investigation, the FCC ordered a hearing on the charges and directed its trial examiner to report on the following issues:

1. To determine the extent, if any, that G. A. Richards issued instructions or directives to officers or employees of said licensees—

(a) To present news broadcasts in a manner designed to give a biased or a one-sided presentation of the news;

(b) To broadcast as news, items which were not known to have any basis in fact concerning particular issues or persons;

(c) To broadcast editorials of daily newspapers as news items without identification of such editorials as such;

(d) To discriminate in news and other programs in favor of particular political causes, groups, or candidates as against the interests of other political causes, groups, or candidates;

(e) To discriminate in any manner in the programing of Stations KMPC, WJR, and WGAR, in favor of the private, political, social, and economic views and interests of G. A. Richards.

2. To determine the extent, if any, officers or employees refused to carry out instructions or directives, if any, of the nature specified in Issue No. 1, and what disciplinary action, if any, was taken or caused to be taken by G. A. Richards against any officers or employees who may have refused to carry out such instructions and directives.

3. To determine the extent, if any, the facilities of said stations, or any of them, have been used to carry out said instructions or directives.

4. To determine, in the light of the information adduced pursuant to Issues 1, 2, and 3, above, whether the licensee corporations are qualified to continue as licensees of stations KMPC, WJR, and WGAR.

Hearings opened in Los Angeles on March 23 and counsel for the Commission presented 23 witnesses who testified that they had been ordered by Richards to slant and distort the news against political groups, religious groups, and one of America's greatest families. There is no need to prejudge this evidence, but I cannot escape the feeling that if this evidence is, as charged by Fulton, thin and unsubstantial, Fulton would not be trying the case in the newspapers and would not be so worried about putting his own client and witnesses on the stand.

I have confidence that the FCC will try this case fairly and decide it fairly, in accordance with its rules and the applicable law. I should like to add as an example of objective analysis of the case the following editorial from the New York Times of March 18, entitled "Freedom of the Air Waves," and a news story from the Hollywood Reporter of April 4, quoting a resolution proposed by H. V. Kaltenborn and adopted by the Association of Radio News Analysts:

FREEDOM OF THE AIR WAVES

The Federal Communications Commission opened hearings in California this week to determine whether broadcasting licenses will be renewed for George A. Richards, owner of three of the country's most powerful radio transmitters, including KMPC in Los Angeles. Mr. Richards is accused of ordering news broadcasts over KMPC to be so grossly distorted that doubt has been cast on his fitness to hold a license to operate a radio station.

Judgment must be withheld on the merits of Mr. Richards' case until all the evidence is in; suffice it to say that his attorneys deny the charge and maintain that he faces revocation of his licenses because of his anti-administration political views.

The importance of the case lies in the question whether or not the FCC has the right to deprive Mr. Richards of his license, granting the assumption that all the charges are true. It lies in the question whether this would or would not constitute censorship over the expression of political views. This newspaper (which is also the owner of a radio station) believes that, if the charges are proved, the FCC would be justified in refusing to renew the license.

Use of the airwaves for an expression of an opinion or any other purpose is fundamentally different from the point of the printing press or of a soapbox on the street corner, because there is a definite physical limitation to the number of wave bands and the strength of transmitters which can be employed for radio broadcasts if hopeless confusion of sound is to be avoided. This is a unique characteristic of radio, as the Supreme Court has noted. It forms the proper basis for at least a minimum degree of Federal control.

The question then becomes: to what extent shall this control be exercised, particularly in respect to political controversies? Broadly speaking, the FCC's attitude is that radio stations have the duty of providing equal time for the presentation of both sides. That seems fair enough. But the Los Angeles case presents a new wrinkle, or at least one that has not yet been ironed out. Here the broadcaster has been accused of presenting a political viewpoint disguised as news. While it has been clearly established that "opinion" on the air shall be answered with an equal amount of time for "counter opinion," what does one do when it is offered not as opinion at all but under the cloak of news? To us, the logic seems inescapable that the purveyor of this form of radio "news" is offering goods under false pretense and is not operating his station in the public interest, which is one of the standards established in the Communications Act. We see no reason why the FCC should not in such a case deny him a license, which could then be granted some other applicant more fit to hold one. Obviously the evidence would have to be unmistakable that the deception had been practiced willfully.

It would be silly to deny that many newspapers are guilty of disguising opinion as news every day. Why, then, do we not advocate that they be deprived of the right to publish? We think the answer has already been given. While, of course, there are financial barriers, there is no insuperable physical barrier to the establishment of a newspaper. Anyone can start one if he has the capital, and if not he can publish a broadside or a pamphlet. But the radio waves are limited; and the licensee is of necessity not an entirely free agent but the holder of a special privilege which requires a corresponding degree of restraint enforceable through police action on the part of the FCC acting under Federal statutes as interpreted by the Supreme Court.

NEWS CLUB COMMENDED ON G. A. RICHARDS STAND

NEW YORK.—A resolution proposed by H. V. Kaltenborn of the Association of Radio News Analysts was passed yesterday in praise of the Hollywood Radio News Club for its censuring stand against G. A. Richards' slanting of KMPC news. The resolution read:

"We hereby go on record in support of the efforts of the Radio News Club of Hollywood in trying to secure the presentation of full unbiased news reports. We also endorse any action that will tend to preserve the right of competent news analysts to digest and interpret the news."

Let me make this clear. I have no interest in this proceeding or in any other proceeding before the FCC. I believe that the Commission was not only entirely justified in instituting that proceeding, but was required by law to do so.

Freedom of thought and of expression requires the elimination from among the radio licensees, of any person who is found guilty of the charges alleged.

No one has the right or the privilege to use the CONGRESSIONAL RECORD to browbeat, picket, or threaten any governmental agency while acting in a quasi-judicial capacity.

No one should be accorded the privilege of poisoning the air with opinions, good or bad, under the false guise of news.

Keep the air waves free, free to broadcast news and opinions, but honest and fair and free from poisonous propaganda.

Marshall Plan Aid After 1952?—Yes and No

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1950

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks a statement by the distinguished Senator from Michigan [Mr. VANDENBERG] and myself on the question: "Should Marshall plan aid be continued after 1952?" Both statements appeared in the New York Daily Compass on Monday, April 17, 1950:

SHOULD MARSHALL PLAN AID BE CONTINUED AFTER 1952?

YES: URGES FORMATION OF COMMISSION TO STUDY EXTENSION BEYOND 1952

(By Senator ARTHUR H. VANDENBERG, Republican, Michigan, Committee on Foreign Relations)

(EDITOR'S NOTE.—The following is the text of the widely discussed letter from Senator VANDENBERG to Paul G. Hoffman, ECA Administrator, which was released to the press a little over 2 weeks ago.)

As you approach your second ECA anniversary next week, I am conscious that you took this critical assignment, in part, as a result of my insistent urging. It is a source of profound regret to me that illness prevents my active participation in current decisions which mean infinitely much, in this connection, to American security and to free peace in a free world. The least I can do is to take advantage of this occasion to say that, in my humble opinion, you and your ECA associates, at home and abroad, have rendered incalculably vital service to our country and its indispensable leadership for liberty. You have paid off in current dividends of freedom.

ECA was launched as an unpartisan enterprise—established by a Republican Congress in full and free cooperation with a Democratic Executive. This working unity typified our finest traditions and our greatest safety in the presence of external hazards to all Americans, regardless of party. You have clung tenaciously to this unparti-

san concept in your administration of ECA. As one citizen to another, I thank you for this service from a grateful heart. United, we stand. Divided we fall. I want America to stand.

It was inevitable that there should have been disappointments in the evolution of these unprecedented programs—as you have been among the first to stress. There is understandable and legitimate debate in many of these aspects. It is our duty, under these programs of self-help and mutual aid, to be as frank about the liabilities as we are about the assets. You would be the last to say that ECA is untouchable.

Western Europe has not moved ahead adequately with the economic integration which is essential to its permanent recovery, including western Germany. There must be sharp improvement in these trends. We confront increasingly obvious limitations upon the domestic resources which we can safely and wisely commit to over-all foreign aid. Furthermore, these resources can no longer ignore or minimize the impact of Communist aggression in the Far East. This is not your problem, but the problem of Congress and the Executive. These are essential subjects for judicial congressional survey in that same factual spirit which must continue to strive to put our country first in our considerations.

But it is equally true that our overriding need is to clearly understand the victories we have won in this cold war, and how we won them; to realize, thankfully, that we have succeeded in helping establish vital zones of freedom where independent governments have survived aggression and subversion which, 2 years ago, threatened to isolate us in an ominously communized world; in a word, to avoid getting so close to the trees that the forest is obscured.

The ECA smoked out Soviet Russia's sinister plan for world dominion—always aimed finally at us. It set up a new type of peaceful cooperation between independent peoples seeking not conquest but honorable survival for liberty under law and for the aspirations by which free men live. It built peaceful sinews into the precious hopes of the United Nations, and of the subsequent North Atlantic community and the peaceful dedications of America. It has made inevitable mistakes which must be rectified. But its tremendous vindication stands clear as crystal on the 1950 map.

In all candor can it be sucessfully denied that ECA has been substantially responsible for reversing the corroding gloom which theatened western civilization 2 years ago, and which might have brought the iron curtain to the very rims of the Atlantic but for this brave adventure? How much is that worth, in liberties and lives and dollars, to our own United States? How much?

Let us not ignore any of the lessons we have learned—emphatically including the lesson that we, and our friends, are engaged in a struggle that is epochal in nature and global in design—emphatically including the lesson that free nations must continue as free nations to work together in closest, practical harmony for the effectual defense of their mutual heritage.

I venture this suggestion. I was one of those who insisted that ECA had to be preceded by the studies of the Harriman Commission, mobilizing the best brains available for consultation, to determine what role is wisest and safest for America, for her own self-interest, in facing the threats of postwar crisis. The ECA was the result. As we approach the statutory end of ECA in 1952, I think it would be well for another such commission, equally unpartisan and equally impeccable in character, to resume independent, advisory studies of our new responsibilities as the world's largest creditor nation and the world's spearhead in the quest of dependable peace. * * *

NO: ECONOMIC INTEGRATION MUST PRECEDE ADDITIONAL UNITED STATES AID

(By Representative LAWRENCE H. SMITH (Republican, Wisconsin), House Committee on Foreign Affairs)

Senator VANDENBERG's statement that Marshall plan aid should be continued beyond 1952 is premature and open to serious question. It is an invitation to recipient countries to rely on the United States for assistance far into the future. It is bad advice. Advocacy of assistance beyond 1952 at this time creates a situation that will be embarrassing to Congress when the present plan expires. Senator VANDENBERG has, in my opinion, rendered a disservice to the people of the United States by prematurely assuring European countries they may expect aid beyond 1952.

When the Marshall plan was first adopted the theory was that our aid should be for the sole purpose of economic rehabilitation. There was a common desire to make the war-torn countries self-supporting by restoring domestic economies to a level comparable to that of the United States in 1952. That was the objective set out in the OEEC report. The fact is that in 2 years of Marshall aid, all of the countries have gone far beyond their prewar level of production, to such a.. extent that in some lines their industrial products are highly competitive with our own. It cannot be denied that their goals have been reached.

The ECA Administrators have always looked beyond the day when economic rehabilitation was an accomplished fact. They have contended that the western European countries should strive for economic integration and for political unification. They have said there could be no real recovery in the absence of those goals. Mr. Paul Hoffman will admit that Europe today is a long way from reaching those objectives. One would assume these countries would be anxious to work together, but even the future is not too hopeful.

Nationalism is on the increase in Europe. That trend is rampant in England. The same is true in Italy and France. Advocates and supporters of the ECA program dreamed of great advantages to the countries of Europe by making them into one big market. They are disillusioned when they view the spirit of nationalism that has developed. They saw the benefits of a vast commercial market where mass-production methods would increase output far beyond a prewar potential, with the result that standards of living would rise to a level comparable to our own.

The present industrial patter, however, is based on nationalistic economies. Industries are propped up to keep them going regardless of their inherent economic disadvantages. Every country in Europe wants a modern sheet steel mill so that it can be self-sufficient in the production of steel goods for its national defense and domestic needs.

Administrators of the present program know what should be done. Mr. Hoffman has spoken frankly about the problem. He wants an integrated economy, yet only a small measure of success has been achieved toward long-range objectives. The outline for integration is clear. All restrictions on the movement of goods and capital across national boundaries must be removed or Government subsidies must be eliminated. Finally factories must be built and operated by private individuals which will insure economy and maximum production.

Political unity is an important part of the program but it is not the function of the United States to impose any such condition upon the ECA countries. The will to do so is up to them.

It is clear to me that American dollars are not the solution to European recovery and integration. Before 1952, the recipient countries must show that they intend to achieve the long-range objectives which they admit are necessary.

In the hearings before the House Committee on Foreign Affairs, Mr. Hoffman made it clear that certain things had to be done in western Europe before those countries could expect additional aid. In fact, he was so sure that a new approach was necessary that he had written into the law a provision to earmark $600,000,000, which sum would be set up as a fund to be used as an incentive for these countries in attaining economic integration. He has called this fund the European Payments Union and he says this about it: "To be successful you have got to bring these people along to where they finally make up their minds that this is hard to do but they are going to do it."

I repeat, assistance after 1952 must depend upon the accomplishments of the recipient countries toward economic and political integration. The completing thought is that this is a job these nations must do themselves; they cannot expect American dollars to do it. Senator VANDENBERG has put Congress on the spot.

The National Association of Evangelicals of the United States Organizes To Fight Communism

---

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. LATHAM. Mr. Speaker, today I received an announcement from the National Association of Evangelicals, which I want to insert in the RECORD, to the effect that it is organizing to fight communism. It is highly gratifying to know that these splendid Americans have been aroused to action. I note also that Dr. Frank B. Gigliotti, a familiar figure in this city, is a delegate to the National Conference to be held in Chicago. Dr. Gigliotti has a long and honorable career in promoting Americanism, both in fraternal and church circles. He is tireless and a crusader for truth, honesty and eternal loyalty to God and Country.

The announcement follows:

THE NATIONAL ASSOCIATION OF EVANGELICALS OF THE UNITED STATES

The National Association of the Evangelicals of the United States, representing a constituency of more than 10,000,000 Protestants, met in Indianapolis, Ind., April 19, 20, 21. Upon its adjournment, the organization instructed its commission on Christian action, composed of Dr. Frederick C. Fowler of the Knoxville Presbyterian Church, Pittsburgh, Pa., national president of the National Association of Evangelicals; Dr. Frank B. Gigliotti of Lemon Grove, Calif., national vice chairman of the commission; Dr. Clyde Taylor, secretary of affairs, of Washington, D. C.; and Dr. Douglas Scott, of Washington, D. C., to take every means at the disposal of the commission to combat all forms of communism, regardless of the name it masquerades under, and to make proper representation in contact with other Christian bodies and national patriotic groups to eradicate this social cancer from among the children of men.

The National Association of Evangelicals went on record sustaining the principle of

private property, and free enterprise. It further instructed the members of the commission on Christian action to carry on a program of education in the principles of Christian social and moral ethics so that the membership at large—who are members of the association, and other citizens throughout the Nation—might know of its position; for it was said, "There is only one way given amongst men whereby they might be saved, and that is, Seek ye first the Kingdom of God and His righteousness, and all these things would be added."

The association went on record condemning the pampering of those that would destroy this Nation as a Christian sovereign people, and would substitute in its place an alien philosophy contrary to Christian principles. Dr. Fowler and Dr. Gigliotti were delegated to be the representatives of the National Association of Evangelicals at the national conference to be held in Chicago May 13, 14, and to cooperate with the 70 national organizations under the sponsorship of the American Legion in framing a program that would alleviate some of the problems that we're facing and work out methods to combat materialistic, atheistic communism that is attending to inseminate its doctrine among our people and the people of the world.

Very truly yours,

CLYDE W. TAYLOR,
Secretary of Affairs

APRIL 26, 1950.

Our Majority Leader

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1950

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Lynn Telegram-News, Lynn, Mass., Sunday, April 23, 1950:

LEADER MCCORMACK LEADS AGAIN

House Majority Leader JOHN W. MCCORMACK again displayed the same quality of leadership in the present Red Russia crisis as he has always shown in matters of legislation and other national emergencies.

On Friday last, Congressman MCCORMACK (Democrat, of Massachusetts) declared in Washington at a press conference that the United States should recall the American Ambassador to Moscow or break off diplomatic relations with Russia in retaliation for the insulting attitude of the Soviet Union.

In a withering attack upon the tactics and attitudes of Red Russia toward the United States and its citizens, forthright leader JOHN MCCORMACK blasted communistic, atheistic Russia in these words:

"I have felt for a long while that the time was rapidly approaching when the United States and other free nations could no longer tolerate the insulting attitude of the Soviet Union and its complete disregard for international law.

"Such constant disregard by the Soviet Union calls for firm action on the part of the United States. It seems to me that the time has arrived when we should either call back our ambassador for a long period of consultation or break off diplomatic relations with Russia."

The ringing words and the stinging rebuke that our Congressman MCCORMACK administered the Soviet leaders for their arrogant rejection of the American demand for indemnity for the loss of an unarmed United States Navy plane, reparations for the lives of 10 American fliers lost in this wanton Russian attack, and proper apologies to this country for this needless attack upon American sovereignty, brought pride again to the hearts of all true Americans.

In typical McCormackian style, the House majority leader timed his blast so as to obtain the greatest value from his speech. We, in Massachusetts, are proud of JOHN W. MCCORMACK. His leadership is effective always. He is a leader who leads. He is a statesman who never fails to sense the need and the time for a statesmanlike utterance.

As long as our Nation has men like Congressman MCCORMACK in the pilot-house, we are confident that our Ship of State will sail serenely through all the shoals and quicksands that beset us through the trickery and treachery of Soviet Red Russia and her satellites.

The Orders of the Postmaster General Curtailing Postal Service Should Be Rescinded

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
April 26, 1950

Mr. DOLLINGER. Mr. Speaker, the orders of the Postmaster General, curtailing delivery and other essential postal services, to take effect July 1, 1950, would completely demoralize the entire postal service, and are causing the American people much concern.

I sincerely believe that it is to the best interests of the Nation's economy and our people, that the orders be rescinded at once. I have accordingly written the President and the Postmaster General to that effect, urging such rescission. I am inserting copies of my letters in the RECORD, so that the Members of this House may know of my action.

APRIL 25, 1950.

The PRESIDENT,
The White House,
Washington, D. C.

DEAR MR. PRESIDENT: I am very much perturbed over the instructions contained in the Postal Bulletin of April 18. The orders of the Postmaster General, which I understand are to take effect July 1, 1950, would, in my opinion, have disastrous effects upon the people and the economy of our Nation.

We have always looked upon our postal service with pride. It has rendered excellent necessary service through the years. It is the one governmental agency which has served all the people in such a way that they have come to rely upon it in their everyday lives. The Postmaster General's orders would reduce the postal service to an inferior agency; delivery of mail would be restricted; business would suffer; magazines, upon which our people rely and look forward to receiving, would be delayed. Parcel post deliveries will also be cut. We know that this program will also mean the reduction in force of postal employees.

There seems to be no justification for this destruction of our fine postal system. Our postal employees deserve commendation—not threats to their livelihood, when we consider the fine record they achieved during the fiscal year 1949. A great many stayed loyal to their post office jobs during the war, instead of turning to private industry, where much higher pay was offered.

The American people as a whole are aghast at the idea of curtailing the service in the Post Office Department. They are raising their voices in protest and are demanding that the Postmaster General's order be rescinded. I respectfully ask that you listen to their pleas, and that you will decide in their favor.

With kindest personal regards.

Sincerely yours,

ISIDORE DOLLINGER,
Member of Congress.

APRIL 25, 1950.

Hon. JESSE M. DONALDSON,
Postmaster General,
Washington, D. C.

DEAR MR. DONALDSON: I am writing to protest the instructions contained in the Postal Bulletin of April 18. Your orders, which I understand are to take effect July 1, 1950, would, in my opinion, have disastrous effects upon the people and the economy of our Nation.

We have always looked upon our postal service with great pride. It has rendered excellent necessary service through the years. It is a governmental agency which has served all the people in such a way that they have come to rely upon it in their everyday lives. Your orders would reduce the postal service to an inferior agency; curtailment of mail service would cause much hardship to people and business; our postal employees would suffer through changes in work and reduction in force.

There seems to be no justification for this destruction of our fine postal system. Our postal employees deserve commendation—not threats to their livelihood, when we consider the fine record they achieved during the fiscal year 1949. A great many stayed loyal to their post office jobs during the war, instead of turning to private industry, where much higher pay was offered.

The American people as a whole are aghast at the idea of curtailing the service in the Post Office Department. They are raising their voices in protest and are demanding that your order be rescinded. I ask that you reconsider, and that you retract the order which I feel is unnecessary, and which will cause untold harm.

Sincerely yours,

ISIDORE DOLLINGER,
Member of Congress.

Common Sense About the Middle East

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1950

Mr. MULTER. Mr. Speaker, 2 days ago more than two score Members of this House extended greetings to the State of Israel on the second anniversary of its independence. Many of us, in our remarks, pointed out the serious and threatening situation in the Middle East which has arisen as a result of Britain's arming of the Arab states and the recent actions taken by the Arab League in its efforts to undermine the peace of the area and renew its war on Israel.

That same day King Abdullah of Jordan defied the Arab League by annex-

ing the Arab section of Palestine, contrary to the wishes of the Arab League. Only a few weeks ago King Abdullah was on the verge of signing a permanent peace agreement with Israel, when he was stopped by the Arab League through the use of threats and coercion.

The Arab League is playing a nefarious role in the Middle East. I think it is time for the United States and Britain to bring an end to its discredited career in which it excelled as a complete failure and an instigator of bloodshed. I desire to draw the attention of my colleagues to an editorial in the Washington Post today, which is an excellent commentary of the situation in the Middle East, and especially the miserable role of the Arab League. The editorial is as follows:

FULL CIRCLE

It has always been our feeling that Jordan's King Abdullah and the Israelis, if encouraged to do so, would have been able to compose their dispute over Palestine. This at last has been accomplished by the two parties acting alone—but not before gallons of blood have been spilled, the United Nations undermined, Arab-Jews relations embittered, and nearly a million Arabs made homeless. The announcement has just come out of Amman, Jordan's capital, that on Monday the King formally annexed Arab Palestine and the old city of Jerusalem. Thereby Abdullah thumbs his nose at two institutions: The United Nations and the seven-nation Arab League. When the fighting over Palestine had subsided, with Abdullah's Arab Legion and the Israelis sharing Jerusalem, the United Nations, which had let the two fight it out, blandly proposed an international regime as if nothing had happened. As for the benighted Arab League, this group, at its recent conference in Cairo, sought to prevent any disposition of Arab Palestine. It threatened sanctions against any member that took over part or all of Arab Palestine. It further required a return to the partition boundaries of 1947—that is, the General Asembly's resolution which it has all along rejected—as the basis of peace talks with Israel. The decisions would be funny if they did not hide tragedy; time doesn't stand still with the Arab League, it goes back, and the wonder grows that its antics are taken at all seriously.

Yet this has always been the attitude of the nineteenth century British Colonial Office, to whose initiative the Arab League owes its creation. The league was supposed to be a bulwark of the British imperial interest against change as well as communism. It was always more myth than reality. Yet British agents continue to throw dust in the British Government's eyes about its power and solidarity. In the very last debate in the House of Commons Mr. Bevin lavished praise upon this model of impotence and intransigence. The British temperament, however, is not given to treating fiction as fact, and the London Times has just administered a resounding rebuke to the Government for impeding peace-making in the Middle East by shoring up the pretensions and sharing the blind reaction of the Arab League. The only sensible policy, the newspaper says, is Jordan's, namely, to reach a comprehensive understanding with Israel. And the only sensible policy for Britain is "to seek a real understanding among all the countries concerned—including Pakistan, Persia, and Turkey, as well as the Arab States and Israel—instead of looking to the Arab League alone to discharge responsibilities for which its narrow basis and restricted outlook quite unfit it."

Would that all this had been said a long, long time ago. Lack of attention to realities has characterized policy toward Palestine since the onset of the reference of the controversy to the United Nations. The noxious Grand Mufti (who turned up as the evil genius behind the scenes at the Cairo Conference) was regarded as the spokesman for Arab Palestine, his Arab Higher Committee was treated at Lake Success as authority, and the Arab League was looked upon as a combination of martial nations capable of leading a jihad, or holy war. This is the policy that precipitated the blood bath in Palestine. And now the Arab League, flapping a whisk broom as ineffectual as Mrs. Partington's, is gesturing to turn back the clock, and demanding a collective peace with Israel on the basis of the United Nations partition plan of 1947. This it could have had in 1947, but the intervening war has created a new set of actualities, and peace terms, even the UN plan for the internationalization of Jerusalem, must correspond with these actualities. King Abdullah, long frustrated in world capitals in his quest for a practical solution, has now recognized them. His is an act of courage that should be backed in London by stopping its arms traffic (with which alone the Arab League retains the slightest prestige) and in Washington by ending its schizophrenia on the Middle East, and at Lake Success by a withdrawal of the resolution on Jerusalem.

Address of Secretary of Defense Louis Johnson

EXTENSION OF REMARKS
OF
HON. HOWARD W. SMITH
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. SMITH of Virginia. Mr. Speaker, anniversaries of recent occurrence have recalled the name of Thomas Jefferson and his many services to the United States. The sesquicentennial celebration of the establishment of the Library of Congress has stressed our continuing indebtedness to him for this great source of intellectual enlightenment. The celebration of Jefferson's own birthday, April 13, 1743, elicited many tributes to the many facets of his genius. I know of no tribute that has so succinctly expressed our general indebtedness to this great American than the one paid by Hon. Louis A. Johnson, Secretary of Defense, at the founder's day celebration of the University of Virginia.

Mr. Speaker, the University of Virginia is Jefferson's own creation. He was its founder and its architect, and he remains the inspiration for the progressive spirit not only of that great university but of other great universities throughout the Nation. Thomas Jefferson believed in education, because he believed that education is a guaranty of democracy, and he believed in democracy because he believed in the people.

It was appropriate that Secretary Johnson, in whose able hands has been placed the responsibility for our national defense, should have quoted from a letter of Thomas Jefferson this statement:

I am persuaded myself that the good sense of the people will always be found to be the best army.

Mr. Speaker, I wish to express my great faith in the ability and the wisdom of Secretary Johnson, faith indicated by the President himself in his selection of Louis Johnson for his tremendous responsibility. There are many who have attacked him and his program of economy, because they fear he has weakened our defense instead of strengthening it. It is my opinion that such detractors of Louis A. Johnson fail to understand his program of economy and of defense, and fail likewise to share his faith and the faith of Thomas Jefferson in the people.

Our defense plans—

Secretary Johnson said in his stirring address at the University of Virginia—

are not rigid. They are not the laws of the Medes and Persians. They are flexible and adaptable to changing conditions. They are under constant study and review. If we become convinced that our present means are insufficient to meet the exigencies of the day and the probable threats of tomorrow, we shall not be too humble to ask for more; and if we find them more than adequate, we shall not be too proud to ask for less. We shall always seek for truth and we shall take fitting means to meet the truth.

Secretary Johnson is no advocate of a static defense, a static system of education, or a static democracy. The motto on the great hall of the University of Virginia, a verse from the greatest of all books, assures us that if we—"Know the truth* * * the truth shall make (us) free." Secretary Johnson said:

Today in a dynamic world we have reached the pinnacle among nations. We shall retain that leadership only so long as we use the brains and the brawn with which we have been endowed in a way so as to be fully prepared to deter aggression in the first place, to defend ourselves, if need be, and to defeat an aggressor, if he forces war upon us.

Mr. Speaker, more significant, however, than Secretary Johnson's statements about our military defense, and how we shall maintain it, are his words about the more inclusive defense we must maintain if we are to continue to enjoy our democracy in peace. It is in such words that he rises to the wisdom of Jefferson, and to the stature of statesmanship. I wish to quote one more paragraph from this heartening speech that does so much to reassure us about the security of the United States, and the strength of our democracy. Secretary Johnson's words are:

We shall win the struggle to rally humanity for freedom not by any matching of man for man, gun for gun, tank for tank, or plane for plane; not by playing our opponents' game and wrecking our economy through spending ourselves into a depression; and not by giving up our cherished democratic institutions for reactionary militaristic experiments in the regimentation of society. We shall win by proving ourselves qualitatively stronger, in ingenuity, in spirit and in muscle, than any who may contemplate to challenge us. We shall invest prudently in our defense and we shall make every dollar bring a maximum return in protection. We shall stand by our friends overseas. We shall give them economic and military aid to the fullest extent possible when there is a reasonable chance of some favorable gain in the form of more effective mutual defense. We are determined to be strong,

for peace today can be achieved only through strength.

Mr. Speaker, I ask unanimous consent to extend my remarks and insert the text of this stirring address, so truly in the spirit and the tradition of Thomas Jefferson, in the CONGRESSIONAL RECORD.

The address by Secretary Johnson is as follows:

(Remarks by Hon. Louis Johnson, Secretary of Defense, Founder's Day, University of Virginia, Charlottesville, Va., Thursday, April 13, 1950)

About 10 days ago I flew back to the United States from the Netherlands. There, at The Hague, I represented the American people at the third meeting of the Defense Committee of the North Atlantic Treaty Organization.

This was a meeting of equal partners with equal votes, each ready to contribute in accordance with his capabilities toward the strengthening of our common defense. As the strongest of the partners and the one in the best position to help in this vital need, the duty and the responsibilities of leadership in this undertaking on the request of all nations concerned devolved upon the United States. This trust we accepted wholeheartedly in the spirit of a brother more fortunately situated who was eager and determined to work to the utmost of his ability with the other members of the family toward the common aspirations of security, peace, freedom, and prosperity.

As I contemplate the present position of the United States as a leader in the family of nations, there comes to my mind a little known chapter of American history of a visit to the Netherlands in 1788 by the founder of our university whom we have come here to honor today. Then the situation was reversed. The Netherlands nation was strong. We were woefully weak. We had come out of a victorious war with our economy crippled, our finances strained, and our credit shattered. We were operating under the loose Articles of Confederation. The Federal Constitution had been framed but not yet adopted. Our power to raise money was not clearly defined. We desperately needed the sympathy and the help of the Dutch people. We needed funds to tide us over the next critical year or two.

It was under such circumstances that Thomas Jefferson came to Amsterdam to negotiate a loan with the Dutch for 1,000,000 florin, or about $400,000 in the American currency of that day. It was not a big loan, not even for those days, but it was definitely needed by our young country. The Dutch listened to the sincere pleas of Thomas Jefferson and extended credit to our new Nation. About a month later our founder was able to write of his journey to the Netherlands in these terms:

"I had the satisfaction to reflect that by this journey our credit was secured and the new Government was placed at ease for 2 years to come."

I sincerely hope that the results of our March meeting in The Hague in 1950 will give the Dutch people and all of our European friends the same kind of strength, encouragement, and faith that our infant Republic gained as a result of the visit of Thomas Jefferson to Amsterdam in March 1788.

Thomas Jefferson, the "father" of our university, was born on April 13, 1743. In commemoration of that historic event which has meant so much to the hopes and the aspirations of all of mankind, we, his sons and his admirers, have assembled here on this Founder's Day again to express our deep respect for him as a man, our abiding faith in him as a great apostle of democracy, and our heartfelt gratitude to him as an earnest and progressive college president.

Thomas Jefferson, the man, was the Virginia gentleman in the full sense of the word—human, gallant, gracious, generous, hospitable, tolerant, and courageous. He fully comprehended the true significance and the responsibility of noblesse oblige. He devoted himself wholeheartedly to the welfare of his fellow man.

Of Thomas Jefferson the great liberal spirit, there is little that can be added by us to his own great expressions in the Declaration of Independence that he wrote, to the statute of Virginia for religious freedom that he sponsored, and to the Bill of Rights whose inclusion in our Federal Constitution he inspired.

Thomas Jefferson believed in democracy. He knew "no safe depository of the ultimate powers of society but the people themselves." Neither the excesses of the Shay's Rebellion nor of the French Revolution shook his faith in the common sense of the common man. He fully understood the vulnerabilities as well as the strength of democratic government and democratic institutions, but in his sound, logical, and informed way he never faltered in his firm conviction that the surest road to human happiness was paved with the inalienable rights of man.

In times of stress, we find there is sometimes a tendency on the part of some people to lose faith in the democratic process. They say that a democracy debates while a strong ruler decides. They point out that in the name of freedom of speech endless discussion obstructs positive action. They maintain that under the cloak of a free press irresponsbile writers harass and abuse men in public life, and often thwart them in their honorable efforts. These criticisms of democracy are not modern twentieth century developments. Some of our own forefathers had similar misgivings, and particularly about the ability of a democracy to face a grave crisis. It therefore is not surprising that some of their children may sometimes harbor similar doubts today.

A study of American history, however, and, especially of our successful experience in World War II, should prove conclusively that a democracy can act with vigor under stress and can come out victorious with its institutions unimpaired.

Today we are engaged in what is popularly described as a cold war, and I am confident that the same good sense of the American people under a leader in the Thomas Jefferson tradition, our President, Harry Truman, will continue to prove the innate strength of our American democracy in the face of any storm.

We shall win the struggle to rally humanity for freedom not by any matching of man for man, gun for gun, tank for tank, or plane for plane; not by playing our opponents' game and wrecking our economy through spending ourselves into a depression; and not by giving up our cherished democratic institutions for reactionary militaristic experiments in the regimentation of society. We shall win by proving ourselves qualitatively stronger, in ingenuity, in spirit and in muscle, than any who may contemplate to challenge us. We shall invest prudently in our defense and we shall make every dollar bring a maximum return in protection. We shall stand by our friends overseas. We shall give them economic and military aid to the fullest extent possible when there is a reasonable chance of some favorable gain in the form of more effective mutual defense. We are determined to be strong, for peace today can be achieved only through strength.

But above the physical prowess of our arms there will always stand the innate spiritual quality of our people and their faith in our democratic institutions. That faith was best expressed in a letter by Thomas Jefferson as follows:

"I am persuaded myself that the good sense of the people will always be found to be the best army."

In the same letter that he expressed such faith in the American people, Thomas Jefferson went on to pay his respects to the freedom of the press.

"The basis of our Government being the opinion of the people," he wrote, "the very first object should be to keep that right; and were it left to me to decide whether we should have a government without newspapers, or newspapers without a government, I should not hesitate a moment to prefer the latter. But I should mean that every man should receive those papers, and be capable of reading them * * *."

Such was Thomas Jefferson's faith in the free opinion of mankind. Coupled with this, he was a firm believer in extending and improving facilities for education.

To the memory of Thomas Jefferson, the educator, and the founder of this great university, we have around us physical testimonials in brick and mortar that he personally planned, and a liberal tradition of scholarship, honor, and truth upon which he so stanchly insisted.

Were Thomas Jefferson to return to us today he would be pleased to find in Dr. Colgate Whitehead Darden, Jr., a worthy successor—an outstanding leader who administers this great university in the full spirit of its founding father.

As for the students of our day, I doubt if Thomas Jefferson would find any to excel him in his capacity for work and play. He could read latin, Greek, and French. He was equally at home with higher mathematics and natural sciences. With it all, he always seemed to find time to ride, and dance, and sing. His versatility continued after graduation and his all-around capacity gained him great renown. One of his early biographers described him in his thirties as a gentleman "who could calculate an eclipse, survey an estate, tie an artery, plan an edifice, try a case, break a horse, dance a minuet, and play a violin."

Nor did the education of Thomas Jefferson stop with his college days. In fact, it never stopped. He would have applauded the present educational program of our armed forces for we, too, work on the theory that study does not end with graduation from college, that a diploma from West Point or Annapolis is but the beginning—a first step to qualify a junior officer for advanced training and higher learning.

Thomas Jefferson was deeply interested in the education of military men, and in a sense West Point shares with our own university the claim upon him as its founder. It was he who selected Jonathan Williams to head the institution when the Military Academy was only in the discussion stage. It was he who chose West Point as the site for the Academy. It was upon his insistence that the organic act setting up the Military Academy was passed by the Congress. He interested himself in the selection of the faculty at West Point and was responsible for the choice of Ferdinand B. Hassler, a distinguished Swiss national, to head its mathematics department.

Toward the end of his administration we find Thomas Jefferson pressing for an expansion of the Military Academy and considering its removal to Washington where he hoped "it may render its benefits common to the Naval Department." Evidently Jefferson, even in those early days, was already thinking in terms of cross-service between the

Army and the Navy, and perhaps even of unification itself.

In later years when it was proposed to give to his portrait a place "among the benefactors of our Nation and of the establishment of West Point in particular," Thomas Jefferson modestly wrote as follows:

"I have ever considered the establishment (of West Point) as of major importance to our country, and whatever I could do for it, I viewed myself as performing a duty only. The real debt of the institution is to its able and zealous professors."

In those days the defense of the United States was based on a series of strong forts commanding strategic approaches to our vital areas, and a small mobile force of foot troops, augmented by some cavalry and supported by some artillery. The need for post graduate education either in civilian colleges or even within the services was not fully recognized, though a beginning was made in 1824, 2 years before Jefferson died, when the artillery school was established at Fortress Monroe in our own Virginia.

Today, life in our armed forces is a succession of schools in army posts, on air bases and aboard ships. Officers and enlisted men are continually studying the arms and equipment entrusted to them and learning how to use them to best advantage. The heart and the core of this educational system are the officers and the noncommissioned officers; and to enable them to teach others, they first must learn themselves.

They must learn the tactics and techniques of their own services. They must understand their own capabilities and limitations and those of their sister services. Many of them must qualify for duties in the strategic field which are predicted on the ability to handle problems common to two or more of our services, and to carry out unification missions for the Army, Navy and Air Force. Above all else, officers must be leaders; and they are not always born. Courses in leadership, therefore, are given great emphasis. Our enlisted men with their innate intelligence and practical sense, with their loyalty and their spirit of bravery, are entitled to the best in leadership and we are determined that they will get it.

Leadership in modern war is more than drawing sword and fearlessly galloping off at the head of a troop, though there still is no substitute for that type of courage when necessity demands it. Leadership normally begins with a sense of confidence born out of knowledge and experience, and our armed forces are engaged in seeing to it that its officers acquire both these prerequisites.

Let us see, for instance, how the Army educates its officers. First, a new second lieutenant goes to a basic officers school for courses in subjects common to the Army as a whole. Then he goes to an Infantry, Artillery, Armored Cavalry, or similar school to become indoctrinated in the basic subjects of his branch. Later he attend an advanced school. If he proves particularly outstanding, he may be selected to attend the advanced school of another branch. Sometime between his 7th and 15th year of service he becomes eligible for a course at the General Staff College, and beyond that there is the War College.

From then on, outstanding officers compete with other exceptional men for an opportunity to attend schools conducted on a joint Army, Navy, and Air basis. There is the Armed Forces College, the Industrial College of the Armed Forces and the National War College.

The Navy and the Air Force provide similar educational programs for their officers. All three services send a considerable number of men to civilian colleges and universities for specialized training where many of them qualify for masters' degrees and some of them become doctors of philosophy or science. Right here at the University of Virginia there are 26 Army men studying medicine, law, nuclear physics, international relations, and military geography. There are eight air officers taking up law, political science, physics, and psychology. The distribution among the universities is Nationwide. Let me give a few examples.

Navy men are studying engineering at Michigan, MIT, Princeton, Lehigh, and California. There are Army men studying communications at Illinois, electronics at Pennsylvania, guided missiles at Johns Hopkins, physics at Chicago, journalism at Missouri, law at Harvard, and public administration at Syracuse. And the Air Force has students at Ohio State, Stanford, Wisconsin, Washington, and Yale. These lists are far from complete. I would not have the time to give you all the colleges and all the courses. I hope I have given you enough, however, to indicate the scope and the variety of education followed by the men in the armed forces.

Those who have graduated from the service, GI alumni of the Army, Navy, Marines, and Air Force, are taking full advantage, by the thousands, of the opportunities offered them by a liberal and appreciative Government to continue their studies interrupted by war. There are many of them right here at the university. They will be found on the campus of practically every one of our colleges. Their experience in uniform has given them an added stimulus to learn and a deeper realization of the value of an education for service, both in war and in peace.

There is one aspect worth especial mention at this time. Among those receiving specialized training there are 575 officers of the Army, Navy, including the Marine Corps, and the Air Force, attending business management courses in our universities. That fact illustrates our determination to train our officers to place our military procedures on a business basis—to make every dollar of our appropriation bring us a dollar's worth of defense.

The sole justification for our armed forces is their ability to defend their country. Second only in importance is the requirement that they operate on an efficient basis. Our educational program aims to train men toward the realization of both essential objectives.

Today, in a dynamic world, we have reached the pinnacle among nations. We will retain that leadership only so long as we use the brains and the brawn with which we have been endowed in a way so as to be fully prepared to deter aggression in the first place, to defend ourselves, if need be, and to defeat an aggressor, if he forces war upon us.

I have every confidence in our ultimate success. We shall face facts as they are and shall fit our defense plans and our manpower and munitions requirements to meet them. Our defense plans, however, are not rigid. They are not the laws of Medes and Persians. They are flexible and adaptable to changing conditions. They are under constant study and review. If we become convinced that our present means are insufficient to meet the exigencies of the day and the probable threats of tomorrow, we shall not be too humble to ask for more; and if we find them more than adequate we shall not be too proud to ask for less. We shall always seek for truth and we shall take fitting means to meet the truth.

As an alumnus of this great university I have never lost sight of the quotation from St. John inscribed in Greek here above the columns of Cabell Hall.

"Know the truth, and the truth shall make you free."

Address by William C. Bullitt at the Yale Law School

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address delivered by the Honorable William C. Bullitt at the Yale Law School on April 13, 1950, under the auspices of the Pierson College International Relations Club.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Forty years ago when I was a student at Yale we were all obliged to go to compulsory Sunday chapel—which often meant returning to New Haven by the milk train from parties in New York. Our pain was eased, however, by President Hadley. The visiting preachers would invariably ask him how long they should preach. Hadley invariably would reply: "Your time is, of course, unlimited; but the oldest Yale tradition is that no souls are saved after the first 15 minutes."

At the risk of saving no souls at all, I shall take more than 15 minutes because I want to try to give you an over-all picture of the world situation. When you complete your studies you will step onto a field of battle. All of us wish that were not so; but it is so. And you had better know now what you will face.

Why isn't it reasonable to believe that if we display enough good will we can reach an agreement with Stalin that will give peace to the world? After all, the Soviet Union contains a sixth of the land surface of the earth. It is sparsely populated. It could be developed as our own country was developed between the Civil War and the First World War—peacefully, with a constantly rising standard of living for all its inhabitants. Why doesn't that happen? Isn't the trouble with ourselves? Isn't the Soviet Government afraid of us—legitimately afraid of us?

It is not. The Soviet Government knows better than any other government in the world the exact state of mind of the American Government and the American people. It has plenty of agents and sympathizers in our country to give it the facts, and there is no better informed group of men in the world than the Politburo. The leaders of the Soviet Union know as well as we know that we desire to live in peace with all nations.

One day in 1934 when our Government was attempting to establish cordial relations with the Soviet Government—hoping that a combination of the forces of Great Britain, France, and the Soviet Union might prevent Hitler from making war in Europe and the Japanese militarists from pushing further into China—a number of commissars were having a drink with me at our embassy in Moscow. I showed them the Soviet second reader. In it was a chapter entitled "America." At the head of the chapter was a drawing of starving children working at factory machines in a cellar, while on the floor above fat, bejeweled women and fatter men danced jazz. The text read: "America is a country where children of workers and peasants are forbidden to get an education. They

are forced to work all day at machines in dark cellars, and get nothing to eat but bread, while the rich dance over their heads." I asked the commissars how they expected to educate leaders for the Soviet Union if they taught their children such lies? They laughed and one of them replied: "Have you ever found any one of us that doesn't know the facts?" I answered that I thought they were better informed than the members of any government I knew. The commissar then went on: "It will always be so. We shall educate in special schools leaders who will know the truth, but as for the rest—we shall teach them exactly what it is in the interest of the Soviet Union for them to know."

Stalin and the members of the Politburo have no fear whatsoever that they will be attacked by the United States. They know the facts. The tremendous trumpetings of anti-American propaganda in Soviet schools, plays, movies, books, press, and radio are merely means to drive fear and hatred into the ignorant in order to make them docile instruments of Stalin.

From 1941 to 1947 we tried to appease Stalin. Hopefully we gave him everything he asked. We failed. His appetite remained as great as ever. We failed to appease him then, and we would fail now if we should try again to appease him. We cannot develop friendly relations with the Soviet Government as we could develop such relations with a normal government because we are facing, not a normal government, but a clique of men who, by their own will, deliberately and consciously, have chosen to declare themselves the enemies of all peoples that live in freedom. They are the high priests of a fighting faith which requires of its adherents conquest of the world. The Russian people, who capable of performing prodigies of good, are driven by that privileged and persecuting clique to prodigies of evil. In 1939, Stalin ruled 170,000,000 persons. Today he controls 800,000,000—more than a third of humanity. His objective is conquest of the entire human race. He will not stop. He can only be stopped. We cannot get off this planet. We shall have to stop him or submit to his rule.

To believe that is still possible to appease Stalin, it is necessary to be ignorant both of Soviet history and of the doctrine which inspires the actions of the Communists.

The Communist creed teaches that establishment of Communist dictatorship throughout the earth and abolition of private ownership of the means of production will erase all envy, hatred, and malice from the human heart. It promises that the state will then wither away and that all men will live without a state in perfect happiness. In the name of science, the Communists teach this fantastically unscientific creed to the peoples they control. They educate their children to live by this faith and, if need be, to die for it. A large percentage of the young in the Soviet Union and the Soviet satellite countries have no other creed taught them. So they have faith in the Communist creed and give their lives for it, believing that they are fighting to emancipate all humanity from all evil.

Since the Communists believe this, they are convinced that the highest present moral duty of man is to achieve Communist world dictatorship. This supreme end, they hold, justifies all means for its achievement—all means including the pledged word given and broken, character assassination, torture, murder, and war. They revere the words which Lenin wrote: "It is necessary * * * to use any ruse, cunning, unlawful method, evasion, concealment of truth." They hold as gospel truth his portentous statement: "* * * it is inconceivable that the Soviet Republic should continue for a long period side by side with imperialist states. Ultimately one or the other must conquer. Meanwhile a number of terrible clashes between the Soviet Republic and the bourgeois states is inevitable."

There is not the slightest evidence that Stalin disbelieves in this doctrine which now bears his name as well as the names of Marx and Lenin. Even if he should disbelieve in it, he could not abandon it. For the Marx-Lenin-Stalin creed is the fighting faith which holds the Communists together. Without it the Soviet Union and all other Communist states would disintegrate. Stalin must and will continue to try to conquer the world.

No vice in international affairs is so fatal as the vice of wishful thinking. If we continue to believe that we can appease the unappeasable, we shall not survive. We cannot turn a tiger into a cat by stroking it.

In our short history, we have never had to face any problem as complex as the problem of this Communist assault. The western world once did face a similar problem. The fighting faith of Mahomet overwhelmed the Christian states of the Near East and North Africa and Spain, and the Moslem forces were not stopped until they reached Tours on the Loire not very far from Paris. I do not wish to compare the Moslem religion, which is a noble one, to the Communist creed, which is satanic; but I do wish to point out that in the hundred years between Mahomet's death in 632 and the defeat of the Moslems by Charles Martel in 732, country after country fell before the fighting faith until it seemed that it was irresistible.

The Communist attack is no more irresistible than was the Moslem attack. But to meet it successfuly, we shall need the same faith and courage that the Christians had at Tours. Furthermore, we shall need wisdom. We shall have to be wise in time. And there is not much time. We shall have to grow up quickly, for the burden of defeating the Communist attack has fallen on us at a moment when we are intellectually ill-prepared to carry it. We have always been so occupied with our domestic affairs, so happy in our own continent, that few Americans have taken any long-continued interest in foreign affairs. In consequence, our foreign policies have often been not expressions of our vital interests, but mere spasmodic reactions to the demands of domestic political expediency. The few Americans who have devoted their lives to foreign affairs since 1914 are so exceptional as to be almost oddities. As a nation, we are amateurs in the foreign field. Our leaders play by ear or by hunch. Stalin sits in the Kremlin with the members of his Politburo who compose his general staff for conquest of the world and plans his advances on a world scale as carefully as the commander in chief of an army plans his attacks. Our Government has never prepared an over-all plan of political, economic, and military defense for ourselves and the rest of the free world. Indeed, our administration has not even understood that such a plan is vital. It is not so long ago that President Truman said "I like old Joe."

What should we be doing?

Can we stop Stalin without war? It is not impossible but it will not be easy. For Stalin will not stop unless we keep him constantly confronted by superior force and unless he knows that we will use that force against his direct or indirect aggressions. To stop Stalin without war we must, therefore, have both the superior force and the will, if necessary, to use it.

Do we have the superior force? In 1945 we had the atomic bomb and the world's greatest air force to carry it. Our industrial plant was intact. China, the key to all Asia, was our ally. Stalin had no atomic bomb and no long-range bombing planes. His industrial plant was, in large part, worn out or destroyed. Compared to the Soviet Union we were overwhelmingly strong.

Today Stalin has China as an ally. He has atomic bombs and at least 350 long-range bombers capable of carrying them to any spot in the United States. We have no radar warning net to detect the approach of his planes. We have only a fraction of the number of pursuit planes needed to make effective use of a warning net. The authoritative Finletter Commission in 1948 recommended as a minimum for national security 70 air groups. We have 44. Stalin's total air force outnumbers ours by about 3 to 1. His annual production of war planes is about 3 to our 1. He has 125 army divisions to our 10—among them, 30 armored divisions to our 1. In addition, he has approximately 270 submarines—about 30 of which are of the latest type against which we have not yet produced effective counterweapons. Furthermore, thanks to his agent Fuchs who transmitted to him all our secrets for production of both A-bombs and hydrogen bombs, he may be ahead of us in production of H-bombs.

Moreover, the whole of western Europe is without defense, and everyone in western Europe knows it. Its cities cannot be protected against Soviet atomic bombs except by our Air Force, which today is not strong enough for the task. To oppose the 125 Soviet divisions, the French have 6, the British say they can furnish 1, the Belgians 1. To have a chance to stop the Red army for a few months, the European democracies would need from 50 to 60 divisions. Modern equipment for such a number of divisions would cost from $10,000,000,000 to $20,000,000,000. And military authorities agree that no western European defense system can be effective unless both the western Germans and the Spaniards are included in it.

The balance of military force is swinging so rapidly to the Soviet side that some officials in Washington who have access to secret information believe that Stalin will attack us this autumn. They argue that by August 1950 he will probably have 50 A-bombs—enough to destroy our great cities and our atomic production plants, and thus prevent effective American counterattack. But my belief is that Stalin will not launch shooting war until he is certain that he can defeat us easily. He is a cautious and crafty leader who strikes only when he feels sure of quick victory. This autumn, his first surprise attack might not be successful. We would probably be able to strike back effectively. Therefore, it seems likely that he will not start bombing this year but will go on increasing his military strength faster than we are adding to ours, and seize more peoples, resources, and strategic areas, until he feels that his power is irresistible. We are allowing time to run on his side. And he knows it.

Unless we strengthen quickly our own military forces and those of our allies and prevent further Soviet aggressions, we shall throw away our last chance to keep Stalin confronted by superior force—and shall throw away, therefore, our last chance to stop Stalin without war.

We shall not even be able to defeat Stalin in war unless we build up our strength and that of our allies faster than Stalin is building up the strength of the Soviet Union and its satellites, and unless we stop further direct or indirect Communist aggressions.

At the present moment the Communists are advancing by open warfare in Indochina. If we let Indochina fall, Burma, Siam, and British Malaya—with its vast production of rubber and tin—will also fall. Then it will be India's turn.

At another point, the Communists are making small attacks preparatory to a great attack. The Chinese Communists for some time have been attempting to seize small islands on the way to the great strategic island of Formosa. Formosa is still being

held by the Chinese Nationalist Army which, some weeks ago, gave proof of its good morale by seizing a port on the mainland. If the Chinese Communists should capture Formosa, Stalin's forces would be within 250 miles of the northern Philippines. It was from Formosa that Japan attacked and captured the Philippines. Our Joint Chiefs of Staff, headed by General Bradley, pleaded with President Truman to send munitions and equipment, as well as economic aid to Formosa, and a few American officers to advise regarding defense. Secretary of State Acheson opposed our military leaders, and persuaded President Truman to decide that we would continue to do nothing to prevent the fall of Formosa. That is our present policy. For the Philippines, the Department of State is preparing another Bataan.

In the Near East, Iran, with its huge oil production, which plays such a large part in British economic life, is again threatened by Soviet-directed revolutionaries of the Tudeh Party. They have a fertile field in which to work. The poverty among the peasants of Iran is so grinding that they are close to revolt. Unless the Government of the United States moves rapidly to alleviate the suffering in Iran, Stalin may soon add that ancient country to his long list of satellites.

These, for the moment, are the areas in Asia where Stalin is pressing his advance strongly. But even in western Europe he is undermining our friends.

In Italy, more than 20 percent of the workmen are unemployed, and the Communists, who gathered one-third of the votes at the last elections, are gaining in strength.

In France, the government is far weaker than any French Government before the Second World War, and its entire apparatus is riddled with Communists. Even the head of French atomic research is a Communist.

Great Britain is staggering toward another financial and economic crisis.

Western Germany, under the pressure of unemployment, is beginning to listen to the Soviet propaganda which says: "Side with the United States and you will have unemployment, underfeeding, shortage of raw materials, a divided country and, finally, Soviet atomic bombs on your cities. Side with the Soviet Union and you will have all the wheat and raw materials you want, no unemployment, and a united Germany including the part that is momentarily Polish." Pastor Niemoeller, much admired by Americans, has now declared himself in favor of a united Germany even at the price of Communist rule.

When we began to give Marshall plan aid, and when we signed the Atlantic Pact, our object was to make western Europe a strong ally. We have succeeded only in keeping alive 17 picturesque, competing countries which cannot feed or defend themselves. If they would unite their economies by entering a European federation, they would be on the path to strength. But their governments refuse to take any serious steps toward federation. And our Government is making no effective effort to move them toward federation. They feel confident that, even after 1952, we will not stop our doles to them. And, indeed, we do not dare to stop for fear that they will all collapse into the hands of Stalin and be organized as Soviet satellites for his final attack on us.

What, then, is the real state of our defenses against Soviet aggression? Our own military strength is falling behind the growing military strength of Stalin. Asia is slipping into Stalin's hands. Western Europe is defenseless. The Soviet atomic bomb threat to our homes, our families, and our country is increasing each day. The Communists are advancing. We are retreating. They are on the offensive. We are on the defensive. No war, hot or cold, was ever won by forces which remained on the defensive.

Why are we on the defensive? Why has our Government failed to defend our vital interests?

Because American foreign policy since 1941 has been a supreme triumph of Soviet psychological warfare. In 1941 our Government was bamboozled into treating the Soviet Union as a peace-loving democracy and the Chinese Communists as mere agrarian reformers who have no connection with Moscow. Our Department of State forgot that the Soviet Government was a predatory totalitarian tyranny and that the Chinese Communists were agents of Stalin. In 1941 the Soviet Government was in desperate straits. Thanks to our aid—$11,000,000,000 worth—it survived. Today, Stalin controls more than a third of the human race, and we are not sure that we shall survive. The measure of our foreign policy is the fact that in 1939 Stalin controlled 170,000,000 people, while today he controls 800,000,000.

Apologists for the Tehran, Yalta, and Potsdam agreements have used many words in an attempt to prove that what was wrong was not the agreements themselves but the failure of the Soviet Union to carry out the agreements. This is as if a banker, who had been appointed trustee of the fortune of a child, should place the funds entrusted to his care in a Ponzi get-rich-quick scheme and then, when the money was lost, plead that the trouble was not with the trustee—who accepted Mr. Ponzi's promise to pay 200 percent per year—but with Ponzi's failure to carry out the agreement. The people of the United States hire officials to work in the Department of State because they need experts to handle complex world questions. The officials of that Department are trustees of the vital interests of the American people, and the most contemptible excuse that can be offered by or for them is that they meant well but were played for suckers.

To explain the sacrifice of the vital interests of the people of the United States by our National Government, it is not necessary to conclude that our Department of State is filled with Soviet agents. We know that there have been some in influential posts. But most of the damage has been done by naive dupes of Soviet psychological warfare. We still have in office, in Washington and throughout the world, duped officials who have not been Soviet agents but have served the Soviet Government as effectively as if they had been Soviet agents.

In our Army, a general who loses a division through incompetence is court martialed. In our Department of State, men who throw away whole countries are promoted. They have a vested interest in their own mistakes. They cannot detach themselves from their past or their friends—even though those friends turn out to be Soviet agents. In any parliamentary democracy a minister of foreign affairs who had tossed a great ally like China to Stalin would have been dismissed from his post. Mr. Acheson remains Secretary of State.

There is a great moral difference between traitors and Soviet dupes. It is the same difference that is recognized in law between a man guilty of murder and a man guilty of manslaughter. In the case of manslaughter, there is no intention to commit the crime. But in both cases the victim ends up dead. If our President continues to keep as advisers on foreign policy men who have played a part in the sacrifice of our vital interests from 1941 to the present time, we shall have small chance to survive.

Perhaps it is difficult for you to feel profoundly that all you care about may be destroyed. Have you ever thought how many great civilizations have been totally annihilated? Have you thought of the Athens of Pericles and of the Roman Empire? Of all the great cities of Syria and north Africa where today stretch only lonely sands? Have you understood that a similar extinction may come, and come soon, to the whole Christian civilization of Europe—and may come to us here? This is hard to believe, but it is so.

Under these circumstances, what should we do? Let us remember two facts in approaching the problem of our foreign policy:

First, let us remember always to distinguish between the Russian people and the Soviet government. There can be no peace on earth so long as the Russian people and the peoples of the Soviet satellite states are driven by men who prefer a murderous doctrine to the "plain exigence of charity." In the year 1830 the Poles in revolt against the tyranny of the Czars inscribed on their banners a phrase addressed to the enslaved Russian people: "For your freedom and ours." We should approach the Russian people in the same spirit. However hard it may be, we must make the Russians comprehend that we stand for their freedom no less than for our own, since in our battle against the Communist dictator the Russian people must be our final allies. We have had freedom for so many years, we have lived so long in Christian civilization under a Bill of Rights honestly enforced, that we are apt to forget that the idea of freedom is the most explosive force in the world of politics. Freedom is an atomic bomb in the field of ideas. All men hate to live under the eye and hand of an omnipotent secret police. Tyranny, whether it be called by the name of communism, fascism, or by any other name, is loathed by all normal men and women. And however absolute may be today the grip of the Soviet dictator on his subject peoples, that grip can and will be ended eventually by the idea of freedom.

Second, let us remember always that many years will elapse before the peoples of the Soviet Union and the satellite states achieve freedom and that, throughout those years, we and the other free nations will be in danger of extinction unless we keep the Soviet Union constantly confronted by superior force. If any one of you is morally disturbed by that idea, let him remember that the most legitimate use of force on this earth is to hold the field to permit the growth of moral ideas.

Within the framework of these general conclusions, what should be our foreign policy?

1. To build up our military strength faster than Stalin is increasing his military strength.

2. To achieve the federation of western Europe and give adequate arms to that federation.

3. To stand up with force to the threat of the Communists in eastern Germany who have announced that on May 28 they will march 500,000 youths from east Berlin into west Berlin.

4. To give far greater aid than we have been giving to resistance forces in all the Soviet satellite countries.

5. To help the Albanian exiles rescue Albania from the Communists, and thus give new spirit to all the enslaved peoples behind the iron curtain.

6. To give adequate and effective economic aid to Iran.

7. To prevent Communist conquest of Formosa.

8. To help the Annamites and the French throw the Communists completely out of Indochina.

9. To insist that the UN—now paralyzed by Soviet veto and boycott—function as if there were no Soviet boycott.

These are but a few of the obvious steps that we must take immediately if we are to wrest the offensive from Stalin.

Won't such a policy be terribly expensive?

Of course it will be. Each one of us will have to make sacrifices—genuine sacrifices that will be hard to bear. We have allowed

Stalin to acquire such strength and to take over such races, resources, and strategic positions that nothing short of the full efforts of the American people will suffice to stop him. We are not technically at war; but we shall have to live and work as if we were at war.

We know what happens to a people that refuses to face—in time—a mortal danger. Yet today our Government is behaving as the French Government behaved from 1936 to 1939. In that period when the Germans were preparing for war and working 60 hours a week, the French cut their working hours to 40 a week. When the Germans were producing 700 planes a month, the French cut their plane production to 50 a month. They did this for the same reason that we are now reducing expenditures for our military forces and for aid to our friends throughout the world. The people of France, like all other peoples, wanted a higher standard of living and leisure. They did not realize that a higher standard of living and leisure would soon give them a higher rate of dying. In 1940 Hitler destroyed the independence of France. We restored the independence of France. There is no nation standing behind us to restore our independence.

It may be difficult for us to persuade our Government to change its present policies. President Truman has staked his political future on a program of hand-outs for crop support, housing, education, and other projects which appeal to groups of voters. To get more tax money for the hand-out program which produces votes, he has cut down the defense program which might produce survival. Our tax money is being used to buy surplus potatoes instead of jet planes. It will not be easy for him to change his course; but our best hope lies in the fact that he is a patriot. If we can let him know that henceforth we want to hear from him not what we can get from our country but what we can give to our country, we shall make it easy for him to take the course which will enable our Nation to survive.

The burden of decision is on our President. He, by our Constitution, controls our foreign policy. He commands our armed forces. If he is to act in time to save our country from conquest by Stalin, he will have to change his thinking quickly. He will have to experience something like the transformation which Saul experienced on the road to Damascus when "there shined about him a light from heaven," and he became Paul the Apostle. We should hope and pray that a light from heaven will fall on President Truman; but we should also try to shed upon him a light from the public opinion of Americans who do not want to live soft for a few years and then be conquered, but do want to live hard and keep their country free.

Seaway Project a Threat to Philadelphia and United States

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Seaway Project a Threat to Philadelphia and United States," published in this morning's Philadelphia Inquirer. It deals with the subject of the St. Lawrence seaway.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SEAWAY PROJECT A THREAT TO PHILADELPHIA AND UNITED STATES

In the light of the dubious over-all value of the St. Lawrence seaway project, to say nothing of the unquestionably bad effects on many sections of the country, including Philadelphia, Secretary of State Acheson's statement that action on this scheme is overdue is wholly unconvincing.

Acheson dutifully appeared before the House Public Works Committee to support President Truman's plea for approval of the seaway project, and added that it was necessary from the economic and defense standpoints, and to improve harmonious relations with Canada as well.

But Acheson, like so many others who have plugged this idea for more than half a century, failed completely to answer the objections that it would be too costly, that its defense value would be negligible if it had any at all, and that it would entail inevitable dislocations among important segments of the American economy.

It has been pointed out before that one bomb placed on one of the 50 proposed locks could bottle up the whole navigation system envisioned in these plans. Yet the locks would be essential if the St. Lawrence River were to be opened to navigation so that oceangoing vessels could go all the way to the port cities of the Great Lakes.

It has been shown, too, without successful contradiction, that this seaway would be shut down by ice for 5 months or more every year. And it has been demonstrated that the cost, now estimated at $800,000,000, would not end with the seaway project. Additional dredging of Great Lakes harbors would be needed, and there would be other costs.

But the most important objection is the disastrous effect of this scheme on American seaports. Philadelphia, along with New York, Boston, Baltimore, and other cities, would suffer severe losses by the proposed diversion of freight. The Pennsylvania Railroad and other railroads would incur new hardships which might impair their effectiveness in times of national emergency.

Acheson hasn't met these objections. The only action which is overdue, in the opinion of most Americans, is a decisive vote by Congress to reject, once and for all, this perennial effort to commit the United States to a wasteful project whose damaging effects would far outweigh its claimed benefits.

If World War III Comes, It Started With the Line That Chinese Communists Are Just "Agrarian Reformers"

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

AVERAGE FELLOWS NOT WORRIED OVER WAR; EXPERTS TROUBLED

(By Edgar Ansel Mowrer)

All over our vast and flourishing country little groups of earnest people are talking about the possibility of war.

This is not the kind of war scare which we have become used to since 1945 when the Soviet Union went berserk and started threatening the civilized world. Those scares affected average citizens. Students of world affairs were skeptical. Even during the Soviet siege of west Berlin which we broke by the airlift, American officials, ex-diplomats and specialists were not alarmed.

Now it is just the opposite. The average fellow does not seem to be much disturbed by the trend of international affairs. The specialists are worried. Recently one such specialist warned me to make no mistake, since we are already in a military situation.

An American ex-diplomat of great experience told me he was convinced that the Russians will never let us rearm western Europe. He thought they would force the issue in about 18 months. Another even higher ex-official, thought the show-down might come within 6 months.

The reason, generally speaking, for this pessimism is the boldness of recent Soviet diplomatic moves and provocations of the latter. The shooting down of the American Navy plane over the Baltic was merely the latest. The tone of the Soviet diplomatic protest over the alleged establishment of a democratic naval base at Trieste is another.

Another reason is the stubbornness with which the Soviet Union is now charging its adversaries with planning war. The latest of these made over the Soviet home radio service on April 18 charged the harmless Council of Europe with plotting aggressive war. The Soviet home service, be it noted, is addressed not to the outside world but to the Soviet peoples. This broadcast looked like part of a campaign to prepare the population for international trouble.

All totalitarian regimes, from Hitler and Mussolini to Stalin and Franco, have a habit of accusing the adversary of preparing to do exactly what they themselves are planning.

A-BOMB FEAR

But behind the current uneasiness in the minds of those Americans closest to international affairs is more than reaction to the Kremlin's latest outbursts.

It is the conviction that the acquisition of the A-bomb and of vast China has for the first time give the lords of the Kremlin enough power to wage an offensive war if they choose. It has been known for some months—and repeated in these columns—that the Russians are rearming on a scale far larger than President Truman and Secretary of Defense Johnson have planned for us—that they are, in sort, outstripping us.

WAR NOT NECESSARY

Personally, I do not believe that war is either imminent or necessary. The reason is that the non-Communist nations still have vastly greater potential strength than the Communist bloc, provided we organize it.

But one thing has to be admitted. Without the A-bomb and China, the U. S. S. R. would not today be defying the armed might of the United States by shooting down our airplanes.

Which brings me back to the drama that has been going on before the Senate committee in Washington these last weeks.

Owen Lattimore has taken oath that he is not and never has been a member of the Communist Party or a Communist sympathizer. Louis Budenz, former editor of the Communist New York Daily Worker, has sworn that Lattimore had been described to him as a top American Communist authority on Asiatic affairs. He claims that Mr. Lattimore was a member of a Communist "cell" active within the Institute of Pacific Relations. I have never met Mr. Budenz and have only a casual acquaintance with Mr. Lattimore.

I do, however, know one thing which is to me more important than whether Mr. Lattimore is or is not connected with the Communist Party. That is, that both Mr. Lattimore and the Institute of Pacific Relations have advocated policies which, in my judgment, have resulted in the Soviet acquisition of China that may be a cause of war.

This policy, as Mr. Budenz pointed out before the Senate, started with passing off the Chinese Communists as "Agrarian reformers." A flat lie if there ever was one. A second phase was designating the Nationalist Government of China—our wartime ally—as "feudalists" while painting the Chinese Communists as "democrats." From this followed logically the policy of withholding arms from the "feudalists" until they did what Washington wanted. A lot of bright American writers fell for this line.

By 1945, according to these people, the Nationalist Government was the "war party" and the Communists the "peace party." What more logical than for General Marshall to try to compel the "war party" to form a coalition with the "peace party?"

Shortly after the Communists began to win the civil war, the line changed again. The "agrarian reformers" had to be acknowledged as Communists all right. But they were not necessarily the tools of Moscow. I actually heard a leading member of the council on Pacific relations tell an uninformed audience at Cleveland, Ohio that if the United States would only be friendly to the Chinese Communists, sell them what they needed on their terms and break off relations with the Nationalists, these Communists would prefer us to the Soviet Union and in case of war, fight on our side against Moscow.

The United States Government went some distance along this line in the blithe hope that Mao Tse-Tung would turn out to be a Chinese Tito.

Mao didn't. The Chinese Communists became Moscow's right bower. They now control all of China but two islands and Moscow becomes insolent toward the United States. Do the advocates of appeasement in the Far East change?

By no means. Mr. Lattimore advocates our throwing South Korea to the Communist wolves and under no circumstances aiding the "feudalists" to maintain themselves from Formosa. Tomorrow some bright American reformer may advocate letting Ho Chiminh take over Indochina.

Why stop there? Why not help the Communist to liberate Thailand and Burma, Indonesia and the Philippines, Malaya, and even India? Aren't there "feudalists" in all these countries?

If the war that such expansion encourages then comes, we can console ourselves with the thought that it can be traced back to a policy that began by calling the Chinese Communists "agrarian reformers" and ended by giving them Asia. Or can't we?

Rent Control

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, April 26 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD testimony I presented this morning before the Committee on Banking and Currency on the subject of rent control.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF HON. HERBERT H. LEHMAN, OF NEW YORK, ON RENT CONTROL BEFORE THE SENATE COMMITTEE ON BANKING AND CURRENCY

As the members of this committee know, I have introduced S. 3464, a bill to amend and continue the present Rent Control Act for 2 years and to provide on orderly decontrol procedure. With the permission of the committee, I propose to discuss the details of my bill, but first I wish to make a short general statement on rent control.

I would like, first of all, to make known to the members of this committee what I believe to be the wishes and the needs of the country today, namely continued protection against the possibility of unjustified rent increases and inflationary influences on the national economy.

The theory of rent control, as I understand it, is to protect tenants from unfair exploitation in the cost of shelter, while protecting landlords in their right to have an adequate rent, and, over-all, to protect the economy of the Nation from an inflation based on a shortage in rental housing.

It is asked why we continue to control rents when controls over other segments of our economy have been eliminated. The answer to that question is not difficult. Rent controls are maintained because housing is the one commodity people cannot do without—it is the one commodity for which people cannot find a substitute, and as a single commodity, it takes a larger portion of the average monthly wage than any other.

Another argument advanced against rent control is that the landlord should be entitled to a fair rent. I agree. But in the same breath, I want to stress that the history of rent control shows that administration policy has been to grant rent increases whenever justified and also to decontrol completely those areas in which housing shortages no longer exist.

In support of this statement, the records of Housing Expediter show that during the past year, three out of every four landlords who applied for a rent increase received it. It has been said that anyone who could write could get a rent increase. I do not approve of that practice, but it has been rather general. The increases granted averaged 17.8 percent. During all this period, the Housing Expediter has had landlord-tenant consultants available and on the job throughout the country. It was the duty of these consultants to provide information and assistance on applications for rent adjustments and to aid in the preparation of these applications. It seems evident that all landlords who could or can justify a rent increase neither were nor are handicapped in applying for an increase. My information is that too many increases were granted, although it is more than likely that some few landlords are still receiving rentals which are unjust to them.

A third argument advanced against rent control is that it is socialistic and is contrary to the American way of life. Those who advance this argument want to end rent control as of this minute, completely and conclusively, without regard to the untold suffering and human misery such a termination would cause. I say that our present situation is not one which calls for such drastic and shocking action. I agree that we should bring rent control to an end as soon as possible, but we should not endanger the national economic structure by doing this before the housing conditions are such that this can be done without inflicting severe hardships upon vast numbers of our people.

NEED FOR RENT CONTROL

Mr. Chairman, your committee will undoubtedly be told that rent control should be eliminated because the need for it no longer exists. The facts and figures available to us completely refute such a claim. At the present time, rent control affects the rents on 11,000,000 units and protects about 38,000,000 people. On May 1, 1950, the State of New York will assume State control of rents and before June 30, 1950, the States of Alabama and Virginia will no longer be subject to Federal controls. Parenthetically, I may say that I understand there is a deep uneasiness over this situation in the county of Arlington and the city of Alexandria near Washington. In these areas live thousands of the employees of the Federal Government. Drastic rent increases will wipe out the benefits of recent salary increases granted to these Federal employees.

It is my prediction that even though rent control is discontinued in these two counties of Virginia, the District of Columbia will continue to have adequate protection. We will then find Federal employees working side by side, earning exactly the same salary, one paying a fair rent and the other paying whatever the traffic will bear. Certainly such a situation is neither fair nor in the public interest. On June 30, 1950, after the withdrawal of New York, Alabama, and Virginia, Federal rent control will still affect 8,375,000 units and protect some 29 million people. Certainly by reason of magnitude alone, this control can qualify as an urgent Federal responsibility to be met with Federal action.

For the past year the decontrol of rents was possible by any city, town, or village, by any State, by any local rent advisory board and by the Federal Housing Expediter. By these means a total of 791 decontrol actions have decontrolled 3,213,800 units since April 1, 1949. Almost a quarter of the total 16,000,000 units which were originally under control were decontrolled in the past year. Certainly this proves that the process of decontrol is progressing at a satisfactory rate. But as of June 30, 1950, there will still remain the major problem of rent control in each of 63 cities with a population of 100,000 or more, located in 40 States.

I have been much concerned with the problem of rent control, especially in my own State. I have already said that the New York State law will go into effect on May 1, 1950. There are, however, certain aspects of that State law which to my mind are far from satisfactory. It was with those defects in mind that I planned the bill which I introduced on the 21st of this month. Moreover, it appears that there is some question of the constitutionality of the New York State law. To permit the Federal law to expire under such circumstances would be an offense against the people of my State. But I am also deeply interested in the welfare of all the people throughout the United States.

With your permission, Mr. Chairman, I would now like to describe the major points of my bill, S. 3464, and give briefly the reason for the inclusion of those major points.

I. S. 3464 extends rent control and the veteran's preference provisions of the present law for 2 years. I have said that I am seeking an orderly transition from a system of controlled rents to one of uncontrolled rents. In our larger cities such as New York, Chicago, Philadelphia, and Los Angeles, such an orderly transition cannot be accomplished in 1 year. That fact is recognized even in the New York State law which also terminates rent control on June 30, 1952. Also I feel it is far safer to have at hand an authority which may not be needed than to suffer from lack of it.

II. Section 201 of my bill provides that housing units completed on or before the date of enactment of this bill will be placed under controls. Maximum rents for these

units would be equal to rents on comparable controlled units, giving due consideration to the increased costs of construction.

I recognize that this has the possibility of working a hardship on some landlords, although I think under the terms of my bill, the Housing Expediter would be given sufficient discretion to prevent such hardships and to make due allowance for the increased costs of construction of these new buidings.

I recognize also that these buildings were constructed on the basis of being exempt from rent control. Yet, it is likewise true that most of the older buildings were likewise constructed on the basis of being exempt from rent control.

The fact of the matter is that most of these units were built with Government FHA financing. I have read numerous reports and analyses indicating that excessive and even shocking rents are being charged in these new units. Since these units were constructed in large part with Federal funds, it seems perfectly proper for the Federal Government to move in at this point and insure that the owners shall not make excessive profits at the expense of the public whose taxes have made this construction possible.

Nevertheless, I do not pretend to insist that this provision represents a black and white case. I think it is a desirable provision. But I think a satisfactory rent control law could be written without it. It has some features concerning which I am not comfortable, but I know of no other way to achieve the purposes which I have in mind.

III. My bill provides for pegging rents at the level of March 1, 1949, and is, in effect, a roll-back to that level. Yet it is only a roll-back for rents which have risen grossly, unfairly, or improperly above the level of March 1, 1949. Rents which have risen as a result of improvements in accommodations or services are approved. Rents which have risen as a result of decrease in net operating income are approved. But all increases in the latter category are limited to 15 percent. My bill also authorizes decreases in rents by action of the Housing Expediter, where gross inequities are found or where rent increases have been imposed through fraud or misrepresentation.

IV. But while I propose to strengthen the controls on rents which should be controlled and to roll back rents which have improperly risen in shortage areas, I also propose new standards for the orderly decontrol of rental areas, and new inducements for decontrol in areas where control is no longer needed.

Under the present law, the State, or the local government, or the Housing Expediter may decontrol areas under their respective jurisdictions. But a State in whose rural areas control is no longer necessary has no means whereby it can practicably retain control in its larger cities. Most States thus choose to either continue to remain under Federal jurisdiction or to decontrol entirely, exposing the cities within their borders to unfortunate hardship.

My bill permits the Federal Housing Expediter to retain control over a portion of the units—the low-rental units—in any area in which the housing shortage in the other categories eases up.

My bill permits a State to decontrol and yet retain Federal controls of the large cities within its borders.

My bill permits a city, village, county, or any other local unit to be recontrolled, after being decontrolled, on a finding of hardship, or an application by the governing body of such a local unit.

My bill authorizes the Federal Government to recontrol large cities which have passed under State control but which have subsequently been decontrolled by State action. In such cases, it would take an affirmative request by the governing body of the city in question to authorize the Federal Government to recontrol.

This provision is aimed at situations like the recent development in my own State.

Under these provisions, States and localities will be quicker to decontrol, knowing that if hardship develops, they can again come under the protecting arm of Federal rent control.

Altogether my bill presents a framework whose emphasis is on control but whose purpose is to encourage dencontrol in areas and for categories of rental units over which control is no longer necessary. I cannot emphasize too strongly and too often that my purpose is to protect the groups and the areas which need protection and to see removed the hand of Federal controls from every area and every unit where it is not socially and economically essential that such control be retained.

My bill provides criminal sanctions for violation of the rent-control laws or regulations. My theory is—and it is supported by experience in a wide variety of fields—that a law without teeth invites violations. I think that our experience in the last year with the Federal rent-control law amply bears this point out.

There are two other noteworthy provisions in my bill which I think should be retained in any rent-control law which is enacted by the Congress. One is a provision prohibiting the conversion of a rental dwelling unit to comercial uses, except where no rental dwelling shortage exists. Sufficient discretion is left to the Housing Expediter to make this provision flexible and practicable.

The second is a provision which would prohibit the denial of unoccupied controlled housing to would-be renters on the sole ground that they have children. I think this is an important provision. I think that the present practice of denying rental accommodations to families with children is antisocial and deeply unfortunate. My bill provides sanctions to back up the intent of the law. I recognize that this provision will be difficult of enforcement. Yet I believe that it should and must be included in the law as a declaration of national policy.

This, Mr. Chairman, sums up the more significant provisions of S. 3464. As I have said, I have no special pride in this bill. I prefer to regard it as my contribution to the consideration which the members of this committee are giving to the subject of rent control. My sole purpose here today is to present to this committee my arguments for asking that a fair and reasonable rent-control law be enacted and that tenants, especially low-income tenants, be granted the protection they so urgently need.

I am submitting for the record a copy of S. 3464 with some minor substantive changes and clarifying amendments indicated thereon. I propose to introduce a clean bill today which will include these changes.

Happenings in Washington

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD, program No. 23 in the series "Happenings in Washington," which I have been presenting from time to time.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Pennsylvanians, this is ED MARTIN, speaking to you from the Nation's Capital, and bringing you another discussion of happenings in Washington.

President Truman, recently back from his month-long vacation in Key West, is busily preparing for his forthcoming nonpolitical swing through many parts of the Nation.

So, down here in Washington, the period between those two events seems to offer an ideal opportunity to take stock.

It gives us a chance to weigh the administration's promises and the accomplishments of the Eighty-first Congress.

The Eighty-first Congress, you remember, came into power in January 1949. It is now more than half way through its second session. It has only about 3½ months more to go before the adjournment date provided by law.

It is a strong Democratic Congress. Let us see what it has done to redeem the promises of the leader of its party.

But, first, I want to remind you that, in 1948, Mr. Truman called the Eightieth Congress a do-nothing Congress. He said it was the second worst Congress in our history.

You will remember also that he summoned the Eightieth Congress back into special session in the summer of 1948 and demanded that it put through a long list of must legislation.

The President said Congress could certainly put through all the bills in 2 weeks.

It couldn't, and of course, it didn't.

In the elections of 1948 the people gave him a Democratic majority in the Senate and an overwhelmingly strong Democratic House. This Congress was in session for 7 months last year. It has been in session about 4 month of this year, so far.

And, you will be interested to know, it has not accomplished in all those months what Mr. Truman insisted in 1948 any Congress should be able to do in 2 weeks.

Let us look over some of the results.

The President demanded higher taxes. He will not get them.

Instead the people will get some reductions in the war-time excise taxes we are still paying.

The Democratic majority in Congress has rejected his tax-increase proposals and is substituting the excise-tax reductions recommended and fought for by the Republican minority in Congress.

One of the finest accomplishments of the Eightieth Congress was its enactment of the Taft-Hartley law. Let me remind you that it was passed over the President's veto. Next to the fact that the Eightieth Congress gave the Nation its only 2 years of balanced budgets in the past 20 years—I am proudest of the fact that it passed the Taft-Hartley Act.

President Truman called it a slave-labor law and promised it would be wiped off the books.

He demanded its repeal in this Democratic Congress—but Congress, with a strong majority of his own party, has flatly refused to obey his orders.

Now the President has tried in another way to circumvent this law and to cripple it.

One feature of the Taft-Hartley Act is that it provides a strong, independent general counsel for the National Labor Relations Board, so that the Board which sits as judge and jury should not also be an enforcement and prosecution arm.

The President sent to Congress a series of 21 reorganization plans, most of them in line with administrative recommendations of the Hoover Commission.

One of President Truman's plans, No. 12, provides that the independent office of general counsel of the National Labor Relations Board be abolished and that its functions be transferred to the chairman of the Board.

Now, many people have been led to believe that this proposed change was recommended by the Hoover Commission.

Actually the Hoover Commission made no such recommendation. And, recently, in a letter to a Member of the Senate, former President Herbert Hoover wrote—and I quote:

"So far as I recollect, this subject was never discussed by the Commission. There was no recommendation in the Commission's reports to Congress."

That, my fellow Pennsylvanians, is in a letter from Mr. Hoover, himself, the chairman of the Hoover Commission. He makes it plain that the Commission not only did not want the office of the general counsel abolished, but that it never even discussed the subject.

Many who have been watching this situation are under the impression that President Truman's political advisers sought to put one over on Congress and the Nation by slipping this scheme across with authentic recommendations of the Hoover Commission.

I don't think Congress will let him get away with it.

Mr. Truman's Congress has refused to give him the Brannan plan which would place the farmers of this country under complete control by the Federal Government.

Congress has pigeonholed the Truman demand for socialized medicine, the extravagant and discriminatory so-called middle-income housing measure, and the controversial Federal-aid-to-education plan which would result in Washington dictatorship over the State and local school systems.

Mr. Truman demanded fair-employment legislation. Last January, you will recall, the Democratic leadership announced that the FEPC bill would be the first one to be brought up in the Senate this year.

It wasn't brought up then. Now, 4 months later, it still has not been brought up.

But the House did pass an FEPC bill. That bill, the only legislation of its kind to pass either branch of Congress, is a Republican measure, introduced by a Republican and backed by an almost solid block of Republican votes in the House.

What is more, neither the President nor his Eighty-first Congress has made a single, genuine move to trim Government spending down to income or to prevent this Nation from plunging deeper and deeper into debt.

In the last 20 years there has been only one Republican Congress—the Eightieth Congress. And in the last 20 years, during the lifetime of only one Congress—the Eightieth Congress—has the Federal Government's spending been kept down to the level of its income.

And so, my fellow Pennsylvanians, I am moved to wonder about this:

When Mr. Truman goes out on the road again in May, to tour the Nation and make speeches, will he denounce his Eighty-first Congress for its failure to give him the legislation he has demanded?

Will he call it a do-nothing Congress and the worst Congress because it has failed to accomplish in a year and a half what he insisted the Eightieth Congress could do in 2 weeks?

I wonder, my friends.

Let us watch and see if he repeats on this nonpolitical expedition the same program and the same promises that he offered when his trip was frankly political.

In my broadcast 2 weeks ago I discussed our social-security system. I explained how, as a member of the tax-writing Senate Finance Committee, I believed the system should be improved so that the wage earner would not be taxed twice for his old-age insurance benefits.

Now, speaking again as a member of the Senate Finance Committee, I think we should provide a change in our tax laws • • • a change to give substance to the constitutional provision that our taxes must be applied uniformly.

I have in mind an elaborate function held not long ago in Washington—the Jefferson-Jackson Day $100 dinner of the Democratic Party—at which President Truman was the principal speaker.

Five thousand persons paid $100 apiece to see and be seen at this dinner, at which the political speeches were intermingled with big-name entertainment by prominent figures in the theatrical world.

Now, under our Federal law, dinners with entertainment for which an admission charge is made are subject to a tax of 20 percent—private dinners as well as those open to the public.

By all the rules of the game, this dinner should have been taxed.

The $500,000 paid for tickets to this dinner should have brought $100,000 in taxes into the debt-ridden Federal Treasury.

Indeed, there was a strong precedent for it. Only a short time before there was a huge Lincoln Day affair in Washington, held, of course, by the Republicans.

You may remember something of that affair. Intermingled with the speeches were several acts of big-name entertainment—just as at the Jefferson-Jackson dinner.

Something else you may recall about the Lincoln Day affair was that the tickets cost $1 apiece. Box suppers were provided at a cost of another dollar each. That was all.

But because of the entertainment the Bureau of Internal Revenue decided this dinner was subject to the 20-percent Federal tax.

So, instead of $1, the admission price was $1.20, of which 20 cents went to the Government.

But those in charge of the $100 Jefferson-Jackson dinner decided not to pay the tax.

They declared that the dinner was free—that there was no charge at all. Instead, they claimed 5,000 men and women had generously contributed $100 each to the party and had been invited to attend the dinner free.

The Bureau of Internal Revenue accepted that tricky explanation with a straight face and handed down a formal ruling to the effect that the 20-percent tax need not be paid.

That ruling cost the Nation $100,000 in taxes—but it did save the jobs of the top executives in our Federal Bureau of Internal Revenue.

Therefore, I say we need a stiffening of our Federal tax laws to prevent discrimination of this kind.

Just suppose, that some of you went out to a place to dine—a place which offered entertainment.

Suppose you refused to pay the 20-percent tax on your check.

Suppose you argued that the dinner was free and that you were merely contributing the price of the check. Suppose, even, that the proprietor of the restaurant agreed with you and said he gave you the dinner free.

Do you believe the Bureau of Internal Revenue would believe either of you? Or would it serve notice on both of you—pay up in accordance with the law, or you'll both go to jail.

The Constitution of the United States very clearly states that taxes must be uniformly applied.

The avoidance of the tax in the $100 dinner indicates that there are discrepancies and favoritism. And you, as law-abiding citizens, should call upon Congress to correct this situation and to insist that the law be enforced without fear or favoritism.

I insist that if the man who can afford to go to a $100 dinner with entertainment need not pay a tax, then the man who goes out for a $4 or $5 dinner with entertainment should not be required to pay a tax.

And the person who goes to a movie for entertainment should not be required to pay a 20-percent tax either.

This is ED MARTIN, speaking to you from the Nation's Capital. I will be with you again in 2 weeks. Thank you for your attention.

McCarthy Versus Reds

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial which appeared in the Lawrenceburg Press, of Lawrenceburg, Ind., on April 20, 1950.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOME VIEWS ON MCCARTHY VERSUS REDS

So much name-calling has taken place in the MCCARTHY against State Department pinks campaign. It may be useful for us to discuss the situation without heat, as it appears to an observer only moderately informed about our Government, as most of us are.

First, let us note that the argument for hushing up all public discussion of Reds and pinks in the State Department is far from the American ideal of citizenship responsibility. It smacks of a taste for the secret conclave and dictatorial directness. Hitler and Stalin have given examples of certain practical advantages in this system, but this Nation has chosen another course.

Senator MCCARTHY may have been much too far reaching in his original statements. At this time, before the show-down, it seems to be assured to the minds of most interested citizens that this is the case. His changes in position have given his opponents some comfort. Though the shocking degree of antiespionage weakness first alleged may no longer obtain, the Alger Hiss conviction and other generally believed statements seem to lay bare a condition calling for some official recognition. Steps to reassure Americans at home and abroad, and even other nations, seem to be indicated.

Little new danger to foreign policy lies in investigation and open discussion. There is a much more lively threat in the fact that those directly responsible for our policy on the highest level, loudly persist in shutting their eyes to any hint, or even proof, of Red infiltration among their own advisers. We have already seen the red herring sneer rebuked by the sentence of Alger Hiss as a Russian spy. That experience alone should and would warn normally reasonable men against this peril.

Though steps have been taken with public fanfare to clear out a nest of moral degenerates in the Department, the public has not been able to discern that any corrective action has been taken against subversives and unsympathetic helpers handling state secrets. The public in this representative Republic is entitled to that knowledge and assurance. Other nations with modern espionage must have known all along what is taking place, and a hush-hush attitude can confuse no one but a few million voters in the precincts far from Washington.

State and other responsible administrative speakers have pointed out danger of

damage to our foreign policy from the give and take of American-type discussion on this subject. Of course, this could have been largely prevented by preserving the bipartisan foreign policy that President Truman sponsored in his first year or so, his honeymoon, before he swung into what became his stride.

Even under the normal loyal opposition system which now obtains in foreign affairs, as well as internal matters, there would be much stronger policy in calmly facing whatever facts are available and conducting a quiet house cleaning, than in risking the reaction of shouting down investigation and refusing information pertinent to it. (We refer to loyal opposition above as the duty of the minority in Congress loyal to our Government principles in general, but opposing whatever seems improper in the manner of their operation.)

It seems to this writer after considerable weighing and balancing, that the State Department may already have done more damage than any such adverse publicity could cause (1) by acting on the advice of at least one fellow traveler; (2) by backing down from Commie advances within the Department and in China; (3) by winking at the theft of secret papers for Commie pay. Who is wrong, the erring officials who lay themselves open to criticism, or the critic who seeks to correct the error in the orthodox official way?

While on this subject, it may be germane to consider a broader aspect of our foreign policy, for which are held fears arising from the McCarthy charges. It is generally believed that the Marshall plan, expensive to every taxpayer, has helped to keep weak nations out of the arms of all-promising dictators. Our money is internationally popular. Our Nation and foreign policy are not thought to be so popular among other governments. Perhaps the State Department could better promote United States standing among nations than by publicly defending the records of its personnel, or bickering over who is paid to advise or who merely gives free advice that becomes policy.

If we were invited to prescribe for our ailing foreign policy (an invitation that we'll not sit and wait for) we'd suggest the need for making up again a working bipartisan team, and not just a token gesture. We need all the brains available, and in foreign matters there is a maximum number of votes in simply the fact of success, by whatever process gained.

The losing record in the cold war might be reversed if the United States played a more forthright if less agile part as one of the two great opposition powers. We have appeased begged issues, entered secret deals in violation of treaty, sold out small nations. We have done everything but lay down principles and stand up to them. This course has been followed at least since Yalta and probably before. We have been represented by Tammany and Pendergast politician-type thinking instead of statesmanship. Our present international ills may be seen by the long view of history to be founded partly on the two decades of war by the administrative branch of our Government upon the legislative branch, and upon the responsibilities of the States and the freedoms of the citizens.

Perhaps it would be well for administration to seek less responsibility for legislation and judiciary, and try to concentrate on doing its own proper work with more finished grace. It conceivably could be that what this country needs now in its internal and external messes is to straighten up and fly right.

The old recipe "treat 'em rough and tell 'em nothing" is poor policy in a representative republic. We have about run out of emergencies to justify it, and in any case we are losing our taste for rough treatment.

PMA in Farm Politics

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "PMA in Farm Politics," written by Alfred D. Stedman, which appeared in the St. Paul Sunday Pioneer Press on April 23, 1950.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PMA IN FARM POLITICS

(By Alfred D. Stedman)

An editorial wave of criticism of the April 4 farm meeting in St. Paul goes rolling on. The charge is that a paid and captive audience was assembled at public expense to hear political addresses by Senator HUBERT HUMPHREY and Secretary Brannan. Up to 2 days of $8 per diem pay and travel were authorized for those who attended among the 4,500 Minnesota community and county committeemen of the Production and Marketing Administration (PMA). Editorially alleged are evils of regimentation, propaganda, and politicking at Federal expense, which is estimated all the way up to $150,000 and which might run considerably under half of that.

Does this criticism reflect genuine concern over a real problem and an aim to help the farm program avoid repetition of mistakes? No doubt some of it does, but that's far from being the whole truth of it.

For behind the present dispute there lies an untold story that's factual, fascinating, and full of meaning. It's a story of experience of the Federal farm program with politics and safeguards, first under the old AAA and then under its successor, the PMA.

The nature of the farm depression tended all along to push agriculture into politics in its broad sense. For the farmers found themselves an intensely competing group in a highly organized economy. The farm program's aim was to afford enough concerted action to prevent unbridled competition among millions of farming units from wrecking farm prices and ruining farm soil. In order to get their program, the farmers had to move up alongside of organized business and organized labor in the resort to political action.

But a farm plan, when once adopted, doesn't run itself. Until a system of administration is created, plans of price and soil protection, acreage controls, grain storage, and crop insurance are just paper plans. So the elected three-member township and county committees were established. They have a real, and not merely advisory job. They actually operate the program for the farmers who each year elect them. They are the program's administrative foundation.

And forces pulling these committees toward politics in their partisan sense became increasingly apparent. These included business and later partisan attacks on the program. Backers in both parties were thrown on the political defensive.

The dangers, including loss of public confidence, of diverting the farm program into partisan or extra-legal byways became increasingly apparent. An early left-wing attempt to convert AAA into an instrument of social change was blocked by Administrator Chester C. Davis. The leftist coterie was ousted in the AAA purge. In 1935, a congressional storm over a farm committeemen's march on Washington was stilled by a full report to Congress and by the good conduct and high caliber of the committeemen. In 1940, some AAA officials were fired by Davis, then War Food Administrator, for partisan activities.

Into the farm laws and regulations that were drawn with advice of Congress and the farm organizations, went safeguards that stand today. Thus the annual elections of committeemen are without any party designation. Acceptance by a farm committeeman of a political campaign post in any party requires his separation from the farm committee. So farm committeemen cannot lawfully use their positions to play machine politics. And the farmers, through their voting power, have in their hands a weapon to stop at the grass roots any offensive politicking.

The funds to pay for the holding of meetings, either local or State-wide, are appropriated by Congress. Expense accounts must be submitted to the General Accounting Office for audit before payment. Thus the actual cost of the St. Paul meeting cannot be known until the expense vouchers are in. The meetings are generally necessary in the big job of informing committee men and farmers about the program.

Though the Humphrey and Brannan talks here this time were a basis of the political accusations, 11 other talks during the 2 days devoted to program details and the entire State-wide meeting in St. Paul in February 1948 drew no fire. The committeemen this time couldn't tell Brannan or Humphrey what to say, couldn't know that Senator THYE would be unable to speak, and came as in the past to hear and consider whatever might be said.

Yet it is evident that safeguards alone aren't likely to solve what's really a continuing problem. For as this year, future speakers will be uncensored. The step from talking agriculture to talking politics will continue to be short. No matter what party is in power, the leaders will be tempted to play up to these committees. So farm program judgment and self-discipline will ever be a need. Alert and fair criticism from the press can be a useful spur to the program to watch its step. Taking advantage of such constructive criticism, the program can emerge stronger than before. So that would be O. K.—if it were all the story.

But the crusade has now swept far beyond such aims. Attacks are centering increasingly on the committeemen, with fewer honeyed compliments tucked in. If possible, the committees are to be discredited and displaced.

The Minneapolis papers, at the pitch of the assault, editorially compared the farm committeemen to the odorous, corrupt, and at times criminal Pendergast machine with its wardheelers and musclemen. The letters PMA, the editorial quoted, "really used to mean Production and Marketing Administration, but now a better name for it is—Pendergast machine in agriculture." In the light of the truth, doesn't that rate as a most unfair and unwarranted slur upon the committeemen and the farmers who elected them? It goes along with a one-sided presentation of the farmers' status as to income, which in fact has again sunk per person to less than half the average income of nonfarm people.

And now at last the Minneapolis papers have come to the point. That's a demand for a big shake-up in farm committee work. It revives an old scheme for stripping away the PMA committees' soil-and-acreage job and transferring the remnants to the Soil Conservation Service's slow and limited farm-by-farm engineering operations. It is clear that if the PMA committees are discredited and their powers transferred or erased, the

farm program's administrative force will be hamstrung and that the program itself may fall.

Thus a Nation-wide campaign that's on right now in some magazines and newspapers for mocking out the farm program is being helped along by the extreme phase of the anti-FMA crusade. If that should win, perhaps a parallel campaign to dispose of the cooperatives can also win. Then if the usual postwar conditions should bring farm depression back again, agriculture would be just about defenseless. The process of building immense city fortunes out of farmers' helplessness could be resumed. And the great political issue of the future could be once again, not the existence of a farm program but the lack of it, with oncoming farm controls making those of today look conservative.

But maybe Congress, the farmers, and people generally won't want to take the risks of this. Maybe they will want to keep and improve for future use the PMA, the farm committees, and the farm program.

The Meaning of the New Wage-Hour Rules

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. KEARNS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address delivered before the Detroit Bar Association and the Industrial Relations Institute of Wayne University by Howard J. Anderson, assistant managing editor of Labor Relations Reporter, published by the Bureau of National Affairs, Inc., Washington, D. C. Mr. Anderson's talk is the best short treatment of the practical problems presented by the amendments to the Federal wage-and-hour law which has yet come to my attention.

For many years, the Bureau of National Affairs has been publishing factual reports and books for professional and business use. Mr. Anderson has specialized in matters relating to the regulation of wages and hours and is well qualified to present an unbiased, authoritative and realistic analysis of the new rules.

For nearly 12 years, the Federal wage-and-hour law has played an important role in the Nation's business and industrial planning. After several unsuccessful attempts, the Eighty-first Congress succeeded last fall in rewriting—and I hope clarifying—some of the major provisions of that law.

How successful we have been will be difficult to ascertain until the courts have interpreted some of the new phrases we used. A law which has as broad a sweep as this one may easily become quite complex. It is unlikely that any two industrial plants follow exactly the same practices with respect to wages, hours, and overtime pay. And it is difficult to establish any rule which may be applied Nation-wide without upsetting some practices of long standing.

THE MEANING OF THE NEW WAGE-HOUR RULES

When you discuss a subject as complicated as the Federal wage-and-hour law, it is difficult to avoid becoming either an advocate or a critic. The long and bitter struggle which preceded the adoption of both the new white-collar regulations and the amendments to the law itself only mirrored the conflicting opinions as to the law and its objectives.

To some groups, it represents a desirable and necessary part of the economic structure. They view it as a shield against the blasts of a depression, insurance against unfair wage competition for the employer, and a guaranty of adequate wages for the employee.

To others, the law appears to be a needlessly complicated and harsh set of regulations—the bane of the small businessman and a booby trap whose hidden meanings often spawn windfall payments.

But no mattter how you regard it, the Wages and Hours Act is an established law of the land—and has been for nearly 12 years. Its basic provisions have been sustained by the highest court. Its requirements are reflected in pay and employment practices throughout the country.

It is my purpose, therefore, to shun the role of either an advocate or a critic. I shall concern myself only with the questions of who, what, and how—who is subject to the law, what its provisions require, and how these requirements are enforced. To paraphrase Tennyson, I shall not attempt to reason "why."

RULES ARE MORE COMPLICATED

But even forgetting questions of social or political desirability, the wage-hour law is still a difficult subject. The rules it imposes are far from simple. There are problems within problems, exceptions to most of the rules, and exceptions to some of the exceptions.

The complexity is the result, in part, of difficulties inherent in any attempt to regulate wages, hours, and employment practices on so broad a scale. Pay and employment practices to which the rules must be applied vary from industry to industry and from plant to plant. A rule which may be applied with little trouble in one plant may upset practices of long standing in another.

There is a second, and perhaps equally important, reason why the rules are complicated. Both the original law and the amendments adopted last October are essentially compromise measures. The same is true, but to a lesser degree, of the new white-collar regulations. No single group can take credit for all the provisions. It was a matter of give and take all the way.

Those who advocated a higher wage floor, for example, achieved their goal at the price of concessions on coverage. Those who wanted to clarify the requirements as to overtime pay had to accept hobbling qualifications. At one point, the fate of the entire amending measure turned on a single vote in the House Labor Committee.

ATTENTION NOW ON COURTS

This necessity for compromising on key points led to the inclusion of many ambiguous words and phrases. The meaning of these will not become clear until the courts have had ample opportunity to construe them.

Moreover, the obstacles encountered in reaching agreement on both the amendments and the white-collar regulations make it extremely unlikely that any further substantial changes will be made for some time. Not a single proposal to amend the law has been introduced in the current session of Congress and, for the first time in several years, the Wage-Hour Administrator's annual report to Congress contained no specific recommendations for changing the law. The rules which became effective on January 25 are the ones you will have to live with for many years to come.

With these observations as a background, let us turn to the questions of "who," "what," and "how."

I. WHO IS COVERED BY THE LAW

In reaching a decision as to whether an employee is entitled to the minimum wage or overtime compensation required under the law, you should obtain answers to these questions:

First. Is he engaged in interstate commerce, the production of goods for interstate commerce, or an occupation or process closely related and directly essential to such production?

Second. If so, does he come under any of the numerous exemptions from the act?

The rules with respect to both of these questions—general coverage and exemptions—were substantially changed on January 25. A new "closely-related and directly-essential" coverage test was adopted for "fringe" production workers. Several new exemptions were added; many of the old exemptions were revised. And more important for the great majority of employers, the rules which govern overtime-pay rights of five classifications of white-collar employees were altered in many important respects.

EXEMPTIONS AND "FRINGES"

While many of these exemption and coverage changes are limited in their effects to a single industry, there are some which cut across industry generally. The most significant of these are the new rules for the exemption of executive, administrative, and professional employees, and the new coverage test for fringe production workers. These are the ones I will discuss.

The new coverage test for fringe production employees is one of the many ambiguous phrases included in the law by dint of a compromise. Its exact meaning will have to be determined on a case-by-case basis, and the number and types of employees who have been removed from the law's coverage thereby will likely not be clear until many test cases have been carried through to final settlement in the courts. Suppose we examine this new test briefly before going on to the more important white-collar rules.

Under the original wage-hour law, an employee was covered if he was engaged in interstate commerce, the production of goods for interstate commerce, or any occupation or process necessary to such production. This last, or necessary, clause has been deleted.

Now, so-called fringe production workers are subject to the law only if they are engaged in "closely related processes or occupations directly essential" to the production of goods for commerce. What did Congress mean by these terms "closely related" and "directly essential?" How do they narrow coverage as interpreted by the courts under the old "necessary-to-production" test?

Even before the new language was adopted there was disagreement among its congressional draftsmen as to its exact meaning. The two extremes in interpretation were presented by Senator PEPPER and Congressman LESINSKI, on the one hand, and Congressman LUCAS, on the other.

WHO IS "DIRECTLY ESSENTIAL"

According to the Pepper-Lesinski interpretation, the new "closely-related and directly-essential" test does not radically revise the law's coverage, as interpreted by the courts in the past. Except for the few groups of employees specifically named in the House Managers statement, they argued, the amendment does not alter the status of any employees who had already been held subject to the act. It merely draws a precise line beyond which the courts may not go in determining whether additional employees are covered.

This interpretation had the backing of the Labor Department's attorneys and will likely be found in the new interpretative bulletin on the law's coverage. This bulletin, I have been told, will be out shortly.

At the other extreme was the view expressed by Congressman LUCAS. The Texas Congressman, who was the original sponsor of some of the amendments which were finally adopted, told the House that the new words "directly essential" connote "indispensable." And he can find some support for this interpretation in the Webster Dictionary's definition of "essential." As one of the meanings of "essential," the dictionary gives "important to the highest degree; indispensable." The only thing wrong with this view is that the words "directly essential" were substituted for "indispensable" in the conference committee because they were believed to have a different meaning.

With even those who drafted the new test disagreeing as to its meaning, it does not appear safe to go beyond the specific guides set out in the House Managers Statement—at least until the courts have handed down some rulings. The managers statement lists about seven types of "fringe" employees who would no longer be covered by the act under the new test and five types who would still be covered.

Among those still covered, according to the statement, are the following:

1. Maintenance, custodial, and clerical employees of manufacturers, mining companies, and other producers of goods for commerce, whether employed by the company itself or by an independent contractor.

2. Employees who maintain or repair buildings in which goods are produced for commerce.

3. Employees who make, repair, or maintain machinery or tools and dies used in the production of goods for commerce.

4. Employees of public utilities furnishing gas, electricity, or water to firms manufacturing, mining, or producing goods for commerce.

The employees removed from coverage, according to the managers statement, are those engaged in a few very specific types of work such as providing residential, eating, or other living facilities for factory workers, cleaning windows or providing exterminator service in factories under contracts between their employers and the manufacturers, or producing fertilizer for sale to local farmers who also sell their products locally.

The distinctions between those employees still covered and those removed from coverage are difficult to perceive in some instances. It looks as if there will be a field day for the lawyers.

WHITE-COLLAR EXEMPTIONS

It is hard to overemphasize the importance of the new white-collar regulations. Nearly 2,500,000 employees are potentially exempt under the rules they establish. And such employees may be found in all sizes and types of establishments from the largest manufacturing plant to the smallest local bank.

To qualify for exemption under the Administrator's regulations, executive, administrative, and professional employees must satisfy requirements as to salary, duties, and responsibilities. One of the most frequent mistakes made by employers is to assume that an employee is exempt merely because his title sounds right and he satisfies the minimum-salary requirement.

Titles do not determine an employee's status under the regulations, and the salary requirement is only one of a series which must be satisfied before an employee may be regarded as exempt.

HOW TO CHECK FOR EXEMPTION

However, in checking an employee's exempt status under the regulations, the logical starting point is his salary. For an executive, the minimum salary is $55 a week. For administrative and professional employees, the minimum is $75 a week. But if an employee in any of the three classifications is paid $100 a week or more, he may be qualified for exemption under new streamlined requirements.

These streamlined requirements should make exemption much easier to support for high-paid white-collar employees. For one thing, they suspend the difficult and strict limitation on the amount of nonexempt work the employee may perform. An important point to remember, however, is that mechanics, craftsmen, and other non-white-collar employees cannot qualify for exemption, no matter how high their pay may be.

In addition to receiving the minimum salary, an exempt executive must be paid on a salary basis. Administrative and professional employees must be paid on a salary or fee basis. The Administrator's interpretation of the phrase "on a salary basis" poses some of the most difficult problems under the regulations.

This phrase, the Administrator explains, means that the employee must receive his full salary—a predetermined amount constituting all or part of his compensation—for any week in which he performs any work, without regard to the number of days or hours worked. In other words, the predetermined amount which constitutes his salary may not be subject to deductions, either for disciplinary or other purposes.

In the ordinary situation, an employer will provide paid vacations and sick leave for executive, administrative, and professional employees. How does this rule apply in such a situation? May the employer penalize an exempt employee for excessive absences during a week by deductions from his paid-vacation allowance?

KEEP THESE POINTS IN MIND

In answering such questions, you may find it helpful to keep the following rules in mind:

First. The exempt employee must receive his full salary in any week in which any work is performed. There are exceptions to this rule only in the first and last weeks of employment. Failure to pay the full salary in such weeks is not regarded as inconsistent with payment on a salary basis.

Second. There is no requirement, however, that the employee be paid his full salary, or any amount for that matter, in a week in which he does no work.

Third. There is no prohibition on deducting from an employee's vacation or sick-leave credits for absences. Just be sure the employee gets his full salary when he works during a week.

Finally, if an employee is not paid his full salary in a week in which he does some work, even a few hours, the exemption may be lost for all weeks, not merely for the week in which the deduction is made.

The practical solution to compliance with these rules would appear to be to make absolutely certain that an exempt employee has no time off without pay in any workweek in which he does any work. If the employee works as much as an hour, he will have to be paid the full salary to preserve the exemption.

Perhaps a few examples will help in clarifying the application of these rules.

First. Suppose an employee is absent for 1 day during a week and the employer makes a deduction of 1 day's pay from his weekly salary. The exemption would be lost, since the employee performed work during the week and did not receive his full weekly salary.

Second. Suppose the employee is absent 1 day and the employer pays him the full salary for the week but deducts 1 day from the 2 weeks of paid vacation to which he is entitled. Since the employee receives his full salary for that week, the exemption would not be impaired thereby. When the employee later takes his vacation, he would be given paid vacation of 1 day less than the full 2 weeks. But the exemption would still not be defeated during the short vacation week if the employer does either of the following: (a) Requires the employee to work 1 day during the week and pays him his full salary or (b) permits him to have the entire week off but pays him for 1 day short of the full week. In the first case, the employee would be paid his full salary for a week in which he worked 1 day; in the second, payment of the full salary would not be required, since the employee did no work during the week.

Third, suppose an employee has exhausted the paid vacation and sick leave to which he is entitled and then takes a day off during the week. If the employer made a deduction from his salary for the absence, the exemption would be impaired.

To sum it all up, no deductions from pay should be made in any week in which the employee does any work. But deductions may be made from vacation or sick leave so long as you avoid a situation in which the employee gets less than his full pay in a week in which he works.

DUTIES AND RESPONSIBILITIES

After deciding that the employee meets the salary requirement for one of the three exempt groups, you should next examine his duties and responsibilities to determine if they jibe with the requirements of the regulations.

The definitions of all three classifications—executive, administrative, and professional—now contain a primary-duty test. And an understanding of these tests may help you immeasurably in distinguishing between the different exempt groups and in applying the other requirements for exemption.

For an exempt executive, the primary duty must be the management of the enterprise or a customarily recognized department or subdivision. In other words, the exempt executive group is composed of bosses—those who manage and supervise the operations of a plant or department, those who direct the work of other employees.

For employees in the administrative classification, the primary duty must be the performance of office or nonmanual field work directly related to management policies or general business operations of either the employer or the employer's customers. In addition, the exempt administrative employee must perform work of one of three specific types—first, the type performed by such employees as executive and administrative assistants to a boss; second, the type performed by such staff employees as tax experts, insurance experts, investment consultants, wage rate analysts, and so forth; or third, the type performed by employees who perform special assignments such as traveling auditors, traveling inventory men, and certain types of field representatives.

Finally, employees in the professional group must have as their primary duty the performance of work of one of two types—first, the type performed by employees in one of the traditional or new professions which requires knowledge of an advanced type such as is acquired by a prolonged course of specialized instruction and study; or second, work of an original and creative character in a recognized field of artistic endeavor—the theater, for example.

If you keep these basic distinctions between the various types of exempt work in mind, it will help you in applying the other tests with respect to duties and responsibilities. Of these other tests, the two which will likely prove the most troublesome are those relating to the discretionary powers of the employee and the so-called non-exempt-work tolerances.

WHO EXERCISES "DISCRETION"?

The test relating to discretionary powers is phrased differently for each of the three classifications. The executive must customarily and regularly exercise discretionary powers. The administrative employee must customarily and regularly exercise discretion and independent judgment. Finally, the professional employee must perform work which requires the consistent exercise of discretion and judgment in its performance.

The Administrator's explanatory bulletin on the regulations may give you some valuable guides for determining the degree of discretion and judgment which must be exercised to qualify an employee for exemption. It points out, for example, that the exercise of discretion and judgment must be distinguished from the mere application of skill and procedures. And it gives several examples to illustrate the distinction.

It points out, for example, that you have to distinguish between the application of skill and procedures by a grader of logs and the discretion and judgment exercised by a customers' man in a brokerage house.

When it comes to what is meant by "customarily and regularly," the bulletin appears only to compound the confusion. This phrase, the bulletin states, signifies "a frequency which is greater than occasional but less than constant."

TOLERANCES FOR NONEXEMPT WORK

More exemption claims have been defeated because the employee exceeded the nonexempt-work tolerance than for any other reason. In brief, these tolerances impose a 20-percent limit on the amount of nonexempt work an exempt employee may do each week.

The new regulations both clarify and liberalize these limitations. The changes made are these:

First. What is meant by nonexempt work is clarified by relating it directly to the exempt work the employee performs. Nonexempt work for an executive, for example, is that which is not directly and closely related to the performance of his exempt duties. More important, numerous examples are given of work which might be regarded as exempt for certain employees. You may find these examples in the explanatory bulletin.

Second. The 20-percent limitation on the amount of nonexempt work which may be performed is now stated in terms of the employee's own workweek, not the workweeks of nonexempt employees. As a result, the amount of nonexempt work an employee in these classifications may perform will increase as his weekly hours increase. If an executive works 40 hours, for example, his nonexempt work would be limited to 8 hours. At 60 hours, the non-exempt-work tolerance would be 12 hours.

WATCH TITLES AND JOB DESCRIPTIONS

It is no secret that these white-collar exemptions are difficult to apply. The variety of jobs within their range is almost endless. And the requirements are not simple. If, however, you are called upon at any time to check the status of employees under the new regulations, you may find the following suggestions of value.

First. Be careful about titles. A title or classification does not determine an employee's status. It is his work, responsibilities, and salary which are controlling. If you are an employer, however, do not bestow titles in such a way as to hurt you. If you have an employee with important responsibilities in the care of plant and grounds, call him a superintendent of buildings and grounds, not a head janitor.

Second. Do not rely on a job description prepared by the employee himself. Duties or functions may be blown up or watered down, depending on the purpose.

Third. Watch the rule on deductions from salaries. Avoid any situation in which an employee has time off without pay in a week in which he works. He must receive the full salary in any week in which he performs any work.

Fourth. Don't assume that an employee is not exempt merely because he does not satisfy the exemption tests for one classification. Check his duties and pay against all the definitions.

Finally. If you are given the job of checking the status of any substantial number of employees, prepare a checklist of questions to ask each employee with respect to his salary, duties, and responsibilities. And file the information you obtain. It may be valuable later on.

II. WHAT THE LAW REQUIRES

Once you have determined that an employee is subject to the law, it then becomes necessary to find out what it requires in the form of minimum wages and overtime compensation.

So far as the minimum wage is concerned, the problems are not too many nor too difficult. The minimum is a flat 75 cents an hour. There is no escalator provision for raising it to higher levels.

MINIMUM WAGE PROBLEMS

When it comes to putting the minimum into effect in a plant, however, there are a few practical considerations to bear in mind. It is important, for example, to know whether compliance will be determined on the basis of each hour, each workweek, or some longer period.

For employees paid hourly or piece rates, the single workweek will still be the standard. If the average hourly earnings for nonovertime hours in the workweek are at least 75 cents, the minimum wage requirement will be satisfied for that week. The Administrator does not, however, permit any averaging of earnings for such employees over a period longer than a workweek. Nor does he permit an employer to set an hourly rate below 75 cents where the employee is paid solely on an hourly-rate basis.

For salaried employees, there is an exception to this rule. If the employee is paid a semimonthly or monthly salary, the Administrator will recognize a regular monthly salary of $130 or a regular semimonthly salary of $65 as meeting the requirements of the act for workweeks of no more than 40 hours.

If the minimum wage were to be applied on a strict workweek basis to such employees, there would be some pay periods in which the $65-semimonthly or $130-monthly salary would not yield an average of 75 cents an hour. Suppose, for example, an employee working a 40-hour week is paid on the first and fifteenth of the month. For some pay periods, that salary will cover only 80 hours; for others, it will cover as many as 96 hours. Over the year, the payment of $65 each pay period would yield an average of 75 cents an hour. But in a half month having 12 workdays, it would take a payment of $72 to net the employee 75 cents an hour.

The Administrator's special rule for such employees obviates this difficulty.

Two other problems with respect to minimum wages deserve special attention before we leave the subject.

First. The problem of training learners under the increased-wage floor is apparently more serious than had been anticipated. Nearly 3,000 special learner certificates permitting a training rate below the minimum have been issued since the first of the year. To obtain such a certificate, the employer should be able to show that experienced workers are not available for the jobs, that the minimum wage is so burdensome that learners would not be hired without an exemption, and that the job is a skilled one requiring a definite learning period.

Second. If you contemplate doing Government work, you should take into account the likelihood that even higher minimum rates may soon be required for work on Government contracts. The Secretary of Labor has asked Congress for $536,000 to finance a program of revising minimum-wage determinations under the Walsh-Healey Act. And his goals are far above the 75-cent hourly minimum established under the Wages and Hours Act.

OVERTIME PAY

Ever since the act was first adopted in 1938, the problem of figuring overtime pay has been particularly difficult. Now you have a set of statutory guides to assist you in making these computations. These guides may be found in a revised and considerably expanded section 7 of the act. Moreover, the Administrator has set out his views as to the meaning of the new provisions in a detailed bulletin covering nearly 50 pages.

Under the revised section 7, as under the original law, hours in excess of 40 a week must be paid for at time and one-half the employee's regular rate. According to a long line of Supreme Court decisions, this regular rate must generally be figured by the averaging method.

Total weekly pay, excluding true overtime premiums and a few other extra payments, should be divided by the number of hours worked during the week. If the employee is paid a flat weekly wage or salary for a fixed number of hours, the divisor should be the number of hours in the fixed or regular workweek.

CHANGES IN AVERAGING RULE

For the great majority of employees, this averaging rule, with some modifications, will still determine the regular rate. The amendments do not rescind the rule. The changes they make are these:

First. They considerably enlarge the category of payments which may be excluded before total weekly pay is divided by weekly hours to determine the regular rate.

Second. They add to the list of true overtime premiums which may both be excluded in figuring the regular rate and deducted from the amount due as weekly overtime under the law. Now in this group are weekend, holiday, day of rest, and premiums for work outside certain clock-pattern hours—premiums which had been considered a part of the regular rate under the Supreme Court's overtime-on-overtime decision.

Third. They expressly sanction three exceptions to the averaging rule—a so-called Belo contract, an employer-employee agreement fixing a regular rate substantially equivalent to the employee's average hourly earnings, and an agreement to base the overtime pay of pieceworkers and employees paid more than one rate in a single week on the basic rate paid during the overtime hours.

Fourth. They liberalize the requirements for obtaining partial overtime exemptions under so-called semiannual and annual wage agreements.

The Administrator's views with respect to these changes are set out at considerable length in the new interpretative bulletin and regulations he has issued. There are three points, however, which deserve special attention at this time. These relate to what the Administrator describes as pseudo-percentage bonuses, so-called Belo contracts, and premium payments for holiday work.

BONUSES AND PREMIUMS

For some time, it has been the general impression that so-called percentage bonuses—those paid as a percentage of total earnings, including premium overtime pay—were safe. It was believed that they clearly included an overtime allowance and thus would have no effect on regular rate or overtime computations.

But the Administrator's new overtime bulletin and profit-sharing regulations do not go this far. While the Administrator recognizes that percentage bonuses ordinarily will not increase overtime liabilities, he points out that there are certain pseudo-bonuses which must all be regarded as regular wages, even though paid as a percentage of total earnings.

As one example, he cites an hourly rate plus group commission pay plan for salesmen. The commissions are part of the regular rate, he states, and the fact that they are paid as a percentage of total earnings will not alter the situation.

Although it is not specifically so stated, it does not appear likely that the Administrator will recognize an overtime allowance in a percentage bonus paid under a so-called cost-saving, production-saving, or Scanlon type of plan, such as was upheld in the Macklin case before the amendments were adopted. The amounts paid under such plans are directly linked to group production and for that reason may be regarded as part of the regular rate.

GUARANTY WAGE CONTRACTS

Although the type of guaranty wage contract which has become known as a Belo contract was twice upheld by the Supreme Court, the Administrator has always regarded the Court's ruling as a narrow pronouncement limited to the exact facts involved in the Belo and Halliburton cases.

Under the new section 7 (e), express sanction is given for contracts of the Belo type, provided they meet very specific and strict requirements. The requirements are these:

First. The contract must be either a bona fide individual employment contract or a collective-bargaining agreement. It need not be written.

Second. The duties of the employee must necessitate irregular hours of work.

Third. The contract must specify a regular rate of pay not less than the 75-cent hourly minimum and compensation at not less than one and one-half times that rate for all hours above 40 in any workweek.

Fourth. The contract must provide a weekly guaranty which covers not more than 60 hours based on the regular and overtime rates specified in the contract.

There is a feeling around Washington that few contracts will get by under the interpretation the Administrator is giving to these requirements. In his overtime bulletin, for example, he emphasizes that the regular rate specified in the contract must actually operate as a regular rate. In other words, the employee will have to get more than the weekly guaranty in a substantial portion of the workweeks so that the specified regular rate may actually be used to figure pay. Moreover, he adds, the weekly guaranty must be a real guaranty—it must be paid in full in all workweeks, however short, in which the employee performs any amount of work for the employer.

In a brief filed in the Antonio Roig case now pending before the Court of Appeals for the First Circuit, the Administrator points out that the rules must be applied on the basis of the hours, duties, and pay of each individual employee.

If you plan to use a Belo contract, therefore, the best advice I could give you would be to make absolutely certain the contract is in exact accordance with the standards specified in the law. Moreover, the guaranty should be set low enough that the employee's pay will exceed it in a substantial portion of the workweeks. There are, however, many good reasons for avoiding such contracts entirely.

HOLIDAY PAY

Among the new overtime premiums—those which may be excluded in figuring the regular rate and, in addition, offset against overtime pay due under the law—are premiums of at least an extra half time paid for work performed on a holiday.

In applying this new provision, you must ignore the pay which an employee receives for the holiday whether he works or not. Payments for time not worked are not part of the regular rate and, in addition, cannot be credited against overtime pay. If, for example, the employment contract provides for 8 hours' pay for an unworked holiday plus an additional straight-time pay for each hour worked on the holiday, you would ignore the 8 hours' idle-holiday pay in applying the new rule. Since the employee receives only straight-time pay for working on the holiday, there could be no credit against statutory overtime. The first straight-time pay—that the employee would get even if he didn't work—would be excluded in figuring the regular rate as pay for time not worked. The extra straight time for working on the holiday would be included in figuring the regular rate. Neither could be credited against overtime.

The rule is different, however, where the employment contract and practices make it clear that an entire holiday payment is compensation for working on the holiday. In such an event, the initial straight time would be included in figuring the regular rate. Any amount of an extra half time or more paid in addition to the straight time could be excluded in figuring the regular rate and credited against overtime pay due under the law.

The point to remember is that the holiday payment which may be excluded from the regular rate and offset against overtime due under the law is a premium of at least an extra half time paid for working on the holiday.

With this brief review of a few of the key overtime problems, let us go on to the final question of how the law is enforced.

III. HOW THE LAW IS ENFORCED

When the amendments to the law were adopted last October, the Administrator gained his long-sought express authority to collect back wages owed to employees under the act. The authority was hedged with so many new restrictions, however, that it is not certain that the Administrator actually gained much.

As thus amended, the law now provides for the following legal actions to enforce its requirements:

First. The Administrator may sue to collect unpaid minimum wages and overtime pay due the employees, provided the employees request the Administrator in writing to bring the suit and the case does not involve an unsettled issue of law.

Second. The Administrator may sue for an injunction to restrain an employer from violating the law.

Third. The Justice Department may bring criminal actions against "willful" violators.

Fourth. Employees themselves may sue to recover back wages due them under the law plus an equal additional amount as liquidated damages.

No change was made in the good-faith defenses or 2-year statute of limitations for wage suits, as provided for by the Portal-to-Portal Act.

WATCH HOW POWERS ARE USED

As is often the case, the exact enforcement powers which the Administrator has may not be nearly so important as the manner in which he exercises them. Some hints as to the Administrator's plans may be found in the budget requests for the coming fiscal year.

To enforce the new minimum wage and overtime requirements, the Administrator is asking for additional funds totaling nearly $3,000,000. This would permit an estimated 60,000 or more inspections during the 1951 fiscal year. In other words, the Administrator plans to inspect 1 out of every 10 establishments covered by the act during the course of the year. This is almost double the number inspected last year. And inspections by the Division often bring a flood of employee-wage suits in their wake.

A FEW SUGGESTIONS

With these increased enforcement activities in prospect, it is more important than ever for the employer, the attorney, and the union officer to know the answers to the questions of "who" and "what" under the law. I have tried to focus your attention on a few of the problems you will encounter. There will be many others, and few of them will be simple.

In dealing with these problems on a day-to-day basis, you may find it helpful to keep these suggestions in mind:

First. If there is some doubt as to an employee's right to the minimum-wage and overtime payments under the law, check his status both under the rules governing basic coverage and those for the specific exemptions.

Second. In applying the most important of the exemptions—those for white-collar employees—remember that exemption depends on the salary, duties, and responsibilities of the employee, not on his title or salary alone. And don't forget the rules on deductions from salaries.

Third. Remember that earnings of hourly paid and piece-rate employees may be averaged over a workweek—but no longer period—in determining compliance with the minimum wage.

Finally. Be wary of any painless rigs for complying with the law's overtime requirements. The overtime provision is now long and detailed, and methods of payment not specifically sanctioned may be very costly in the long run.

Our Confused Present and Uncertain Future

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial appearing in the April 22, 1950, issue of the Ave Maria, the publication of Notre Dame University.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

For some time now the people of the United States have been worried about the confused present and the uncertain future of our country. There seems to be lack of stability and definiteness in the direction and management of national affairs. Our leaders seem less concerned with the people who make up this Nation than with projects that will likely assure political continuity in public office. And you are not at all sure that some of the projects will assure continuity.

We the people are often referred to as dumb by men who affect penetration and a far-seeing vision. As a matter of fact the American people are not dumb. They are miraculously patient with sometimes very muddled situations. Were they not they might start a revolution. But they still think that America is the people's country and ex-

press their revolution constitutionally at the polls.

Why did n't they in a few recent elections? Because the two major political parties that selected candidates for the top office in Government did not offer them a very wide margin of choice in candidates and in the national and international politicies which these candidates announced and defended at the hustings.

There was not much of a convincing nature about meeting the problems of the homeland; not much emphasis on lessening the load of taxation; or if there were, it was forgotten after the election. There were rumors about socialized medicine and socialized projects under other heads. Communism was challenged somewhat but not as a serious threat—at least not here. One candidate ran for President as a more or less Communist suspect. That was one definite issue—one of the few—which faced the voters. The returns showed definitely that the American people of both parties do not want either an all-out or a modified communism.

You do not know just how factually President Truman, the House, and the Senate have returns on the outlooks and feelings of the American people at this moment. But they should know, and perhaps they do know, that not within the memory of anybody now living has the down feeling been so apparent and so persistent as at this time. The people are not just angry, although they are angry too. They are mentally and emotionally depressed. And no funny story is successful in lifting the depression.

Frankly, they do not know where the country is going or why. They were dangerously near a complete coal shut-off. They had to beg for rationed coal at a price higher than the present high price. Coal dust became as precious as gold dust. Coal operators and John L. Lewis got into a strangle hold and would not untie. And Washington told the country there was no coal emergency. People began to wonder when an emergency is not an emergency.

Communist spies in and out of Government are discovered and brought to trial. They and their lawyers are challenging and arrogant; men high in Government station, paid by the people to maintain the America of tradition, appear in court to testify to the good characters of known spies; a Cabinet member asserts boldly he will not turn his back on a former Government employee accused of perjury to conceal his subversive activities. The effort to discover and prosecute spies was classified under the red herring trope.

Taxes, taxes, taxes; projects, projects, projects; and money loans to Communist Tito who persecutes, jails, and kills people because they believe in one God the Father Almighty. At this moment people are convinced that American political planners should give much more thought to American homesteading.

The Workings of Governmental Agencies

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. HUMPHREY. Mr. President, during the past several months I have received countless communications from our people living in Minnesota and the upper Midwest desiring to know something about the workings of our Government agencies.

In an effort to supply this information I enlisted the help of the Minnesota Arrowhead radio network and Mr. George E. Reedy, well known radio personage, and the Washington representative for this network, in airing a program called Know Your Government. This program featured heads of a number of Government agencies who carried the story of their agency's functions direct to these people via the Arrowhead network.

The response has been excellent. Several inquiries have been received from radio stations throughout the United States expressing a desire to carry a like program. Several Senators and Congressmen have asked me for information concerning this series of programs with the idea of using the same idea in their localities.

I ask unanimous consent to have printed in the Appendix of the RECORD, an article on the subject which appeared in the St. Paul Pioneer Press on Saturday, April 22, 1950.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATE AREA TOLD HOW UNITED STATES OPERATES

WASHINGTON.—Senator HUMPHREY, Democrat of Minnesota, is aroused by what he calls criticism of Government agencies and the people who work for them. He's trying to do something about it.

As a member of the Civil Service Committee, he says he's learned that hundreds of Americans don't understand why the Federal Government is as big as it is and includes so many different branches.

(On March 2, the Federal pay roll contained 1,948,900 employees, not counting the military, the lowest it's been since 1942.)

OFFICIALS SPEAK

HUMPHREY says the American people should have more chance to get educated on Government activities.

So he and George E. Reedy have worked out a "know your Government" radio program. Reedy is Washington representative of the Arrowhead radio network, serving northeastern Minnesota and western Wisconsin.

Every Saturday afternoon people in that area can tune in on the 15-minute program.

They'll hear people like Dr. Roy Peel, head of the Census Bureau; James Mitchell, president of the Civil Service Commission; Raymond Foley, Federal Housing Administrator.

The series of broadcasts, recorded in Washington, started April 1. They will probably stop some time in June, when school lets out, and take up again in September.

"People have a right to know where their tax dollar goes, and why. This may help them find out," HUMPHREY says.

After delivery over the Arrowhead network, the discs are available to schools and colleges.

They are in the form of questions and answers, with Reedy asking and a top Government employee answering. They don't avoid controversial issues.

TIME IS FREE

During Mr. Peel's broadcast, for instance, Reedy asked why the census takers had to go into the question of personal income. The income question has been called an infringement on liberty.

Dr. Peel replied "that information is of vital importance to business in serving markets. The answers measure purchasing power."

The program is billed as a public service and the time is free. Humphrey gets a note of thanks for his help in making the program possible at the end of the 15-minute show.

Humphrey's secretary, Bill Rasch, who helped work out the details, said response to the program has been very good so far.

He said a couple of other Senators have already asked about the idea.

Next winter, Rasch said, "Reedy hopes to get Secretary of Defense Johnson, Secretary of the Interior Chapman, and FBI Director Hoover on the air."

Tribute to Lt. Gen. Alvan C. Gillem by Hubert Lee

EXTENSION OF REMARKS

OF

HON. KENNETH McKELLAR

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. McKELLAR. Mr. President, I ask permission to have inserted in the RECORD an editorial paying tribute to Lt. Gen. Alvan C. Gillem, a Tennessean, who will retire as Commanding General of the Third Army in September. The editorial was written by Hubert Lee, and appeared in Dixie Business, published at East Point, Ga.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THIS WEEK

(By Hubert Lee)

Lt. Gen. Alvan C. Gillem, Jr., commanding general of the Third Army, will retire in September at Fort McPherson where, 40 years ago, he served as a buck private.

The Nashville, Tenn., born soldier played a major role in winning World War II just as he did during the First World War.

General Gillem is known over the world, wherever military men gather, as the soldier's general.

In all the years he has never forgotten that he was a buck private. His own idealism and belief in the dignity of the profession of army, whether the lowest recruit or high rank, has been an inspiration to many men in the Army. The welfare of the men in the ranks comes first with General Gillem, for he knows his officers and noncoms can look out for their own welfare. Such a soldier, too, was Gen. John J. Pershing, known affectionately as Black Jack. And Gen. J. Lawton Collins, who hails from New Orleans, and many another.

It took him 30 years to reach the rank of brigadier general and with the one star on July 12, 1941, the veteran infantry officer was given the command of the Third Armored Division. On January 17, 1942, less than 2 months after Pearl Harbor, General Gillem activated and took command of the famed Second Armored Corps. From August to October 1942, he commanded the Desert Training Center and General Gillem directed the first United States Army maneuvers held solely for armored and mechanized troops.

Sewanee's gifted soldier found his training and leadership in great demand, for on May 14, 1943, he was placed in command of the armored force and became commanding general on July 2, 1943, of Armored Command. In 1945 he was promoted to lieutenant general. General Gillem commanded the Thirteenth Corps in the European theater of operations.

With peace treaties signed, there was still no thought of retirement for General Gillem.

His old friend, Gen. George C. Marshall had need of his knowledge and experience and good judgment and General Gillem was called to China as General Marshall's assistant on a special presidential mission in an effort to end that nation's troubled and strife-torn woes. In China, General Gillem commanded the China theater, United States Forces in China.

In 1947, he returned to the States and assumed command of the Third Army at Fort McPherson where he has made an unforgetable record for the Army. The Third Army today is regarded at the Nation's best.

What a fine thing it would be if at least one soldier from every outfit General Gillem has ever served in or commanded could be assigned to march in review when the Guard of Honor is reviewed for the last time in September at the retirement ceremonies.

There would be thousands, both in and out of the uniform, who would like to have that privilege.

A man can't be a good soldier for 40 years without making a mark on the lives of many others. General Gillem's mark is imprinted on thousands who have come in contact with him the past twoscore years and who sought to emulate the quiet dignity and leadership of the soldier's soldier.

In retirement, he will continue to be a great influence in and out of the Army. Many an officer in a tight position will ask himself, "What would General Gillem do in this situation?" And many an enlisted man will hope that perhaps he too will follow the example of General Gillem and climb to the top in his chosen profession—the profession of arms.

The St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HERBERT H. LEHMAN

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 27 (legislative day of Wednesday, March 29), 1950

Mr. LEHMAN. Mr. President, on Tuesday, Secretary of State Dean Acheson testified before the House Public Works Committee on the St. Lawrence seaway and power development project. I ask unanimous consent to have his testimony printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Gentlemen, the construction of the St. Lawrence seaway and the development of the power potential of the international rapids section of the St. Lawrence River are both vitally important to the economy and defense of the United States. In the consideration, however, of the importance of these projects to the United States, a subject which will be fully developed before this committee by other witnesses whose functions it more immediately concerns, we must not overlook the fact that both of these projects are of equal concern to Canada. Canada, like the United States, has a vast, midcontinent area, which needs to be connected with European markets at reduced cost. Canada, like the United States, has an eastern area which is deficient in low-cost power, and in which the deficiency is hindering the growth of industry. In Canada lies iron ore which needs to be transported to the steel mills of the United States. The building of the seaway and the development of power are as essential to the economy and defense of Canada as they are to the economy and defense of the United States. And because those measures which make Canada more prosperous and better able to defend itself add also to the prosperity and security of the United States, so the proposal now under consideration becomes doubly important to the United States.

The extent of the mutual dependence involved in this partnership is indicated by the fact that United States exports to Canada are valued at about $1,800,000,000 annually, an amount three times as great as exports to our next best customer, the United Kingdom. Our trade with Canada, both imports and exports, composed about 18 percent of our total foreign trade last year.

Since, therefore, the construction of the seaway and of the power project are of equal importance to Canada and to the United States, and since neither project can be constructed without the joint action of both countries, our action on this measure cannot fail to have an immediate effect on the international relations between the two countries. If we adopt the resolution, Canada and the United States can go forward together in this joint venture for their mutual benefit, and our already happy relations will be made happier; if we refuse to cooperate, there will be disappointment and justifiable criticism on both sides of the border. It is my function as Secretary of State to point out to this committee the importance of the resolution from the point of view of our international relations with Canada.

This committee is aware of the upward progress of friendly relations between the United States and our great neighbor to the north over the last 150 years. From the bitterness of the Revolutionary War to the partnership of the Second World War, the course of friendship has not always been smooth. The Treaty of Paris in 1783 led to innumerable disputes over the international boundary, which were only terminated by the Webster-Ashburton Treaty of 1842, and the establishment of the International Boundary Commission in 1908 and 1925. This was not the only Commission which has helped ease the natural frictions of a common boundary of over 3,000 miles and two economies which do not respect national boundaries. The Boundary Waters Treaty of 1909, which I shall refer to again, established the international joint commission to handle problems relating to utilization of boundary waters. The halibut and sockeye salmon commissions, set up in 1923 and 1930, supervise the great fisheries of the Pacific coast.

This relationship has proceeded also in the field of national defense. The Permanent Joint Board on Defense established in 1940 to consider joint military problems, was followed by the Hyde Park agreement of 1941 for joint mobilization of economic resources. The efforts necessary to achieve victory during the war enlarged tremendously the recognized area of common interests, and as recently as 1947 the two governments agreed to continue the military cooperation of the war years. In the international field, common ideals, as well as common interests, have tended to cause the United States and Canada to seek similar objectives. Together they have striven to fashion the United Nations into an adequate safeguard for peace, and when supplementary measures seemed needed, these two nations took the lead in fostering the Atlantic Pact.

Thus, the partnership with Canada is of the utmost importance to the United States. Approval of this resolution would authorize the United States and Canada to undertake cooperatively the management on a large scale of this jointly-owned water resource for the welfare of both nations and would further strengthen the partnership between the two countries.

The boundary waters between the United States and Canada have been the object of a series of agreements and treaties between the two countries. The reason why the proposed public works involve the international relations between the United States and Canada is that they concern boundary waters. For over 100 miles from Lake Ontario to the Province of Quebec, the St. Lawrence River is boundary water. From that point it flows through Canadian territory for over 1,000 miles to the Atlantic Ocean. It is available for deep-water navigation connecting the thousand miles of the Great Lakes system with the ocean. It has been the care of the Department of State, ever since the founding of the Republic, to maintain by treaty reciprocal rights of navigation for American citizens, not only through the 1,000 miles of the Great Lakes system, and these 100 miles of boundary waters, but also over the 1,000 miles of Canadian waters to the sea. These rights were secured by treaties between the United States and Great Britain or Canada in 1794, 1854, 1871, and finally 1909. Furthermore, since the 46 miles of the International Rapids section of the St. Lawrence lie within these 100 miles of boundary waters, the great power potential that lies in the drop in elevation over this stretch can be utilized only through international agreement.

Of these treaties I need refer in detail only to the Boundary Waters Treaty of 1909. This treaty is important in relation to the pending agreement because it affects the use of the St. Lawrence in both of its aspects—as a seaway and as a source of power. The treaty provides that the navigation of all boundary waters shall forever continue free and open, for purposes of commerce, to the inhabitants and vessels of both Canada and the United States. This same right of navigation was extended by the Treaty to all canals connecting boundary waters, or which may be constructed on either side of the line, such as the MacArthur Lock at Sault Ste. Marie, between Lakes Superior and Huron, the Welland Canal, connecting Lakes Erie and Ontario, and the seaway at the rapids of the St. Lawrence, which is the subject matter of the seaway half of the proposed project. This treaty, taken in connection with previous treaties, opens to the equal use of both countries what will be one navigable seaway, over 2,000 miles in length, from Duluth, Minn., and Chicago, Ill., to the Atlantic Ocean.

I have said that the treaty of 1900 affects the use of the St. Lawrence in both of its aspects, as a seaway and a source of power. In addition to assuring perpetual rights of navigation to both parties, the treaty provided that no uses, obstructions or diversions of boundary waters might thereafter be made on either side of the line, which affect the natural level or flow of the waters on the other side of the line, without resort to certain procedures. The treaty set up the International Joint Commission previously referred to, to pass upon such cases, but it also provided that such uses, obstructions or diversions might be made by special agreement between the parties. In other words, under the treaty of 1909, the development of the power potential of the international rapids section, as well as the construction of the seaway through the section may be accomplished through special agreement between the United States and Canada.

The project for the completion of a Great Lakes-St. Lawrence deep waterway by mutual agreement between the United States and Canada was first considered by Congress in 1895, and has since been the subject of numerous conferences, commissions and reports. A treaty was signed on July 18, 1932. This treaty differs in many respects from the agreement we are now considering, and I will not need to go into its details. In brief, it provided for the construction of

a waterway, not less than 27 feet in depth, by a St. Lawrence International Rapids Section Commission, of 10 members, 5 appointed by each country. The Senate Foreign Relations Committee reported favorably on the ratification of this treaty, but although it received a majority in the Senate in 1934, it failed of a two-thirds vote.

The present St. Lawrence seaway and power project was agreed upon by Canada and the United States on March 19, 1941. A resolution approving the agreement was favorably reported by the House Rivers and Harbors Committee in November 1941. In February 1946 I appeared before the Foreign Relations Committee of the Senate as Under Secretary of State, in support of Senate Joint Resolution 111 then before that committee and urged its approval. That Senate committee, and a subsequent committee of the Eightieth Congress, reported favorably on legislation corresponding to the legislation now before this committee and indicated its opinion that the 1941 agreement and the legislation were based on sound constitutional grounds.

The objective of the 1941 agreement is an equal division of the water available for power, and the construction of a deep waterway. The plans and specifications are to be prepared, and the work allocated between the two Governments, by a Great Lakes-St. Lawrence Basin Commission of not more than 10 members, appointed equally by each Government. Plans and specifications must be approved by the Governments, and the work so allocated that each Government constructs the work within its own territory, or an equivalent proportion of the whole works. The Commission is to supervise construction and the Governments agree to construct the works allocated to them.

House Joint Resolution 271, which we have before us, approves this agreement of 1941, with the exception of three articles in whole or in part, and authorizes the President to fulfill the undertakings made on behalf of the United States in the agreement, on receipt of satisfactory evidence of the approval of the agreement, subject to the exceptions, by reciprocal or concurrent legislation of Canada.

The agreement provides a completion date not later than December 21, 1948. It is clear that a new date must be fixed for the completion of the construction. The original date, 1948, afforded a period of 7 years for construction. On the assumption that similar engineering considerations still prevail, it would seem reasonable if the Congress by amendment of the resolution should provide a new date for completion, 7 or possibly 8 years after the agreement goes into effect.

Two of the three articles contained in the agreement of 1941 which are specifically excepted from the approval of the Congress by the present resolution deal with matters which, as the Senate has indicated, may be more appropriate for a treaty than for an executive agreement. The first of these, article VII, was in substance an agreement that the rights of navigation accorded under existing treaties should be maintained notwithstanding provisions for termination contained in such treaties. Considering the number of years that these treaties have now run without termination, and the close relations between Canada and the United States, both economic and in matters of defense, it is quite unthinkable that they would hereafter be terminated. However, the Department of State is prepared to negotiate with Canada a treaty on this point, as is suggested in section 2 of the draft bill before you.

The other of these two articles omitted in the resolution, article IX of the agreement, referred to Niagara Falls and River. This article is quite properly omitted, since a treaty with Canada on the subject of Niagara has recently been signed.

The third omission, article VIII, paragraph (c), is of even less moment. It provides that if either country should authorize diversions of water from the Great Lakes system, other or greater than those permitted on January 1, 1940, the Government of such country would give immediate consideration to the representations of the other. If satisfactory settlement were not possible, the article provides for an arbitral tribunal. The particular dispute envisaged by the article related to possible future increase in the diversion of Lake Michigan waters through the Chicago drainage canal. The issue as to the Chicago drainage canal was settled by the decision of the Supreme Court in *Wisconsin* v. *Illinois*, in April 1930, which enjoined the objectionable diversion. The International Joint Commission has complete jurisdiction over diversions of boundary waters in general, and both countries have regarded with satisfaction the exercise of that jurisdiction by the Commission. Because of these facts, it is believed that this provision for a special arbitral tribunal is unnecessary.

The present legislation also adds a provision that is not contained in the 1941 agreement; namely, a provision for tolls, or the self-liquidation of the new navigation portion of the project through the collection of charges on shipping which uses the new seaway facilities. The resolution provides that the President shall negotiate a further agreement with the Government of Canada defining, within limits also stated, the rates of charges to be levied for the use of the seaway facilities. This new subject matter has been discussed with the Canadian Government and we have been informed that the Canadian Government is prepared to agree to the principle of making the St. Lawrence seaway self-liquidating by means of toll charges, subject, however, to the conclusion of arrangements satisfactory to both Governments for the implementation of this principle. The Government of Canada has been fully advised as to the provisions of the present legislation, including both the deletions from and the addition to the agreement of 1941. This Government has no reason to believe that satisfactory agreement cannot be worked out on these matters, and I am confident that this will be done.

I have not stressed the many economic benefits that will accrue to the United States from this project. That is not my role. I do wish to say, however, that I believe these benefits are of sufficient importance to warrant the contemplated expenditures at this time. The creation of a great inland waterway would enable goods originating in the midcontinent area, shared by both Canada and the United States, to be shipped to European markets at reduced cost. It would make possible the shipment of iron ore from the Quebec-Labrador area of Canada. The low-cost power provided would materially reduce the acute shortage in both northeastern United States and southeastern Canada.

Both the seaway and power developments would enhance the defense potential of Canada and the United States. This was pointed out by the Joint Chiefs of Staff in 1946. In May 1947, the Permanent Joint Board on Defense, United States-Canada, of which I was a member, said:

"The Board considered the significance of the St. Lawrence seaway project from the point of view of the joint defense of the United States and Canada. It was recognized that the completion of a deepwater navigation route from the sea to the heart of the continent would provide additional facilities for the movement of ships and essential supplies in wartime and would also make possible the construction of ocean going vessels in inland areas. Furthermore, the new source of power made available by the St. Lawrence project would greatly increase the defense potential of the two countries. It is, therefore, the view of the Board that the early completion of this long-delayed enterprise on a cooperative basis satisfactory to both governments would directly contribute to the security of the North American Continent."

The prosperity of the United States and the ability to arm for our own defense has been a result of the development of our natural resources. The long-overdue development of one of the world's greatest waterways and power sources by Canada and the United States will further expand the economies of both countries, thus increasing our joint peacetime prosperity and the ability to defend ourselves successfully.

I urge the committee to report the resolution favorably.

Detroit Jewish Community Marks Centennial

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 27, 1950

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I include the following article from the Jewish News of Detroit commemorating the one hundredth anniversary of the Jewish community of Detroit:

From the traditional Minyan in 1850, Detroit Jewry has grown to a community of nearly 100,000 people. It now rates a place among the seven largest Jewish centers on this continent, together with New York, Chicago, Philadelphia, Boston, Los Angeles, and Cleveland.

Although there is a record of Jews who had lived in Detroit as early as the year 1763, the history of Jewry as an organized community in Detroit did not begin until 1850.

Since Jewish tradition designates that a "minyan"—a group of 10 men who are at least 13 years of age—is required for the holding of congregational services, the "minyan" has become the symbol of community organization.

THE FIRST MINYAN

It was not until the beginning of 1850 that the number of Jews in Detroit grew to the traditional "minyan." Their predecessors, included Jewish traders who probably were among the first arrivals at the trading posts along the Great Lakes. At the time of Chief Pontiac's conspiracy in 1763, two Jews, Levy and Chapman were captured by the Indians. Old records show that Chapman settled in Detroit and lived here until 1796.

Another Jewish pioneer, Solomon Ben Isaac Halevi, who lived in Detroit in 1783, is mentioned as a witness in a matrimonial case before the Beth Din—the Jewish Court—of London. Names of other Jews in the early Detroit records, prior to the formation of the Detroit Jewish community, include: Isaac Moses, whose name appears in the 1798 and subsequent records of the first Masonic Detroit lodge; A. J. Solomon, who was, en route to Mackinac, among the 10 passengers whose names were listed in the Gazette of June 17, 1820, as satisfied with the "arrangements and accommodation" of the steamer *Walk on the Water;* Louis Benjamin, a merchant who may have been Jewish, who was, according to Michigan Territory records awarded a lot in Detroit to indemnify him for losses in the fire of 1805; and, according to

the records of the common council, an Alex Cohen was on the pay roll for grading a street in 1835.

THE FIRST SETTLERS

In the first directory to be published in Detroit, in 1837, there was not one name among the 1,100 that was certainly Jewish. In the second directory, published in 1845, there were only two Jewish names—Solomon Bendid and Moses Rindskoff. In the directory of 1850, in spite of the marked increase in Detroit's population which then numbered 21,000, there were only three Jewish firms and five individuals listed: S. and H. Bendid & Co., dry goods; Silberman & Hersch, cigar manufacturers; S. Freedman & Brothers, dry goods; Alex Grunwald, Leopold Rappenkeimer or Rappenheimer, fancy goods; F. E. Cohen, portrait painter; Solomon Cohen, pedlar.

Detroit Jewry's history began in 1850 with the coming to Detroit of Isaac and Sophie Cozens who were followed by other Jews, mostly from Bavaria. Available documents show that among these first settlers were the following pioneers who assisted in the establishment of the Detroit Jewish community: Amberg, Bresler, Franke, Friedlander, Heineman, Hirschman, Kanter, Lang, Newman, Proll, Schloss, Sloman, and Springer.

FORMATION OF BETH EL

Eager for religious services, Mr. and Mrs. Cozens converted their home on Congress Street into a synagogue and Sabbath services were held there regularly until September 22, 1850, when the founding group organized itself into the Beth El Society which served as the beginning for Michigan's first Jewish congregation—the 100-year-old Temple Beth El of Detroit.

Joseph Newman was temporary chairman of the newly-formed Beth El Society. Later, Jacob Silberman—to whom went the distinction of being the founding president of Temple Beth El, was chosen the first head of Detroit's first community organization. Marcus Cohen, who came here early in 1850, was the first acting spiritual leader of the congregation until, later that year, he brought from New York his friend Rabbi Samuel Marcus who served the small synagogue as rabbi, cantor, and schochet. Rabbi Marcus served here until 1854 when he fell as one of the victims in the cholera epidemic of that year and was buried in the first Jewish cemetery, the half-acre plot that was acquired by Beth El in 1851 for $150 on Champlain Street in what is now the city of Hamtramck.

SHAAREY ZEDEK ORGANIZED

For 11 years, Beth El was Detroit's sole synagogue. A hall was rented as a place of worship on Michigan Grand Avenue in 1859. In 1861, property for a synagogue building was purchased on Rivard Street. It was the old First Methodist Church near Congress Street. This house of worship was dedicated on August 30, 1861, by Dr. Isaac M. Wise, of Cincinnati, founder of the Reform Jewish movement in America. The tendencies of Beth El congregation towards reform practices created a rift in the synagogue and a group of members withdrew to form, in 1861, Congregation Shaarey Zedek, which today is considered one of the leading conservative synagogues in America.

From the handful of Jewish settlers in 1850, the Jewish community of Detroit has grown in the 100 years of its existence to a community of nearly 100,000. There are two Reform congregations—Temple Beth El and Temple Israel; three conservative synagogues—Shaarey Zedek, Bnai Mosche and Northwest Congregation, and 35 orthodox synagogues ranging in memberships from as small as 25 to as high as Bnai David's 650.

TEMPLE BETH EL'S RABBIS

A number of distinguished men served Temple Beth El as rabbis. Samuel Marcus was followed by the following rabbis: Liebman Adler, 1854–61; A. Laser, 1861–63; Isidore Kalisch, 1863–64; Elias Eppstein, 1864–69; Kaufman Kohler, who later became president of Hebrew Union College, 1869–71; Reverend Greenblatt, 1871; E. Gerechter, 1871–74; Leopold Wintner, 1873–76; Henry Zirndorf, 1876–84; Louis Grossman, 1885–89; Leo M. Franklin, 1899–1948. Dr. B. Benedict Glazer, the present rabbi, has Sidney Akselrad as his educational assistant.

Rabbi Judah L. Levin, father of Prof. Samuel M. Levin, of Wayne University, was among Detroit's most distinguished orthodox rabbis. Rabbi Leon Fram is spiritual leader of Temple Israel. Harry C. Levine is president of Temple Israel.

SHAAREY ZEDEK'S RABBIS

Dr. A. M. Hershman, rabbi emeritus of Congregation Shaarey Zedek, whose present rabbi is Morris Adler, is one of America's most distinguished scholars. He has served this community for 45 years. Rabbi Benjamin N. Gorrelick is Shaarey Zedek's educational director.

The following served as presidents of Temple Beth El since its founding: Jacob Silberman, 1850; M. Hirschman, 1859; Emanuel Schloss, 1860; Simon Freedman, 1861–65; D. J. Workum, 1866–68; Simon Heavenrich, 1868–74; Martin Butzel, 1874–78; Seligman Schloss, 1878–81; Julius Robinson, 1881–91; Samuel Heavenrich, 1891–93; Julius Freud, 1893–97; Louis Blitz, 1897–1905; Samuel Heavenrich, 1905–07; Henry M. Butzel, 1908; Bernard B. Selling, 1909–12; Benjamin L. Lambert, 1912–13; Louis Welt, 1912–13; Bernard Ginsburg, 1918–19; Isaac Gilbert, 1919–23; Adolph Finsterwald, 1924–25; Milford Stern, 1925–29; Melville S. Welt, 1930–32; Israel Himelhoch, 1932–36; Morris Garvett, 1936–39; Harry C. Grossman, 1939–41; Joseph M. Welt, 1941–44; Leonard T. Lewis, 1944–47; Dr. Herbert I. Kallet, 1947–49.

Nate S. Shapero, president of Cuningham Drug Co. and a prominent civic leader, is the present president of Temple Beth El under whose leadership the congregation is preparing to celebrate its one hundredth anniversary.

Harry M. Schulman is the present president of Congregation Shaarey Zedek. The past presidents of Shaarey Zedek include the following: Hiram Kranshaur, Max Hertzberg, Reuben Mendelsohn, Louis Blumberg, Aaron Simon, and Samuel N. Ginsburg, all of whom served from 1862 to 1902; William B. Saulson, 1903–08; David W. Simons, 1908–20; Joseph Wetsman, 1920–21; Louis Granet, 1922–23; Robert Marwil, 1926–28; A. Louis Gordon, 1929–32; Isaac Shetzer, 1932–34–38–40; Maurice H. Zackheim, 1924, 1935–37; Morris H. Blumberg, 1941–43; Harry Cohen, 1944–47. Two leaders served as chairmen of the Shaarey Zedek board of directors; Harry B. Keidan, 1923–24; and Abraham Srere, 1925–1926.

The other two conservative congregations, their rabbis and presidents, are B'nai Moshe, Rabbi Moses Lehrman, Theodore M. Curtis; Northwest Hebrew Congregation and Center, Rabbi Jacob E. Segal, Ira G. Kaufman.

ORTHODOX SYNAGOGUES, RABBIS

The existing orthodox synagogues, their rabbis and presidents (in instances where there are no rabbis only the presidents are listed) are:

Adas Yeshurun, Rabbi Leo Goldman, Meyer Freedman; Ahavath Achim B'nai Abraham, Albert Burke; Anshe Bereznitz, Nathan Rose; Beth Aaron, Rabbi Pinchos Katz, Dr. Marvin Last; Beth Aaron v'Israel, Sol Lapinsky; Beth Abraham, Rabbi Joseph Thumin, Rabbi Israel Halpern, Louis Ellenbogen; Beth Itzchock, Rabbi Jacob Hoberman, Isidore Rosenthal; Beth Joseph, Abraham Walter; Beth Moses, Rabbi Gerson Frankel, Emil Kahn; Beth Shmuel, Rabbi Joseph Rabinowitz, Isador Rosenberg; Beth Tikvah, Rabbi Leizer Levin Jerome Kagan; Beth Yehudah, Harry Stolsky; Bath Tefilo Emanuel, Rabbi M. J. Wohlgelernter, Jacob Shevitz; B'nai David, Rabbi Joshua S. Sperka, Joseph Gorman; B'nai Israel, Jacob Lesser; B'nai Jacob, Sam Rosenberg; B'nai Zion, Rabbi S. Gruskin, Morris Snow; Chesed shel Emes, Sam Nelson; Cong. Dov Frenkel, Max Kaplan; Ezras Achim (Turover Temple), Rabbi David Bakst, Isadore Sesnick; Gemiluth Chasodim, Rabbi Leopold Neuhaus, Max Marx; Mishkan Israel, Rabbi Isaac Stollman, Philip Stollman; Mogen Abraham, David I. Berris; Nusach Ari, William Axelrod; Shaarey Shomayim, J. L. Berman; Shaarey Zion, Rabbi Leo Goldman, Benjamin Assik; First Hebrew Congregation of Delray, Sam Klein; Young Israel branches, Rabbi Samuel Prero, Samuel W. Platt, Alter Greenbaum.

In addition to congregational schools Detroit has two Yeshivoth (theological schools)—Beth Yehudah and Chachmey Lublin; the United Hebrew schools, whose nine branches have a daily afternoon school attendance of 1,200; Farband, Sholem Alechem and Arbeiter Ring schools.

Detroit's Jewish Welfare Federation, an affiliate of the Community Chest and United Foundation, is the central fund-raising body for local, national, and overseas philanthropies and educational movements. Its president is Julian Krolik. The Jewish Community Council supervises the civil-protective and community relations programs for Detroit Jewry. The Zionist movement, B'nai B'rith, and the Jewish War Veterans are the leading community organizations next to the organized synagogue functions.

Fifty Years of Philippine-American Trade

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 27, 1950

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Vicente Villamin from the Manila Bulletin of March 27, 1950:

FIFTY YEARS OF PHILIPPINE-AMERICAN TRADE

(By Vicente Villamin)

From 1900 to the beginning of 1950 the Philippine-American trade rose from about ₱10,200,000 to ₱1,300,000,000, or 130 times.

During that same period the Philippine trade with all other countries rose from about ₱95,400,000 to ₱411,000,000 or 4⅓ times.

From 1900 to the end of 1941, when the Pacific war started, the Philippines bought a total of ₱3,908,505,352 worth of goods from the United States and sold to that country a total of ₱5,545,057,251 worth.

That left a balance of ₱1,636,551,899 in favor of the Philippines. That amount, or most of it, went into the very warp and woof of the economy of the country, expanding it to that extent.

Based on the median population during that 41-year period, that favorable balance meant an acquired ₱130 for every man, woman, and child in the entire country. That amount is small, but it worked in an incredibly big way.

If the ₱130 changed hands five times a year, it rendered the service of a total of ₱560 a year. Every person who handled it along the line received benefits from it. In 41 years it rendered the service of a total of ₱26,650.

The turn-over or changing hands of money is called the velocity of the monetary circu-

lation. The velocity of five is a conservative estimate for the Philippines, but even at that rate it will be seen how a seemingly small sum, per person, added to the total wealth of the country over the ordinary exchange of buying and selling becomes the main economic element in the permanent material progress of the Filipino people.

Benefits arising from trade mean a great deal more to a country than outright monetary hand-outs or gifts. They are earned through work and employment. And they continue and increase as the worker acquires more interest and efficiency.

In the past the Philippine-American trade was the prop of the Philippine economic structure. In the future it will continue that vital role. It is of supreme importance therefore, that nothing is done now to impair that trade permanently.

There is nearly half a century of history back of the trade relations between the Philippines and the United States. A review of its high lights will show the consistent encouragement given by the United States Government to build up the Philippines materially by admitting Philippine products to the United States, at the beginning, partially, but later, completely duty-free.

The Philippines was thereby given the immensely valuable privilege of selling products freely in the best market in the world—the market that every country on earth aspired to enter, paying the high-tariff duties. The United States was actuated by the desire of assisting the Filipino people to achieve a higher standard of living.

When American occupation of the Philippines began on August 13, 1898, almost immediately the American military authorities examined the country's foreign trade. On August 20, a week after occupation day, the Manila customshouse was opened for business.

Philippine-American trade from occupation day to March 8, 1902, was on a foreign basis. Imports and exports between the two countries paid the tariff duties provided for by their respective tariff laws.

Excepted, however, from payment of duties in the Philippines were the Spanish goods ordered or purchased before the Spanish-American War broke out and the supplies and materials for the use of the American armed forces of occupation and for the Philippine insular government. General Orders No. 10, October 26, 1898, abolished the exception as to Spanish goods. But the exception as to the supplies for the American Army was not abolished until August 6, 1909.

Imports from Spain were afterward defined under the Treaty of Paris, dated December 10, 1898. By virtue of its article 4, the United States agreed "to admit Spanish ships and merchandise to the ports of the Philippine Islands on the same terms as ships and merchandise of the United States for a period of 10 years from April 11, 1899." Up to March 8, 1902, therefore, during which the Philippine-American trade was on a foreign basis, the treaty provision did not benefit the Spanish ships and imports.

The Philippine exports to the United States during those early years were as follows: ₱5,921,702 in 1900; ₱9,092,584 in 1901; ₱22,951,896 in 1902. They totaled ₱37,966,182 for the period of 3 years.

The Philippine imports from the United States were as follows: ₱4,306,396 in 1900; ₱7,068,510 in 1901; ₱8,306,348 in 1902. They totaled ₱19,681,254 for the 3-year period.

Thus the Philippines registered a favorable balance of ₱18,284,928. This favorable balance was to continue unbroken except for a period of 4 years, 1910 to 1913, until 1941.

That balance was enhanced by the expenditures of the American armed forces in the Philippines. Those two items together gave the Philippines a good start in her economic development.

As early as 1901 the question of whether Philippine products had to pay duty in the United States was brought up in what had come to be known as the Fourteen Diamond Rings case. In that case the United States Supreme Court ruled that since, under the Treaty of Paris, the Philippines had been ceded to the United States and had come under its sovereignty, it had ceased to be a "foreign" territory in the contemplation of the tariff law and that, therefore, the Tariff Act of 1897 was not applicable to Philippine imports to the United States. The Court added that the Congress had the absolute and plenary power to pass laws regulating the tariff relations of the Philippines with the United States and foreign countries. This decision was subsequently reaffirmed in other insular cases.

At this point, it is relevant to mention that civil government had been established in 1901 and William Howard Taft was appointed civil governor. He functioned with a governing body called the Philippine Commission, with both American and Filipino members, the former being in the majority. A survey commission under President Jacob Gould Schurman of Cornell University went to the Philippines in 1899, followed by another headed by Mr. Taft. Both commissions recommended the establishment of a civil government. The Philippine Commission was sole legislative body until 1907, when it functioned concurrently with the Philippine Assembly, composed of elected Filipinos. The commission was abolished under the Jones Act approved by Congress on August 29, 1916.

Acting under the Spooner amendment to the Army Appropriation Act of March 2, 1901, the Philippine Commission enacted the Philippine insular tariff law of Sepetember 17, 1901. There was a question as to the validity of the action of the Commission, but the question was passed over by Congress reenacting the law in bills introduced by Senator LODGE and Representative PAYNE.

A discussion of the Philippine import tariffs from 1898 to 1909 is pertinent here. The first tariff was that annexed to the Executive order of the President of the United States of July 12, 1898, which was an adaption of the prevailing Spanish colonial tariff. The next was the one proclaimed by the Philippine Commission on September 17, 1901, which was reenacted by Congress in the act of March 8, 1902. That was followed by the act of Congress of March 3, 1905, which was amended on February 26, 1906.

Under those tariffs, until August 6, 1909, American goods entered the Philippines on the same basis as foreign goods, that is, they were not exempted or given a reduction despite the reduction given the Philippine goods under the act of March 8, 1902. The idea was to help the Philippine insular government to raise more revenue.

The Philippine Commission did not lose time in asking Congress to open the American market to Philippine products. It suggested that those products be exempted from at least one-half of the duties in the United States Tariff Act of 1897 (the Dingley tariff). It had the advice in this connection of two Filipino members: Jose R. de Luzuriaga, a sugar planter, and Benito Legarda, who was interested in tobacco and distilling industries.

At that time, and for many years before American occupation, the bulk of Philippine exports to the United States consisted of manila hemp (abaca), which was subject to export duty in the Philippines. The system of export duty in the islands was completely abolished by the act of Congress of October 3, 1913.

There was opposition in the United States to the unrestricted duty-free imports from the Philippines, the same opposition that made itself manifest in later years when Philippine legislation was under consideration in Congress. American sugar and tobacco interests expressed alarm at the prospect of competition from the Philippines and urged that no concession be given under the tariff act of 1897.

The House considered a bill providing for the continuation of the full duty with slight modifications. But the Senate passed a bill giving Philippine products a reduction of 25 percent. The House went along with it and the act of March 8, 1902, the first preferential legislation in favor of the Philippines, was enacted.

This act provided also for the postponement of the application of the United States coastwise laws to the Philippines. That meant that ships of all countries could go in and out of Philippine ports on the same conditions as American ships. There was then a shortage of American bottoms and the application of the coastwise laws would have had the effect of driving Philippine trade to foreign countries from the United States. The coastwise laws have never been made operative in the Philippines.

Also provided in the act was that all customs collections in the United States on Philippine products, the 75 percent of the tariff duties, shall be turned over to the Philippine insular government for its use for the benefit of the Filipino people. This generous provision was the beginning of a consistent policy which was to mean in later years a most substantial assistance to the Philippine government, in fact, it provided most of the funds which wiped out the great deficits of that government to the present day.

Not satisfied with the 25 percent reduction under the act of 1902, friends of the Philippines in Congress—and there were many even then—worked for greater reduction. The Cooper bill, providing for a 75 percent reduction in the 1897 tariff rates passed the House of Representatives on December 17, 1902, but failed to reach a vote in the Senate. The Payne bill, with the same provision, was introduced in the House and approved on January 16, 1906, but likewise failed to reach a vote in the Senate.

There was a strong opinion developing in Congress that if the Philippines was going to remain under the American flag it should receive a tariff treatment that its nonforeign status warranted that is that Philippine imports should be admitted free of duty. There was also a great desire to accelerate the material advancement of the Filipino people by encouraging them to produce more for the American market, which paid the best prices in the world.

At this point, it is pertinent to discuss two developments in Philippine-American relations: (a) The first Philippine organic act and (b) the monetary and coinage system, both done by Congress. They affected materially the trade and economy of the Philippines.

The first Philippine organic act was enacted by Congress on July 1, 1902. It incorporated almost verbatim the Bill of Rights in the United States Constitution, thereby investing the Filipinos with civil liberty. It was the beginning of the American policy of extending increasing power to Filipinos to govern themselves, culminating with the declaration of complete independence on July 4, 1946.

The act, besides providing the coinage of money, approved the action of the President of the United States as Commander in Chief of the Army and Navy in issuing the Executive order of July 12, 1898, directing the collection of tariff import duties in the Philippines. It also granted authority to continue and regulate and control commercial intercourse with (other countries) and within the Philippines whenever the sovereignty and authority of the United States encounter armed resistance.

On March 2, 1903, Congress passed an act establishing a standard of value and a more complete coinage system in the Philippines. This step greatly helped the trade of the Philippines because it stabilized its currency position by tying up the Philippine peso to the American dollar in the ratio of 2 persons to $1. This tie-up will continue to 1974 unless in the meantime the Philippine Government modifies it with the agreement of the President of the United States.

In Washington, interest in the establishment of a Philippine-American free trade was increasing. In 1909 the President of the United States called Congress to a special session to consider a general revision of the tariff. During the long discussions in both Houses the tariff policy toward the Philippines was taken up.

The dominant purpose was to help the Philippines. There was no thought then, as there had been no purpose thereafter, to institute the tariff assimilation of the Philippines in the American tariff system. The United States did not apply against the Philippines, for instance, the antidumping, countervailing, contingent duty, or the flexible provisions in the United States, and it gave up the right in the Jones Act of 1916, subject to the approval of veto of the President, to pass import tariff laws for the Philippines.

While the possibility of a Philippine-American free trade was under discussion, the Congress had before it a resolution of the Philippine Assembly, which came into existence in 1907, opposing the duty-free entry of American goods in the Philippines except on a very limited scale on the ground that it would reduce the government's revenue.

The political question of independence from the United States got involved in the free-trade discussion when the Philippine Assembly declared that "the duty-free exchange of products between the United States and the Philippines in the long run would be highly prejudicial to the economic interests of the Philippine people and would create a situation which might delay the obtaining of its independence." Thus was when the conflict between politics and economics was inaugurated in the thinking of Filipinos. Those who were in charge of politics dominated the situation completely and only few Filipinos had the hardihood to oppose them or even to propose the synchronization and harmonization of political and economic considerations.

The Philippine Commission disagreed with the attitude of the assembly, but both of them favored the duty-free admission of Philippine products into the United States under certain restrictions as to quantities.

When the Tariff Act of August 5, 1909, was passed, its section 5 provided for duty-free entry of Philippine products with quantitative limitations and restrictions. This was a long step forward to complete, unrestricted free trade between the two countries which was to come in 1913.

At this juncture, it is relevant to set forth the progress of Philippine-American trade under the 25 percent exemption—the period from 1903 to 1909.

The Philippine exports to the United States were as follows: ₱26,142,852 in 1903; ₱23,309,936 in 1904; ₱29,680,814 in 1905; ₱23,738,578 in 1906; ₱20,658,774 in 1907; ₱20,901,510 in 1908; ₱29,453,026 in 1909.

The exports totaled during the 7-year period ₱173,885,490, and imports totaled ₱71,236,914. The balance in favor of the Philippines amounted to ₱102,648,576.

Attention is again directed to the favorable balance of trade. It was increased by the greater expenditures of the different units of the American Government in the Philippines.

Under the tariff act of August 5, 1909, above-mentioned, Philippine products were admitted duty-free in the United States with the following limitations: 200,000 long tons of sugar, 150,000,000 cigars, 300,000 pounds of wrapper tobacco, 1,000,000 pounds of filler tobacco. Rice continued to be dutiable. The maximum limitations were never reached, and the Philippines imported instead of exported rice. Coconut oil was not then an important exportable commodity and copra was on the free list in the United States.

At that time there were no absolute quotas and the Philippines could have exported to the United States amounts over the limitations by paying the full duty. Since, however, the American tariff rates were then very high and since Philippine production was not yet quite developed, the quantitative limitations did not work against the industries as they then existed, although it did not give encouragement to their expansion. This later feature was the purpose of the limitations.

In section 5 of the act the following important provisions were set forth: (1) That the Philippine Government shall impose a duty equal to that imposed by the United States on sugar and tobacco in any form entering the Philippines from a foreign country, (2) Philippine products to be duty-exempt must not contain more than 20 percent of their value in foreign materials, (3) there must be no draw-back of customs duties on articles to be admitted duty-free, (4) and they must be by direct shipments to the United States.

The foregoing requisites had for their purpose to prevent foreign products from entering the United States duty-free, or partially so, by way of the Philippines, thereby circumventing the United States tariff law.

After hardly 4 years of the operation of the tariff act of August 5, 1909, the Underwood tariff of October 3, 1913 came into existence, which instead of helping the sugar industry disturbed it and stopped its expansion.

This tariff act removed all quantitative restrictions on all Philippine products entering the United States. Up to that year the maximum amounts permissible under the 1909 tariff act had never been even approximated. The movement for political independence became more pronounced and it must have been generally realized that the granting of independence would place the Philippines outside of the United States tariff wall and, therefore, its products would have to pay the high tariff duties, and that would make those products less lucrative if they could be produced at a profit at all.

The political separatist movement militated against the expansion of Philippine industries and exports to the United States. The result was reflected in Philippine-American trade during the 4-year period, 1910–13, during which the Philippines registered an adverse balance.

The Philippine exports to the United States were as follows: ₱34,483,450 in 1910; ₱39,845,254 in 1911; ₱45,764,014 in 1912; ₱32,868,036 in 1913.

The Philippine imports from the United States were as follows: ₱40,137,084 in 1910; ₱38,313,974 in 1911; ₱48,612,020 in 1912; ₱53,352,522 in 1913.

The Philippine exports to the United States for that 4-year period totaled ₱152,960,754, and the imports totaled ₱180,415,600.

Thus there was an unfavorable balance against the Philippines of ₱27,454,846. By that time the Filipinos developed more wants and a taste for American goods and they used their past favorable balances to make purchases in the United States. Their purchasing power should have gone hand in hand with that development, but it did not.

It was expected that the Philippine sugar industry was going to expand under the Underwood tariff because it eliminated the quantitative limitations. But it did not, and for a good reason. The reason was that paragraph 177 of that tariff act provided that on and after May 1, 1916, sugar entering the United States from any source, foreign included, shall be free of duty. Thus sugar from low-cost foreign countries, like the then Netherlands East Indies, would be admitted to the United States duty-free and wipe out competition. The Philippines could not have competed in the American market in that situation.

The free-sugar provision was a blow to the sugar industry in the United States and in its Territories and possessions, like Hawaii and Puerto Rico, especially the former. It effectively stopped more sugar production in the Philippines and postponed the modernization of the industry there.

Congress was bombarded with petitions and protests against the provision from American domestic sugar producers, who enlisted the cooperation of farm organizations and other influential groups. On the other side were the Cuban-American and the Cuban financial and sugar interests. The latter had even then possessed great weight in the sugar tariff deliberations in Washington, and the Philippines had felt that weight in various and sundry forms in later years and, possibly, even today it has not been put away permanently.

Finally, on April 27, 1916, Congress passed an act repealing paragraph 177 of the Underwood tariff of 1913, and the Philippine sugar industry heaved a sigh of relief, together with the American domestic producers.

The next legislation affecting Philippine trade was the Philippine Autonomy Act passed by Congress on August 29, 1916. It was popularly known as the Jones law, which made the Philippines almost completely self-governing, with a legislature composed of a senate and house, the former taking the place of the old Philippine Commission. Under the inspiration of the law's preamble, the agitation for "immediate, complete, and absolute independence," for the Philippines was pushed strongly and dramatically under Mr. Quezon and Mr. Osmena, then the two foremost leaders of the Filipino people.

The Jones law gave the Philippine Government the power to enact tariff laws affecting foreign countries (not including the United States, of course) on condition that before such laws went into effect they should have first the approval of the President of the United States. A disapproval would kill such laws. The reason for that condition was that a tariff law might cause international complications and the United States was still responsible for the Philippines internationally. The Philippine-American trade relations continued to be governed by the acts of Congress.

The Philippine Government was prohibited under the Jones law to impose export duties, a policy in line with the provisions of the United States Constitution. And another provision limited the borrowing power of that Government to $15,000,000 (₱30,000,000) exclusive of the friars' land purchase bonds of about $4,000,000 (₱8,000,000) and the sum not to exceed 7 percent of the aggregate tax valuation at any time of cities, provinces, municipalities, and other governmental instrumentalities.

At this point, the Philippine-American trade during the 3-year period from 1914 to 1916 should be inserted.

The Philippine exports to the United States were as follows: ₱48,855,420 in 1914; ₱47,306,422 in 1915; ₱71,296,265 in 1916.

The Philippine imports from the United States were as follows: ₱48,022,802 in 1914; ₱52,762,138 in 1915; ₱45,267,329 in 1916.

The Philippine exports to the United States during that 3-year period totaled ₱167,458,107, and the imports totaled ₱146,510,286.

The Philippine favorable trade balance amounted to ₱20,947,821 for that short period.

Following the tariff act of 1913, two tariff acts were enacted by Congress. They were the acts of September 21, 1922, and June 17, 1930. They did not introduce important changes insofar as the Philippines was concerned.

World War I had its full impact in 1916, 1917, and 1918. The shutting off or disruption of comparable industries in combatant countries gave impetus to the sugar, coconut oil and other industries in the Philippines. The foreign trade of the Philippines with the United States increased considerably. Big profits were made, prosperity was upon the land, and industries were built and modernized.

In the Tariff Act of 1921, the preferential rate on Cuban sugar was increased to 1.60 cents (U. S.) per pound, to 1.7648 cents under the Tariff Act of 1922, and to 2 cents under the Tariff Act of 1930. The effect of these increases was to give Philippine sugar higher tariff advantage.

The tariff preference to Philippine coconut oil admitted to the United States was first provided in the emergency Tariff Act of 1921. Oil, nondeodorized and unrefined, of foreign origin was charged an equivalent duty of 2.67 cents a pound (20 cents a gallon), which gave the Philippine product that much advantage over its foreign competitor.

Shredded coconut (desiccated) from foreign sources was imposed a duty of 3½ cents a pound, an increase of the then prevailing duty of 2 cents. This gave further encouragement to the Philippine desiccated coconut industry. But despite that it found it not easy to compete with the older industry in Ceylon.

The rates on shell buttons, straw hats, cotton embroideries, and Manila fiber cordage were increased under the 1922 tariff act, all of which helped the Philippine comparable products.

Under the tariff act of 1930 the rates on cotton embroideries, Manila fiber cordage, and certain tropical nuts were increased; and copra-oil cake and meal were taken off the free list and made dutiable. All of these changes were calculated to redound to the advantage of the Philippines.

It was not until March 24, 1934, that Congress passed legislation profoundly affecting Philippine-American trade. This act was the Philippine Independence Act, popularly known as the Tydings-McDuffie Act.

The Philippine-American trade from 1917 to 1934, a period of 18 years, is inserted at this point.

The Philippine exports to the United States were as follows: ₱126,468,717 in 1917; ₱178,293,837 in 1918; ₱113,305,384 in 1919; ₱210,432,525 in 1920; ₱100,713,586 in 1921; ₱128,223,201 in 1922; ₱170,094,046 in 1923; ₱194,627,805 in 1924; ₱218,089,883 in 1925; ₱200,006,430 in 1926; ₱232,076,500 in 1927; ₱231,171,751 in 1928; ₱248,930,946 in 1929; ₱210,684,122 in 1930; ₱166,844,793 in 1931; ₱176,069,238 in 1932; ₱193,058,032 in 1933; ₱196,276,383 in 1934.

The Philippine imports from the United States were as follows: ₱75,241,295 in 1917; ₱117,649,222 in 1918; ₱150,982,829 in 1919; ₱184,579,556 in 1920; ₱148,260,030 in 1921; ₱95,476,651 in 1922; ₱100,705,070 in 1923; ₱120,797,206 in 1924; ₱138,595,166 in 1925; ₱143,151,236 in 1926; ₱142,956,594 in 1927; ₱167,716,135 in 1928; ₱185,185,917 in 1929; ₱156,366,057 in 1930; ₱124,279,366 in 1931; ₱103,005,088 in 1932; ₱87,582,513 in 1933; ₱109,375,368 in 1934.

The Philippine exports to the United States during that 18-year period totaled ₱3,295,367,179, and the imports totaled ₱2,351,905,299.

The favorable balance of the Philippines during that period amounted to ₱943,461,880, or an annual average of more than ₱52,400,000.

The independence act of 1934 created the Philippine Commonwealth, which was to become the independent Republic of the Philippines on July 4, 1946.

Under this act changes were introduced in the trade relations between the Philippines and the United States as a preparation for their political separation.

Its section 6 set forth these changes and conditions. The imports into the United States of three Philippine products were limited in quantities as follows: 50,000 long tons of refined sugar; 800,000 long tons of unrefined sugar; 200,000 long tons of coconut oil; and 3,000,000 pounds of cordage.

After the first 5 years, beginning with the inauguration of the Commonwealth, the Philippine Government was directed to impose and collect export duty on all articles shipped to the United States free of duty in that country at the rate of 5 percent of the United States duty on the sixth year, increasing progressively every year by 5 percent until, the ninth year, the rate reached 25 percent.

The duty thus collected was, by provision of the act, directed to be placed in a sinking fund to be used solely for the payment of the principal and interest of the bonded indebtedness of the Philippine Government, the provinces, municipalities, and other governmental instrumentalities.

It was provided in section 13 that after the independence of the Philippines was promulgated the trade relations between it and the United States should be on a foreign basis, that is as before March 8, 1902. But it also provided that at least 1 year before independence there should be a conference held between Philippine and American representatives, appointed by their respective presidents, for the purpose of formulating recommendations as to future trade relations between the United States and the Philippine independent republic.

Such a conference was called. A joint Philippine-American preparatory committee was created. It held hearings in the United States and the Philippines. Then it submitted a voluminous report.

The recommendations of the committee were embodied in a draft of a bill submitted by the Roosevelt administration to Congress. The appropriate congressional committees held long hearings on the bill. But in the end Congress did not act on it and the bill died a natural death. A period of nonaction on the postindependence trade relations between the two countries followed, continuing until the Pacific war came on December 7, 1941.

After the enactment of the Independence Act on March 24, 1934, several changes in the trade relations occurred, but they did not alter basically the general economic plan of the act.

The Jones-Costigan Sugar Act of May 9, 1934, authorized the imposition of definite limits on imports called absolute quotas. Imports over the quantities provided for, although prepared to pay the full duty, was forbidden. The Sugar Act established the quota plan applicable not only to the Philippines but to all domestic-producer areas, with the addition of Cuba, which, though a foreign country, had a preferential tariff arrangement with the United States for nearly 50 years.

The United States revenue act of May 10, 1934, as modified in some particulars by the revenue acts of 1935 and 1936, provided for the imposition of a processing tax of 3 cents (6 centavos) a pound on coconut oil expressed from Philippine copra either in the Philippines or in the United States. The amount collected was turned over to the Philippine treasury. This collection proved to be one of the great sources of Philippine revenue. The legality of the transfer of this fund to the Philippine treasury was contested in the United States Supreme Court by users of coconut oil, especially the American soap industry, but the court upheld its legality.

The cordage act of June 14, 1935, provided for an absolute quota of 6,000,000 pounds of cordage a year duty-free, or two times more than the quantity permitted in the independence act. It was for a period of 3 years, but the President of the United States was authorized to extend it for a period of 3 years or more, subject to its acceptance by the President of the Philippines.

At this juncture, it is relevant to insert the Philippine-American trade for the 7-year period from 1935 to the end of 1941, when the Pacific war was already raging.

The Philippine exports to the United States were as follows: ₱166,308,071 in 1935; ₱238,531,723 in 1936; ₱274,727,551 in 1937; ₱243,302,378 in 1938; ₱259,059,324 in 1939; ₱258,307,567 in 1940; ₱277,182,925 in 1941.

The Philippine imports from the United States were as follows: ₱109,428,441 in 1935; ₱123,708,995 in 1936; ₱127,330,759 in 1937; ₱181,576,754 in 1938; ₱167,382,653 in 1939; ₱210,373,935 in 1940; ₱218,954,432 in 1941.

The Philippine exports to the United States during that 7-year period totaled ₱1,717,419,539, and the imports from the United States, ₱1,138,755,999.

The Philippine favorable balance amounted to ₱578,663,540, or a yearly average of about ₱82,500,000.

Philippine-American trade was suspended during the war years, 1942 to 1944.

During the war Congress considered several bills relating to the Philippines, although it was under the control of the Japanese army of occupation. Such was the absolute confidence in the ultimate victory over the Japanese and their expulsion from the Philippines. A bill provided for the independence of the Philippines in 1942—a psychological counter action to the granting of independence by the Japanese—was introduced, but did not become law. Another bill which had to do with military bases was passed. And another bill was approved suspending the Philippine Constitution so the incumbent president and vice-president could continue in office, although their terms uder the constitution had already expired.

Soon after the war the question of the post-independence trade relations between the Philippines and the United States was taken up by Congress. An administration bill was sent to the appropriate congressional committees. Exhaustive hearings, mostly executive, were held. After earnest debates on both floors of Congress it was passed on April 30, 1946, and it became known as the Philippine Trade Act of 1946. On the same date the Philippine Rehabilitation Act, providing for a system of payment of war damages, was passed.

Under the trade act, which is now in operation, the following absolute quotas are provided:

From January 1, 1946, to July 3, 1974, the Philippines can export to the United States annually 952,000 short tons (the equivalent of 850,000 longs tons), of which 56,000 short tons (the equivalent of 50,000 long tons) may be refined sugars, 6,000,000 pounds of cordage, 1,040,000 of rice, 200,000,000 cigars, 6,500,000 pounds of scrap and filler tobacco, 200,000 long tons of coconut oil, and 850,000 gross of pearl buttons.

All those articles, as well as other Philippine articles, will be duty-free, and at the full quota to July 3, 1954. After that date all articles from the Philippines with the exception of the above-named commodities, whose restrictions are provided for, will become subject to graduated duties, beginning with 5 percent of the prevailing rates until they reach 100 percent in 1974.

The seven Philippine products listed above are divided into two groups. Sugar, cordage

and rice will not decrease in quantity to 1974, but will pay the graduated quota of 5 percent. Cigars, scrap, and filler tobacco, coconut oil and pearl buttons will not pay the graduated duty, but their amounts will decrease progressively by 5 percent.

The reason for the difference in the treatment of the two groups is that the first group has relatively low tariff rates and the second group has such high tariff rates that in a few years they would not be able to produce at any profit at all. The official record of the hearings before the Committee of the Ways and Means of the House of Representatives will show that it was the author of this article who suggested that idea to the committee.

It should be noted that, because absolute quotas are granted, the Philippines is permitted to export to the United States quantities over the duty-free amount, but within the quota, after the progressive quantitative reductions, by paying the full duty.

It is provided that if the Philippines should export a new product that comes into substantial competition with a like article produced in the United States the President may impose a quota on it after an investigation by the Tariff Commission.
